OFFERS DEATH SPAR REWARD

A reward of $50 was offered Saturday for a part of the spar of the airplane in which Lieut. Edward G. Snell, wealthy Detroit business man and sportsman, met his death when it fell 1,700 feet at Greenfield and Bonapart avenue, a week ago.

Snell was flying with Maj. Floyd E. Evans of the one hundred seventh Observation Squadron, M. C. G., when a vital part of the right upper wing collapsed. Major Evans jumped from the machine in a parachute and escaped unhurt. Snell was equipped with a parachute but for some undetermined reason did not try to jump.

Ray P. Whitman, chief inspector of the Consolidated Aircraft Corporation of Buffalo, N. Y., manufacturers of the plane, offered the reward. He with, J. M. Gwinn, chief engineer, and Lieut. W. E. Nicol, of the one hundred seventh Observation Squadron, are conducting an investigation to determine the cause of the accident.

The part of the plane which is sought, and which is believed to have been picked up by persons who went to the wrecked plane soon after the crash, is a piece of the spar of the right upper win. To properly determine the cause of the accident this piece is needed, Nicols said.

$50 Reward

For pieces of wood spar from airplane which crashed on Grand River Avenue, south of Bonaparte, Saturday, October 20. These pieces were taken as souvenirs from scene of accident, and are vital in determining cause of accident. Deliver pieces immediately to Lieut. W. E. Nicol, 107th Squadron, Rouge Park, Detroit.

$50 Reward

for pieces of wood spar from airplane which crashed on Grandview avenue, south of Bonaparte, Saturday, October 20. These pieces were taken as souvenirs from scene of accident and are vital in determining cause of accident.

Deliver pieces immediately to Lieut.

Airman, Who Once Took Girl's Dare, Falls 1900 Feet to Death

DETROIT, Mich., Oct. 22 (AP).—Lieut. Edward C. Snell, Michigan National Guard officer, who a few weeks ago leaped from an upper deck of the Leviathan in New York harbor, at the dare of a girl, plunged 1900 feet to his death in an airplane here late Saturday when he failed to use a parachute strapped to his back.

A fellow officer, Major Floyd E. Evans, pilot, escaped death by jumping from the falling plane.

The accident occurred in the outskirts of Detroit while the men were flying here from Ann Arbor, Mich.

BUFFALO COURIER-EXPRESS, TUESDAY, NOVEMBER 6, 1928

Noted Flier, Plane Try to Solve Fog Riddle

Lieut. James A. Doolittle, army pilot, stunt flier and the first man to cross the Andes in a non-stop flight, and the Consolidated Husky biplane in which he took off from the Buffalo airport for Long Island last week-end in an attempt to devise means of overcoming the dangers of flying in the fog or in complete darkness. His experiment is backed by the Guggenheim Fund for the Promotion of Aeronautics.

Army Aviator in Attempt To Make Fog-Flying Safe

Lieut. Doolittle hops off from local airport in Buffalo made plane

Lieut. James A. (Jimmy) Doolittle, army flying ace, hopped off from Buffalo over the weekend in an attempt to write a new chapter in the history of aviation, an experiment that may end the most dreaded hazzard of the air, an attempt to find a way to make fog-flying safe.

Lieut. Doolittle, known as an expert aviator whose flying achievements are legion, set out for Long Island in a Buffalo plane specially selected and equipped for the experiment by the Daniel Guggenheim Fund for the Promotion of Aeronautics as the safest and best suited to his needs. It is the standard Navy training plane, known as N. Y. 2 by that branch of the service, built by the Consolidated Aircraft Company of Buffalo. At the factory the plane is catalogued as the Consolidated Husky, a biplane with a Wright Whirlwind motor of 200 horsepower.

Is Crack Flier

Lieut. Doolittle holds several records and is famed as a stunt flyer. He was the first to complete an outside loop with a plane, and made the first non-stop flight across the Andes. He was commandeered from the army by the Guggenheim fund for experiments to eliminate the danger of fogs, the chief bugaboo of aviation, impressed vividly upon the public yesterday by the tragic end of the Yankee Doodle fliers.

Lieut. Doolittle came to Buffalo for the plane Thursday and supervised its equipment with a specially constructed cover for the rear cockpit which will throw the pilot, in that compartment, into complete darkness, duplicating conditions of night and fog flying. Under this condition, he will fly by means of special instruments. A pilot in the front cockpit will check his maneuvers and report results.

Has Special Equipment

The Consolidated Aircraft equipped the plane with every new and accepted instrument on the market for blind flying, including special equipment called by Doolittle, bank and turn indicators, an air conductor compass, magnetic compass and special lighting of the instrument board. Special landing gear and wheel brakes were also installed on the plane for tests in landing. In addition to all these new wrinkles, the Husky plane is known for being exceptionally sturdy for bad landings, airworthy and safe.

Lieut. Doolittle is a stunt flier who holds several records. He made the first non-stop flight across the Andes and was first to complete an outside loop with a plane. Lieut Doolittle was in the army service when he was given leave to make the fog test flights for the Guggenheim fund.

Much interest will attach to the flight, according to officials at the Consolidated Aircraft company's factory, especially in view of the death of the Yankee Doodle fliers two days ago, while flying in a dense fog.

Buffalo Evening News
Nov. 6-1928

6, 1928

FOG TEST TO BE MADE IN BUFFALO AIRPLANE

Flier Will Seek to Conquer the Murky Atmosphere.

A flight to test and, if possible, conquer the hazards of fog-flying, will be made probably within ten days in a specially equipped Buffalo plane. The flight will be made under auspices of the Daniel Guggenheim fund for the promotion of aeronautics. Lieut. James A. (Jimmy) Doolittle will make the flight.

The airplane is a Husky, built by the Consolidated Aircraft company of Buffalo. Lieut. Doolittle flew the plane to Long Island Sunday, where it will be still further equipped to make the test flight. The plane is the same type that is used as a standard Navy training plane. It is a biplane and has a single Wright Whirlwind motor.

Special instruments have been mounted on the board to enable the flyer to check conditiois in fog, and the plane has been equipped with wheel brakes and "Oleo" landing gear. The wheelbrakes will enable the flyer to come to a stop after a short roll in case of a forced landing, and the special landing gear will protect the plane and flier from shock if he is forced to land on rough terrain.

The rear cockpit of the plane is provided with a cover and the walls are sealed so that the pilot can cover the cockpit, making it entirely dark, and then fly by the aid of his instruments alone. A flier in the front seat will check Doolittle's flying. The front seat will be uncovered. This equipment will enable Doolittle to fly in safety and at the same time under night conditions. The fog test, however, will be made under actual conditions.

November 1928.

HARTFORD *from the AIR*

RIGHT—Aerial view of Hartford on the Connecticut River. Its airport may be seen in the center of the picture, and in the foreground are tobacco fields, growing under glass.

BELOW—Hartford as seen from over the Connecticut River. The buildings in the center belong to insurance companies.

How Connecticut Looks from the Air

By JOHN H. TRUMBULL, GOVERNOR OF THE STATE OF CONNECTICUT AND CHAIRMAN NAA HONORARY MEMBERSHIP COMMITTEE

FLYING experience whether as pilot or passenger is an unparalleled source of the development of the powers of observation. As one's time in the air accumulates, even though the flying is done over a very restricted area, more and more of the wealth and detail of town and country below registers. The size of objects at different altitudes, their altering appearance at various angles, and in various lights, presents an interesting study which precludes that monotony incident to other modes of transportation.

A short time ago an old calf volume entitled "Easy Lessons in Reading for the Use of the Younger Classes in Common Schools" from the pen of Joshua Leavitt and printed at Keene, New Hampshire in 1839, attracted my interest. Chapter 51 of this treatise, a dialogue between father and son, begins:

> "Robert: 'How I wish I could fly as the pigeons do. How fine it must be to soar to such a height and dash through the air with so swift a motion.'
>
> "Father: 'I doubt not that the pigeons have great pleasure in it, but we have our pleasures too, and it is idle and wrong to wish for that which is out of our power.'"

This short quotation from an interesting chapter may serve to demonstrate that the desire of man of all times past is today so fully realized as to be very nearly commonplace through practice, though still an inspiration and delight to all.

When I take a plane into the air, I find little of my time occupied in its mechanical control, permitting more attention to be given to the study of the marvelous detail of the panorama,—rectangular fields of green, brown and red, spread out below me. I see great stretches of woods with lakes set in the hills, the hills themselves tending to average their height with the valleys below; the beautiful Connecticut River, a silver ribbon winding to the sea on the south and to a disappearing thread to the north. I see villages, towns, and cities with their business centers and their great and small industrial plants, monuments to our industrial versatility, and I see thousands of homes emblematic of the peace and prosperity of our state and nation.

Governor John H. Trumbull of Connecticut, ready to take off from Hartford Airport.

I cannot permit this opportunity to pass without remarking on how Connecticut looks from the air commercially to the air-minded. Those of us, and we are a rapidly growing legion, who are air-minded, realize the tremendous advantage to our state in the development of air-ways and air transportation. We have highly skilled labor and the ability to manufacture highly specialized products. We recognize not only the necessity for better facilities for bringing in raw materials and for shipping our products to markets, but we believe that air transportation is the method whereby we will remain in competition with manufacturers of similar lines located nearer their supply of raw materials and nearer their markets. Therefore, one of my chief pleasures in flying is to visit new airports springing up in this community of Connecticut and that,—satisfying testimony to the rapid growth of the belief in the future of air transportation and to Connecticut's aim to profit by it.

No vantage point equals that offered by the airplane to look upon the activities and the quiet of the terrain below. Away from the influence of speech and of obstructed vision one can more fully appreciate nature's beauties and man's art. As a citizen of this rugged State of Connecticut, I am inspired by its scenic splendors and filled with pride in contemplating its busy industrial life.

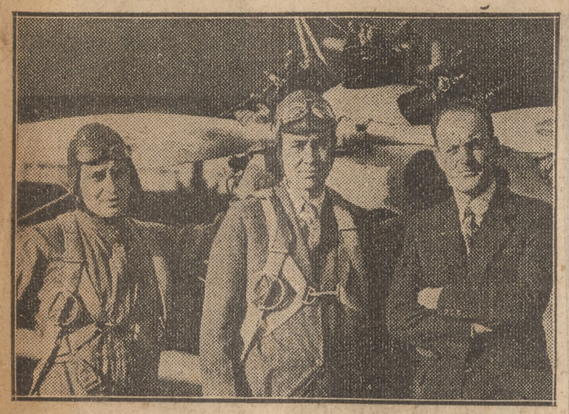
and Your State

—your City, how does it look from the air? Have you seen it thus? Have you some new and excellent pictures of it from aloft? Write Editor of your Aeronautic Review about them. Write today.

EXPRESS

BUFFALO, N. Y., FRIDAY MORNING, NOVEMBER 16, 1928

Navy Patrol Flying Boat Built Here



Buffalo's increasingly important place in aviation was evidenced again yesterday, in the display of the craft which was secretly constructed here for the navy. The XPY-1, as it is designated, brought unstinted praise from Lieut. Leigh Wade, former world flier; Assistant Secretary of the Navy E. P. Warner and Maj. R. H. Fleet, who are shown above, left to right, in the order named.

New Craft May Become Official Fighting Unit

Plane will carry radio operator, two gunners, pilot and mechanic

Edward P. Warner, assistant secretary of the navy in charge of aeronautics, yesterday made one of his periodical trips to Buffalo to inspect local aircraft factories and especially to look over the new navy patrol flying boat built under secret orders by the Consolidated Aircraft Corporation of Buffalo.

The patrol boat is regarded by Assistant Secretary Warner as the answer to many present problems of commercial air navigation and, after a thorough inspection of the new craft, he declared that its possibilities were tremendous.

Able to Do 120 Miles an Hour

"We expect great things of the new boat and it is much needed," he said. "Its development is epochal and may lead to many things in aviation."

The patrol boat is a monoplane with a 100-foot wing span. It is all metal and will have an air speed of about 120 miles an hour. A series of motors so constructed that one will carry the load if two fail, is a distinct safety feature. The plane, unnamed as yet, is designated as XPY-1, meaning Experimental Plane and Y, the Consolidated keyletter. It will carry a crew of five, being a unit in itself with its own radio operator, two gunners, a pilot and mechanic. The plane is of the bombing type and may be used for that purpose during wartime, but it is primarily constructed for observation.

The new boat is a test plane for the navy and if it materializes as Mr. Warner expects, it may become standard equipment of air navy outfits. It will be used on long distance flights along the coasts.

Yesterday Consolidated Aircraft also issued another machine that has been developed under cover of secrecy during the past few months. This craft, a two-seater biplane, is known as the Consolidated Husky, Jr., a smaller model of the well known Consolidated Husky, Sr., in one of which Lieut. Jimmy Doolittle has been experimenting in fog flying.

Enters Commercial Field

The Junior Husky places the Consolidated Aircraft Corporation in the commercial field for the first time. For the past five years the Consolidated has concentrated on the manufacture of training planes for instruction uses in both the army and navy.

Leigh Wade, ex-army lieutenant, and known as one of America's flying aces, a member of the round-the-world army crew, yesterday tried out the Junior Husky, piloting Mr. Warner on a test flight that was eminently successful despite tremendous high wind.

Lieut. Wade pointed out the remarkable safety features of the Husky plane.

"Five years of development, of experimenting and inventing, have gone into the Husky plane and it is an outstanding vehicle in aviation today," he said. "Its universal use in instruction, regarded as the most dangerous flying, next to wartime flying, is in itself significant. In testing, fliers have spun into the ground with the motor on, and emerged uninjured."

The Husky, Jr., is the same as the large model, with the elimination of a lot of non-essential instruments used only in service work. It has a Warner engine of 100-horsepower, with a top speed of 110 miles an hour. It will cost about 60 per cent. of the larger jobs and will cost a similar 60 per cent. rate to maintain and operate.

Lieut. William McCart of the navy, Maj. R. H. Fleet of the Consolidated Aircraft, and ex-Lieut. Leigh Wade accompanied Mr. Warner on his inspection trip yesterday.

Navy Flying Boats Built Here Seen as Key to All Aviation

Assistant Secretary Warner Believes Craft Will Solve Many Problems of Commercial Navigation.

Following an inspection Thursday of flying boats under construction for the Navy at the Elmwood avenue factories of the Consolidated Aircraft company, Edward P. Warner, assistant secretary of the Navy, declared his belief the new type ships developed by the Buffalo company would probably solve most of the present problems of commercial air navigation.

Contracts for the first of the new ships were awarded the Buffalo company several months ago by the Navy department, and construction has since been carried on under a curtain of secrecy. The first completed ship will be ready for its trial flights in about a month, it was said Thursday by Maj. Robert H. Fleet, president and general manager of the Consolidated company.

While this type of ship is purely for military purposes, it can readily be adapted to commercial needs. The Consolidated company is not ready to make public all details of its construction, but it is said to differ radically from the type of flying boat brought out several years ago by other aircraft builders.

"In every sense it is a real ship," said Secretary Warner. "Its lines indicate that it will be stable and seaworthy, and should give immediate stimulation to all projects having to do with commercial navigation, along the Great lakes, the Atlantic and Pacific seaboards, and along our river routes."

The ship will have an air speed of about 120 miles an hour, it was said, and with a series of motors so constructed that even should several of the motors fail, one would be able to develop sufficient power to keep the ship aloft until it could be brought to the surface of the water safely.

Maj. Fleet declined to discuss a report that his company is interested in the proposed establishment of a Great Lakes Air line, giving passenger service to all the larger cities between Buffalo and Duluth and using the type of craft now under construction.

Following his inspection of the flying boat, Secretary Warner rode as a passenger in one of the Consolidated military training planes, which took off from the company's airport in Military road and circled above the city. Secretary Warner was scheduled to return to Washington by train Thursday evening.

TIMES

THURSDAY, NOVEMBER 15, 1928.

Buffalo Times - November 15, 1928.

Navy Secretary Here to Inspect New Flying Boat

Edward P. Warner, Assistant in Aeronautics Division, Is Visitor at Local Aircraft Plant.

EDWARD P. WARNER

Edward P. Warner, assistant secretary of the United States Navy, is in Buffalo. The object of Mr. Warner's visit is to inspect a new type of flying boat, now nearing completion at the Consolidated Aircraft Corporation plant in Elmwood Avenue.

Mr. Warner said today that if the tests of the new boat are successful, the Navy Department would order 32 of the same type to be built beginning next year.

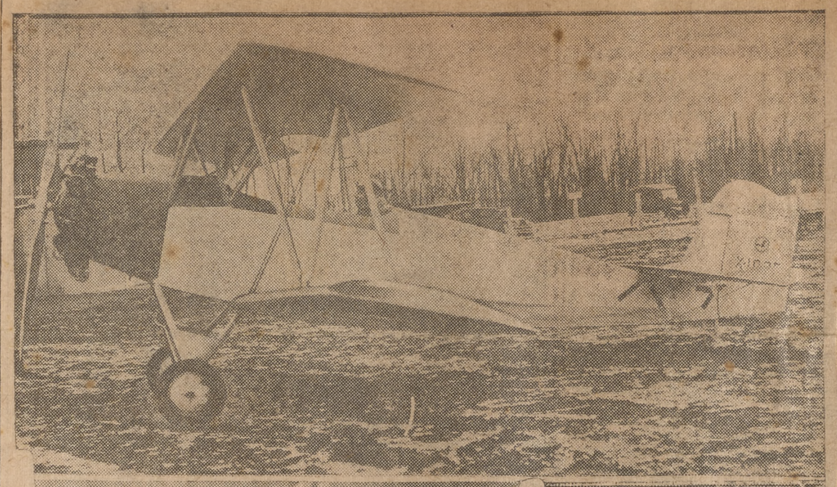
The Consolidated Aircraft Corporation began construction of the flying boat eight months ago, according to Secretary Warner, and the ship is the first of its type to be built by the aircraft industry in the United States. Other flying boats were built by the Navy Department itself.

800 Horse-power Motor

Powered with an 800-horse power motor the flying ship is capable of cruising 2500 miles. When tests are completed the new ship will be ordered to the Hawaian Islands for navy service. The boats will be able to fly from the mainland of the United States to the Islands on a non-stop flight.

Because the newly-developed aircraft is of major military importance, Secretary Warner himself came to inspect it. No definite date was fixed for the test flights of the flying boat, but it is understood that they will take place shortly. Secretary Warner would not say whether the Consolidated Aircraft Corporaion would be awarded the contracts for other flying boats of the same type, in the event that the ship now under construction is approved and accepted by the Navy Department.

Mid-West's New Training Plane



Elmer Leighton, transportation manager, and Jim Knaup, president of Mid-West Airways, Inc., who flew the new Consolidated Husky Junior training ship from Chicago to Milwaukee last week.

The first Consolidated Husky Junior to be placed in commercial service has been added to the student training equipment of Mid-West Airways, Inc.

The new plane was purchased from the Consolidated Aircraft corporation during the airplane show at Chicago recently. It was piloted to Milwaukee last week by Elmer Leighton, transportation manager and Jim Knaup, president of Mid-West Airways.

The Consolidated Husky Junior, a two-place, dual control, single-bay biplane with a span of twenty-eight feet, pleasing in lines and appearance, is said to afford a happy combination of strength, safety, performance and maneuverability. For student instruction it is classed as ideal, possessing that "just right" feel on the controls and responding instantly to the touch of the pilot, lending greater confidence to the student.

POWERED BY WARNER MOTOR.

The Husky Junior is designed and built to withstand, with strength to spare, all the loads imposed by every possible condition of flight, it is stated by its manufacturers. It may be stunted with ease and safety, vitally important to provide the student flier with the necessary experience for handling planes under all conditions of service.

The training ship is powered with a seven cylinder Warner "Scarab" radial air-cooled engine of 110 horse power. Its top speed is 110.5 miles per hour, cruising speed is 90 miles per hour while the stalling speed is 35 miles per hour. The ceiling of the craft is 16,000 feet while the rate of climb at the ground is 930 feet per minute.

The wings are fabric covered, all metal structures except laminated spruce spars. There are two flying wires and one landing wire on each side. The structural work of the fuselage is welded steel tubing with fabric cover. The cockpit section is made exceptionally sturdy with the use of alloy steel. All steel parts are protected against corrosion by the use of two coats of aluminum enamel.

700 IN DAILY SERVICE.

The Husky Junior is manufactured by the Consolidated Aircraft corporation of Buffalo, N. Y., an organization that has specialized in the design and production of training planes for a period of eight years. Its success is evidenced by the fact that Consolidated Husky training planes have become standard equipment in all the services of the United States army, navy and five foreign countries.

More than 700 planes of this type are now in daily service, operating at 140 different stations throughout the western hemisphere, ranging from the bitter cold of the far north to the steaming heat of the tropics.

Consolidated Aircraft only recently entered the commercial field, Mid-West Airways of this city being the first organization to receive delivery of a Consolidated built plane for commercial training purposes.

In addition to purchasing one of these planes for student training, Mid-West Airways, Inc., is one of the first distributors in the United States to be appointed by the Consolidated Aircraft corporation. The local organization will act as distributors for the state of Wisconsin and upper Michigan.

MID-WEST GETS HUSKY JUNIOR TRAINING PLANE

Local Concern Named Distributors for Wisconsin Territory

A Consolidated Husky Junior, the same type of plane that is being used for training purposes by the United States army, navy and marine corps, and also several foreign countries, has been added to the student training equipment of Mid-West Airways, Inc., Milwaukee County airport. This is the first plane of a fleet of five Husky Juniors that will be put in student training service by Mid-West Airways.

Lyman Leaves Big Airmail Company; Joins Local Firm

Manager of Colonial Western Airways, Inc., to become associated with Frontier Aircraft Corp.

William T. Lyman, traffic manager of the Colonial Western Airways, Inc., yesterday announced his resignation from that organization.

Lyman, who did much in this city to encourage the sending mail via airplane, will become associated immediately, he said, with the Frontier Aircraft Corporation, a Buffalo financed concern devoted at the present time to the distribution of Fairchild, Stearman and American DeHaviland Moth planes. It is rumored the Frontier Corporation will branch out shortly into several other phases of the aviation industry.

Mr. Lyman's associates in the new corporation include Lee Francis, formerly of the M. & T.-Peoples Trust Company, and Leo Chase, prominent pilot, instructor and parachute expert.

WILLIAM T. LYMAN

Successor Is Named

Mr. Lyman has been traffic manager for the Colonial Western since that line pulled its first load of air mail out of Buffalo a year and a half ago. He will be succeeded by Goodrich K. Murphy, formerly district manager at Hartford, Conn., for the Colonial Western.

Murphy has been in charge of the Hartford office of the corporation for the past six months. Prior to that time he served for more than five years in the transportation department of the Munson Steamship line.

John F. Wheelock will succeed Murphy at Hartford. The changes are expected to go into actual effect in a day or two.

Aviation Club Incorporates

Amherst Aviation Club, Inc., Williamsville, to deal in all kinds of aircraft. Capital stock: 5,000, shares having par value of $10. Directors: Lieut. Vernon Schutt, 836 Ellicott street, Buffalo; Harry M. Schadd, 5590 Main street, Williamsville; Harold B. Sanford, 671 Mt. Vernon road, Snyder.

December 1928 Aero Digest

NEW YORK AIR NEWS

FOUR PT-3A planes, built for the Cuban Army Air Corps by the Consolidated Aircraft Corp. of Buffalo, were recently flown from Buffalo to Havana, Cuba. The 1,900-mile trip was made on a predetermined schedule. The planes were piloted by Capt. Jack R. Beam and Lieutenant Hodgson, U. S. Army Air Service instructors to Cuba, Captain Martull and Lieutenant Terry, the latter two of the Cuban Air Corps.

BIG BUFFALO PLANE TO BE TESTED SOON

Consolidated's Boat Being Assembled in Washington.

Evening News - Dec. 29-1928

Test flights of the largest flying boat ever built in the United States, which was constructed at the Consolidated Aircraft corporation plant in Elmwood avenue the past year, will be made the week of Jan 7 at the U. S. Navy yard in Washington, it was announced Saturday by R. P. Whitman, assistant to the general manager of the Consolidated plant.

Shipment of the plane was completed last Wednesday. It was sent from Buffalo on three flat cars. The ship is being assembled at the Navy yard and will be flown by Consolidated and Naval test pilots. With successful flights it is expected the government will place a contract for several ships with the Consolidated company.

The craft was built secretly in the experimental department. It is designed for long-distance patrol flying and will have a range of 3000 miles. Its wing spread is nearly 100 feet. It will carry four in the crew, including two pilots and two machine gunners. Bombing equipment also is provided for, although the primary purpose of the craft is for patrol work. It has been named The Admiral.

Courier-Express Dec. 30-1928

BIG FLYING BOAT, BUILT HERE, TO BE TESTED AT WASHINGTON

The largest flying boat ever built, The Admiral, a product of the Consolidated Aircraft Corporation of this city, will be tested at the U. S. navy yard in Washington the second week in January, it has been announced.

The new flying boat was built in the Elmwood avenue plant and shipped to the navy yard earlier in the week on three flat cars. It was built secretly here. The craft has a range of 3,000 miles and a capacity of four persons, presumably two pilots and two machine gunners. It also is provided with bombing equipment.

Buffalo Evening News - Jan. 3-1929

NAVY TO TEST PLANE BUILT HERE IN SECRET

Huge Flying Boat Said to Be Able to Span World in Five Hops.

By MERWIN H. BROWNE.
From the Washington Bureau of the BUFFALO EVENING NEWS

WASHINGTON, Jan. 3.—Tests of the super-flying boat built by the Consolidated Aircraft company of Buffalo for the Navy department in accordance with official Navy specifications, are expected to begin here early next week.

Under the supervision of I. M. Laddon, engineer of the Consolidated company, and secreted from prying eyes, the huge craft is being assembled at the Anacostia naval air station here. The work will be completed in a few days.

Trial flights are expected to be conducted by Lieut. Leigh Wade, former round-the-world flier, but he has not yet reached Washington and it is likely the big flying boat will be entrusted to another pilot.

In addition to Engineer Laddon, the plane was accompanied here by Lieut. R. D. MacCart, United States Navy inspector stationed in the Curtiss Buffalo plant, who supervised the building of the ship by the Consolidated people. J. L. McClane and Frederic Flader, Consolidated engineers, completed the party.

Details Kept Secret.

Outside of declaring that the boat in question is the largest air boat ever produced in this country, Mr. Laddon, who is in charge of the plane here, declined to give a description of the ship or details regarding the ship's ability or passenger-carrying capacity. Navy officials likewise refused information regarding the ship, pending completion of the trial flights next week.

It was learned from another source, however, that the boat is a monoplane with a 100-foot wing span. It is all metal and will have an air speed of about 120 miles an hour. A series of motors so constructed that one will carry the load if two fail, is a distinct safety feature.

The ship will carry a crew of five, being a unit in itself with its own radio operator, two gunners, a pilot and mechanic. The plane is of the bombing type, and may be used for that purpose during wartime, but has primarily been constructed for observation.

Planned For Long Flights.

If accepted by the Navy, the ship probably will be used for coast patrol work. It is said that installation of additional gas tanks will enable it to make a trip around the world in five hops.

Commercial copies of the boat now are being constructed by the Consolidated company in Buffalo and these ships, having a maximum speed of 135 miles an hour, it is said will be able to carry 32 passengers in addition to a pilot and assistant pilot. It was indicated that one of the features of the boat now in the Navy's hands is that it is readily convertible, with few minor changes, into a strictly commercial craft. Nearly a dozen of the commercial types probably will find their way from the Consolidated shops this year.

The boat was built under the combined supervision of the Consolidated company and Navy engineers and the construction contract was awarded to Consolidated when the company won the Navy competition for designs over a year ago.

NAVY CONTRACT GIVEN AIRCRAFT FIRM HERE

Buffalo Evening News

Formal Order Totaling $164,450 for Ten More Ships.

Jan. 10-1929

Formal award of contract to the Consolidated Aircraft corporation of Buffalo for ten model NY-1 and the same number of NY-2 training planes and spare parts at a total cost of $164,450 by the U. S. navy Wednesday, was announced Thursday, according to an Associated Press dispatch and confirmed by Ray P. Whitman, assistant to the general manager at the Consolidated's Buffalo plant.

The contract was characterized as a "small repeat order" as the navy had previously ordered 66 NY-1 and 130 NY-2 planes. They are equipped with Wright Whirlwind motors. Eight of the NY-1's of the new contract have already been sent to the navy, as the Buffalo concern did not stand on ceremony but built and shipped the planes without waiting for the formal contract to be negotiated. The other two will be finished this week. The NY-2 planes will be constructed in a few weeks.

The company shipped to Washington just before Christmas a large plane called an experimental patrol boat. It is being assembled at the capital and will be furnished with two Pratt & Whitney geared engines. It has a range of nearly 3000 miles and will be used by the navy for extended patrol work, being capable of such jaunts as New York to the Panama canal or San Francisco to the Hawaiian islands.

Air Transportation

Consolidated Aircraft Corp. Establish Airport at Buffalo

(Staff Correspondence)

BUFFALO, N. Y.—An airport has been established on Military road north of this city by the Consolidated Aircraft Corp. A steel hangar including a waiting-room and shop has been erected on the east side of the field which is enclosed by a strong wire fence. Red boundary lights are affixed to steel fence posts and ends of the cinder runway have been marked by green lights. A temporary snow fence has been placed on each side of the field to keep the runway clear during the winter.

The company has purchased adjacent land for the future erection of a new factory making possible enlarging of the present airport. At present a Husky Junior and experimental cabin monoplane called Model 10 are being kept at the field.

the other leading institutions.

N.Y. TIMES

NEW BLOOD AT BUFFALO.

Special to The New York Times.

BUFFALO, Jan. 11.—Albert R. Erskine, president of the tudebaker Corporation and chairman of the board of directors of the Pierce Arrow Motor Car Company of Buffalo, was elected to the board of directors of the Marine Trust Company of Buffalo at the annual meeting this week. The company reported net earnings of $4,817,071.62, or 48 per cent on the $10,00,000 capital.

Retirement of E. H. Hutchinson and Harry T. Ramsdell as honorary chairmen of the board of directors of the Manufacturers and Traders Peoples Trust Company marked the annual election of that institution. Mr. Hutchinson and Mr. Ramsdell retained their places on the board. The election of Major R. H. Fleet, president of the Consolidated Aircraft Corporation of Buffalo, to the directorate was the only other major change in the executive personnel. Earnings of more than $11 a share are reported for 1928.

Horace L. Mann was elected to the board of the Liberty Bank of Buffalo. He is vice president and treasurer of the Buffalo General Electric Company and vice president of the Buffalo, Niagara and Eastern Power Corporation.

The community National Bank of Buffalo started the year with Robert W. H. Campbell as president and Edward A. Duerr as chairman of the board. Mr. Duerr was formerly president and Mr. Campbell executive vice president. The directors elected Irving D. Brott vice president in charge of investment securities. He had been associated with the bank unofficially for several years in the investment field.

New Convertible Seaplane Arrives

Washington Post - Jan. 17-29

Craft That Won Contest of Navy to Be Tested; Carries 32 in Cabin.

An experimental type of flying boat, which is directly convertible into a commercial transport plane carrying 32 passengers in a compartment 60 feet long, has arrived at the naval air station for acceptance tests.

The boat, designated the XPY-1, was constructed by the Consolidated Aircraft Corporation, of Buffalo, N. Y., on the winning design in a flying boat competition held by the Navy Department early in 1928.

This seaplane is of monoplane type, with a metal hull and euipped with two 430-horsepower Pratt-Whitney engines, with an emplacement for a third if necessary. Its wing span is 100 feet long and it is euipped with two Richardson type wing-tip pontoons for landing on water.

The contract for this plane was awarded February 28, 1928. It was flown here by Lieut. A. W. Groton, pilot, and S. M. Landon, chief engineer of the constructing company. It is being tried out by the Navy Department's test board.

Evening Star - Washington, D.C.

JANUARY 17, 1929.

Largest Plane in U. S. Is Brought Here For Test Flights at Anacostia Station

What is said to be the largest airplane flying in the United States, was brought to the Anacostia Naval Air Station yesterday for test flights during the next week or 10 days. The plane, which is 100 feet across the wings and which can carry 32 passengers, is an experimental type constructed in conformity with the winning design of last year's flying boat competition of the Navy Department.

The big seaplane, known as the XPY-1, was flown here by Lieut. A. W. Groton, pilot, and S. M. Landon, chief engineer of the Consolidated Aircraft Corporation of Buffalo, N. Y., which constructed the plane, from the Buffalo plant. Contract for the plane was awarded by the Navy Department February 28 last.

The plane, of a monoplane type, with metal hull, has two 430-horsepower Pratt & Whitney Wasp motors and an emplacement for a third motor of the same type. Because of its great wing spread, two wing tip pontoons have been added, a practice not customary with smaller flying boats.

Although equipped for military purposes, it is so designed as to be readily convertible into a commercial type transport plane, with seating provisions for 32 passengers in a cabin 60 feet long.

Huge Navy Flying Boat Dares Potomac Ice for Test

This plane, the Navy's latest thing in flying boats, was made by the Consolidated Aircraft Co., shipped here, and set up at the Naval Air Station. Although it has had two short flights, tests for speed, altitude and load-carrying have not yet been made. The ship has a wing span of more than 100 feet, and can carry 35 passengers. It is powered by two Wasp motors.

THE WORLD TOLD IN

NEW NAVY FLYING BOAT FOR SEA PATROL

This experimental type of flying boat, intended for long sea patrol duty, is now being tested by the Navy at the Anacostia Air Station, Washington, D. C. The craft has a wingspread of 100 feet, and enjoys the luxury of a sixty-foot cabin. Two 430 horsepower motors furnish the propelling force.

BIGGEST PLANE IS TESTED OUT

Victoria, B. C. Colonist 1/23/29

AMPHIBIAN HAS CONVERTIBLE CABIN TO HOLD THIRTY-TWO PASSENGERS

New United States Army Bomber Can Load 2,200 Pounds of Deadly Bombs

(Copyright, 1929, by the North American Newspaper Alliance.)

WASHINGTON, Jan. 22. — The largest amphibian plane in the world and a new type of bombing plane with air-cooled motors, which is to become the standard for the Army Air Corps, were in the national capital today as a vivid demonstration of the latest in military airplane engineering.

The amphibian, constructed for the navy in accordance with the winning planes in the navy's flying boat competition held early last year, is convertible into a commercial transport plane, having comfortable quarters for thirty-two passengers in a cabin sixty feet long. The big amphibian is of the monoplane type, with a spread of 100 feet. It has two Wasp air-cooled motors and an emplacement for a third motor. The ban of navy censorship has been removed as regards performance characteristics of the big ship. It was built by the Consolidated Aircraft Corporation at Buffalo, and flown to this city for official test.

The army bomber is the first of thirty-five new planes, of a type to be known as the Panther. It carries 2,200 pounds of bombs, has a maximum speed of 128 miles per hour and a cruising range of six hours with a full military load. It is a biplane with a span of seventy-five feet and is the first army bomber powered with air-cooled engines, having two 725-horsepower radial motors. The performance of this plane under actual flying conditions also remains unknown, since it was completed only a few days ago and has had but one short test flight. The bomber, a Keystone product, was designed to meet a need for sturdier bombing planes capable of carrying greater loads and attaining greater speed.

To meet the increasing demand for air mail and air transport service across the country, Representative Allen J. Furlow, of Minnesota, today introduced in the House a bill to establish a new Northern States transcontinental airway from New York City to Seattle, across New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, Montana and Idaho. The route would be designated as the Wright Airway in honor of Orville and Wilbur Wright, pioneer aviators.

The Furlow Bill would authorize a survey by the Secretary of Commerce to determine the best route over the states designated and would provide for the preparation and publication of maps covering the route, the location of airports and emergency landing fields, and the establishment of a meteorological service between the fields.

JANUARY 23, 1929.

GIANT FLYING BOAT IS TESTED BY NAVY

Assistant Secretary Warner Declares Department's New Craft Proved Satisfactory.

FORERUNNER OF AIR LINERS

Commercial Orders, Converting Admiral Type Into 32-Passenger Planes, Said to Be Pending.

Special to The New York Times.

WASHINGTON, Jan. 22.—Successful tests of the giant navy flying boat Admiral were conducted at the Naval Air Station at Anacostia this afternoon with Edward P. Warner, Assistant Secretary of the Navy for Aeronautics, as a passenger.

Orders for ships of the same design converted into thirty-two-passenger air liners are said to be contingent upon success in the navy's tests.

The plane, which was built by the Consolidated Aircraft Corporation, Buffalo, N. Y., is a pioneer in this country in large flying boats designed to compete with European types.

One order is reported to be under consideration by the Detroit and Cleveland Navigation Company, which is to inaugurate a flying boat service next Spring on Lake Erie between Detroit and Cleveland and Buffalo.

Plane Lifts Easily From Water.

The tests were made this afternoon under a leaden sky with scattered snow flurries. Captain H. C. Richardson of the navy, designer of the NC craft which crossed the Atlantic in 1919, was in the navigator's cockpit. Lieutenant W. G. Tomlinson was at the controls.

After a score of photographers had snapped the officials and the plane it was wheeled into the water and its handling gear removed. Lieutenant Tomlinson taxied the craft up the Anacostia River, turned, gave the twin motors the gun and roared down the river on a ten-mile wind. The plane lifted easily after a 650-foot run and climbed quickly. Two navy Corsairs, one with photographers, swooped after it in formation.

The Admiral wheeled far south of the station and with the other planes swung back at more than 100 miles an hour over the spectators. The flight continued for almost half an hour.

I. Machlin Laddon, the designer, and Ray P. Whitman, representative of the Consolidated Company, said a third Pratt & Whitney Wasp motor would be mounted in a nacelle atop the single wing. This, they thought, will increase the top speed of the plane from 120 to 135 miles an hour, and the cruising speed from 100 to 110 miles an hour.

Warner Calls Tests Satisfactory.

"The tests were very satisfactory," Assistant Secretary Warner said. "I feel we have made a long step forward in the development of a new type of giant flying boat in this country."

"The boat is very stable," declared Captain Richardson. "It felt good to have something solid under foot."

Lieutenant Tomlinson explained that the craft flew in excellent fashion and handled easily.

The Admiral cost the navy $150,000. Officials said that Secretary Warner hoped by buying the plane to foster the development of large flying boats for commercial air lines.

The plane has a wing spread of 100 feet, and is 60 feet over all. It weighs 13,600 pounds with full load and has an excess carrying capacity of 2,400 pounds.

The craft exceeded the requirements laid down by the navy, which called for a top speed of 114 miles an hour, a 4,000-foot initial climb in ten minutes, and a service ceiling of 9,500 feet, after twenty minutes.

As equipped at present, the craft carries a crew of five, a navigator-bomber in the bow cockpit, two pilots, a radio operator and a mechanic-gunner in the stern emplacement.

HUGE BUFFALO PLANE IS READY FOR TESTS

Largest Amphibian Ship in World Turned Over to Army Air Corps at Capital.

By J. S. EDGERTON.

Copyright, 1929, by Buffalo Evening News and North American Newspaper Alliance.

WASHINGTON, Jan. 22.—The largest amphibian plane in the world and a new type of bombing plane with air-cooled motors, which is to become the standard for the army air corps, were in the national capital today as a vivid demonstration of the latest in military airplane engineering.

The amphibian, constructed for the navy in accordance with the winning planes in the navy's flying boat competition held early last year, is convertible into a commercial transport plane having comfortable quarters for 32 passengers in a cabin 60 feet long. The big amphibian is of the monoplane type, with a spread of 100 feet. It has two 430-horsepower wasp air-cooled motors and an emplacement for a third motor. The ban of navy censorship has been clapped down as regards performance characteristics of the big ship. It was built by the Consolidated Aircraft corporation at Buffalo and flown to this city for official test.

The army bomber is the first of 35 new planes of a type to be known as the "Panther." It carries 2200 pounds of bombs and has a cruising range of six hours, with a full military load. It is a biplane with a span of 75 feet and is the first army bomber powered with air-cooled engines, having two 725 horsepower radial motors. The performance of this plane under actual flying conditions also remains unknown, since it was completed only a few days ago and has had but one short test flight. The bomber, a Keystone product, was designed to meet a need for sturdier bombing planes capable of carrying greater loads and attaining greater speed.

To meet the increasing demand for airmail and air transports service across the country, Representative Allen J. Furlow, of Minnesota, today introduced in the House a bill to establish a new Northern States Transcontinental airway from New York city to Seattle, across New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, Montana and Idaho. The route would be designated as the Wright airway in honor of Orville and Wilbur Wright, pioneer aviators.

The Furlow bill would authorize a survey by the secretary of commerce to determine the best route over the states designated and would provide for the preparation and publication of maps covering the route, the location of airports and emergency landing fields, and the establishment of a meteorological service between the fields.

N. Y. TRAINING PLANE

I am an N. Y. training plane
I'm like a little Ford,
I take the bumps, do all the work
With no thought of reward.

I'm up in the air in the morning,
Flying still at night,
Looping, diving, turning,
Banking, left and right.

Flipper turns and spirals
A student at the stick,
I would surely show 'em "tricks,"
But my pilot is too thick.

I used to be a fast one,
Manouver anyway;
But now I'm getting old, I fear
I won't take off some day.

And then you know they'll take me
And give me quite a rest
They'll put me in a hangar
When I have done my best.

They'll take my engine from me,
Unfasten both my wings,
They'll scrape my bones with emery cloth
And do a lot of things.

They'll take me to the beach again
For I'll be feeling like a top,
They'll fill me up with gasoline
And I'll be ready for a hop.

—R. L. Hunter.

THE PENSACOLA AIR STATION NEWS
22 JANUARY - 1929

United States Daily - Wash. D.C. 1/23/29

Nation's Largest Seaplane Tested by Naval Officers

The Navy's new type of flying boat, the XPY-1, largest seaplane in this country, was successfully tested on January 22 at the Naval Air Station at Anacostia, D. C., it was announced oraily at the Department of the Navy. The Assistant Secretary of the Navy for Aeronautics, Edward P. Warner, and members of the Navy Test Board witnessed the flight.

The plane, built on the winning design of the flying boat competition held by the Navy in 1928, was piloted by Lieut. W. G. Tomlinson. The craft is convertible into a commercial transport type and has a compartment 60 feet long, which will hold 32 passengers. It is a monoplane, with two engines and an emplacement for a third.

BUFFALO EVENING NEWS: WEDNESDAY, JANUARY 23, 1929

BUFFALO-MADE SHIP WINS NAVY AIRMEN

Huge Ship, With 100-Foot Wing Span, Progresses Favorably, Says Warner.

From the Washington Bureau of the Buffalo Evening News.

WASHINGTON, Jan. 23.—Satisfaction over performance of the XPY-1, huge flying boat built by the Consolidated Aircraft company of Buffalo and now undergoing tests here, was expressed by high naval officials today.

Favorable comment followed a test flight Tuesday made by Assistant Secretary of the Navy for Aeronautics Edward P. Warner and Capt. H. C. Richardson, leading authority in the United States on flying boat hulls. Capt. Richardson designed the hull of the XPY-1.

"Excellent progress has been made in development of this ship," Secretary Warner declared as he stepped from the cockpit of the mammoth plane. "She rode as smoothly as a battleship, and showed great flexibility for a boat of her size."

Now in Hands of the Navy.

The XPY-1, which satisfactorily has concluded tests under the auspices of I. M. Laddon, Consolidated engineer whose winning design was selected by the Navy, now is in the hands of the Naval Test board. Although the ship has not been finally accepted by the Navy, responsibility for its performance now is in Navy hands, and the Consolidated company would be reimbursed should the plane crash.

An idea of the tremendous size of the XPY-1, which is expected to be christened "The Admiral" if accepted by the Navy, may be gained by comparison with an airplane of normal size. The ordinary plane has a wing span of about 40 feet, and is about 25 feet long. The XPY-1 has a wing-span of 100 feet and is more than 60 feet long.

Monoplane With All-metal Hull.

The ship is a monoplane with an all-metal hull, being constructed of duralumin, an aluminum alloy. The wings also are constructed of this metal, and covered with fabric. It is powered with two Pratt & Whitney 430 horsepower "Wasp" type motors, and has an emplacement on the top wing for a third motor. Built primarily for patrol purposes, the ship is said to have a cruising radius of around 3000 miles with tanks carrying 1000 gallons of gasoline. It has a speed of 120 miles an hour.

Provision has been made for installation of machine guns in both the front and rear cockpits and it will also carry about a ton of bombs. The hull of the model tested here is entirely closed, but in future commercial models due shortly to be constructed by the Consolidated company a window-lighted cabin is to be built into the hull for convenience of the 32 passengers the ship will be able to accommodate.

Commercial Models Next Year.

It was indicated here that commercial models of the XPY-1 next year will be placed into service by a Buffalo concern for traffic over the Great Lakes area.

Under normal conditions, the ship weighs 13,600 pounds and will take off in 30 seconds time. Despite its size and weight, it will climb to a height of 5500 feet in ten minutes. The ship can be successfully flown, however, at a gross overload weight of 16,000 pounds.

In the test flight Tuesday, the ship was piloted by Lieut. W. G. Tomlinson, attached to the flight test section of the Bureau of Naval Aeronautics.

Before a gallery of naval officers, newspapermen and both movie and still photographers, the XPY-1 was rolled from her hangar to the edge of the Potomac river channel, and the huge motors warmed up in preparation for the flight. On land, the ship is equipped with wheels, which are removed after the boat is in the water.

Take-off is Described.

The ship taxied a half mile up the river channel, and with the Navy officials aboard, turned slowly around and began her take-off. The twin motors roared in unison as she swept past, the momentum of the ship beating the water into frothy foam. Suddenly the ship's hull dipped, and the boat, apparently without effort, lifted itself into the air.

At that moment two regulation observation planes set our from the land side of the naval air station to accompany the XPY-1 on her official flight. The Leviathan of the air and its escort, silhouetted against a glowering sky, looked like an eagle pursued by a couple of English sparrows.

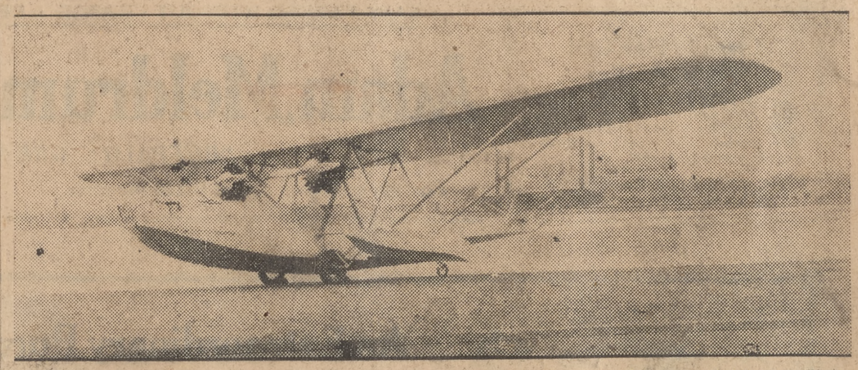
The flight lasted but 15 minutes, with Secretary Warner and Capt. Richardson expressing their pleasure at the smooth handling of the craft by Lieut. Tomlinson.

Third Motor to Be Added.

In the Navy tests to follow, a third motor will be added to the ship. It was stated at the Naval air station today that in the tests already concluded only a few minor changes in the original construction of the ship have been found necessary. The final tests, some of them technical in nature, may take a month or more.

It was learned today that due to the size of the ship, Consolidated officials were unable to freight it to Washington over the route usually used. The plane was dismantled and placed on three flat cars, and due to difficulty in bridge clearances, was re-routed several times, finally reaching Washington via Philadelphia and Baltimore. The plane then was assembled at the Washington Navy yard, and floated across the river to the naval air station on a flat barge.

Buffalo-built Plane Scores in U. S. Navy Tests



—Official Naval Department Photo.

The Admiral, the gigantic seagoing all-metal flying patrol boat, built by the Consolidated Aircraft corporation of Buffalo, has been a complete success in the rigid tests given by experts of the U. S. Navy, for which it was built. The ship is one of the largest yet made and could carry 32 passengers and a crew of four. The craft is shown at the testing field at Washington, D. C., and across the Potomac in the distance can be seen the massive buildings of the War college.

NEW BOAT FLIES 20 MINUTES

Washington Times - Jan. 23 1929

The Consolidated Aircraft Corporation's new type flying boat successfully completed a 20-minute test at the Navy Air Station yesterday. It was piloted by Lieut. W. G. Tomlinson, who had as passengers Capt. H. C. Richardson, Navy authority, who designed the NC flying boat, and E. P. Warner, Assistant Secretary of Navy.

The plane, officially designated XPY-1, was designed by I. Machlin Laddon. It has a wing spread of 100 feet, an overall length of 60 feet, and is powered with two Wasp geared engines of 430 horsepower each. The plane can make 128 miles per hour and has a cruising speed of 100 miles per hour.

If converted to commercial use it would have a capacity of 32 passengers, pilot, mechanic and steward.

New Type Seaplane Passes Tests Here

Washington Post Jan. 23 1929

Largest Craft of Its Kind in United States Has Room for 30 Passengers.

Successful tests of the new experimental type of flying boat, the XPY-1, largest seaplane in this country, were made yesterday at Anacostia Naval Air Station in the presence of Assistant Secretary of the Navy for Aeronautics Warner and members of the Navy Test Board.

Lieut. W. G. Tomlinson flew the plane and Capt. H. C. Richardson, Bureau of Aeronautics, who developed the hull and float lines of the craft, Assistant Secretary Warner and Chief Aviation Machinist Mate Kidder were passengers.

The plane is directly convertible into a commercial type and has a compartment 60 feet long which will hold 32 passengers It was constructed by the Consolidated Aircraft Corporation, Buffalo, N. Y., on the winning design of the flying boat competition held by the Navy early in 1928.

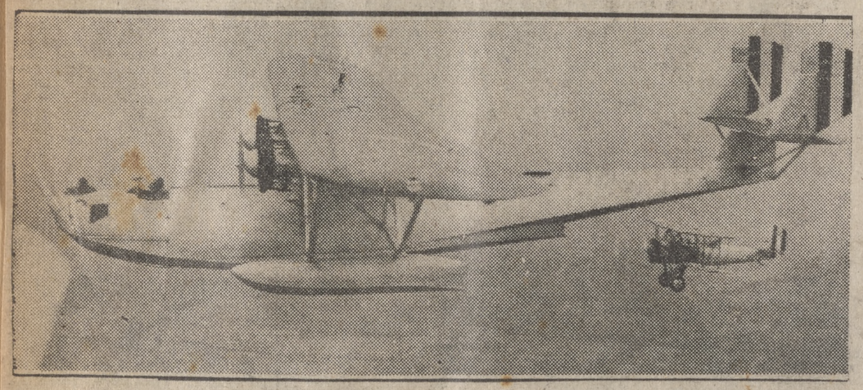
The first 10,000-ton cruiser built for the Navy under the terms of the Washington conference, the Salt Lake City, has just been launched at Camden, N. J. Secretary of the Navy Curtis D. Wilbur and other notables attended the ceremony.



—International News Photo.

The Navy's new giant seaplane, built for patrol duty along the Atlantic seaboard, has just been given a trial flight over Washington, where experts observed its successful performance. Edward P. Warner, assistant secretary of the Navy for aviation, was the first pasenger.

BUFFALO FACES LOSS OF NAVAL PLANE PROJECT

Buffalo Evening News — 1/25/1929

Consolidated Aircraft Corporation Cannot Produce Admiral Seaplane Here Due to Lack of Water Airport Facilities, Says Maj. Fleet.

Spurred to action by the intensive campaign of the Buffalo Evening News, the finance committee of the Common council met in special session Friday afternoon with members of the airport advisory board and representatives of the airplane manufacturing companies to discuss all the phases for formulating a concrete, forward-looking program for the development of Buffalo's airport.

Simultaneously, the need of a seaplane landing station in Buffalo as an inducement to manufacturers of this type of aircraft to locate plants in this city become vitally apparent when it was disclosed that lack of a water airport threatens to put Buffalo entirely out of the running as a center of seaplane manufacture and to cripple seriously its growth as an aviation industrial hub.

To Discuss Seaplane Station.

In addition to delving into every angle of developing and improving the Genesee street municipal flying field, which acknowledgely is the most urgent immediate need to give Buffalo her rightful place in the world of aeronautics, the meeting Friday afternoon also was expected to go into the matter of providing a seaplane landing station here. The importance of such a water airport for the complete development of Buffalo's potentialities as the nation's leading aviation metropolis was brought to the surface with forceful conviction Friday in the revelation that within the last few days the city stood to gain two new aviation industries, devoted to the manufacture of huge planes.

Duffy Makes Winter Flight.

Nathaniel E. Duffy, director of the airport, will report on the location of a proposed seaplane base should it be decided that such a base is needed in Buffalo at the present time. Mr. Duffy made a flight over the harbor and river Thursday in order to see just what the winter conditions are at the junction of the river and lake. He reported that a bay at the northern end of Grand Island was free from ice and suggested that should a seaplane base be needed such a site would be practicable.

The first is that of the newly organized Curtiss-Caproni, Inc. The second is the seaplane division of the Consolidated Aircraft corporation of Buffalo, first made known Thursday by an announcement of Maj. Robert H. Fleet, president, following acquirement of a substantial interest in the concern by Pynchon & Co., New York investment house.

Unable to Locate Here.

But in the same breath which told that the deal means the Consolidated company will begin manufacturing seaplanes after the style of the huge Admiral, recently successfully tested by the Navy, Maj. Fleet said that the manufacturing division could not be located here—as things stand now, minus a water airport.

The largest aircraft in America is the title held by the Admiral. All metal with a 100-foot span, it can hold 32 passengers and a crew of four. Maj. Fleet, saying that manufacture of this type of plane will go forward at once, stated that no selection of a place for manufacturing them has been made, but must be made soon.

"When we built this biggest plane," he said, "we couldn't put it in the water. There was no place in Buffalo to do so.

Cost $10,000 to Land Ship.

"We couldn't find a box car big enough to take some of the sections, so we loaded the parts on three flat cars and then had to route them all around the country in order to avoid bridges and tunnels because the parts were so large.

"We also had to send 14 men along to assemble the ship before the Navy test. It cost probably $10,000 to ship the plane out of Buffalo and turn it over to the Navy. Of course we couldn't make them here if we had to do that with every one made.

"At that rate we simply couldn't consider making the big planes here and I understand the Curtiss-Caproni, Inc., also tried to consider Buffalo as a site for its factory, but have just about given it up because so many other places afford facilities in the water of a seaplane station."

Can't Build New Port.

"We are here and naturally want to stay here if we can," said Maj. Fleet. "We have shown our good faith by building a land port. When it comes to water, we can't afford it."

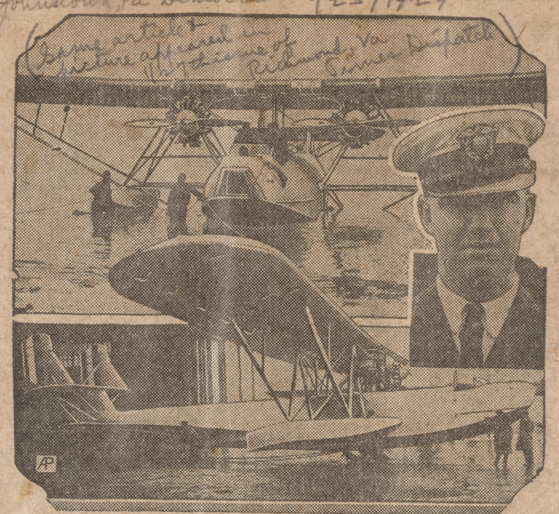
The president further said that the company is negotiating for orders on other big planes and right at the moment is confronted with the situation of having no water airport to test them or take off from when delivery time comes.

"Buffalo without a water airport is now to us," he said, "like Buffalo without a railroad to the average manufacturer. We are thinking now of what next to do. Buffalo needs a water port if any place does."

Big Navy Amphibian Is Built With Cabin For 32 Passengers

Johnstown Pa-Democrat — 1/25/1929

Important part of picture affected in Richmond, Va. Times-Dispatch



The navy's new giant amphibian (above), capable of carrying 32 passengers safely over land and water, is said by aeronautical experts to represent an important advance in the development of flying boats for military patrol purposes and regular commercial air transportation service. Lieut. A. W. Gorton, navy pilot (inset), flew it on its initial trial.

By WILLIAM E. BERCHTOLD
(Associated Press Aviation Editor)

WASHINGTON, Jan. 24.—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft Corp. of Buffalo. Lieut. A. W. Gordon, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport, as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

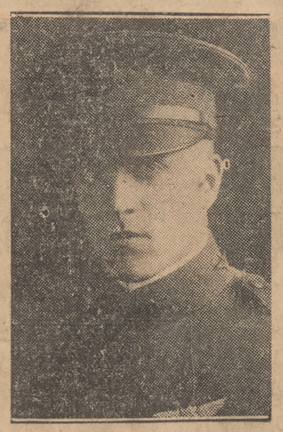
The plane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance over the type used on the navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt and Whitney 400 horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Admiral William A. Moffett, chief of the navy's bureau of aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the navy's need for a fast plane capable of lifting great loads of bombs or patrol work, as well as an advance in equipment for commercial air transportation.

Buffalo Evening News — 1/25

NAMED CHIEF ENGINEER



NORMAN N. TILLEY.

Norman N. Tilley, son of John J. Tilley, 98 Baxter street, has been appointed chief engineer of the Kinner Airplane & Motor corporation, Glendale, Cal., according to word received by his father Wednesday. He will have charge of designing, inspecting and testing planes manufactured at two plants of the concern, one in Colorado and the other in Glendale.

He is called by his new employer, W. B. Kinner, one of the three best aeronautical engineers in this country. Born in Buffalo 36 years ago, he was graduated from School 60, Lafayette high school and Cornell university, with the class of 1915.

He first served in the World war as instructor at Cornell aviation ground school and then took the flying course and qualified as pilot. He served as instructor in gasoline engines at Elington field, Houston, Texas, and Kelly field, San Antonio, Texas, for a time being in charge of the air service mechanics school there. Later he taught in the University of Texas.

BUFFALO FACES LOSS OF NAVAL PLANE PROJECT

Buffalo News — 1/25

Consolidated Aircraft Corporation Cannot Produce Admiral Seaplane Here Due to Lack of Water Airport Facilities, Says Maj. Fleet.

Spurred to action by the intensive campaign of the Buffalo Evening News, the finance committee of the Common council met in special session Friday afternoon with members of the airport advisory board and representatives of the airplane manufacturing companies to discuss all the phases for formulating a concrete, forward-looking program for the development of Buffalo's airport.

Simultaneously, the need of a seaplane landing station in Buffalo as an inducement to manufacturers of this type of aircraft to locate plants in this city become vitally apparent when it was disclosed that lack of a water airport threatens to put Buffalo entirely out of the running as a center of seaplane manufacture and to cripple seriously its growth as an aviation industrial hub.

To Discuss Seaplane Station.

In addition to delving into every angle of developing and improving the Genesee street municipal flying field, which acknowledgely is the most urgent immediate need to give Buffalo her rightful place in the world of aeronautics, the meeting Friday afternoon also was expected to go into the matter of providing a seaplane landing station here. The importance of such a water airport for the complete development of Buffalo's potentialities as the nation's leading aviation metropolis was brought to the surface with forceful conviction Friday in the revelation that within the last few days the city stood to gain two new aviation industries, devoted to the manufacture of huge planes.

Duffy Makes Winter Flight.

Nathaniel E. Duffy, director of the airport, will report on the location of a proposed seaplane base should it be decided that such a base is needed in Buffalo at the present time. Mr. Duffy made a flight over the harbor and river Thursday in order to see just what the winter conditions are at the junction of the river and lake. He reported that a bay at the northern end of Grand Island was free from ice and suggested that should a seaplane base be needed such a site would be practicable.

"I don't know whether there are any seaplanes on the Great Lakes," said Chairman Wylegala, prior to the meeting Friday, "and neither do I know whether it is necessary for us to build a seaplane landing field. If there are no seaplanes in use on Lake Erie and there is no immediate reason for Buffalo spending money for such a field at the present time I shall be against it. That is one reason why we have called this meeting. We want to know all we can about the air needs here and we want every person who is airminded to attend the meeting and give us his ideas."

Full Attendance Expected.

A majority of members of the Council were expected to attend the meeting inasmuch as Councilman William M. Eberhardt had called a meeting of the Council's committee on legislation at the same hour. Notified of the special finance committee meeting, Chairman Eberhardt promptly declared he will postpone his committee meeting until the end of the airport discussion in order that members of both committees can give their undivided attention to the aviation experts.

"We expect to arrive at a definite conclusion in regard to formulating a concrete program for developing and improving the airport," said Councilman Wylegala. "Councilman Harry Fisher has taken the stand that the whole idea of the city's financing the airport is unconstitutional. I personally believe he is not far-sighted, but his criticisms must be met frankly. Any other criticisms of the city's program should also be ironed out at Friday's meeting."

Fisher Still Opposes Plan.

Councilman Fisher Thursday reiterated his opposition to the city's action in awarding contracts for two new hangars at the airport. He declared he did not want to hinder the growth of Buffalo, or be a stumbling block in the path of those working for a larger airport, but said he could not conscientiously support the present plan, which involves the expenditure of close to $1,000,000 for airport improvements.

"The city sells gasoline, tires and oil at the airport," said Mr. Fisher. "In addition, it operates a restaurant, and Director Duffy has warned that this must be made larger. I can not find any ordinance or statute that permits the city to go into businesses of this nature. Remember, this is the taxpayers' money we are handling. I am not sure that it is legal for the Council to take the people's money for such a purpose.

Endorses Cleveland Plan.

"The article appearing in the Evening News Wednesday showing how Cleveland operates its airport sums up my ideas entirely. In Cleveland the city did not put its hand in its pocket and spend millions of dollars to promote the business of corporations engaged in building and flying airplanes. The Cleveland authorities merely leased the airport to these corporations and used the rentals to reduce the taxes. That is what we should do here. I believe the corporations can build their own hangars and hire their own employes.

"Under the present plan the city will have to hire an army of employes and supply them with a restaurant in which to eat. The rentals we are charging aviation corporations are only nominal. That means that the entire cost of operating the field comes out of the taxpayers' pockets. Remember also that when the field is leased to private corporations and individuals that they have the right to keep persons and airplanes out of their territory. It loses its public character although entirely maintained by public funds. I may sound like an obstructionist of the worst kind—but this is the time to study these things. At least we should consider the Cleveland plan."

The opportunities that are involved in Buffalo's failure to provide ideal airport facilities are shown by two recent incidents.

The first is that of the newly organized Curtiss-Caproni, Inc. The second is the seaplane division of the Consolidated Aircraft corporation of Buffalo, first made known Thursday by an announcement of Maj. Robert H. Fleet, president, following acquirement of a substantial interest in the concern by Pynchon & Co., New York investment house.

Unable to Locate Here.

But in the same breath which told that the deal means the Consolidated company will begin manufacturing seaplanes after the style of the huge Admiral, recently successfully tested by the Navy, Maj. Fleet said that the manufacturing division could not be located here—as things stand now, minus a water airport.

The largest aircraft in America is the title held by the Admiral. All metal with a 100-foot span, it can hold 32 passengers and a crew of four. Maj. Fleet, saying that manufacture of this type of plane will go forward at once, stated that no selection of a place for manufacturing them has been made, but must be made soon.

"When we built this biggest plane," he said, "we couldn't put it in the water. There was no place in Buffalo to do so.

Cost $10,000 to Land Ship.

"We couldn't find a box car big enough to take some of the sections, so we loaded the parts on three flat cars and then had to route them all around the country in order to avoid bridges and tunnels because the parts were so large.

"We also had to send 14 men along to assemble the ship before the Navy test. It cost probably $10,000 to ship the plane out of Buffalo and turn it over to the Navy. Of course we couldn't make them here if we had to do that with every one made.

"At that rate we simply couldn't consider making the big planes here and I understand the Curtiss-Caproni, Inc., also tried to consider Buffalo as a site for its factory, but have just about given it up because so many other places afford facilities in the water of a seaplane station."

Can't Build New Port.

"We are here and naturally want to stay here if we can," said Maj. Fleet. "We have shown our good faith by building a land port. When it comes to water, we can't afford it."

The president further said that the company is negotiating for orders on other big planes and right at the moment is confronted with the situation of having no water airport to test them or take off from when delivery time comes.

"Buffalo without a water airport is now to us," he said, "like Buffalo without a railroad to the average manufacturer. We are thinking now of what next to do. Buffalo needs a water port if any place does."

Buffalo Airport Inspected by Philadelphia Officia

A delegation representing the city Philadelphia, led by Alexander M doch, head of the Department of P lic Works, inspected the Buffalo m nicipal airport Friday. Philadelphia soon to build a municipal port and Murdoch will be in charge of constr tion. He said he was impressed by size and location of the flying fi here.

The party is on its way to Philad phia after visiting the airports at D troit and Cleveland. Others in party are John E. Allen, engineer the Department of Public Works; R ert Barry, of the Philadelphia Even Ledger, and Walter G. Long, of Philadelphia Bulletin.

The Navy's new giant seaplane, built for patrol duty along the Atlantic seaboard, has just been given a trial flight over Washington, where experts observed its successful performance. Edward P. Warner, assistant secretary of the Navy for aviation, was the first pasenger.

Bankers to Acquire Interest in Consolidated Aircraft

Boston Transcript - 1/25/29

New York, Jan. 25—A substantial interest in the Consolidated Aircraft Corporation of Buffalo, which is pioneering in the design and construction of large flying boats, will be acquired soon by Pynchon & Co. One of the new flying boats, the giant Navy boat, Admiral, built under the personal supervision of R. H. Fleet, president of the corporation, was given a successful test this week at the Anacostia Naval Air Station and exceeded the Navy's requirement calling for a top speed of 114 miles an hour. The equipment includes two Pratt & Whitney Wasp motors, but it is planned to add a third motor which, it is believed, will increase the top speed of the plane from 120 to 135 miles an hour, and cruising speed from 100 to 110 miles an hour. Consolidated Aircraft Corporation has supplied the greater part of the Army and Navy requirements for training plants during the past five years.

UNLISTED ARE IRREGULAR ON DULL TRADING

Springfield, Mass-news 1/26/29

New York, Jan. 26—Active demand for Consolidated Aircraft corporation, a newcomer to the aeronautical group of the over-the-counter market, featured trading yesterday. Following the announcement of New York bankers taking an interest in the company and the receipt of an order for 20 planes from the navy department, the stock jumped 5 points. Consolidated Instrument was another bright spot, scoring a substantial advance.

With the exception of Neisner Brothers preferred which advanced 4 points, the chain store group held at about its previous closing level. Utilities turned dull in late trading and no definite trend was discernible.

While the bank stocks were inclined to irregularity, Guaranty Trust and Commerce were strong features. Insurance shares resumed activity, and there were a few modest advances. Late demand brought about a jump in County Trust, which closed up 50 points, and Central Union gained 45. There was a better tone in Corn Exchange, Bank of New York and Trust and New York Title and Mortgage. Hanover and Commercial National were soft, dropping 15, while Fidelity and Guardian National eased 10.

New Flying Boat Gets Try-Out at Anacostia

ANACOSTIA, D. C.—Tests and acceptance trials of the XYP-1, an experimental type of flying boat developed by the Consolidated Aircraft Corp. of Buffalo, N. Y., are now under way here. The craft follows the winning design of the flying boat competition held by the Navy early in 1928.

This seaplane is of a monoplane type with metal hull, has two 430 hp. Pratt & Whitney Wasp engines and emplacement for a third engine. Its wing span is 100 ft. and it has two Richardson type wing tip pontoons.

The contract for this plane was awarded on Feb. 28, 1928, and the plane was flown for the first time at the Naval Air Station, Anacostia, on January 10, with Lieut. A. W. Gorton, U. S N., pilot, and M. J. M. Laddon, chief engineer, Consolidated Aircraft Corp., observer. The plane was flown again on Friday, January 11, and is now being tried out by the Navy's Test Board at Anacostia.

This flying boat is directly convertible into a commercial type transport and has a compartment 60 ft. long designed to hold 32 passengers.

Test Flying Boat Built for Navy by Chicago Co.

Chicago Tribune 1/26/29

[Chicago Tribune Press Service.]

New York, Jan. 25.—Pynchon and company, it was announced today has acquired an interest in the Consolidated Aircraft corporation of Chicago, contractors for the government for training planes. This company has recently completed a large flying boat for the navy department which is now undergoing tests at the Anacostia naval air station at Washington.

Investors, Inc.

Boston Globe - 1/26/29

SUBSTANTIAL STOCK INTEREST

Announcement is made that Pynchon & Co will acquire a substantial interest in Consolidated Aircraft Corporation of Buffalo, which is pioneering in the design and construction of large flying boats and which has supplied the greater part of the army and navy requirements for training planes during the last five years.

THE NAVY INTRODUCES SOMETHING NEWER AND LARGER IN FLYING BOATS

Trial flight over Washington, D. C., of the first of the new XPY model flying boats delivered to the United States Navy. The ship, built according to the winning design in a Navy Department competition, can be converted into a commercial transport plane carrying 32 passengers in a cabin 60 feet long. It was accompanied in its flight by several combat planes. (P. & A.)

FLYING BOAT IS CONVERTIBLE

Detroit, News 1/27/29

Navy Produces Defense Plane Also Suitable for Commercial Use.

(SPECIAL TO THE DETROIT NEWS.)

WASHINGTON, Jan. 26.—Military authorities often have urged commercial airplane builders to design their craft with a view to their conversion for military flying in the event of emergency, but now the tables are turned, and the Navy has produced a flying boat convertible for commercial use.

In its report of the boat's first trials the Navy specifies that "this boat is directly convertible into a commercial type transport, and has a compartment 60 feet long which will accommodate 32 passengers."

The new boat is designated the XPY-1 in technical records, and has been named the "Admiral." It was built from the prize-winning flying boat design of 1928 by the Consolidated Aircraft Corp., of Buffalo. The contract was let last February following a competition among manufacturers, but the boat was not delivered until recently.

The first test flights were made by Lieut. A. W. Gorton and M. J. M. Laddon, Consolidated's chief engineer. Edward P. Warner, Assistant Secretary of the Navy for Aeronautics, was the first passenger. At present exhaustive load-carrying and performance trials are being flown by pilots of the Navy Test Board.

This seaplane is a semi-cantilever monoplane with wing floats suspended on struts from the wing. The hull is built of metal, and contains open cockpits forward for pilots and observers. Two Pratt & Whitney Wasp engines of 425 horsepower each are mounted on the wing with tractor propellers. The wing span is 100 feet.

Navy Plane To Carry 32

Huge Amphibian Ship Flown By Lieut. Gorton.

Toledo, O, Times 1/27/29

WASHINGTON, Jan. 26.—(AP)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft Corp. of Buffalo. Lieut. A. W. Gorton, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

ARMY AND NAVY GET NEW PLANES

Cleveland-Plain Dealer 1/27/29

Former Draws First of 35 Bombers; Latter Obtains Giant Amphibian.

BY J. S. EDGERTON.

(Staff Correspondent Cleveland Plain Dealer and North American Newspaper Alliance.)

WASHINGTON, Jan. 26.—The largest amphibian plane in the world, and a new type of bombing plane with air-cooled motors which is to become the standard for the army air corps, were in the national capital today as vivid demonstrations of the latest in military airplane engineering.

The amphibian, constructed for the navy in accordance with the winning planes in the navy's flying boat competition held early last year, is convertible into a commercial transport plane having comfortable quarters for 32 passengers in a cabin 60 feet long.

The big amphibian is of the monoplane type, with a spread of 100 feet. It has two 430-horse power Wasp air-cooled motors and an emplacement for a third motor.

The ban of navy censorship has been clapped down as regards performance characteristics of the big ship. It was built by the Consolidated Aircraft Corp. at Buffalo and flown to this city for official test.

First of 35 Airships.

The army bomber is the first of 35 new planes of a type to be known as the "Panther." It carries 2,200 pounds of bombs, has a maximum speed of 128 miles an hour and a cruising range of six hours, with a full military load. It is a biplane with a span of 75 feet and is the first army bomber powered with air-cooled engines, having two 725-horse power radial motors.

The performance of this plane under actual flying conditions also remains unknown since it was completed only a few days ago and has had but one short test flight.

The bomber, a Keystone product, was designed to meet a need for sturdier bombing planes capable of carrying greater loads and attaining greater speed.

* * *

To meet the increasing demand for air mail and air transport service across the country, Representative Allen J. Furlow of Minnesota recently introduced in the House a bill to establish a new northern states transcontinental airway from New York City to Seattle, across New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, Montana and Idaho. The route would be designated as the Wright Airway, in honor of Orville and Wilbur Wright, pioneer aviators.

Lack of Marine Airport May Cost Buffalo Two Big Seaplane Plants

If City Were to Have Launching Facilities, Consolidated Aircraft Corp. Would Build There, Says Fleet—Keys Cites Curtiss—Caproni Needs

Special to DAILY NEWS RECORD

Buffalo, Jan. 28. — Lack of a marine airport on the waterfront for seaplanes and amphibians may cost Buffalo two major industries for the production of seaplanes, it was said by Maj. Robert H. Fleet, president of the Consolidated Aircraft Corp., and C. Roy Keys, vice-president of the Curtiss Aeroplane & Motor Corp., both of which are planning new factories for manufacturing flying boats.

"Under existing conditions there is no place in Buffalo for launching the new type of flying boats we will produce for the navy and commercial transport companies," explained Major Fleet. "The giant amphibian we tested recently in Washington for the Navy Department cost us $10,000 to ship from Buffalo to Washington by rail.

"We could not get box cars large enough for some of the sections so we loaded these parts onto three flat cars and had to route them around the country to avoid bridges and tunnels. We also had to send 14 men along to assemble the ship before the navy test. Under these circumstances it would be impossible to build these planes at the local plant, but if there were facilities for launching seaplanes, the local plant would be enlarged to provide for their production here."

C. Roy Keys, of the Curtiss company, said that the giant flying boats to be produced in this country by the newly organized Curtiss-Caproni, Inc., also may be forced to construct its seaplane factory elsewhere because of lack of a marine airport. Mr. Keys says that naturally the company shows a preference for Buffalo because of the tremendous investment of the Curtiss interests in this city but, without a marine airport, there would be no facilities for testing the new planes or starting them into the air for delivery destinations. Only the largest size craft will be produced by Curtiss-Caproni, Inc.

Big Navy Amphibian Built With Cabin for 32 Passengers

Aeronautical Experts Are Stirred With Flying Grace of Big Bird.

(Associated Press.)

Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the Navy's flying boat competition, staged last year and won by the Consolidated Aircraft Corporation, of Buffalo. Lieut. A. W. Gordon, Navy pilot, who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia Naval Air Station prior to its acceptance by the Navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by floating boat designers until the present ship was put in production. Although the Navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type, said to represent an advance over the type used on the Navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt & Whitney 400-horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Admiral William A. Moffett, chief of the Navy's Bureau of Aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the Navy's need for a fast plane capable of lifting great loads of bombs for patrol work, as well as an advance in equipment for commercial air transportation.

Naval Airplane Is Designed For 32 Passengers

Big Amphibian Represents Important Advance in Flying Boat Advancement

By William E. Berchtold.

WASHINGTON, Jan. 26—(AP)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft Corporation, of Buffalo. Lieut. A. W. PLANS STOCK OFFERING

Pynchon & Co. May Market Consolidated Aircraft Shares.

Buffalo News — 1/30/29

NEW YORK, Jan. 30.—Pynchon & Co. are planning a public offering of 82,175 shares of no-par common stock of the Consolidated Aircraft corporatio which engages in the design, construction and sale of airplanes and no has a wide variety of different model on the market.

The corporations owns, except for few qualifying shares, Frontier Enterprises, Inc., which, through another wholly owned subsidiary, leases Consolidated's private airport, which is used as a base for sightseeing trips over Niagara Falls and as a training field for aviators. The corporation now has three plants in Buffalo, and its own airport comprising 90 acres near th city, including a factory site of acres.

Capitalization of the corporation co sists of 750,000 shares of common stock, of which 550,000 shares will be outstanding. With the excepting of its first year, the corporation has not failed to earn a profit, and during the last two years its net earnings after all charges have amounted to approximately $1.50 per share on the outstanding stock. There are no bonds, notes, or other obligations except current bills, outstanding.

The purpose of the sale of this stock, according to a statement by the corporation, is to establish a broad national market for the securities as the future progress of the airplane industry will depnd to a large extent on the public opinion behind its growth and the participation of the public itself in the ownership of the individual companies.

Different models now being manufactured by the corporation include the Consolidated "Husky," a training plane, used by the government, the design and rights to which have been sold, but will, however, be manufactured temporaritly under a cost plus contract by Consolidated Aircraft; Consolidated "Admiral," a seaplane used by the Navy, and Consolidated "Husky Junior," a commercial and training and sports plane.

Consolidated Aircraft Corporation, through Pynchon & Co., is offering 82,175 shares of no par common stock at $25 a share. The corporation is one of the most prominent in the industry and owns three plants in Buffalo. With the exception of its first year the corporation has not failed to earn a profit, and during the last two years earnings have been $1.50 a share. Capitalization consists of 750,000 shares of common stock of which 550,000 shares will be outstanding.

BUFFALO EVENING NEWS: W

Seaplane Base Is Selected During Flight

January 30, 1929.

—Evening News Staff Photo.

Members of the party that gathered at the Buffalo airport Wednesday for an airplane inspection trip of the harbor to view, from the air, the several sites suggested as suitable for a seaplane landing station, are, left to right: Lawrence D. Bell, sales manager, Consolidated Aircraft corporation; W. L. Yule of the Ford Motor company; E. J. Beach, assistant secretary of the Chamber of Commerce, who, incidentally, made his maiden flight; Dexter P. Rumsey, member of the Airport Advisory board; Airport Director Nathaniel E. Duffy; William T. Jebb Jr., chairman of the aeronautics committee of the Chamber of Commerce; Maj. Reuben H. Fleet, president of the Consolidated Aircraft corporation; Miss Lauretta Lederer, secretary to Maj. Fleet; Dennis W. Taylor, pilot of the Ford tri-motored plane in which the flight was made, and George E. Marlatt, Buffalo manager of the Ford airlines.

CONSOLIDATED AIRCRAFT CORP. STOCK OFFERED

Buffalo Express — 1/31/1929

Issue of 82,175 shares announced by Pynchon & Co. and M. & T.-Peoples Trust

Pynchon & Co. and the Manufacturers & Traders-Peoples Trust Company today announce an offering of 82,175 shares of no par common stock of the Consolidated Aircraft Corporation which engages in the design, construction and sale of airplanes and now has a wide variety of different models on the market. The corporation owns, except for a few qualifying shares, Frontier Enterprises, Inc., which through another wholly owned subsidiary, leases Consolidated's private airport, which is used as a base for sightseeing trips over Niagara Falls and a training field for aviators. The corporation now has three plants in Buffalo, and its own airport comprising 90 acres near that city, including a factory site of twenty acres.

Capitalization of the corporation consists of 750,000 shares of common stock, of which 550,000 shares will be outstanding. With the exception of its first year, the corporation has not failed to earn a profit, and during the last two years its net earnings after all charges have amounted to approximately $1.50 per share on the outstanding stock. There are no bonds, notes or other obligations except current bills outstanding. The purpose of the sale of this stock, according to a statement by the corporation, is to establish a broad national market for the securities as the future progress of the airplane industry will depend to a large extent on the public opinion behind its growth, and the participation of the public itself in the ownership of the individual companies.

Different models now being manufactured by the corporation include the Consolidated Husky, a training plane, used by the government, the design and rights to which have been sold, but will, however, be manufactured temporarily under a cost plus contract by Consolidated Aircraft; Consolidated Admiral, a seaplane, used by the navy, and Consolidated Husky Junior, a commercial and training and sports plane.

The Consolidated Admiral is the first of a series of flying boats (all-metal except wing covering) for which the corporation expects to develop an increasing market both government and commercial and it will shortly be followed by the Commodore, which is purely a commercial type.

Consolidated Aircraft Corporation

Common Stock

NO PAR VALUE

CAPITALIZATION

	Authorized	Outstanding
Common Stock, no par value.....	750,000 Shares	550,000 Shares

Transfer Agent: Guaranty Trust Company of New York — *Registrar:* Empire Trust Company, New York

Mr. R. H. Fleet, President of the Corporation, summarizes from his letter of January 28, 1929, as follows:

Company: Consolidated Aircraft Corporation was incorporated under the laws of Delaware in May, 1923, to engage in the design, construction and sale of airplanes. The Corporation owns entirely (except for 2 qualifying shares) Frontier Enterprises, Inc. (a new New York corporation) which, through the medium of another wholly-owned subsidiary, Niagara From-the-Air, Inc. (a New York corporation), leases Consolidated's private airport, and will operate therefrom Consolidated aircraft, on sight-seeing trips in the air over Niagara Falls, in the training of aviators, etc. The Corporation owns its own airport of 90 acres, near Buffalo, N. Y., which includes a factory site of 20 acres. It is operating in Buffalo three plants with a total floor area of 105,000 square feet, under favorable leases, with opportunity for ample expansion.

Business: Consolidated Aircraft Corporation has been designing and manufacturing the following types of airplanes (and spare parts therefor) for the customers indicated: *Consolidated "Husky"*, a training airplane which, with different features, is designated officially by the United States Government as follows: Army—PT-1, PT-2, PT-3, PT-3A; Navy—NY-1, NY-2, NY-3; National Guard—O-17. *Consolidated "Admiral"*, a seaworthy, long-distance, multi-engine flying boat for patrol duty by the United States Navy and designated by it "XPY-1". *Consolidated "Husky Junior"*, a commercial training and sport airplane, the design and rights to which have been sold, and the airplane re-named in honor of the founder of Consolidated Aircraft Corporation. It will, however, be manufactured temporarily under a cost-plus contract by Consolidated Aircraft Corporation. One or more of these types of airplanes are in current use by the following customers: U. S. Army Air Corps, N. S. Naval Air Service, U. S. Marine Corps, U. S. National Guard, U. S. Organized Reserves, U. S. Naval Reserves, Royal Canadian Flying Corps, Cuban Army Air Corps, Brazilian Army and Brazilian Navy, Peruvian Army and Siamese Air Corps. These types of aircraft have been flown more than 16,500,000 miles in the service of the United States alone, in which flying they have established an unsurpassed record for safety, durability and ease of maintenance. Consolidated airplanes are now located at more than one hundred forty places in the United States and are also in Canada, Cuba, South America and Asia.

Earnings: With the exception of its first year, Consolidated Aircraft Corporation has not failed to earn a profit and in the last two years its net earnings after all charges have amounted to approximately $1.50 per share on the present outstanding stock. Its products are giving universal satisfaction and its fine organization, factory facilities, and tooling equipment are such that it has been able and can continue to compete upon any basis with any competitor in the making and marketing of such aircraft.

Assets: All fixed assets of the Corporation have been suitably depreciated and cash and marketable securities are more than sufficient for the present requirements of the Corporation. There are no bonds, notes or other obligations (except current bills) outstanding.

Purpose: The present owners are convinced that all aviation companies must depend upon public support for their proper growth and development and that public participation in ownership with themselves is the best method of guaranteeing public support of an industry growing so rapidly. The purpose of this sale is, therefore, to establish a market for the stock, and application will be made to list it on one or more of the country's recognized security exchanges.

Management: The operation of the Corporation remains in the hands of the organization responsible for its successful development. This organization consists of men trained and experienced in all phases of design, manufacture and sale of aircraft. All officers, executives and more than fifty men employed in "key" positions by the company, have had more than ten years of aviation experience. The Directors of the Corporation are:

R. H. FLEET, *President, Consolidated Aircraft Corporation, Buffalo, N. Y.*

GEORGE M. PYNCHON, JR., *of Pynchon & Co., New York*

FRANCIS DEAN SCHNACKE, *of Craighead, Cowden, Smith & Schnacke, Dayton, Ohio*

PRESTON LOCKWOOD, *of Davisson & Manice, New York*

LAWRENCE D. BELL, *Vice-President, Consolidated Aircraft Corporation, Buffalo, N. Y.*

R. P. WHITMAN, *Consolidated Aircraft Corporation, Buffalo, N. Y.*

GEORGE NEWMAN, *Vice-President, Consolidated Aircraft Corporation, Buffalo, N. Y.*

This information, while not guaranteed, is taken from sources which we believe to be reliable.

All legal matters relating to the issuance of this stock have been passed upon by Messrs. Davisson & Manice, New York City, for the Bankers, and by Messrs. Craighead, Cowden, Smith & Schnacke, Dayton, Ohio, for the Corporation. It is expected that delivery of these shares in the first instance will be made in the form of temporary certificates. We offer this stock when, as and if received by us and subject to the approval of counsel and to prior sale.

This offering involves no new financing for the Corporation.

Price $25 per share

PYNCHON & CO. — MANUFACTURERS & TRADERS-PEOPLES TRUST CO.

Inspect Seaplane Port Sites From Air

Buffalo Courier 1/31/1929

A special committee yesterday inspected from the air five sites for the proposed seaplane landing station. The members who made the trip are, left to right: Lawrence D. Bell, sales manager, Consolidated Aircraft Corporation; W. L. Yule of the Ford Motor Company; E. J. Beach, assistant secretary of the Chamber of Commerce; Dexter P. Rumsey, member of the airport advisory board; Airport Director Nathaniel E. Duffy; William T. Jebb, Jr., chairman of the aeronautics committee of the Chamber of Commerce; Maj. Reuben H. Fleet, president of the Consolidated Aircraft Corporation; Miss Lauretta Lederer, secretary to Maj. Fleet; Dennis W. Taylor, pilot of the tri-motored plane in which the flight was made, and George E. Marlatt, Buffalo manager of the Ford airlines.

Group Favors Area At Foot of Hudson Street

Difficulties, however, may bar use of location approved by committee

An airplane ride over the harbor and river by those interested in the development of aviation and in the establishment of a port for seaplanes at Buffalo yesterday resulted in consensus of opinion that the port should be located on city-owned water front lands off the foot of Hudson street, but it appeared later that various difficulties might prevent use of this site.

Of five sites viewed from the air by a special committee, the site on lands included in the proposed municipal water front park development was hailed as a most likely location for a marine airport. Before reaching a definite verdict, however, the committee determined to make a further study. In view of statements made later by Maj. George H. Norton, former city engineer and engineer for the grade crossing commission, who is making a special study of the problem at the request of the Chamber of Commerce, it is not at all certain that that will be the location of the port.

Doubts Its Merit

Maj. Norton explained that even if obstacles, such as interference with a navigable government channel, were overcome, the site would not receive greater than a No. 3 rating as a seaplane port by the United States department of commerce. He is inclined to doubt availability of the site.

It appears that the federal department of commerce has established a rating for seaports for airplanes. In the first group are listed such ports as permit a sea runaway, 4,000 feet in length, in all directions. Admittedly there is no such site available in the vicinity of the city.

In the second class of rating are sites which have two runaways permitting planes to course 4,000 feet in one direction. These runways must be 600 feet wide. Studies made by Maj. Norton lead him to the belief that there are only two such sites available. He is not prepared to say that they are practical, from the viewpoint of flying because of the conditions of the wind and current, but they are ample from the angle of distance of runways alone.

Other Suggestions

These are a site outside the breakwater at the head of the Niagara River and opposite the proposed city water-front park lands and a site in the river off the Riverside park.

There are four sites which Maj. Norton believes might be classed by the government as class three rating seaports, requiring runways of 3,600 feet long. One is near the Canadian pool elevator, along the Hamburg turnpike, and is suggested only for temporary use.

A second is on government owned lands between the lighthouse and the foot of South Michigan avenue. Objection to this site is raised because vessels at all times of the year lie inside the breakwall and might interfere with the landing of seaplanes and because the city's plan to develop this property as moorage space for vessels.

The third site is at the southerly end of Grand Island, but this is viewed with favor because of the distance from the center part of the city and of the requirements for boats to bring passengers from seaplanes to the shore.

Georgia Street Site

The fourth possible site is one which seemed, from the air, to be highly regarded by aviation experts. This is on city-owned land extending south from the water filtration plant. The city planned to use the fill from the plant to the foot of Georgia street as a waterfront park. It is filled in to Pennsylvania street, which is about five blocks north of the southerly end of the proposed park.

Maj. Norton explained that it will be possible to lay out two runways of the third class as required by the department of commerce in this area providing the government does not raise objections. The landing place is inside the breakwater. In one section of the proposed site, the water is extremely shallow, rocks rising almost to the surface of the water. The government requires a depth of six feet. The biggest objection, however, is that one of the runways must cross the ship channel, outlined by government buoys and stakes, entering the so-called Black Rock harbor.

Land Inspection Next

It was because of unfamiliarity with the conditions that the special committee failed to arrive at a definite agreement after their inspection trip. Dexter P. Rumsey of the airport advisory council, Airport Director Nat E. Duffy, William T. Jebb, Jr., chairman of the aeronautical committee of the Chamber of Commerce, L. D. Bell, general sales manager of Consolidated Aircraft, all voiced a belief that the site seemed most satisfactory. But it was agreed to find out actual conditions by a land inspection before final decision was reached. This trip will probably be made on Friday.

In view of the explanation by Maj. Norton, the airport experts may be forced to abandon the idea of locating on the city-owned land. On the contrary, however, some agreement may be made with the government which would iron out the difficulties

The inspection tour was made in a tri-motor plane. The take-off was made shortly after the craft arrived from Detroit. It was used through the courtesy of W. L. Yule, manager of the Ford plant at Buffalo, and George A. Marlatt, operations manager of the Ford air lines. The pilot was Dennis Taylor. Mr. Rumsey was the only airport advisory council member aboard. One of the interested passengers was E. J. Beach, assistant secretary of the Chamber of Commerce.

Name Duffy Chairman

The first site inspected from the air was that near the Canadian Pool elevator. Then the plane swung northward, through swirling snow that at times obscured the earth, along the water front as far as one site near the Wheatfield farm which had been suggested as a possibility.

The aviation experts were highly enthusiastic about the site at the foot of Hudson street inside the breakwater and did not indicate what other site might be considered as suitable in the event that this cannot be used.

At the suggestion of Mr. Bell, Airport Director Duffy was named chairman of a committee to obtain data as to the depth of the water and other factors entering into use of the proposed site.

Another meeting of the airport advisory council was held yesterday afternoon at which a decision to urge the common council to purchase additional 36 acres of land was ratified. If the council agrees to buy this land, the airport board will recommend that the property be leased to aircraft manufacturing companies so that they may build their own hangars. The rental fees will be based upon the cost of buying and developing the land. It is not proposed to burden the companies with a share of the carrying charges for developing the entire airport of 518 acres.

AIRCRAFT SHARES OFFERED

Bankers Offer Capital Stock of Consolidated Company.

An offering of 82,175 shares of no par value common stock of the Consolidate Aircraft corporation, 2050 Elmwood avenue, was announced today by Pynchon & Co., New York and the Manufacturers & Traders-Peoples Trust company.

Application will be made to list the stock on one or more of the country's recognized security exchanges.

Net earnings on the stock during the last two years, after all charges, have amounted to approximately $1.50 per share. At present, there are no bonds, notes or other obligations, except current bills, outstanding on the company's books.

The corporation now has three Buffalo plants and its own airport, comprising an area of 90 acres, including a factory site of 20 acres.

Different models now being manufactured by the corporation include the Consolidated Husky, a training plane, used by the government, the design and rights to which have been sold, but will, however, be manufactured temporarily under a cost plus contract by Consolidated Aircraft; Consolidated Admiral, a seaplane, used by the navy, and Consolidated Husky Junior, a commercial and training and sports plane.

The Consolidated Admiral is the first of a series of flying boats (all-metal except wing covering) for which the corporation expects to develop an increasing market both government and commercial and it will shortly be followed by the Commodore, which is purely a commercial type.

AIRCRAFT STOCK OVER-SUBSCRIBED

Brooklyn Times 1/31/29

82,175 Shares of Consolidated Offered at $25 Each By Pynchon & Co.

Pynchon & Co. offered today 82,175 shares of no par common stock of the Consolidated Aircraft Corp. priced at $25 per share. The issue was quickly oversubscribed.

The corporation is one of the most prominent units of the aviation industry whose activities embrace the design, construction, and sale of airplanes as well as conducting a transportation department. The latter phase of the business is handled through a subsidiary, Frontier Enterprices, Inc., which, through another wholly owned subsidiary, Niagara From-the-Air, Inc., leases Consolidated's private airport and uses it as a base for training aviators and conducting sightseeing trips over Niagara Falls. The corporation now has three plants in Buffalo, and its own airport comprising 90 acres near that city, including a factory site of 20 acres.

Capitalization of the corporation consists of 750,000 shares of common stock, of which 550,000 shares will be outstanding. With the exception of its first year, the corporation has not failed to earn a profit, and during the last two years its net earnings after all charges have amounted to approximately $1.50 per share on the outstanding stock.

There are no bonds, notes, or other obligations except current bills outstanding. The purpose of the sale of this stock, according to a statement by the corporation, is to establish a broad national market for the securities as the future progress of the airplane industry will depend to a large extent on the public opinion behind its growth, and the participation of the public itself in the ownership of the individual companies.

CONSOL. AIRCRAFTS OFFER SOLD COON AT $25 A COMMON SHARE

Corporation Designs, Constructs and Sells Airplanes, Besides Conducting Transportation Dept.

NY Evening Post 1/31/29

Pynchon & Co. sold today 82,175 shares of no par common stock of the Consolidated Aircraft Corporation, priced at $25 a share. The corporation's activities embrace the design, construction and sale of airplanes as well as conducting a transporation department through a subsidiary, Frontier Enterprices, Inc. This, through another wholly owned subsidiary, Niagara From-the-Air, Inc., leases Consolidated's private airport and uses it as a base for training aviators and conducting sightseeing trips over Niagara Falls. The corporation has three plants in Buffalo and its own airport, comprising ninety acres near that city, including a factory site of twenty acres.

Capitalization consists of 750,000 shares of common stock, of which 550,000 shares will be outstanding. With the exception of its first year, the corporation has not failed to earn a profit, and in the last two years earnings after all charges amounted to approximately $1.50 a share on the outstanding stock. There are no bonds, notes or other obligations except current bills outstanding.

The purpose of the sale, the corporation announced, is to establish a broad national market for the securities, as the future of the airplane industry will depend to a large extent on the public opinion behind its growth and the participation of the public in the ownership of the individual companies.

82,175 No Par Common to Be Sold to Broaden Share Market, It Is Said

NEWS AND NEW ISSUES

Pynchon & Co. are planning a public offering of 82,175 shares of no par common stock of the Consolidated Aircraft Corporation, which engages in the design, construction and sale of airplanes. The corporation owns, except for a few qualifying shares, Frontier Enterprises, Inc., which, through another wholly owned subsidiary, leases Consolidated's private airport, used as a base for sightseeing trips over Niagara Falls and as a training field for aviators. The corporation has three plants in Buffalo, and its own airport, comprising ninety acres near that city, including a factory site of twenty acres.

Capitalization consists of 750,000 shares of common stock, of which 550,000 will be outstanding. With the exception of its first year, the corporation has not failed to earn a profit, and in the last two years net earnings after all charges have amounted to approximately $1.50 a share on the outstanding stock. There are outstanding no bonds, notes, or other obligations except current bills. The sale, according to a statement by the corporation, is to establish a broad national market for the securities.

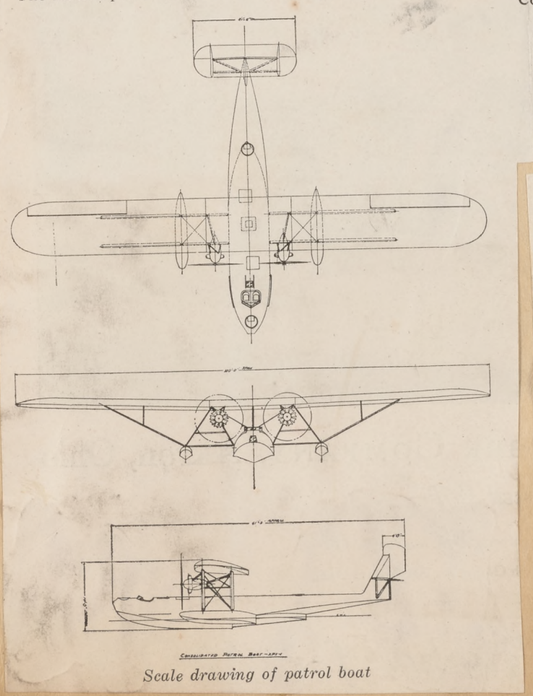
Navy Patrol Boat XPY-1 *2 P. & W. Wasps*

Navy Patrol Boat XPY-1

Consolidated Aircraft Corporation

Official flight tests were conducted in January of the new Navy Patrol Boat XPY-1, completed for the Navy by the Consolidated Aircraft Corporation, Buffalo, N. Y. With comparatively few changes, this boat is readily converted into a commercial transport with accommodations for 32 passengers, baggage, toilet and radio equipment.

The motive power of the XPY-1 is supplied by means of two Pratt & Whitney Wasps driving two 2-blade adjustable pitch propellers, 10 ft. 6 in. in diameter, carried in the nacelles underneath the wing. The center section structure is designed to take a third engine located on longitudinal center line above the wing.



Scale drawing of patrol boat

Specifications

Type: Triple float flying boat monoplane.
Dimensions: Length overall, 62 ft. Height overall, 15 ft. Wing span, 100 ft. Wing chord, 11 ft. 6 in.
Weights: Weight empty, 8,240 lbs. Normal gross weight, 13,500 lbs. Overload gross weight, 16,000 lbs. Wing loading (normal), 12 lbs. per sq. ft. Wing loading (overload), 14.4 lbs. per sq. ft. Power loading (normal), 15.3 lbs. per h.p. Power loading (overload), 18.2 lbs. per h.p.
Areas: Total wing area (including ailerons), 1,110 sq. ft. Stabilizer area, 81 sq. ft. Elevator, 54½ sq. ft. Fins (2), 25 sq. ft. Rudders (2), 46 sq. ft.
Power Plant: 2 P. & W. Wasps. Type, 9-cylinder, air-cooled, radial. Rated, 400 h.p. at 1900 r.p.m., each. Fuel, contained in tanks in hull and pumped to gravity tanks in leading edge of center section. Oil, carried in tanks located in center section over each engine nacelle.
Performance: High speed, 120 m.p.h. Take-off time, 30 sec. Climb (at sea level), 5,000 ft. in 10 min. Service ceiling, 12,000 ft.
Construction: Hull, 17-ST shapes arranged in trusses and floor frames covered with dural plating; divided into watertight compartments by bulkheads with water-tight doors and covers. Floats, 2 outboard pontoons located 14 ft. from hull center line. Wings and tail surfaces, extruded 17-ST spars, drag trusses and sheet dural ribs, fabric covered, externally braced; Goettingen 398 airfoil; balanced type ailerons operated by wheel control; externally braced monoplane stabilizer, single unbalanced elevator, twin fins and balanced rudders above stabilizer.

OFFER CONSOLIDATED AIRCRAFT STOCK

Pynchon & Co. plan a public offering of 82,175 shares of common stock of the Consolidated Aircraft Corp. which makes a variety of airplanes now on the market. Capitalization of the company which is located in Buffalo consists of 750,000 authorized shares of which 550,000 will be outstanding. Net profits during the past two years after all charges have amounted to approximately $1.50 a common share. Principal models now made by the company are a training plane used by the government, a seaplane used by the navy and a combined commercial, training and sports plane.

Consolidated Aircraft Stock Is Offered at $25 a Share

Distribution of a small block of common stock for the Consolidated Aircraft Corporation has been arranged by Pynchon and Company in the belief that public participation will stimulate interest in the industry. A total of 82,175 shares was made available at $25 a share and the advance subscription materially exceeded this amount. The company has outstanding 550,000 shares of no par common upon which earnings for the last two years have amounted to approximately $1.50 a share. Operations include the production and sale of airplanes in the several models. Through subsidiaries, a sightseeing trip business over Niagara Falls, and a training field for aviators is operated from a private airport near Buffalo where the company has three manufacturing plants.

6 Nation's Review — February 1929 N.

"ADMIRAL" FLYING BOAT BY CONSOLIDATED SUCCESSFULLY PASSES RIGID NAVY TEST

Ship Fine Tribute To Buffalo Air Institution

THE successful tests of the giant navy flying boat Admiral which were conducted by the Naval Air Station at Anacostia emphasize the great place this type of flying boat will take in the future life of the country.

The plan which is a product of the well known Consolidated Aircraft Corporation of Buffalo, New York, pioneer in the flying boat field, was designed to compete with European types. The results obtained through the tests are a fine tribute to the Consolidated Aircraft Corporation and the great progress to the aircraft industry, which they have contributed through the building of flying boats.

The boat is absolutely stable, has a wing spread of 100 feet and is 60 feet over all. It weighs 13,600 pounds with full load and has an excess carrying capacity of 2,400 pounds. In the test the craft exceeded the requirements laid down by the navy in respect to speed.

It is expected that an order for ships of the same design converted into thirty two passenger air liners will be placed with the Consolidated Aircraft Corporation at once by the Government, the placing of this order being contingent on the test, which was most successful.

The officials of the Consolidated Aircraft Corporation are very well known to the industry and in their pioneering efforts in the flying boat field which have resulted in such a successful outcome, they have been encouraged and supported by the entire industry, as well as the United States Navy.

In congratulating them on their creation of the flying boat which passed the Navy test and the fine success which they have achieved the editor of Nation's Review is voicing the sentiments of the entire aviation and business field and all who realize the great progress which this boat shows.

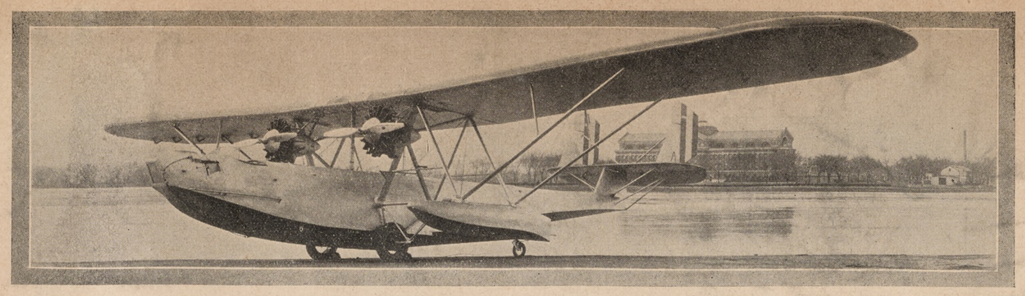
Consolidated Aircraft Corporation no par common offered to the amount of 82,175 shares by Pynchon and Company, at 25.

NEW YORK, N. Y.
Wall Street Journal
FEB 1 - 1929

Consolidated Aircraft Corp.

Pynchon & Co. are offering 82,175 shares of no par common stock of Consolidated Aircraft Corp. at $25 a share. Corporation is one of the most prominent units of the aviation industry and its activities embrace the design, construction, and sale of airplanes as well as transportation department.



CONSOLIDATED XPY-1 PATROL BOAT

AS a result of a design competition open to the American industry, the Navy awarded the contract for XPY-1 Navy Patrol Boat to the Consolidated Aircraft Corporation. Actual construction commenced in January, 1928. The boat was completed and entirely assembled in the large Elmwood Avenue Plant No. 2, Buffalo, N. Y., in December, 1928. It was then disassembled, racked on three large flat cars and shipped by rail to the Navy Yard, Washington, D. C.

Arriving there on December 26, it was partially assembled, swung into Anacostia River by a huge locomotive crane, towed across to the Naval Air Station, Anacostia, D. C., and there completely assembled by January 10, 1929. Its demonstration flights were conducted by Consolidated Aircraft Corporation on that day and the next day, during the course of which it was demonstrated to the Navy's satisfaction that it exceeded all requirements.

With comparatively few changes, this boat is readily converted into a commercial transport. As a commercial craft, it incorporates provision for the seating of 32 persons comfortably, and includes the necessary baggage, toilet and radio compartments. The Navy in fostering this project, has aided in providing an ideal commercial transport to fill the need existent in the United States today.

The XPY-1 in its preliminary flights indicated a high speed of approximately 120 m.p.h. With full military load, it took off in about 30 seconds and climbed more than 5000 feet in 10 minutes. Its service ceiling apparently will be almost 12,000 feet.

The hull lines were laid down by Captain H. C. Richardson of the Bureau of Aeronautics, one of the world's leading authorities on flying boat hulls. First flights show that the XPY-1 hull is more efficient than anything yet constructed. It is constructed of 17-ST shapes arranged in trusses and floor frames, covered by dural plating and is divided into a series of water-tight compartments by means of bulkheads provided with water-tight doors and covers. Lateral stability on the water is provided by two outboard floats located about 14 feet on each side of the hull center line. The flotation system is tied into the wing bracing so that while the overall span is large, the overhang at the wing tips is less than 1½ chord lengths.

The wings and tail surfaces consist of extruded 17-ST spars, drag trusses and sheet dural ribs, fabric covered. The wings are monoplane, externally braced and include a center section and 2 outboard panels. Their span is 100 feet, chord 11½ feet and aspect ratio 9. The airfoil used is the Goettingen 398 which affords the happy combination of maximum 1/d and proper spar depth for large span. The ailerons are of the balanced type, easy in operation through a wheel control and quite effective in lateral control.

The tail surfaces afford ample stability, directional and vertical control through the use of an externally braced monoplane stabilizer, single unbalanced elevator, and twin fins and balanced rudders above the stabilizer and elevator.

The motive power of the XPY-1 is supplied by two Pratt & Whitney geared Wasp engines, driving two 2-bladed adjustable pitch propellers, 10 feet 6 inches diameter, carried in nacelles located underneath the wing. The main fuel supply is contained in large tanks in the hull, from which it is pumped to gravity tanks located in the leading edge of the center section, near each engine. Oil is carried in tanks located in the center section over each engine nacelle. The center section structure is designed to take a third engine located on the longitudinal center line above the wing. If the boat were converted to commercial work, 3 engines would be installed to increase the power plant margin of safety. Flight tests showed that the propellers are clear of the spray thrown in planing prior to take-off. Incidentally, the hull lines are such that a remarkably small amount of spray is thrown, its planing being markedly clear. With 3 geared Wasps installed, the high speed of the Consolidated Patrol Boat is expected to surpass 135 m.p.h.

Bakelite Laminated parts used on airplanes made by Consolidated Aircraft Corporation, Buffalo, N. Y.

Bakelite Laminated
for airplane parts
Light, Strong, Non-corrosive

VITAL parts of the standard training planes for both the Army and the Navy are made of Bakelite Laminated. Cable pulleys and guides and wing spar bearing spools must be light but very strong, must resist erosion and corrosion and be non-absorbent. For all of these parts Bakelite Laminated has replaced other materials.

On these same planes the engine mount shims are of Bakelite Laminated because it is not affected by gasoline or oil, and is non-hygroscopic. The properties that make Bakelite Laminated so valuable a material for airplane parts, make it equally desirable for many automotive applications.

Bakelite Laminated is available in sheets, tubes and rods and is sold under the following trade-names:

FIBROC PHENOLITE Spaulding BAKELITE
FORMICA Micarta Textolite Dilecto

Manufacturers are invited to enlist the Cooperation of Bakelite Engineering Service

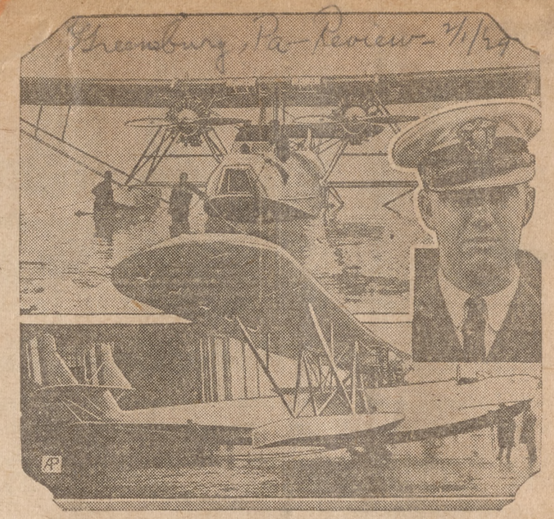
BIG NAVY AMPHIBIAN IS BUILT WITH CABIN FOR 32 PASSENGERS



The navy's new giant amphibian (above), capable of carrying 32 passengers safely over land and water, is said by aeronautical experts to represent an important advance in the development of flying boats for military patrol purposes and regular commercial air transportation service. Lieut. A. W. Gorton, navy pilot (inset), flew it on its initial trial.

By WILLIAM E. BERCHTOLD

Washington (*AP*)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft corporation of Buffalo. Lieut. A. W. Gordon, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advence over the type used on the navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt and Whitney 400 horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Adm. William A. Moffet, chief of the navy's bureau of aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the navy's need for a fast plane capable of lifting great loads of bombs or patrol work as well as an advance in equipment for commercial air transportation.

Patrol Flying Boat Proves Successful

Buffalo, N. Y., Feb. 2.—Successful tests of a new type of flying boat, manufactured in Buffalo, have just been made by naval officers at the United States Navy Yards in Washington, D. C., according to advices received by the Consolidated Aircraft Company, the manufacturer here. The ship is a huge all-metal-body monoplane with a wing spread of 100 feet and a length of 60 feet. It has a cruising radius of 3,000 miles.

In the event of acceptance of the model by the navy, orders for six more of the same type are expected. Final tests by the navy will take another month.

Airport Active

TONAWANDA March 1.—The Town of Tonawanda airport of the Consolidated Aircraft corporation on the Military road has been the scene this week of the greatest activity since the opening of the proving grounds last summer. There has not been a day this week that several machines have not been seen in the air over the airport or in the immediate vicinity, undergoing tests that they must withstand before being turned over to the consignee.

The activities this week have been due to tests to which nine standard training planes were subjected before being flown away to the training grounds of the United States navy. These planes have started on their way and others are to follow as soon as they have been put through their preliminary paces.

BIG PLANE SEATS 32 PASSENGERS

By WILLIAM E. BERCHTOLD
(Associated Press Aviation Editor)

WASHINGTON, (AP)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft corporation of Buffalo. Lieut. A. W. Gorton, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Plane Stirs Interest

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put inp roduction. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

Speed Unknown

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the island of the West Indies, Central and South America.

Thep lane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance overt he type used on the navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

CLEVELAND, OHIO
FEB 4 1929

Transport Planes

Last week Consolidated Aircraft Corp. of Buffalo delivered its first 32-passenger flying boat, the *Admiral*, to the Navy, whose men tried it out at once at Anacostia, D. C., and found it reliable.

The event was significant. In the present industrialization of aeronautics two factors have become highly important—private and commercial exploitation. Some two-score aircraft companies are making small planes for private gadabouting. Less than a dozen are important manufacturers of great planes capable of carrying pay passengers, express, mail. They are to flying what buses and trucks are to motoring. The greater their pay-load per trip, the greater their profits.

Huron A.-Times 2/5/29

Formation of a $500,000 corporation to promote flying in Cleveland was announced Tuesday by a group of Cleveland businessmen.

It will be known as the Cleveland Institute of Aviation.

The new corporation plans to build a $100,000 hangar, which will be the largest at the Cleveland port.

It is expected operation will be started between May 1 and May 15. It will be primarily a flying school. Taxi service and aerial photography will be provided.

The company also will be sales agents and distributors in Ohio for two plants, one of which will be the Husky Junior, made by Consolidated Aircraft Corporation of Buffalo. The other type has not been announced.

A new navy airplane, "The Admiral" the latest addition to the U. S. naval air service, was built at an initial cost of $150,000. It has a carrying capacity of thirty-two passengers, including a crew of five which will consist of two pilots, a radio operator, a navigator, and a bomber and machine gunner. The Admiral has a wing spread of one hundred feet and with a full load will weigh thirteen thousand six hundred pounds. The new airplane has a cruising speed of 110 miles per hour and can attain a maximum of 135 miles an hour. This latest addition to the naval armament is part of the air service development which is now under progress in that department of the navy. The program includes the construction of several of these planes as well as many which will be devoted entirely to fighting purposes.

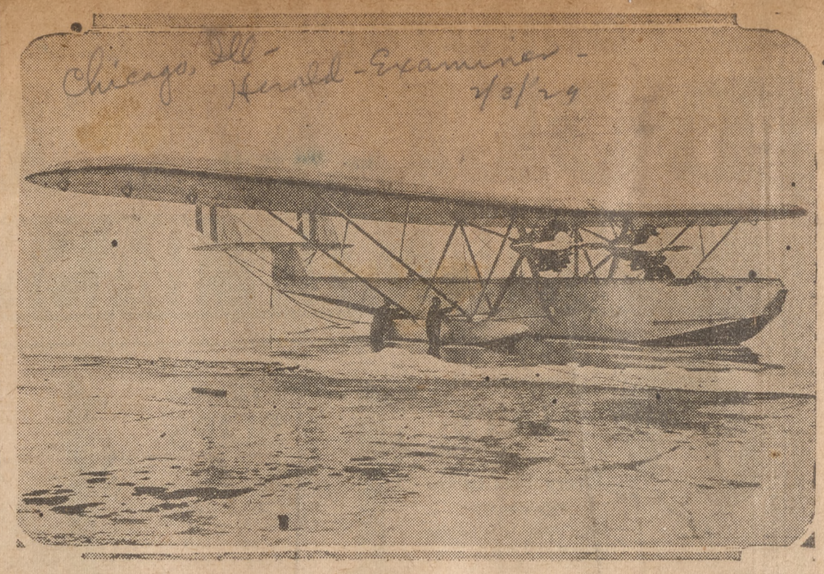
Chicago, Ill - Herald-Examiner - 2/3/29



The seaplane known as the XPY-1, said to be the largest airplane flying in the United States today, at the Anacostia Naval Air Station. It has a 100-foot wing spread and can carry thirty-two passengers.

The XYP-1 experimental flying boat, constructed in conformity with the winning design of last year's flying boat competition of the Navy Department is at the naval air station at Anacostia here for test and acceptance trials.

The seaplane, which is of a model plane type with metal hull., has two 430 horsepower Pratt-Whitney wasp engines, and a wing span of 100 feet. It can be used as a commercial transport plane, said naval officials, accommodating thirty-two passengers in a compartment sixty feet long.

The experimental flying boat was constructed by the Consolidated Aircraft Corporation of Buffalo.

INSTRUMENT FIRM GETS 2 BIG ORDERS

DAILY NEWS RECORD - FEB. 11

The Consolidated Instrument Company of America, Inc., announced today the adoption of their instruments as standard equipment for the entire 1929 airplane production of the Advance Aircraft Co., Troy, O., manufacturers of "Waco" planes, and the Consolidated Aircraft Co., Buffalo, manufacturers of "Husky" training planes.

With the closing of these two contracts, Consolidated instruments are now standard exclusive equipment for 20 of the major aircraft manufacturers of the country, according to J. Leopold, president.

The equipment to be furnished these two companies includes the following for each instrument board: Temperature and oil pressure gauges, altimeter, compasses and tachometer.

GIANT SEAPLANE TO FLY HERE FOR EXHAUSTIVE TEST

Newport News, Va. Times 2/4/29

Mammoth Navy Plane To Be Tested Here, Hull Designed by Capt. Holden C. Richardson, Trans-Atlantic Flier Who Was at One Time Naval Architect at Local Yard.

"The Admiral," largest flying boat of its kind in the world, is scheduled to fly from its hangar at Anacostia naval air station to Hampton Roads in the near future. The huge ship represents the winning design in a flying boat competition held by the United States navy last year. The ship will be brought here for exhaustive tests before being formally accepted by the navy flying service. The possibilities of the plane as a commercial transport ship as well as a naval patrol plane are creating wide interest.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Capt. Halden G. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance over the type used on the navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

Capt. Richardson was at one time stationed here and married Mrs. Margaret Jones Phillips, of Hampton.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt and Whitney 400 horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Adm. William A. Moffet, chief of the navy's bureau of aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the navy's need for a fast plane capable of lifting great loads of bombs or patrol work as well as an advance in equipment for commericial air transportation.

Quincy, Mass—Patriot—Ledger
FEB 11 1929

MONSTER AIRPLANE, COSTING $150,000, ADDED TO U. S. NAVY

A new navy airplane, named the "Admiral," costing $150,00, and capable of carrying thirty-two passengers, is the latest addition to the aircraft of the navy. This air monster is good for one hundred thirty-five miles per hour, and has a cruising speed of one hundred ten miles per hour.

The "Admiral" has a wing spread of one hundred feet and with full load weighs thirteen thousand six hundred pounds.

The crew of five will consist of two pilots, a radio operator, a navigator, bomber and a mechanic gunner.

AMPHIBIAN PLANE SETS NEW RECORD DUE TO ITS SIZE

Development in Aviation Is Marked by Unusually Big Flying Boat

By WILLIAM E. BERCHTOLD

Washington, Feb. 10.—(AP)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft corporation of Buffalo. Lieutenant A. W. Gordon, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

Plane Co. Prepares to Expand

New York Evening Post—2/11/29

Consolidated Aircraft Introduces Stock to Market to Keep Pace With the Industry

By WILLIAM RUSSELL WHITE

THE Consolidated Aircraft Corporation, which had been privately owned until its introduction to the public recently through the sale of about 82,000 shares, is one of the chief productive units of the industry. Its 1,000th airplane is soon to leave the Buffalo factory.

The company is engaged not only in the manufacture of various types of flying machines, but through subsidiaries operates a privately owned airport and sightseeing planes over Niagara Falls. It is engaged as well in training pilots. The company has grown, therefore, under the direction of R. H. Fleet, president, who has devoted many years to all branches of flying, into a well-rounded organization.

The company has outstanding 550,000 shares of an authorized issue of 750,000 of common stock. The stock recently sold to the public was purchased from stockholders and represented no new financing for the company.

Record of Earnings Shows Net of $1.50 a Share

One unusual feature of the company's introduction to financial markets is that it has a record of earnings to present. Not many airplane companies whose shares have been offered to the public can boast of a similar showing.

With the exception of its first year, Consolidated has not failed to earn a profit, and in the last two years its net earnings after all charges amounted to more than $1.50 a share on the present outstanding stock, according to the bankers.

Earnings last year showed considerable improvement over those for 1927, it is understood, despite the fact that costs of two new commercial models and a new flying boat were written off. Large sales are anticipated in the flying boat division, judging from the success of recent tests.

The purpose of the sale of stock, officers explained, was to prepare the company for eventual expansion with the industry's rapid strides. Through establishment of a market for the stock on recognized security exchanges, the company will become better known, will receive its share of public support and will establish a credit basis on which it may rely for future growth.

Products Used by Army and Navy With Favorable Results

Consolidated airplanes have been flown more than 16,500,000 miles in the service of the United States alone, and in this flying they are said to have established an unsurpassed record for safety, durability and ease of maintenance.

The company's customers include the army, the navy, the National Guard and a great many corporations and individuals, as well as several foreign governments. Its planes are located in almost 150 places in this country, as well as in points in Canada, Cuba, South America and Asia.

NEW AMPHIBIAN PLANE CARRIES 32 PASSENGERS

2/15/29
Springfield, Mass—Union Evening

Winning Design in Navy's Flying Boat Contest Is Capable of Making 100 Miles an Hour.

WASHINGTON, Feb. 15—(AP) Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the Navy's flying boat competition staged last year and won by the Consolidated Aircraft Corporation of Buffalo. Lieut. A. W. Gorton, Navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia Naval Air Station prior to its acceptance by the Navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a Navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance over the type used on the Navy's PN-11 and the NC-4 which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt & Whitney 400-horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

PLANE CONCERN RESERVES SPACE IN CITY AIRPORT

Buffalo Evening News—2/20/29

Two New Municipal Hangars Will Go Forward, Despite the Council's Action Delaying Construction—Consolidated to Erect Plant in Field.

Construction of the two new municipal hangers at Buffalo airport will go forward despite the failure of the Common council and the Department of Public Works to observe all of the legal formalities in ordering the work done, it was announced Wednesday as the Consolidated Aircraft corporation submitted a request for the leasing of one site at the Genesee street field on which to build a structure for its operations and for space in one of the buildings the city will shortly erect.

The Consolidated corporation is expanding its operations and has announced the formation of a new airplane construction company to be known as the Fleet Aircraft, Inc., an organization authorized to manufacture the "Consolidated Husky" plane. The "Husky," an army patrol ship, has been renamed the "Fleet" in honor of Maj. Robert H. Fleet, president of the Consolidated corporation, it was reported by Ray P. Whitman, assistant to that official.

Work Delay Feared.

It was feared by Nathaniel E. Duffy, director of the airport, and others interested in the development of the field, that the failure of the city officials to publish a notice of intention to build two new hangars would delay by at least two weeks the erection of the buildings. Public Works Commissioner George F. Fisk stated Wednesday the Gilsam Construction corporation, which has the contract, would proceed with the work at once.

"It is not unusual for a contractor to go ahead with work, even though the formality of signing a contract is not observed," Commissioner Fisk said. "The Common council must serve notice of intention to proceed with the construction of the hangars before I can sign the contract. That will be done a week from Monday, March 4.

"In the meantime there is no reason why the Gilsam Construction corporation cannot fulfill its contract. I'll sign the document as soon as it is legally possible."

Project Progresses.

Commissioner Fisk was unable to state whether it was the fault of the Council that all of the legal formalities had not been observed when the question of building the hangars first came up.

Airport Director Duffy stated Wednesday that the action of the Common council in buying additional land for the port and in adopting a policy for the leasing of some of it on which manufacturers and operators of airplanes might build their own hangars already had begun to bear fruit.

"The Consolidated Aircraft corporation has leased one site of 200 square feet and has reserved space for four airplanes in one of the hangars the city is about to put up," Director Duffy said. "The corporation has agreed to lease the land for 25 years, as fixed by the Council, and has agreed to pay its portion of the cost of the improvements necessary to make it available.

"The purchase of the land at the southeastern corner of the airport was a ten-strike.

Space Is Provided.

"It gives us all the room we need for the extension of one of the runways, and provides us with land needed for a new hangar line, east of the present structures. That leaves all of the field, as originally planned, free of all structures and available for flying."

Maj. Fleet, president of the Consolidated Aircraft corporation, was in Washington, Wednesday, but left word before departing Tuesday night that he probably would return with an extensive governmental contract for new airplanes. These are expected to be made in Buffalo by the new subsidiary firm, Fleet Aircraft, Inc., it is stated.

The Consolidated company will continue to manufacture the "Fleet" under contract with the new concern until it is able to take over the work. One of the planes is being tested at the private airport in Military road, town of Tonawanda, this week, and will be shown at the aviation exhibit.

The Consolidated concern will continue to manufacture its other types of planes which include the "Courier," "Husky Jr." and the "Admiral," the first of which is being tested now by naval officials in the Potomac river near Washington. This type may be manufactured as a commercial craft as well as a naval patrol plane. A contract for several of the latter type depends upon successful completion of the tests.

NAVY AMPHIBIAN IS BUILT WITH CABIN FOR 32 PERSONS

Santa Cruz, Cal. Sentinel—2/10/29

Important Advance In Development of Flying Boats

By WILLIAM E. BERCHTOLD
(Associated Press Aviation Editor)

WASHINGTON, Feb. 8 (AP)—Flying with the grace of a giant bird a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft corporation of Buffalo. Lieut. A. W. Gorton, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

High Speed

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Capt. H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance over the type used on the navy's PN-11 and NC-4, which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt and Whitney 400 horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Admiral William A. Moffett, chief of the navy's bureau of aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the navy's need for a fast plane capable of lifting great loads of bombs or patrol work as well as an advance in equipment for commercial air transportation.

Buffalo News—2/19/29

NAVY RENEWS TESTS WITH BUFFALO PLANE

From the Washington Bureau of the Buffalo Evening News.

WASHINGTON, Feb. 19.—Aided by several days of spring-like weather, the Navy Monday for the first time in more than two weeks was able to begin a series of tests to determine characteristics of the giant patrol boat "Admiral," built by the Consolidated Aircraft company of Buffalo.

The ship has a wing span of 100 feet, has an all-metal fuselage, and will carry 32 passengers. Built to accommodate three motors, it at present is equipped with two Pratt & Whitney Wasp engines.

CONSOLIDATED AIRCRAFT IS ADMITTED TO CURB

At a meeting yesterday, the Board of Governors of the New York Curb Market approved the application of the Consolidated Aircraft Corporation to list its capital stock on the New York Curb Market. It is understood that trading will start at 10:30 o'clock today.

The company has authorized 750,000 shares of no par common stock of which 550,000 shares are outstanding. There are no senior issues. A block of this stock was sold recently by Pynchon & Co.

The company is one of the few aircraft concerns that has shown a consistent record of earnings over a period of years. The company manufactures aeronautical, naval and marine instruments and instrument boards.

CONSOLIDATED SHARES ARE TRADED ON CURB

Daily News Record 2/23/29

Trading started Thursday on the New York Curb Market in shares of Consolidated Aircraft Corp. Initial quotation was at 33½ compared with the public offering price of 25. The company has authorized 750,000 shares of no par common stock, of which 550,000 shares are outstanding. There are no senior issues. Stock was marketed recently by Pynchon & Co. The stock is listed under the symbol CAN.

Buffalo News—2/21/29

CONSOLIDATED AIRCRAFT LISTED ON CURB MARKET

Trading in the common stock of the Consolidated Aircraft corporation, Buffalo, began today on the New York Curb exchange. The initial quotation was 33½. The company has authorized 750,000 no par value common shares of which 550,000 shares are outstanding.

BUFFALO TO BE SITE OF FLYING SCHOOL

Buffalo Evening News 2/20/29

Maj. Robert H. Fleet Announces Formation of Corporation.

A distinct stride toward Buffalo's goal of international leadership in the aviation industry is seen in the announcement by Maj. Robert H. Fleet, president of the Consolidated Aircraft corporation of America, of the formation here of the National Flying School, Inc., which plans to establish a country-wide chain of schools to teach flying.

The corporation is being financed entirely in Buffalo and initial paid-up capital amounts to $1,250,000. Maj. Fleet will head the new venture and will be assisted by Lieut. Leigh Wade, vice president of the Consolidated firm and their chief of flight testing.

Personnel of the board of directors of the new corporation follows:

Maj. Fleet, president of the Consolidated Aircraft corporation; George Newman, vice president of the Consolidated corporation; Lawrence D. Bell, general sales manager of the Consolidated corporation; Lewis G. Harriman, president of the Manufacturers' & Traders-Peoples' Trust company; Lieut. Leigh Wade, George P. Rea, vice president of the Manufacturers & Traders-Peoples' Trust company; Harley F. Drollinger, vice president of the Manufacturers & Traders-Peoples' Trust company, and Elbridge G. Spaulding, president of Spaulding, Hedstrom & Spaulding.

Rapid and gigantic expansion of the aviation industry has placed its future scope of growth beyond the realms of calculation, according to Maj. Fleet, and the demand for trained pilots, who earn from $3000 to $8000 a year, far exceeds the supply. Buffalo as headquarters of the new corporation is of importance, he declares, in attracting fliers and attention to Buffalo as a place which is rapidly taking national lead in the development of the industry.

MONOPLANE BUILT BY CONSOLIDATED MEETS NAVY TESTS

Daily News-Record 2/23/29

Admiral Sustains Its Full Load of 13,500 Pounds Running on One Motor

Special to DAILY NEWS RECORD

Buffalo, Feb. 22. — Maj. R. H. Fleet, president of the Consolidated Aircraft Corp., has received favorable reports from tests now being made by the Navy Department on the Potomac river of the giant patrol boat, Admiral, an all-metal monoplane equipped with two Pratt & Whitney Wasp motors.

With Lieut. W. G. Tomlinson of the naval flight test section at the controls, the Buffalo-made patrol plane sustained its full load of 13,500 pounds while running on but one motor. This was considered by the Navy Department to be a remarkable performance for such a large plane. The tests are being made to determine the speed of the motors and the action of the plane under various conditions. Mechanics frequently changed the pitch of the propeller blades in an attempt to lessen the revolutions per minute and synchronize the two motors.

The Admiral is housed at the Anacostia Naval Air station and it is expected that if the present tests prove successful, the Consolidated Aircraft Corp. will receive a large Government contract for similar planes. For comparative purposes the Navy is awaiting completion of a new naval patrol boat now under construction in the Government's own aircraft plant in Philadelphia. It is expected the new ship will be completed and ready for tests in June. It will bear the PN designation and although it will not be larger than the Consolidated's Admiral, it will be a much heavier ship.

Navy Big New Amphibian Will Carry 32 Passengers

The navy's new giant amphibian (above), capable of carrying 32 passengers safely over land and water, is said by aeronautical experts to represent an important advance in the development of flying boats for military patrol purposes and regular commercial air transportation service. Lieut. A. W. Gordon, navy pilot (inset), flew it on its initial trial.

BY WILLIAM E. BERCHTOLD,

Fleet Aircraft Plans New Plant To Manufacture Husky Monoplane

Design and Rights Purchased From Consolidated — To Function as Separate Firm

Special to DAILY NEWS RECORD

Buffalo, Feb. 22. — Fleet Aircraft, Inc., announces the purchase of the design and manufacturing rights of the Husky monoplane from the Consolidated Aircraft Corp., of Buffalo, and will establish a new plant for the production of these machines. The company has awarded a contract for the manufacture of 110 machines with the Consolidated Aircraft Corp., and by the time these are delivered the new company expects to be on a production basis in its own plant.

Lawrence D. Bell, vice-president and general sales manager of the Consolidated Aircraft Corp., has been elected president and general manager of the new Fleet Aircraft, Inc., which has been incorporated under a Delaware charter with a nominal capitalization of 1,000 shares of no par value. Mr. Bell says the company is not yet ready to announce its capital structure nor the interests behind the new corporation.

Officers Elected.

Other officers elected by Fleet Aircraft, Inc., include Joseph M. Gwynn as vice-president and chief engineer and Thomas Kenny, secretary and treasurer. Mr. Gwynn formerly was project engineer for Consolidated Aircraft Corp., and Mr. Kenny also is secretary and treasurer of Consolidated. Mr. Bell, the new president, formerly was vice-president and general manager of the Glenn L. Martin Co., aircraft manufacturers of Cleveland, and has been associated with the Consolidated Aircraft Corp. for the last eight months.

Confirmation of the sale of the design and manufacturing rights of the Consolidated Husky by the Consolidated Aircraft Corp., to Fleet Aircraft, Inc., was obtained from Ray P. Whitman, assistant to Maj. Robert H. Fleet, president of Consolidated. He explained the new company will be a separate and distinct corporation and will not be operated as a subsidiary of the Consolidated.

Plane Is Renamed Fleet.

Mr. Bell told a correspondent of DAILY NEWS RECORD that the Consolidated Husky formerly produced by the Consolidated Aircraft Corp., has been renamed the Fleet in honor of Maj. Robert H. Fleet, president of the Consolidated company. It will be produced as a training and privately owned plane with a wing span of 28 feet, body length of 20 feet nine inches and stands seven feet 10 inches high. It will be powered with a 110 hour power, Warner Scarab seven-cylinder air-cooled motor. The plane has a normal cruising sped of 115 miles an hour.

"At least 500 of these planes will be built this year," explained Mr. Bell. "Already we have placed a contract with Consolidated Aircraft Corp. for the production of 110 planes of this type so that by the time this order is filled, we expect to be in production on a capacity basis in our new plant."

Several Sites Considered.

Mr. Bell said it has not been decided where the new plant will be built in Buffalo as several sites are under consideration. Although concentrating on the Fleet monoplane, the Fleet Aircraft, Inc., will conduct experimental work on new and improved types of aircraft which will be added to the company's line from time to time.

Mr. Whitman said that the Consolidated Aircraft Corp. will continue the production of the "Courier," "Husky, Jr." and the "Admiral," the latter being the new naval patrol plane now undergoing tests by the Navy Department on the Potomac river from the Anacosta Naval Air Station. Major Fleet, president of Consolidated, now is in Washington observing the tests and expects a large Government contract for planes of this type. The "Admiral" also will be developed as a commercial craft after the successful completition of the Government tests.

NEW YORK TIMES
26 FEBR. 1929

New Yorkers Buy Air-Chute Co.

BUFFALO, N. Y., Feb. 25 (AP).—The sale of the Irving Air-Chute Company, the biggest parachute manufactory in the world, at the reputed price of $4,000,000 to a group of New York financiers, was announced here today by George Waite, president and general manager. Leslie L. Irving will continue as vice president. The new board of directors, headed by Colonel L. J. Campbell of New York, will include Waite, Irving, General Mason M. Patrick, Major Robert H. Fleet of the Consolidated Aircraft Company of Buffalo and Casey Jones of the Curtiss Flying Service.

Fleet Aircraft Plans New Plant To Manufacture Husky Monoplane

Daily News Record

Design and Rights Purchased From Consolidated — To Function as Separate Firm

7/23/29

Special to DAILY NEWS RECORD

Buffalo, Feb. 22. — Fleet Aircraft, Inc., announces the purchase of the design and manufacturing rights of the Husky monoplane from the Consolidated Aircraft Corp., of Buffalo, and will establish a new plant for the production of these machines. The company has awarded a contract for the manufacture of 110 machines with the Consolidated Aircraft Corp., and by the time these are delivered the new company expects to be on a production basis in its own plant.

Lawrence D. Bell, vice-president and general sales manager of the Consolidated Aircraft Corp., has been elected president and general manager of the new Fleet Aircraft, Inc., which has been incorporated under a Delaware charter with a nominal capitalization of 1,000 shares of no par value. Mr. Bell says the company is not yet ready to announce its capital structure nor the interests behind the new corporation.

Officers Elected.

Other officers elected by Fleet Aircraft, Inc., include Joseph M. Gwynn as vice-president and chief engineer, and Thomas Kenny, secretary and treasurer. Mr. Gwynn formerly was project engineer for Consolidated Aircraft Corp., and Mr. Kenny also is secretary and treasurer of Consolidated. Mr. Bell, the new president, formerly was vice-president and general manager of the Glenn L. Martin Co., aircraft manufacturers of Cleveland, and has been associated with the Consolidated Aircraft Corp. for the last eight months.

Confirmation of the sale of the design and manufacturing rights of the Consolidated Husky by the Consolidated Aircraft Corp. to Fleet Aircraft, Inc., was obtained from Ray P. Whitman, assistant to Maj. Robert H. Fleet, president of Consolidated. He explained the new company will be a separate and distinct corporation and will not be operated as a subsidiary of the Consolidated.

Plane Is Renamed Fleet.

Mr. Bell told a correspondent of DAILY NEWS RECORD that the Consolidated Husky formerly produced by the Consolidated Aircraft Corp., has been renamed the Fleet in honor of Maj. Robert H. Fleet, president of the Consolidated company. It will be produced as a training and privately owned plane with a wing span of 28 feet, body length of 20 feet nine inches and stands seven feet 10 inches high. It will be powered with a 110-horse-power, Warner Scarab seven-cylinder air-cooled m tor. The plane has a normal cruising sped of 115 miles an hour.

"At least 500 of these planes will be built this year," explained Mr. Bell. "Already we have placed a contract with Consolidated Aircraft Corp. for the production of 110 planes of this type so that by the time this order is filled, we expect to be in production on a capacity basis in our new plant."

Several Sites Consid ed.

Mr. Bell said it has not been decided where the new plant will be built in Buffalo as several sites are under consideration. Although concentrating on the Fleet monoplane, the Fleet Aircraft, Inc., will conduct experimental work on new and improved types of aircraft which will be added to the company's line from time to time.

Mr. Whitman said that the Consolidated Aircraft Corp. will continue the production of the "Courier," "Husky, Jr." and the "Admiral," the latter being the new naval patrol plane now undergoing tests by the Navy Department on the Potomac river from the Anacosta Naval Air Station. Major Fleet, president of Consolidated, now is in Washington observing the tests and expects a large Government contract for planes of this type. The "Admiral" also will be developed as a commercial craft after the successful completion of the Government tests.

MONOPLANE BUILT BY CONSOLIDATED MEETS NAVY TESTS

Daily News Record

Admiral Sustains Its Full Load of 13,500 Pounds Running on One Motor

7/23/29

Special to DAILY NEWS RECORD

Buffalo, Feb. 22. — Maj. R. H. Fleet, president of the Consolidated Aircraft Corp., has received favorable reports from tests now being made by the Navy Department on the Potomac river of the giant patrol boat, Admiral, an all-metal monoplane equipped with two Pratt & Whitney Wasp motors.

With Lieut. W. G. Tomlinson of the naval flight test section at the controls, the Buffalo-made patrol plane sustained its full load of 13,500 pounds while running on but one motor. This was considered by the Navy Department to be a remarkable performance for such a large plane. The tests are being made to determine the speed of the motors and the action of the plane under various conditions. Mechanics frequently changed the pitch of the propeller blades in an attempt to lessen the revolutions per minute and synchronize the two motors.

The Admiral is housed at the Anacostia Naval Air station and it is expected that if the present tests prove successful, the Consolidated Aircraft Corp will receive a large Government contract for similar planes. For comparative purposes the Navy is awaiting completion of a new naval patrol boat now under construction in the Government's own aircraft plant in Philadelphia. It is expected the new ship will be completed and ready for tests in June. It will bear the PN designation and although it will not be larger than the Consolidated's Admiral, it will be a much heavier ship.

SHIPS OF 2 BUFFALO FIRMS GET U. S. TEST

General Airplanes Photographic Plane and Fleet Aircraft Trainer Pass

Special to DAILY NEWS RECORD

Buffalo, Feb. 27.—Successful tests under the supervision of aeronautic experts of the Department of Commerce have been made at the municipal airport of two new planes of General Airplanes Corp. and Fleet Aircraft, Inc. The former has successfully tested its new photographic plane and the latter its training plane known as the Fleet.

The Fleet is now being manufactured by the Consolidated Airplanes Corp., under contract for Fleet Aircraft, Inc., which soon will establish its own factory. The first 110 planes, however, will be made in the Military road plant of the Consolidated company of which Maj. Robert H. Fleet is president. These planes will be used by the National Flying Schools, Inc., which recently has been organized with a paid-in capitalization of $1,250,000 to establish a chain of flying schools in the larger cities of the country.

Motion pictures of the new photographic plane of the General Airplanes Corp. were made over Niagara Falls and the lower Niagara gorge by a news movie concern during its tests under Department of Commerce supervision. The plane was put through daring stunts by an experienced army pilot to determine its stability under almost every condition including the drop test, which was made at the airport.

Irving Air-Chute Firm Sold to N. Y. Financiers

Buffalo Times
1/25/29

Announcement was made here today of the sale to a group of New York financiers of the Irving Air-Chute Company, 372 Pearl, at a reported price of $4,000,000. George Waite is president and general manager of the new concern, and Leslie L. Irving, vice-president. Mr. Waite and Mr. Irving have been identified with the concern for the last ten years. Duncan McLeod will be secretary of the new firm.

Mr. Waite and Mr. Irving will be members of the board of directors, which will be headed by Col. L. J. Campbell of New York. Other members of the board are: Major Robert H. Fleet of the Consolidated Aircraft Co.; Casey Jones of the Curtiss Flying Service; Collin McLeod, Boston financier, and General Mason M. Patrick, former head of the United States air service.

It is reported that stock, which the new owners will put on the market this week in New York, Chicago and Boston at $25 par value has been more than subscribed. Mr. Waite said the company faces a prosperous outlook with contracts betwene thirty governments, besides large orders for commercial companies.

Flying School Chain Is Formed in Buffalo

Buffalo Times
7/24/29

Initial Capital $1,250,000; Major Fleet and Lieut. Wade, Famed Fliers to Have Actual Working Charge; Present Plan Calls for the Establishment of Schools in All Important U. S. Cities.

Buffalo has gained added impetus in its ambition to become one of the leading aviation centers of the world in the announcement by Major R. H. Fleet, president of the Consolidated Aircraft Corporation of America, of the formation here of the National Flying Schools, Inc., the purpose of which will be to conduct a nation-wide chain of schools to train persons to fly. The new corporation, destined eventually to be continental in scope, will be financed by Buffalo capital—the initial amount of paid-in capital being 1,250,000. The board of directors will comprise:

Major Fleet, founder and head of Consolidated Aircraft Corporation, also a director of the Manufacturers & Trades-Peoples Trust Company of Buffalo.

George Newman, vice-president of the Consolidated Aircraft Corporation of America.

Lawrence D. Bell, general sales manager of the Consolidated Aircraft Corporation of America.

Lewis G. Herriman, president of the Manufacturers & Traders-Peoples Trust Company of Buffalo.

Leigh Wade, vice-president and chief of flight testing for Consolidated Aircraft Corporation.

G. P. Rea, vice-president of the Manufacturers & Traders-Peoples Trust Company.

H. F. Drollinger, vice-president of the Manufacturers & Traders-Peoples Trust Company.

E. G. Spaulding, president of Spaulding, Hedstrom & Spaulding, leading coal corporation.

Additional details of major importance to the aviation advancement of the city as well as to the expansion of the industry in the nation will be announced later.

Fleet's Long Experience.

Major Fleet entered the flying service of the army in 1917. He was No. 74 to receive his air pilot's commission. Later he was promoted until he became executive officer for the chief of aviation training for the United States army as well as officer-in-charge of the training of army corps pilots and aerial observers and officer-in? charge of the inauguration and operation of the United States aerial mail service. When the war closed, Major Fleet did not suspend his interest in flying activities, but was appointed contracting officer of the army air corps and business manager of its engineering division.

On November 30, 1922, after notable success, Major Fleet resigned from the army and directed his attention to building of aircraft. In 1923, he founded Consolidated Aircraft Corporation which moved from Rhode Island to Buffalo in 1924. As an evidence of the success with which the venture met, Consolidated Aircraft manufactured in Buffalo have already been flown more than 18,000,000 record miles by governmental authorities, which is more than four times the record of any other type of airplane since the World War, and yet, in all this flying there have been fewer casualties than in any other type of airplane with one-fourth as many hours of flying.

Success in Training.

Major Fleet's real distinction, however, has been gained in his success in superintending the training of aviators and the designing and building of aircraft for that purpose. Consolidated Aircraft are known the world over and are today being used in three continents.

As chief of flight testing for the Consolidated Aircraft Corporation, Lieut. Wade has proved invaluable in the exercise of the vast knowledge and experience he acquired as a regular army air corps officer during the war and as one of the four celebrated pilots chosen to participate in the memorable round-the-world flight.

Lieut. Wade's Career.

Lieut. Wade's career in the nation's military service has been marked with notable developments. Joining the National Guard of North Dakota in 1916, he answered his country's call and that year went with the North Dakota troops to the Mexican border. There he performed faithful and meritorious service and when the World War broke out he was transferred to the first officers' training camp. For four years he was one of

TO TRAIN PILOTS

LIEUT. WADE.

the chief testing pilots at McCook Field, Dayton, O., and then came the notable occasion on which he was chosen as one of the four pilots to make the famous round-the-world flight. For his participation in that notable achievement, Lieut. Wade was awarded several high honors, including the Distinguished Service Medal of the United States; the Order of the Rising Sun, conferred by the Emperor of Japan; the Legion of Honor of France conferred by the French government, and the degrees of Master of Science conferred by Tufts and Norwich colleges.

Lieut. Wade became associated with the Consolidated Aircraft Corporation of America in December, 1927. Almost immediately he was dispatched on a tour of South America demonstrating the merits of Consolidated Aircraft and Wright whirlwind engines.

With the location here of headquarters of the National Flying Schools, Inc., Buffalo will have another attraction for the airplane industry in general.

"To teach people to fly is the urgent need of the day," said President Harriman of the Manufacturers & Traders-Peoples Trust Company. "In locating its headquarters in this city, the National Flying Schools, Inc., is confirming the convictions of all citizens who wish to see Buffalo maintain its proper place in the air."

Need for Pilots.

With the tremendously rapid growth of the aviation industry at the start and the extent of its future expansion almost beyond calculation, the necessity for the instruction of persons to fly is apparent, it was pointed out. As the industry containes to grow there will be an increasing demand for pilots, Major Fleet said, men whose present salaries range from $3,000 to $8,000 a year.

The appeal of this opportunity to young men leaving high school, he pointed out, is becoming very large as compared to other trades, and from a purely material standpoint offers a magnetic impulse to the general public to learn to fly.

Major Fleet's program contemplated the establishment of schools in the principal cities and towns in the United States. In the promotion of the industry Major Fleet's personal contact with the Department of Commerce at Washington and his identification with the aviation industry in general will play an important role.

An inter-department committee has been formed in Washington to study the problem of the designation of airports of entry. Certain requirements probably will be established as necessary before an airport is eligible for nomination as a port of entry. A complete study of the direction of flow of international air commerce will be made, and designations will be made only where sufficient business indicates the necessity. More than a score of airports situated in all parts of the country are being considered.

Consolidated Flying Boat Tested by U. S. Navy

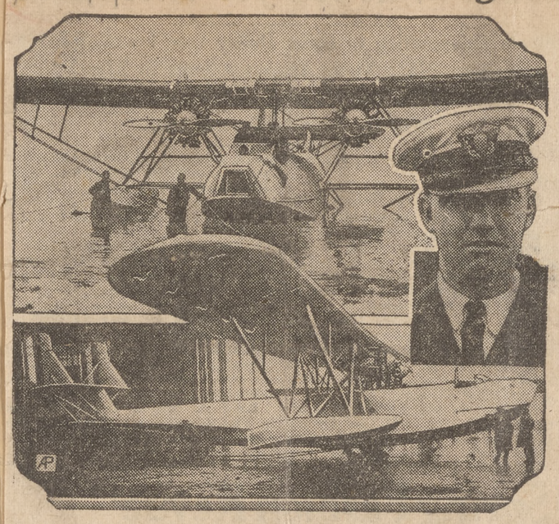
Daily News-Record 2/27/29

An experimental type of flying boat XPY-1, constructed by the Consolidated Aircraft Corp. of Buffalo, is at Anacostia for tests and acceptance trials. This seaplane is of a monoplane type with metal hull, has two 430 horse power. Pratt & Whitney Wasp engines, and emplacement for a third engine. Its wing span is 100 feet, and it has two Richardson type wing tip pontoons.

Contract for the plane was awarded Feb. 28, 1928, and the plane was flown for the first time at the Naval Air Station, Anacostia, Jan. 10, 1929. The plane was flown again Jan. 11, and is now being tried out by the Navy's Test Board at Anacostia. This flying boat can be converted into a commercial type transport and has a compartment 60 feet long, which will hold 32 passengers.

Big Navy Amphibian Is Built With Cabin For 32 Passengers

Elmira, NY Star 2/19/29



The Navy's new giant amphibian shown above, capable of carrying 32 passengers safely over land and water, is said by aeronautical experts to represent an important advance in the development of flying boats for military patrol purposes and regular commercial air transportation service. Lieutenant A. W. Gordon, Navy pilot, (inset), flew it on its trial flight.

By William E. Berchtold
(Associated Press Aviation Editor)

Washington, Feb. 19—(AP)—Flying with the grace of a giant bird, a new amphibian flying boat capable of carrying 32 passengers has stirred the curiosity of aeronautical experts and aviation enthusiasts alike.

It represents the winning design in the navy's flying boat competition staged last year and won by the Consolidated Aircraft corporation of Buffalo. Lieutenant A. W. Gorton, navy pilot who flew it on its first trial, and a staff of experts now are putting the new land and water plane through its paces at the Anacostia naval air station prior to its acceptance by the navy.

Interest in the big plane centers around its potentialities as a commercial transport as well as a navy patrol flying boat.

The passenger compartment is 60 feet long, a length only dreamed about by flying boat designers until the present ship was put in production. Although the navy's use of the plane never would involve the use of the plane as a transport carrying a large number of persons, the designers and aeronautical experts see in it an important development which can be adapted to commercial use.

HAS HIGH SPEED

While the plane's speed will not be known definitely until the test flights here are completed, the designers say that preliminary tests convince them that it will have a higher speed for its load and size than any flying boat yet built.

If the big ship can maintain a cruising speed greater than 100 miles an hour with its full load of 32 passengers or their equivalent weight, it would be of great value on combined land and water hops such as must be made to the islands of the West Indies, Central and South America.

The plane's metal hull and wing tip floats were designed by Captain H. C. Richardson, who is considered a world authority on hulls. It is a new type said to represent an advance over the type used on the navy's PN-11 and the NC-4, which crossed the Atlantic in 1919.

Its monoplane wing has a span of 100 feet, greater than any airplane now in use in the United States. It is powered with two Pratt and Whitney 400 horsepower engines and has an emplacement on the top of the wing for a third engine should greater power be deemed necessary.

Rear Admiral William A. Moffett, chief of the navy's bureau of aeronautics, under whose supervision the new ship was built, sees in the early flight tests the fulfillment of the navy's need for a fast plane capable of lifting great loads of bombs or patrol work as well as an advance in equipment for commercial air transportation.

$35,000,000 MERGER OF AVIATION FIRMS SEEN AS UNDER WAY

Daily News-Record 2/27/29

Formation of Aviation, Inc., Huge Corporation, Reported Coming Soon

LEHMAN TAKING PART

Banking Firm Admits Interest in Move — Others Mentioned Are Reticent

Formation of a $35,000,000 corporation, to be called Aviation, Inc., is projected at present, according to gossip finding its way into brokerage houses. Although a number of important aviation companies are reported to be interested in the plan, it was impossible yesterday to obtain informative statements from principals said to be conferring on the matter.

Much secrecy surrounds the report of the pending merger, and all mentioned in the proposed union were reluctant to discuss the subject in any way. That something is going on, however, is taken for granted in Wall Street, and conferences at unnamed meeting places are being held every day, it is said.

Western Air Express Mentioned.

Among the companies mentioned in the reported consolidation are the Western Air Express, a transport company whose stock has been rising steadily recently, and an organization headed by Harris M. Hanshue, James A. Talbot and other well known aeronautical factors; Universal Aviation Corp., the coordinating organization for the Robertson Aircraft Corp.; Universal Air Lines, Inc., Universal Air Lines System Terminal Co. and the Mid-Plane Sales & Transit Co., etc.; the Fairchild Aviation Corp.; Stearman Aircraft Co., of Wichita, Kan., and Consolidated Aircraft, of Buffalo.

In one quarter it is said that while the Consolidated figured in early conferences, it now is possible that this company will not participate in the proposed merger. Also mentioned in the report is William Cramp & Sons Ship and Engine Building Co., of Philadelphia. Still another shipbuilding company mentioned is the company which will be known after tomorrow as United Dry Docks, a union of several Brooklyn shipbuilding and dock concerns. At the offices of James Shewan, a company which is participating in the shipyard merger, it was said that nothing was known of the aviation angle.

An observer of the situation said that the sponsors of the move were possibly considering the Cramp company as affording facilities for both plane building and a marine base, also pointing out that the big Philadelphia shipbuilding properties are situated in a position strategic to Washington, inferring that the proposed consolidated companies will make a strong bid for Government wor.

L. H. Piper Makes Statement.

Practically everything concerning the reported merger was characterized as conjecture yesterday. L. H. Piper, president of the Universal Aviation Corp., made the following statement:

"It has been called to the attention of the management of the Universal Aviation Corp. that certain rumors have been circulated that this company has entered into an agreement for combination with another company or companies, and we feel it is necessary to deny that any such agreement has been made."

Among the brokerage houses said to be interested in the current merger plans are Lehman Bros.; Pynchon & Co.; Hitt, Farwell Co.; Harriman & Co., and possibly Hornblower & Weeks. Rumors had it that stock priced at $20 a share was to be issued when details are ironed out.

Lehman Bros. Interested.

A representative of Lehman Bros. yesterday said: "There is nothing to say other than that we are interested in the merger. It is too early to reveal the names of the companies involved, but the completed program, I believe, will be coming along very shortly."

It was also stated yesterday that the Fairchild Aviation Corp. had about completed negotiations for the purchase of the Kreider-Reisner Aircraft Co., of Hagerstown, Md.

A report that the Curtiss interests were negotiating for the purchase of the Cessna Aircraft Co., of Wichita, was said by officials to be without foundation. They thought that this report might have originated as a result of the recent deal whereby Curtiss Flying Service, Inc., becomes Cessna distributors in the United States and Canada.

FLEET'S VISIT HERE MAY BE ON MERGER

Daily News-Record 2/27/29

Maj. Robert H. Fleet, president of Consolidated Aircraft Corp., Buffalo, and a director of the Irving Air Chute Co., also of Buffalo, was in New York yesterday. His visit was interpreted variously. It was believed he was here either on a possible merger, or regarding the financing of the Irving company.

He was a visitor at the offices of Hornblower & Weeks yesterday morning. Hornblower & Weeks are among the bankers offering the new Irving stock.

FIVE BIDDERS FOR PANAMA-CHILE MAIL

Daily News-Record 2/1/29

Washington, Feb. 28.—Bid opened by Postmaster General New today for carrying mail on what is to be the longest air mail route in the world, from Cristobal, Canal Zone to Santiago, Chile, disclosed five bidders, one of which, unaccompanied by the required bond, was thrown out. The names of the bidders, and the amount bid were as follows:

Fred B. Arnold, Washington, (no bond) $1.98 per mile.

Tri-motor Safety Airways, Inc., New York, 12 Sikorsky planes; $1.95 per mile, plus 97.5 cents per pound per 1,000 miles for mail in excess of the 800 pound load limit.

Consolidated Aircraft Corp., Buffalo, 20 consolidated New York planes; $1.98 per mile, plus 99 cents per pound per thousand miles in excess of mail load.

Pan-American Grace Airways, Inc., New York, $1.80 per mile, plus 90 cents per pound per thousand miles.

American International Airways, Inc., New York, $1.44 per mile each way; plus 72 cents per pound per thousand miles.

Under the contract the postmaster general may call upon the contractor to extend the route over the Andes to Buenos Aires, Argentina, and Montevideo, Uruguay.

RIGHTS TO PLANE SOLD

Buffalo News 2/1/29

Corporation Formed to Manufacture "Husky Junior" Model Here.

The Fleet Aircraft corporation, a new Buffalo concern, headed by Lawrence D. Bell, has purchased the design and manufacturing rights of the Husky Junior airplane from the Consolidated Aircraft corporation, 2050 Elmwood avenue, it was announced Friday.

The model will be renamed Fleet as a tribute to its designer, Maj. Reuben H. Fleet, founder and president of the Consolidated corporation. The airplane will be manufactured in a modern plant to be especially built for that purpose, probably in Buffalo. Meanwhile, the Husky Junior will be built by the Consolidated corporation, the new concern having recently placed an order for 110 models.

AIRCRAFT SERVICE FOR PITTSBURGH PLANNED

Washington, Pa. - Observer 2/16/29

Certificate of Public Convenience Sought by Pittsburgh Air Transport Corporation—To Start with Four Planes.

Harrisburg, Feb. 15.—A new aircraft service for Pittsburgh is seen in the application of the Pittsburgh Air Transport corporation for a certificate of public convenience giving it the right to carry persons, freight, merchandise and other personal property on call and demand from and to airports in and around Allegheny county and other parts of Pennsylvania.

The company proposes to begin service with one Fairchild cabin monoplane, a Travelair, either a Fokker or Ford tri-motor transport monoplane, powered either with whirlwind or wasp engines as the company's experts may advise; and a training biplane, manufactured by the Consolidated Aircraft Co., of Buffalo, N. Y. At least $100,000 will be spent for equipment according to the application.

The planes will be operated from some suitable airport around Allegheny county and later from the city-county airport now being constructed at Pittsburgh, the application states.

Besides passenger and freight service, the company plans to operate planes for sight-seeing, student instruction and general commercial aircraft work.

The company is a subsidiary of the Pittsburgh Aviation Industries corporation which includes also a managing company and a financial company. Its authorized capital stock consists of 50,000 shares of no par value.

The company was incorporated under the name of the Pittsburgh Eastern Airlines.

CHAIN OF FLYING SCHOOLS TO BE SPREAD ACROSS U. S.

Times - Watertown, NY, 2/21/29

Buffalo, Feb. 21. (U.P.)—Announcement was made today that Buffalo will be the headquarters of the National Flying School, Inc., a corporation which will organize a nation-wide chain of schools to teach flying. The corporation will have an initial paid in capital of $1,250,000, according to Major R. H. Fleet, president of the Consolidated Aircraft Corporation and head of the new organization.

Lieutenant Leigh Wade, one of the four pilots to make the army round-the-world flight in 1924, will be on the board of directors. Wade is also identified with the consolidated concern.

PLAN FLYING SCHOOL HERE

Buffalo Times 2/21/29

Consolidated Aircraft Corporation to Establish in Buffalo

Another boost for Buffalo's stock as an airplane center was revealed yesterday in the announcement by Maj. R. H. Fleet, president of the Consolidated Aircraft Corporation of America, that the National Flying School, Inc., will be established here and will bring about the organization of a string of flying schools covering the nation.

Maj. Fleet will be at the head of the new corporation, assisted by Lieut. Leigh Wade as vice-president. Lieut. Wade was one of the army round-the-world fliers and is chief of flight testing for the Consolidated. The corporation will have an initial paid-in capital of $1,250,000 and will be financed locally.

"There is a tremendous demand for trained pilots—men who draw from $3,000 0to $8,000 a year," said Maj. Fleet. "The National Flying School, Inc., is formed to train pilots to meet that demand. We plan to do this in a sound and scientific way. Headquarters will be in Buffalo and we expect to establish branches in the principal cities and towns of the country."

Commenting on the new corporation, Lewis G. Harriman, president of the Manufacturers & Traders-Peoples Trust company, emphasized the fact that the National Flying School is helping to maintain the position it has begun to acquire in the lead of aviation.

The complete board of directors of the new instruction company:

Maj. R. H. Fleet, founder and head of the Consolidated Aircraft Corporation and director of the Manufacturers & Traders-Peoples Trust Company; George Newman, vice-president of the Consolidated Aircraft Corporation; Lawrence D. Bell, general sales manager of the Consolidated Aircraft Corporation; Lewis G. Harriman, president of the Manufacturers & Traders-Peoples Trust Company; Lieut. Leigh Wade; G. P. Rea, vice-president of the Manufacturers & Traders-Peoples Trust Company; H. F. Drollinger, vice-president of the Manufacturers & Traders-peoples Trust Company, and E. G. Spaulding, president of Spaulding, Hedstrom & Spaulding.

Jamestown NY - Post
FEB 22 1929

Monday morning.

Additional evidence of the rapid progress Buffalo is making in becoming a world center of aviation was made public Wednesday in an announcement by Major R. H. Fleet, president of the Consolidated Aircraft Corporation of America, of the formation there of the National Flying School, Inc., which will organibe a nationwide chain of schools to teach flying. The corporation will have an initial paid in capital of $1,250,000 and will be financed in Buffalo.

Transport Planes Times - 2/4/29

Last week Consolidated Aircraft Corp. of Buffalo delivered its first 32-passenger flying boat, the *Admiral*, to the Navy, whose men tried it out at once at Anacostia, D. C., and found it reliable.

The event was significant. In the present industrialization of aeronautics two factors have become highly important—private and commercial exploitation. Some two-score aircraft companies are making small planes for private gadabouting. Less than a dozen are important manufacturers of great planes capable of carrying pay passengers, express, mail. They are to flying what buses and trucks are to motoring. The greater their pay-load per trip, the greater their profits.

Fokker and Ford-Stout certainly have the lead in transport manufacture. Close to them is Loening, who makes amphibians. Another amphibian maker is Sikorsky, whose development has been retarded by constant experiments for new designs. Fokkers, Ford-Stouts, Loenings and Sikorskys carry usually a dozen passengers, or their weight-equivalent in freight. Boeing and Curtiss have big planes in trial.

Larger are the Keystone Patrician and the Chapman Airliner, both new developments. Each can carry 20 passengers and each shortly will make a transcontinental demonstration tour.

Largest of course is Consolidated's new *Admiral*. Its wing spread is 100 feet, its body 60 feet long. Its twin motors carried it last week at more than 100 miles per hour. Waiting as a reward for the Navy tests was a commercial order for Consolidated.

National Chain of Flying Schools Formed With Capital of $1,250,000

New York "News Record" 2/25/29

Fleet and Bell Announce New Venture — Branches in Larger Cities Planned

Special to DAILY NEWS RECORD

Buffalo, Feb. 24.—Major Robert H. Fleet, president of Consolidated Aircraft Corp., and Lawrence D. Bell, president of Fleet Aircraft, Inc., of Buffalo, announce the organization of the National Flying School, Inc., with an initial paid-in capital of $1,250,000, to establish a nationwide chain of flying schools.

Buffalo will be the headquarters of the new organization and branches will be established in the larger cities of the country. Locations will be chosen with a particular view of attracting students with a high school or college education. Mr. Fleet will be president of the National Flying School, Inc., and he will be assisted in the organization and management of the schools by Lieut. Leigh Wade, vice-president and chief of flight testing for Consolidated Aircraft Corp.

Prominent Men on Board.

Members of the board of directors of the National Flying School in addition to Messrs. Fleet, Bell and Wade include George Newman, vice-president of the Consolidated Aircraft Corp.; Lewis G. Harriman, president, Manufacturers & Traders-People's Trust Co., of Buffalo; G. P. Rea, vice-president of the bank; H. P. Drollinger, vice-president of the bank, and E. G. Spaulding, president, Spaulding, Hedstrom & Spaulding, Inc., Buffalo.

Major Fleet, who heads the new company, not only is a skilled flier but has had considerable experience in organizing and training pilots and has close personal contact with the department of commerce at Washington. Lieutenant Wade has a notable record in the Government air service. He was one of four army pilots chosen to make the Government round-the-world flight a few years ago and for four years was one of the chief testing pilots at McCook Field at Dayton. He became identified with Consolidated Aircraft Corp. in 1927.

Bell Heads New Fleet Firm.

Mr. Bell is president and general manager of Fleet Aircraft, Inc., a newly organized airplane manufacturing company in Buffalo and also was vice-president and general sales manager of the Consolidated Aircraft Corp. He formerly was vice-president and general manager of Glenn L. Martin Co., airplane manufacturers, of Cleveland.

Outlining the objects of the new organization, Major Fleet said the tremendously rapid growth of aviation makes the future expansion of the industry a matter almost beyond the scope of calculation. He says there is a rapidly increasing demand for trained pilots, men who now receive from $3,000 to $8,000 a year. Major Fleet says flying schools heretofore have been started and maintained in a haphazard manner and it is the object of the National Flying School, Inc., to place this form of instruction on a sound and scientific basis.

HANGAR SITE PICKED FOR CONSOLIDATED

Daily News-Record - NY 2/26/29

Space Also Reserved in Buffalo City Hangars for Four Planes

Buffalo, Feb. 25. — Consolidated Aircraft Corp., of Buffalo, has leased a site for the construction of a hangar on property acquired by the city adjoining the municipal airport and has reserved space for four planes in one of the two new hangars to be constructed by the city at a cost of $52,000 each, it was announced by Lieut. Nathaniel E. Duffy, airport director.

"The corporation has agreed to lease the land for a period of 25 years and also has agreed to pay its proportionate cost of new runways from the flying field to the property laid out for hangar and service building development," explained Lieutenant Duffy. "Several other companies including the Colonial Western Airways, Inc. and the Curtiss Flying Service, a subsidiary of the Curtiss Aeroplane & Motor Corp., of Buffalo, also have indicated their intention of applying for ground space in this new area adjoining the field for the construction of hangars, terminal buildings and shops."

New Yorkers Buy Air-Chute Co.

BUFFALO, N. Y., Feb. 25 (AP).—The sale of the Irving Air-Chute Company, the biggest parachute manufactory in the world, at the reputed price of $4,000,000 to a group of New York financiers, was announced here today by George Waite, president and general manager. Leslie L. Irving will continue as vice president. The new board of directors, headed by Colonel L. J. Campbell of New York, will include Waite, Irving, General Mason M. Patrick, Major Robert H. Fleet of the Consolidated Aircraft Company of Buffalo and Casey Jones of the Curtiss Flying Service.

National Chain of Flying Schools Formed With Capital of $1,250,000

Daily News Record-2/25/29

Fleet and Bell Announce New Venture — Branches in Larger Cities Planned

Special to DAILY NEWS RECORD

Buffalo, Feb. 24.—Major Robert H. Fleet, president of Consolidated Aircraft Corp., and Lawrence D. Bell, president of Fleet Aircraft, Inc., of Buffalo, announce the organization of the National Flying School, Inc., with an initial paid-in capital of $1,250,000, to establish a nationwide chain of flying schools.

Buffalo will be the headquarters of the new organization and branches will be established in the larger cities of the country. Locations will be chosen with a particular view of attracting students with a high school or college education. Mr. Fleet will be president of the National Flying School, Inc., and he will be assisted in the organization and management of the schools by Lieut. Leigh Wade, vice-president and chief of flight testing for Consolidated Aircraft Corp.

Prominent Men on Board.

Members of the board of directors of the National Flying School in addition to Messrs. Fleet, Bell and Wade include George Newman, vice-president of the Consolidated Aircraft Corp.; Lewis G. Harriman, president, Manufacturers & Traders-People's Trust Co., of Buffalo; G. P. Rea, vice-president of the bank; H. P. Drollinger, vice-president of the bank, and E. G. Spaulding, president, Spaulding, Hedstrom & Spaulding, Inc., Buffalo.

Major Fleet, who heads the new company, not only is a skilled flier but has had considerable experience in organizing and training pilots and has close personal contact with the department of commerce at Washington. Lieutenant Wade has a notable record in the Government air service. He was one of four army pilots chosen to make the Government round-the-world flight a few years ago and for four years was one of the chief testing pilots at McCook Field at Dayton. He became identified with Consolidated Aircraft Corp. in 1927.

Bell Heads New Fleet Firm.

Mr. Bell is president and general manager of Fleet Aircraft, Inc., a newly organized airplane manufacturing company in Buffalo and also was vice-president and general sales manager of the Consolidated Aircraft Corp. He formerly was vice-president and general manager of Glenn L. Martin Co., airplane manufacturers, of Cleveland.

Outlining the objects of the new organization, Major Fleet said the tremendously rapid growth of aviation makes the future expansion of the industry a matter almost beyond the scope of calculation. He says there is a rapidly increasing demand for trained pilots, men who now receive from $3,000 to $8,000 a year. Major Fleet says flying schools heretofore have been started and maintained in a haphazard manner and it is the object of the National Flying School, Inc., to place this form of instruction on a sound and scientific basis.

$150,000,000 Loss in Risky Aviation Stocks Predicted

New York — Daily News Record — 2/26/29

That speculation in aviation stocks will cost the American public a loss of $150,000,000 this year was a statement made yesterday by an astute observer of the financial situation as it pertains to the aeronautical industries. The author of this statement, a pioneer pilot and an executive connected with the industry in various important capacities for the last several years, said that the "surface of the aviation stock market has not been scratched," and despite the seemingly active interest of the public in the market, wildcat schemes almost without number will make their appearance in the next few months, and cause the present interest in aeronautical stocks to seem like a ripple in a mill pond in comparison with the activities of the future.

"The public," this man said, "has only begun to open its eye to aviation stocks. To be sure, a lot of money already has been lost in this infant industry, but I predict that the current year will cause many regrets on the part of people who think that aeronautical stocks will enable them to get rich overnight.

Investing a Science in Itself.

"The business of investing in aviation securities is a science in itself. The temptations to take a chance are pronounced, and the inducements will become far more numerous as the year goes on. Nine out of 10, I might say, are speculating when they buy aviation stocks, and the reputable financial houses are so advising their clients when purchases are made.

"There are good substantial aviation companies that offer worth-while attractions for investments, and these companies, through good management and good, practical equipment, are going right ahead all the time. If the public would analyze the managements of the companies in which it plans to invest, a great many sure thing losses would be averted, but in the urge to make quick money and plenty of it, I am afraid this factor will not be sufficiently studied by the speculator, with consequent loss to him.

"For my own part, I have put every dollar I have right into aviation stocks, and my assets show a 50 per cent increase over this time of a year ago. In no case, however, have I invested in individual companies; rather I have put my money into well managed holding companies which specialize in the aviation industry. I have confidence in the management of these companies, and am content to let my money ride along with the students of the inner workings of the business. Besides, I am too much on my own to follow the ticker all day long.

"I look for possibly 500 reorganizations among the airplane and accessory manufacturers this year. Too many are skating on thin ice right now, and the weeding out process will set in with a vengeance this year. From the standpoint of the investor, the industry has a great future, but caution should be the watchword for a long time to come. The immediate future augurs well, I believe, and, providing there is no change in the rediscount rate, I feel that the values of aeronautical companies will show a healthy rise within the next month."

$35,000,000 MERGER OF AVIATION FIRMS SEEN AS UNDER WAY

New York — Daily News Record — 2/27/29

Formation of Aviation, Inc., Huge Corporation, Reported Coming Soon

LEHMAN TAKING PART

Banking Firm Admits Interest in Move — Others Mentioned Are Reticent

Formation of a $35,000,000 corporation, to be called Aviation, Inc., is projected at present, according to gossip finding its way into brokerage houses. Although a number of important aviation companies are reported to be interested in the plan, it was impossible yesterday to obtain informative statements from principals said to be conferring on the matter.

Much secrecy surrounds the report of the pending merger, and all mentioned in the proposed union were reluctant to discuss the subject in any way. That something is going on, however, is taken for granted in Wall Street, and conferences at unnamed meeting places are being held every day, it is said.

Western Air Express Mentioned.

Among the companies mentioned in the reported consolidation are the Western Air Express, a transport company whose stock has been rising steadily recently, and an organization headed by Harris M. Hanshue, James A. Talbot and other well known aeronautical factors; Universal Aviation Corp., the coordinating organization for the Robertson Aircraft Corp.; Universal Air Lines, Inc., Universal Air Lines System Terminal Co. and the Mid-Plane Sales & Transit Co., etc.; the Fairchild Aviation Corp.; Stearman Aircraft Co., of Wichita, Kan., and Consolidated Aircraft, of Buffalo.

In one quarter it is said that while the Consolidated figured in early conferences, it now is possible that this company will not participate in the proposed merger. Also mentioned in the report is William Cramp & Sons Ship and Engine Building Co., of Philadelphia. Still another shipbuilding company mentioned is the company which will be known after tomorrow as United Dry Docks, a union of several Brooklyn shipbuilding and dock concerns. At the offices of James Shewan, a company which is participating in the shipyard merger, it was said that nothing was known of the aviation angle.

An observer of the situation said that the sponsors of the move were possibly considering the Cramp company as affording facilities for both plane building and a marine base, also pointing out that the big Philadelphia shipbuilding properties are situated in a position strategic to Washington, inferring that the proposed consolidated companies will make a strong bid for Government work.

L. H. Piper Makes Statement.

Practically everything concerning the reported merger was characterized as conjecture yesterday. L. H. Piper, president of the Universal Aviation Corp., made the following statement:

"It has been called to the attention of the management of the Universal Aviation Corp. that certain rumors have been circulated that this company has entered into an agreement for combination with another company or companies, and we feel it is necessary to deny that any such agreement has been made."

Among the brokerage houses said to be interested in the current merger plans are Lehman Bros.; Pynchon & Co.; Hitt, Farwell & Co.; Harriman & Co., and possibly Hornblower & Weeks. Rumors had it that stock priced at $20 a share was to be issued when details are ironed out.

Lehman Bros. Interested.

A representative of Lehman Bros. yesterday said: "There is nothing to say other than that we are interested in the merger. It is too early to reveal the names of the companies involved, but the completed program, I believe, will be coming along very shortly."

It was also stated yesterday that the Fairchild Aviation Corp. had about completed negotiations for the purchase of the Kreider-Reisner Aircraft Co., of Hagerstown, Md.

A report that the Curtiss interests were negotiating for the purchase of the Cessna Aircraft Co., of Wichita, was said by officials to be without foundation. They thought that this report might have originated as a result of the recent deal whereby Curtiss Flying Service, Inc., becomes Cessna distributors in the United States and Canada.

NEW FLYING SCHOOL STARTED IN BUFFALO

Buffalo, N. Y., March 1 (AP)—Establishment of National Flying Schools, Inc., at Buffalo, has been announced by Major R. H. Fleet, president of the Consolidated Aircraft Corporation of America.

The new corporation, according to Major Fleet, will be financed by Buffalo capital, with the initial amount paid in fixed at $1,250,000, and will operate a nation-wide chain of schools for the instruction of would-be aviators.

The board of directors is composed of Major Fleet, George Newman, vice-president; and Lawrence D. Bell, general sales manager of the Consolidated Aircraft Corporation; Lewis G. Harriman, president of the Manufacturers and Traders Peoples' Trust Company; Lehigh Wade, C. P. Rea, H. F. Drollinger and E. G. Spaulding, all of Buffalo.

4 Bidders Seek Panama - Chile Air-Mail Route

NY-Herald-Tribune 3/1/29

American International Airways, Inc., is Low; Plans Will Save 2 Weeks' Time

To Operate Both Ways

Figures Are Based Upon Normal 800-Pound Load

From the Herald Tribune Washington Bureau

WASHINGTON, Feb. 28.—The American-International Airways Corporation of New York City was low bidder among four air transport companies whose bids to carry United States mail between Cristobal, Canal Zone, and Santiago, Chile, were opened to-day at the Postoffice Department. The contract will not be awarded until the bids have been investigated by the department.

The American-International bid was $1.40 a mile for a load of 800 pounds. The Pan-American Airways Corporation of New York City bid $1.80 a mile, the Consolidated Aircraft Corporation of Buffalo, $1.98; the Tri-Motor Safety Airways Corporation, $1.95, and Fred B. Arnold, of Washington, $1.98. Service is to start April 1 with flights three times a week.

Montgomery Heads Company

The American- International Corporation is a newly organized air transport company of which Captain John K. Montgomery, of New York, is president.

The route, when it is opened, will form an important link in the longest air mail route in the world, extending from New York City to Santiago, a distance of 6,000 miles. It will save two weeks in the time now required to transport a letter from New York City to Santiago.

Leaving Cristobal, the planes will touch at Buenaventura and Tumaco, Colombia; Esmaraldas and Guayaquil, Ecuador, Talara, Truxillo, Lima, Lomas and Mollendo, Peru; Arica, Iquique and Antofagasta, Caldera, and Coquimbo to Santiago, Chile. The distance from Cristobal to Santiago is 3,400 miles.

Service Extension Provided

The contract will provide that the service may be extended at the option of the Postmaster General to Buenos Ayres, Argentina, and Montevideo, Uruguay, and return. The specified load is 800 pounds a trip and any excess will be carried at pound rates.

The project is one to which the Coolidge Administration has given its approval, and President-elect Hoover has expressed his deep interest in it. The Postoffice Department believes that the line will satisfy the demand for passenger transportation between the North American and the South American continents, and that it may prove a satisfactory substitute for the international railroad which has been agitated for years. In addition, it will provide a method for rapid transportation of invoices and other important banking paper.

N.Y. Times 3/1/29

LINDBERGH TAKES UP FIANCEE THREE TIMES DESPITE HIS INJURIES

Borrows a Plane and Manages Controls Easily With Only His Left Hand.

TEST OF HER FLYING MORALE

Miss Morrow Nervous at First, but Her Concern Quickly Gives Way to Smiles.

FATHER SILENT ON 'MISHAP'

But He Is Greatly Impressed by Accounts of Colonel's Skill in Landing Broken Plane.

Special Cable to THE NEW YORK TIMES.

MEXICO CITY, Feb. 28.—Undaunted by yesterday's "mishap," as he described the accident at Valbuena flying field in which he and his fiancée, Miss Anne Spencer Morrow, narrowly escaped serious injury or death when their plane overturned while making a one-wheel landing, Colonel Lindbergh was back at the flying field with Miss Morrow bright and early this morning, and before noon had made three short flights in a borrowed two-passenger biplane.

Whether Miss Morrow insisted upon accompanying him, or whether the Colonel prescribed the Army Air Service remedy for shaken confidence—that is, to send a flier who has crashed back into the air as soon after the accident as possible—could not be ascertained. But in either case Miss Morrow flew with her fiancé in all three flights.

Although forced to handle the "stick" with his left hand, his injured right shoulder and arm being encased in bandages, Colonel Lindbergh handled the strange plane with perfect ease and assurance. The injury had not prevented him from driving his fiancée to the field in one of the embassy cars.

Wreck of Other Plane Inspected.

The first thing the Colonel and Miss Morrow did on reaching the field was to inspect the wreckage of the Lindbergh plane, which lay on its back in the middle of the field. Then, accompanied by a group of Mexican Army officers, they began making the rounds of the hangars to find a plane for the Colonel to fly.

At last, in one of the hangars, they discovered a small yellow biplane, a two-seater affair with open cockpits and the name "Fleet" painted in bold letters on the side. Colonel Lindbergh inspected it and at his request the officers ordered the plane wheeled into the field.

Two mechanics got the motor started while the Colonel removed the coat and vest of his gray business suit. Because of the bandages encasing his injured shoulder, he wore no collar or tie. He donned a flying helmet and goggles and climbed into the plane while a pilot familiar with the handling of the ship began to explain the fine points of it to him.

She Appears Slightly Nervous.

Meanwhile Miss Morrow had donned a flying suit over her blue skirt and red sports coat and exchanged her close-fitting hat for a helmet and goggles. Then she climbed into the seat behind her fiancé. She appeared slightly nervous, but as she settled in the seat she smiled and the nervousness soon wore off.

The conference between the Colonel and the Mexican aviator continued, while Miss Morrow watched from her seat. Finally, having apparently found out all he wanted to know about the ship, the American motioned to the mechanics to remove the blocks. Just as he was about to give the plane "the gun," he turned to see if Miss Morrow was ready. Observing that her goggles were still raised, he called to her. But the roar of the motor drowned his voice. He pointed to his own goggles and she adjusted hers.

It was just 10:27 o'clock when the little plane skimmed down the fairway and, lifting gently, rose over the field and circled. Ten minutes later the pair landed and taxied up to the hangar.

Almost immediately they took off again. The second flight lasted only about ten minutes. The plane had barely landed, when it took off for the third time.

At 10:50, Colonel Lindbergh made his third landing. This time he leaped out and, helping Miss Morrow from the plane, walked with her to the automobile. After turning over their flying togs to attendants and thanking the Mexican officers, they stepped into the car and drove away.

Reports Current of Wedding Soon.

Reports are current here that the marriage of Colonel Lindbergh with Miss Morrow will be held in the near future, but when the Colonel was questioned about his plans he declined to discuss them.

When asked how he felt after the accident, the Colonel replied, "Fine." Miss Morrow would say nothing about it.

Miss Morrow drove the car into town from Valbuena Field. Colonel Lindbergh declined to say where they were going, beyond the fact that they were to have luncheon with friends.

Ambassador Morrow plans to leave here Saturday for his country estate at Cuernavaca, but the other members of the family are expected to leave tomorrow, and it is believed that Colonel Lindbergh will accompany them.

Late this afternoon the Ambassador received reporters. He, too, was questioned regarding plans for the wedding, but replied, "I have nothing to say." Because of important conferences yesterday, it was disclosed the Ambassador did not learn of the accident until three hours after it occurred. He received the news calmly, and appeared deeply impressed by accounts of the Colonel's skill in landing the crippled plane.

Believe Pin Was Left Off Wheel.

It is now believed that the accident was caused by the failure of a mechanic, who had greased the wheels, to replace a cotter pin. After flying with Miss Morrow to a picnicking spot on the outskirts of Mexico City for luncheon, Colonel Lindbergh started back for the flying field, but in taking off he lost one wheel.

Realizing his predicament, he told Miss Morrow to prepare for an accident in landing. He showed her how to encase herself with cushions from the plane's seats so as to protect herself in case they crashed. Fortunately, the plane was not carrying a great deal of gasoline, and as an added precaution against fire Colonel Lindbergh circled the field several times, so that his gasoline supply was nearly exhausted when he did come down. All windows in the plane had been lowered, so as to minimize the danger from broken glass.

Mechanics who inspected the wrecked plane today said that it would need a new motor and propeller, but they thought that the rest of the damage would be repaired in Mexico City. The landing gear was practically demolished and the wings were badly ripped in spots, but the general framework does not appear to have been greatly injured.

The wrecked plane, a four-passengen Travelair monoplane known as the City of Wichita, is not Colonel Lindbergh's, but was borrowed by him last week from another aviator for the flight to Mexico City.

BUFFALO TO HAVE SCHOOL OF FLYING

Buffalo (AP).—Establishment of National Flying Schools, Inc., at Buffalo, has been announced by Major R. H. Fleet, president of the Consolidated Aircraft Corporation of America.

The new corporation, according to Major Fleet, will be financed by Buffalo capital, with the initial amount paid in fixed at $1,250,000, and will operate a nation-wide chain of schools for the instruction of would-be aviators.

The board of directors is composed of Major Fleet, George Newman, vice president, and Lawrence D. Bell, general sales manager of the Consolidated Aircraft Corporation; Lewis G. Harriman, president of the Manufacturers and Traders Peoples' Trust Company; Leigh Wade, C. P. Rea, H. F. Drollinger and E. G. Spaulding, all of Buffalo.

NEW YORK TIMES, FRIDAY, MARCH 1,

Will Rogers Tells the World His View Of Lindbergh's Flying Accident

To the Editor of The New York Times:

I was just sitting down to write to you saying that I bet the minute Lindbergh's arm was able he would take Miss Morrow and fly again and here is the paper saying he did that very thing today. I knew he would and that's great, just another example of that boy doing the right thing.

Flying is Lindbergh's business. He spent years perfecting himself at it. Because he tips over on his nose once out of a million miles, a lot of editorial writers start howling about it.

This thing of talking about "somebody's life being too valuable to risk in an airplane" is not only the bunk, but it's an insult to the men we ask to do our flying. Where does anybody's life come in to be any more valuable than anybody else's? Ain't life just as precious to one as to another?

We have heard that "can't spare you" attitude till we got a lot of men in this country believing it now. Say, get over that old ego. This country will replace you before your folks get home from the funeral.

So bravo, Lindy. You are bigger tonight than you ever was before, and that's saying a lot. And bravo, little Miss Anne, you have helped aviation more today than you will ever know. And Mr. and Mrs. Morrow, bless your hearts for your splendid help. That's why you gave your daughter to him, because you knew he could take care of her.

If flying is dangerous pass a law and stop it. But don't divide our nation between a class that should fly and one that shouldn't. Aviation is not a fad, it's a necessity and will be our mode of travel long after all the people who are too valuable to fly have met their desired deaths by the roadsides on Sunday afternoons.

Yours, WILL ROGERS.

New York, Feb. 28, 1929.

MAJOR R. H. FLEET
After whom the new plane, Consolidated Fleet, is named

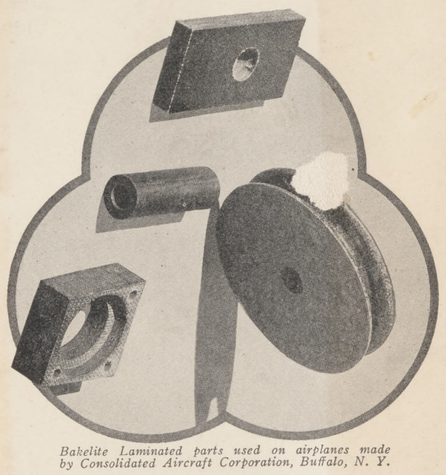
Buffalo Aircraft Co. Receives Large Contract

Nation's Review - March

INDICATING the steady growth and expansion in the business of the well-known Consolidated Aircraft Corporation, of Buffalo, is the recent contract received by the company to build six all-metal, twin-engine flying boats for the Trimotor Safety Airways, each to carry mail and express, and twenty passengers with their baggage. The airplanes will be the most modern and luxurious, and will be used on the projected line between New York and Buenos Aires. No airline in the world will be so well equipped, for these flying boats cost $150,000 each.

The progress of the Consolidated has been marked by a widespread interest from the general public as well as the financial world, and a recent offering of its stock in the New York market was more than six times oversubscribed on the day of its offering. The corporation is headed by Major R. H. Fleet, whose career in the aviation industry has been one of real accomplishment. Major Fleet, both in his military and his civil life, has had a career which has been most active. As head of the Consolidated he has in a large degree been responsible for the steady growth of the organization.

In a recent issue this publication commended the company for their creation of the famous flying boat, the "Admiral" which has had most successful tests, and we are pleased to note this recent contract for six Consolidated "Commodores", commercial prototypes of the "Admiral".



Bakelite Laminated parts used on airplanes made by Consolidated Aircraft Corporation, Buffalo, N. Y.

Bakelite Laminated
for airplane parts
Light, Strong, Non-corrosive

VITAL parts of the standard training planes for both the Army and the Navy are made of Bakelite Laminated. Cable pulleys and guides and wing spar bearing spools must be light but very strong, must resist erosion and corrosion and be non-absorbent. For all of these parts Bakelite Laminated has replaced other materials.

On these same planes the engine mount shims are of Bakelite Laminated because it is not affected by gasoline or oil, and is non-hygroscopic. The properties that make Bakelite Laminated so valuable a material for airplane parts, make it equally desirable for many automotive applications.

Bakelite Laminated is available in sheets, tubes and rods and is sold under the following trade-names:

FIBROC PHENOLITE Spaulding BAKELITE
FORMICA Micarta Textolite Dilecto

Manufacturers are invited to enlist the Cooperation of Bakelite Engineering Service

RECEIVE FIVE BIDS FOR AIR MAIL ROUTE

Washington Mar 1 (UP)—Five bids for an air-mail route from Cristobac to Santiago, Chile, were opened today by the post office department. One bid by Fred B. Arnold, Washington, D. C., was rejected because it lacked the required bond. Other bids were:

Tri-Motor Safety Airways, Inc.—$1.95 per mile plus 97 1-2 cents per 1,000 miles for excess over 800 pound load.

Consolidated Aircraft Corporation—$1.98 per mile plus 99 cents for excess.

Pan-American-Grace Airway, Inc.—$1.80 per mile plus 90 cents excess.

American International Airways, Inc.—$1.44 per mile plus 72 cents excess.

The route will be operated both ways three times a week. It will connect at the northern end with the domestic airmail and will thus provide the longest airmail route in the world from Montreal, Canada, to Santiago, Chile.

Postmaster General New reserves the right in the contract to require extensions of the route to the east coast of South America.

CANAL-CHILE AIR MAIL DRAWS FIVE BIDDERS

New York Times 3/1/29

Proposals Opened for the Longest Route in the World, Connecting With the Domestic System.

Special to The New York Times.

WASHINGTON, Feb. 28.—Bids opened by Postmaster General New today for carrying mail on what will be the longest air-mail route in the world, from Cristobal in the Panama Canal Zone, to Santiago, Chile, disclosed five proposals, one of which, unaccompanied by the required bond, was thrown out.

The bidders and bids were as follows:

Fred B. Arnold, Washington, D. C. (no bond bond), $1.98 a mile.

Tri-Motor Safety Airways, Inc., New York City; twelve Sikorski planes; $1.95 a mile, plus 97.5 cents a pound a 1,000 miles for mail in excess of the 800-pound load limit.

Consolidated Aircraft Corporation, L. H. Flint, president, Buffalo, N. Y.; twenty consolidated New York planes; $1.98 a mile, plus 99 cents a pound per 1,000 miles in excess of mail load.

Pan-American Grace Airways, Inc., J. T. Trippe, agent, New York City; $1.80 a mile, plus 90 cents a pound per 1,000 miles.

American International Airways, Inc., John K. Montgomery, president, New York City; $1.44 a mile each way, plus 72 cents a pound per 1,000 miles.

Under the contract the Postmaster General may call upon the contractor to extend the route over the Andes to Buenos Aires and Montevideo.

The route will run from Cristobal via Buenaventura and Tumaco, Colombia; Esmeraldas and Guayaquil, Ecuador; Talara, Truxillo, Lima, Lomas and Mollendo, Peru; Arica, Iquique, Antofagasta, Caldera and Coquimbo, to Santiago, Chile, and return, three times a week.

The route will connect with a route already in operation from Cristobal to Miami, making connection with the domestic airmail system and meaning direct airmail service between Montreal and Santiago, Chile.

Purchase of Kinner by Consolidated Likely

Special to DAILY NEWS RECORD

Buffalo, March 1.—Reports of an impending purchase of control of the Kinner Airplane & Motor Corp., of Glendale, Cal., by the Consolidated Aircraft Corp., of Buffalo, are denied by officials of the latter company, but in local investment security circles it was stated that the negotiations have been under way for several days but the actual purchase may be postponed for another 60 days.

In the last few days local brokers have been handling a large number of buying orders for stock of the Kinner Airplane & Motor Corp. This stock is being bought by local houses through New York and San Francisco. The increase in buying orders has enhanced the current prices for the stock and all local brokers say the reports of the impending purchase of control by the Consolidated Aircraft Corp. are entirely responsible for this local activity.

"We have been asked about these rumors, but so far as we know, there is no impending merger," explained an executive of Consolidated Aircraft Corp. Local financial reports say the Kinner company is increasing its production so as to keep pace with increasing orders for airplane motors.

Flying School Established at Buffalo

Buffalo News - 3/2/29

Buffalo N. Y., March 1 (AP)—Establishment of National Flying Schools, Inc., at Buffalo has been announced by Major R. H. Fleet president of the Consolidated Aircraft Corporation of America.

The new corporation, according to Major Fleet, will be financed by Buffalo capital, with the initial amount paid in fixed at $1,250,000, and will operate a nation-wide chain of schools for the instruction of would-be aviators.

The board of directors is composed of Major Fleet; George Newman, vice president, and Lawrence D. Bell, general sales manager of the Consolidated Aircraft Corporation; Lewis G. Harriman, president of the Manufacturers and Traders Peoples' Trust Company; Leigh Wade; C. P. Rea; H. F. Drollinger and E. G. Spaulding, all of Buffalo.

Maj. R. H. Fleet, president of the Consolidated Aircraft corporation, 2050 Elmwood avenue, Charles S. (Casey) Jones, president of the Curtiss Flying Service, Inc., and James E. Willson, president of the National Aviation corporation, were elected directors also.

AIR SERVICE TO BRAZIL NEAR

N. Y. Times

Rio Government to Grant Rights for Landing Mail.

RIO DE JANIERO, March 2 (AP).—The Ministry of Communications today announced it expects that an air mail service between Brazil and the United States by way of the Antilles will be an accomplished fact within a few months. The Ministry is only awaiting a visit from Captain Ralph O'Neill or another representative of the Tri-Motor Safety Airways Company to grant the privilege of landing the mail. Much interest was aroused here by the fact that President Irigoyen of Argentina has signed an agreement with the same company. Several Brazilian cities will benefit from the service.

The President has also signed a decree permitting a company financed by Brazilian capital to engage in airplane taxi service between this city and Sao Paulo and Campos.

Aero Leaders Buy Interest In Stromberg

Richard F. Hoyt, C. M. Keyes and Others Are Elected on Carburetor Board

Purchase of an interest in the Stromberg Carburetor Company of America by men closely identified with development of the aviation industry was disclosed yesterday following a meeting of the directors, The Associated Press says. It was announced that Charles W. Stiger, Chicago, president since the company was organized, had disposed of his interest in the company and retired from active business.

Stiger and his associates, Charles A. Brown and W. W. Wheelock, also of Chicago, resigned from the board. They were succeeded by Richard F. Hoyt, New York, chairman of the board of the Wright Aeronautical Corporation; C. M. Keys, head of the Curtiss Aeroplane and Motor Company, and Vincent Bendix, Chicago, president of the Bendix Corporation.

William L. O'Neill, former vice-president of the Stromberg Company, was named president.

Stromberg is a holding company owning nearly all of the capital stock of Motor Devices Company, Chicago, producer of motor accessories.

The directors voted an initial quarterly dividend of 75 cents a share on capital stock, placing it on a $3 annual basis. The stock was on a $6 basis before payment of an 87½ per cent stock dividend in January.

The annual report showed net profit for the year of $554,507, equal to $6.93 a share, against $168,452, or $2.10 a share in 1927.

Foresees Linking of Three Continents by Mail Planes

BUFFALO, March 2 (United Press).—A possible linking of three continents by mail and passenger planes was seen to-day by Major R. H. Fleet, president of the Consolidated Aircraft Corporation.

Fleet announced his concern had received a contract to build six large flying boats, costing $1,000,000, for tri-motor safety airways, to be put in service between the United States and Buenos Aires for air mail and passenger service.

The flying boats will be operated by the Inter-American Air Transport. Fleet said. He pointed out that if this linking of the two Americas is followed by a similar link between continental Europe and South America, as planned by the Lufthanza organization in Germany, three continents will be united by air.

AIRMAIL MAY LINK THREE CONTINENTS

Buffalo Concern Gets Contract for Six Flying Boats.

Buffalo, March 2.—A possible linking of three continents by mail and passenger planes was seen today by Major R. H. Fleet, president of the Consolidated Aircraft Corporation.

Fleet announced his concern had received a contract to build six large flying boats, costing $1,000,000 for Trimotor Safety Airways, to be put in service between the United States and Buenos Aires for airmail and passenger service.

The flying boats will be operated by the Inter-American Air Transport, Fleet said. He pointed out that if this linking of the two Americas is followed by a similar link between Continental Europe and South America as planned by the Lufthanza Organization in Germany, three continents will be united by air.

BUFFALO FIRM WILL BUILD BIG PLANES

Buffalo Times - 3/4/29

Consolidated, with 500 More Men, Plans Construction of Air Transports; Need Marine Port.

A Buffalo plant probably will hire 500 more men and embark on an intensive program of construction of hugs flying boats capable of carrying 20 to 32 passengers for service between North and South America, providing Buffalo equips itself with a marine airport.

The plant is the Consolidated Aircraft Corporation. Announcement of its plans, depending on the city's activity in supplying the marine airport facilities, was made yesterday by Maj. R. H. Fleet, president of the corporation.

Safety Airways Places Order.

The planes have been ordered by the Tri-Motored Safety Airways of New York, holders of concessions from the Argentine government and negotiating for others with other South American countries. The airways company plans to start operation between New York and Buenos Aires this summer.

The contract for the ships would amount to $900,000, said Maj. Fleet. Each ship would cost $150,000, built of duraluimin, luxuriously fitted out and manned by a crew of four. Empty, these huge boats weigh four tons. Their wingspread is 100 feet. They are powered by two 1,100-horsepower motors. Filled with gasoline, said Maj. Fleet, they could easily make a non-stop flight to Europe or circumnavigate the globe in five stops.

Admiral Type.

The planes are of the Admiral type, one of which the Consolidated built for the Navy and shipped to Washington on three cars at a cost of $10,000.

Maj. Fleet said that a number of airplane factories on the Atlantic seaboard want the contract for the flying boats and have been deluging him with telegrams to that effect. Whether Buffalo gets the work or whether one of the Eastern cities does, depends entirely on whether or not Buffalo gets a marine airport so that the planes may be launched here and flown away, according to the Consolidated's president.

BUFFALO PLANT GETS ORDER FOR SIX BIG PLANES

Buffalo Courier - 3/4/29

Construction of craft here, however, depends on whether city acquires marine airport

CONTRACT FOR $900,000

Alluring offers made company by seaboard cities, Maj. Fleet asserts

Six gigantic flying boats, which will link the Americas for the first time this summer in a luxurious aerial transport service, have been ordered from the Consolidated Aircraft Corporation by South American and United States capitalists, it was learned yesterday.

Whether these all-metal boats, capable of carrying from twenty to 32 passengers, exclusive of a crew of four, are built in the Consolidated's Buffalo plant or some place along the Atlantic seaboard, depends entirely on whether this city provides a marine airport, Maj. R. H. Fleet, president of the Consolidated corporation, declared yesterday afternoon.

To Resemble Navy Plane

Several seaboard cities have been besieging him with telegrams, offering all kinds of inducements to get these planes built there, Maj. Fleet admitted. The planes are to be of the Admiral type, recently built for the United States navy, which was so big it took three cars and cost $10,000 to ship it to Washington.

The six flying boats to be built for the South American service are commercial prototypes of the Admiral, said Maj. Fleet, and will be more luxuriously fitted out. They will cost $150,000 each, will carry a pilot, a relief pilot, a radio operator and steward in addition to the passengers, and they will constitute the first step in line with Herbert Hoover's recent declaration that the Americas ought to be linked by air.

They have been ordered by the Tri-Motored Safety Airways of New York, which holds concessions from the Argentine government, and is closing negotiations with other South American governments, and which intends to start operation between New York and Buenos Aires this summer. They are to be the largest as well as the most luxurious passenger and mail flying boats in the world. United States navy specifications will be followed in building them.

Twin-Motored

They are to be twin-motored monoplanes, with a wing span of 100 feet, and with motors capable of developing 1,100 horsepower. The boats will weigh four tons empty and when filled with gasoline, said Maj. Fleet, could easily make a non-stop flight from New York to some European port or could circumnavigate the

CURTISS SERVICE ADDS TWO FIELDS TO CHAIN

Kansas City and Baltimore Air Interests Linked Into Nation-Wide Operations.

Buffalo Times - 3/3/29

Curtiss Flying Service, Inc., operators of twenty-five flying schools and fields, announced yesterday that two more would be added by arrangements with the Fairfax Airport Company at Kansas City, Mo., and the absorption of the Chesapeake Aircraft Company of Baltimore.

The arrangement was the Fairfax company, a subsidiary of Woods Brothers Corporation, gives the Curtiss interests a five-year lease, subject to three renewals of five years each, on 800 feet of frontage on the Kansas City airport. The Curtiss company will build hangars, offices and other buildings there to house a flying school and shops and provide for taxi-planes. Activities at the field will be under the direction of Ray G. Sparks.

At Baltimore the Chesapeake Aircraft Company, which has its base at Logan Field, holds franchises for the operation of passenger service between Baltimore and Norfolk, Va. The company has been active in aerial photography in addition to its other activities. Curtiss will use the present holdings as a nucleus for future expansion, in charge of Major W. D. Tipton, former vice president of the Chesapeake company.

The Curtiss Flying Service was founded in 1910 by Glenn H. Curtiss. Its operations include primary and advanced student training, aerial photography, air taxi service, cross-country air transportation and has now begun, through its nation-wide expansion, an organization to distribute aircraft and accessories.

Fleet Aircraft Plant Expected to Be Ready When 110 Contracted Planes Are Done

Special to DAILY NEWS RECORD

Buffalo, March 5. — The first four Fleet monoplanes produced under contract for Fleet Aircraft, Inc., of Buffalo, by Consolidated Aircraft Corp., have been delivered in Chicago. These planes are part of an order placed with Fleet Aircraft, Inc., by the Gray Goose Air Lines, a subsidiary of the United Aircraft Corp., of Chicago.

Gray Goose Air Lines will use these Fleet monoplanes for training pilots, air mail, passenger and express air service through the Middle West and West. They are powered with seven-cylinder Warner Scarab air-cooled motors of 110 horsepower. They have a wing spread of 28 feet and are 20 feet, nine inches long and stand seven feet, 10 inches high.

The first four planes were piloted from Buffalo to Chicago by M. C. Meigs, publisher of the Chicago Herald-Tribune; Capt. Homer Gray, operations manager for Gray Goose Lines; William B. Wheatley, a pilot of Fleet Aircraft, Inc., and J. B. Stowe, of the Gray Goose system.

Lawrence D. Bell, president of Fleet Aircraft, Inc., says that construction work is being rushed by Consolidated Aircraft Corp. on the contract for 110 planes and by the time these are completed it is expected that Fleet Aircraft, Inc., will be in production in its own plant. The Fleet company expects to produce at least 500 training planes this year.

Consolidated Aircraft Will Do 1929 Business of $7,000,000, Says Bell

NY Daily News Record 3/5/1929

Firm's Official Declares Plant Will Make 750 Planes

Special to DAILY NEWS RECORD

Buffalo, March 7. — Consolidated Aircraft Corp., of Buffalo, will do a business this year of more than $7,000,000, it was announced by Lawrence D. Bell, vice-president, who said that upward of 500 Fleet training planes, 200 Consolidated Huskies for the army and navy and about 50 seaplanes of the Admiral and Commodore types will be produced in the Elmwood avenue plant.

Production of the Fleet type biplanes under contract for Fleet Aircraft, Inc., are now reported by Mr. Bell to be on a basis of three planes weekly but soon after March 15 the company will be turning out one complete plane every day. Production will be gradually increased until two a day will be turned out in May and June.

Work on Commodore Started.

Construction work has been started on the first of six of the Commodore type seaplanes which will be built by the company for the New York Buenos Aires air line which will be inaugurated next summer by the Tri Motored Safety Airways, Inc. These planes are being brought out at a cost of $150,000 each and Mr. Bell says that at least 50 will be produced this year. The Commodore type is a commercial adaptation of the Admiral seaplane now undergoing navy tests at the Anacosta Naval Air Station at Washington and has a carrying capacity from 20 to 32 passengers.

Announcement also is made by Mr. Bell that at least 80 of the Fleet type biplanes will be produced this year for the National Flying Schools, Inc., of Buffalo for training purposes. He says the initial order of 110 planes of this type placed by Fleet Aircraft, Inc., with the Consolidated Aircraft Corp., will be completed early in May and says that the Consolidated company probably will continue the production of these training planes under contract for Fleet Aircraft, Inc. Plans are being considered, however, for the establishment of a separate plant in Buffalo for the production of Fleet planes but Mr. Bell says no definite decision has yet been reached.

Four distributors for Fleet training and sport planes have been appointed by Mr. Bell and additional territories are being alloted as fast as production increases at the Buffalo factory. He says the distribution plan for aircraft is very similar to that employed by the automobile industry. The company is making no efforts to make direct sales and distribution is through State or district distributors who in turn have the authority to appoint subdistributors in cities within their restricted territories.

United Aviation Appointed.

United Aviation Corp., of 105 West Adams street, Chicago, has been appointed exclusive distributors for the States of Illinois and Arizona. This company is a holding corporation for the Gray Goose Air Lines, Inc., of Chicago, Scenic Airways, Inc., which operates a scenic air line over the Grand Canyon and also an air service at El Paso, Tex.; North Shore Airport Co., of Chicago, which is developing a new airport on the North side of Chicago in connection with an aviation country club and the Interstate Air Lines, Inc., which operates an air mail and passenger service between Chicago and Atlanta, Ga.

Midwest Airways, Inc., of Milwaukee has been appointed distributors of the Fleet biplanes for Wisconsin and the upper Michigan peninsula. The Cleveland Institute of Aviation, of Cleveland, has the Ohio territory and Lloyd Mosier Air Commerce, Inc., has the Wyoming, Colorado and New Mexico territories.

Announcement of the California distributor of the Fleet planes will be made by Mr. Bell within the next few weeks. In addition the Consolidated Aircraft Corp., of which Mr. Bell is vice-president and general sales manager, is doing an export business on army and navy type Huskies, these planes being used by the Royal Canadian Air Force, the Cuban Army Air Corps, the Brazilian Naval Air Service, Peruvian Army Air Corps and the Siamese Army Air Corps. The export business this year will run into a considerable volume, Mr. Bell says.

2 New Finance Companies Will Back Aviation

Buffalo News

Stout to Head $6,000,000 Enterprise Which Will Offer Stock to Public

Formation of two new aviation financing corporations was announced yesterday, the first to be known as Inter-Allied Aeronautics, Inc., a more than $6,000,000 enterprise, and the other as the Aviation Securities Corporation of New England, which will begin business with $3,000,000 in cash.

William B. Stout, president of the Stout Metal Airplane Division of the Ford Motor Car Company, is one of those backing Inter-Allied Aeronautics, and with him will be associated Brigadier General Milton F. Davis, former chief of staff of the U. S. A. Air Service, and Alexander Klemin, professor of aeronautical engineering at New York University and affiliated with the Guggenheim interests.

Public offering of securities to raise $6,000,000 is expected shortly by a syndicate headed by Bertram A. Unger & Co., Inc. Activities of the new concern will include investment in securities of established aeronautical companies, participations in underwritings and in aircraft insurance and the financing and construction of manufacturing and equipment contracts as well as airport landing fields and terminals. Although welcoming finance participation in the larger manufacturing and operating aviation companies now in existence in this country, the company expects to co-operate to a large degree with the smaller producing and operating companies and systems.

George R. Shanton, who was formerly executive for the Law and Order Bureau of Insular Affairs in Cuba, the Canal Zone and Porto Rico and formerly president of Cuban-American International Air Lines, Inc., will be president of the company, and the board of directors will include, in addition to him and Brigadier General Davis and Mr. Klemin, the following: William E. Arthur, Peter J. Brady, William H. Chadbourn, of the J. G. White Engineering Corporation; Leopold Croes, Hermann F. Cuntz, Charles E. Day, Walter McKay Jones, R. M. Saunders, Charles F. Seabrook, Frederick S. Stoepel, H. H. Stryker, Bertram A. Unger, Alanson H. Wightman, Orlando B. Wilcox and Howard J. Bloomer.

The Aviation Securities Corporation of New England, incorporated in Delaware, is sponsored by a group whose members are largely residents of New England and are closely associated with the aviation industry. The company will participate in and assist the development of the industry, devoting a portion of its resources to the development of new projects, especially those originating in New England. It is proposed to invest at all times a further part of its assets in the securities of established aviation companies, both manufacturing and transportation.

Small, High Speed, Passenger Plane Planned by Buffalo Firm

Speed of 200 Miles an Hour With Pilot and Four Passengers Is Sought

Special to DAILY NEWS RECORD

Buffalo, March 6.—Although formal announcement is being withheld pending patent applications one of the airplane manufacturing plants in Buffalo will soon begin tests of a new type high speed passenger plane capable of approximately 200 miles an hour with four passengers and a pilot.

Details of the new plane are being carefully guarded but a correspondent of DAILY NEWS RECORD who was shown a markup of the machine was told that many new ideas in construction are embodied in the plane so as to obtain unusually high speeds. Such a passenger plane, it was said, is capable of long overland hops between New York and Chicago, Chicago and Denver and Denver and points along the Pacific coast.

The passenger cabin is very small and closely resembles the tonneau of a limousine or a section of a Pullman car. The pilot sits up forward and the entire plane is not much larger than a student training plane. Gasoline tanks are carried in the upper wing section.

"This plane should have a speed of better than three miles a minute and is regarded as an important advance in the progress of aeronautics especially in referenence to speed and stability," explained a representative of the company.

The type of engine to be used has not been announced but it also is said to develop a very high speed at a minimum of weight per horsepower.

SIX NEW HYDROPLANES FOR S. AMERICA SERVICE

Buffalo, N. Y., March 7 (U.P.)—Six flying boats, each costing $150,000, will be built here by the Consolidated Aircraft Company for service starting this summer from Buenos Aires to New York according to an announcement made by Major R. H. Fleet, general manager of the concern.

The ships were ordered by the Trimotored Safety Airways of New York which will be connected with the Inter-American Air Transport, which holds a concession from the Argentine government for the right to conduct an airmail, express and passenger sirvice.

The boats, all metal and capable of carrying from twenty-five to thirty-two person, were said by Fleet to be the finest ever built. Pullman accommodations and a dining salon will be two of the features of the hydroplanes.

Pittsburg-Sun Telegraph

AIRCRAFT SHOW OPEN TONIGHT

Airminded Pittsburghers prepared today to visit Motor Square Garden where the first Pittsburgh Aircraft show opens tonight.

Nineteen airplane manufacturers and almost 100 exhibitors of motors, propellers and various accessories arranged their displays in final preparation for the opening at 8 p. m. by County Commissioner E. V. Babcock.

Snow and high winds over the city for the past three days delayed preparation of the exhibits, and some exhibitors worked all last night getting ready for the opening. Several planes will be added to the display over Sunday.

Leigh Wade, army round-the-world flier, now chief test pilot for Consolidated Aircraft Corporation, makers of the P-T-1, government training type planes, was expected at Bettis Field late today. He is flying the giant 22-passenger Burnelli plane on which recently he completed tests in New Jersey. It will not be disassembled for the aircraft show, but will be used here to give Pittsburghers flights over the city as guests of the P. W. Chapman Company, owners.

Six Flying Boats Carrying 25 to 32 Passengers Built for Argentine-New York Line

Buffalo, March 8—(United Press) —Six flying boats, each costing $150,000, will be built here by the Consolidated Aircraft Co., for service starting this summer from Buenos Aires to New York, according to an announcement made by Major Fleet, general manager of the concern.

The ships were ordered by the Tri-motored Safety Airways of New York, which will be connected with the Inter-American Air Transport, which holds a concession from the Argentine government for the right to conduct an airmail, express and passenger service.

The boats, all metal and capable of carrying from 25 to 32 persons, were said by Fleet to be the finest ever built. Pullman accommodations and a dining salon will be two of the features of the hydroplanes.

CONSOLIDATED WILL BUILD FAST PLANES

Buffalo, N. Y. (UP).—Six flying boats, each costing $150,000, will be built here by the Consolidated Aircraft Company for service starting this Summer from Buenos Aires to New York, according to an announcement made by Major R. H. Fleet, general manager of the concern.

The ships were ordered by the Trimotored Safety Airways of New York, which will be connected with the Inter-American Air Transport, which holds a concession from the Argentine Government for the right to conduct an airmail, express and passenger service.

The boats, all metal and capable of carrying from 25 to 32 persons, were said by Fleet to be the finest ever built. Pullman accommodations and a dining salon will be two of the features of the hydroplanes.

Special to DAILY NEWS RECORD

Buffalo, March 8. — Orders for six gigantic flying boats of the Admiral type now being tested by the Navy department at the Anacosta Naval Air Station, have been placed with the Consolidated Aircraft Corp., of Buffalo, by the Tri-Motored Safety Airways, Inc., of New York, for use between New York and Buenos Aires this summer.

The ships, which will cost $150,000 each, will have a capacity for 20 to 32 passengers exclusive of a four-man crew. They will be the largest and most luxurious passenger and mail aircraft in the world, U. S. Navy specifications will be followed in their construction. The ships will be twin-motored monoplanes with a wing span of 100 feet and with motors capable of developing 1,100 horsepower.

Weigh Four Tons Each.

Maj. Robert H. Fleet, president of the Consolidated Aircraft Corp., in announcing the orders says the Tri-Motored Safety Airways, Inc., of New York, financed by United States and South American capitalists, holds concessions from the Argentine Government. The planes will weigh four tons each and when filled with gasoline they easily will be capable of making a non-stop flight from New York to Paris or could circumnavigate the globe in five stops for refueling.

"These six planes, made of duraluminum, an alloy lighter than aluminum and stronger than steel, are only the prelude of a busy season for the Consolidated plant," explained Major Fleet. "We are planning the production of at least 50 ships of this type during the current year. The planes will be commercial prototypes of the Admiral which already has successfully passed Government tests in Washington. We have spent upward of $100,000 developing this giant flying boat, which, with its metal hull, can alight on water with perfect safety."

To Enlarge Plant.

It has not been decided where these flying boats will be built by the Consolidated Aircraft Corp., but with the city speeding up its plans for the construction of a marine airport, it is likely that the Consolidated Aircraft Corp. will enlarge its local plant to provide for construction of seaplanes. Major Fleet says that if the new type flying boats are built in Buffalo, it will increase its working force by the addition of more than 500 men. Construction work on parts for these planes already is under way because an early delivery of the planes has been promised the New York company by Major Fleet.

It was announced by Major Fleet that with the inauguration of the New York-Buenos Aires route, the United States will be taking an important step in bringing South America closer to this country. Germany, he says, is planning an air service between continental Europe and Rio de Janeiro.

Open Chile Air Mail Bids

Five Bidders for Route from Canal Zone to Santiago Chile

Gets Argentine Concession

Tri-Motor Safety Airways Has Ten Year Mail Contract N. Y.-Buenos Aires

WASHINGTON, D. C. — (Special) Postmaster New has awarded Pan American Grace Airways of New York, the contract for the airmail line from Cristobal, Canal Zone, to Santiago, Chile.

NEW YORK, N. Y.—(Special).—Five bids were opened by Postmaster General New last week for the air mail contract offered by the Government between Cristobal, Canal Zone to Santiago, Chile showing a range from $1.44 to $1.98 per pound. One bid was not accompanied by the necessary cash bond.

During the same day word was received from Buenos Aires that the Tri-Motor Safety Airways of New York City has received a ten year concession from President Hipolito Irigoyen, of Argentina for the transport of mail from that city to New York.

This contract is said to be the first sizeable South American concession given to any United States airline company with the exception of Pan American Airways who for months has had almost a free hand in developing air lines in the vast South American territory.

It is understood that Tri-Motor Safety Airways is a company formed by Major Robert Fleet, president of the Consolidated Aircraft Company for the express purpose of gaining air line foothold throughout South America and the West Indies. The company is reported to have very strong financial backing but no officers of the firm were available by phone or telegraph to make any statement, about future plans. This company also bid on the Santiago-Chile Route.

Bids on the Chile line were:

Airlines Fight for South American Air Dominance

(Continued from page 1)

mile each way, plus 72 cents per pound per 1,000 miles.

Pan American Grace Airways, Inc., New York City, $1.80 per mile plus 90 cents per pound per 1,000 miles.

Tri-Motor Safety Airways, New York City, $1.95 per mile plus 97½ cents per pound per 1,000 miles in excess of the 800 pound load limit.

Consolidated Aircraft Corp., R. H. Fleet, pres., Buffalo, N. Y., $1.98 per mile plus 99 cents per pound per 1,000 miles in excess of mail load specified.

Fred B. Arnold, Washington, D. C. (No Bond) $1.98 per mile.

The Postoffice Department is not obliged to take the lowest bid as they have the right to decide what company is best qualified to fulfill the contract.

Little is known of the American International Airways, Inc. except for the fact that several years ago John K. Montgomery was connected with Pan American Airways.

Under the contract the Postmaster General may call upon the contractor to extend the route over the Andes Mountains to Buenos Aires and to Montevideo, Uruguay.

The route on which bids were made runs from Cristobal, Canal Zone, via Buenaventura and Tumaco, Colombia; Esmeraldas and Guayaquil, Ecuador; Talara, Lima, Lomas and Mollendo, Peru; Arica, Iquique, Antofagasta, Caldera and Coquimbo, to Santiago, Chile, and return, three times a week.

When in operation the route will make connection with a route already in operation from Cristobal to Miami, Florida, which makes direct connection with the domestic air mail system of the United States.

It will mean direct air mail service between Montreal, Canada, and Santiago, Chile, by far the longest air route in the world.

The Buenos Aires contract specifies that the route is to be by way of the West Indies and Brazil.

Provisions of the contract require one trip in each direction each week, not to exceed seven days. This time is to be reduced within three years to four days. Stipulated stops en route named in the contract are Montevideo, Uruguay; Santos and Rio de Janeiro, Bahai and Pernambuco, Brazil. Other stops are to be arranged in cities of the Guianas, Trinidad, Martinique, Porto Rico, San Domingo and Cuba. Miami, Charleston and Washington will probably be included in the route.

The airmail rate will be 20 centavos (approximately 8 cents) for two grams, of which the company is to receive one-half. The rate to Uruguay and Brazil will be 10 centavos (about 4 cents).

After six months, service must be placed on a fixed schedule with penalties of approximately $400 a day for each day's delay and approximately $2,000 for each canceled voyage, except in instances beyond the company's control.

Six hydroplanes are now being built in the United States for the New York-Buenos Aires route, according to Alejandro Bunge, local representative of the Tri-Motor Safety Airways Corporation. Each will be capable of carrying thirty-two passengers besides mail, being much larger than any other ships now being used commercially.

Bunge said he understood the first ships will be ready within two months and that he thought the service would be established well before the end of 1929. Several applications have already been received from persons desirous of being among the first passengers to fly over the route. The rates have not yet been fixed.

Consolidated Aircraft May Be Part of $25,000,000 Deal

By Associated Press.

NEW YORK, March 12.—Aviation Corporation, recently organized with initial capital of $35,000,000 as a development and holding concern, was understood in Wall Street today to have arranged to acquire control of four large aviation companies in carrying out its program to cover all phases of aviation development.

The companies reported to be in the new group were Fokker Aircraft Corporation of the Americas and Fairchilds Aviation Corporation, prominent in the manufacturing field, the aviation Corporation of America and Universal Aviation Corporation in the transportation line.

Name Buffalo Firm.

Aviation Coroporation also was reported to have made offers for interests in the Consolidated Aircraft Corporation, Buffalo, N. Y.; Stearman Aircraft Company, Wichita, Kan., and other companies, although it was not believed anything definite had come out of these negotiations.

For Engines ,the company was believed to be counting on obtaining rights to manufacture the motors of Armstrong-Siddeley, Ltd., of England.

No Confirmation.

Prominent officials in several of these companies are on the aviation board and Graham B. Grosvenor, identified with the Fairchild interests, is president of the aviation corporation.

No confirmation of these reports could be obtained from financial interests backing the corporation.

Efforts to obtain an authoritative statement on the matter from Maj. R. H. Fleet, president of the Consolidated Aircraft corporation here elicited the information from his secretary that he could not be reached until late in the afternoon. No one else at the plant, the secretary said, was qualified to speak on the subject.

AVIATION CORP. REPORTED BUYING 4 FIRMS IN FIELD

Fokker, Fairchild, Universal and Aviation Corp. of America Acquired, Wall St. Hears—Dicker for English Motor

Aviation Corporation, recently organized with initial capital of $35,000,000, as a development and holding concern, was understood in Wall Street today to have arranged to acquire control of four large aviation companies in carrying out its program to cover all phases of aviation development.

The companies reported to be in the new group, according to the Associated Press, were Fokker Aircraft Corporation of the Americas and Fairchild Aviation Corporation, prominent in the manufacturing field, and the Aviation Corporation of America and Universal Corporation in the transportation line.

Aviation Corporation also was reported to have made offers for interests in the Consolidated Aircraft Corporation, Buffalo; Stearman Aircraft Company, Wichita, Kan., and other companies, although it was not believed anything definite had come out of these negotiations.

For engines, the company was believed to be counting on obtaining rights to manufacture the motors of Armstrong-Siddeley, Ltd., of England.

Prominent officials in several of these companies are on the Aviation Corporation board and Graham B. Grosvenor, identified with the Fairchild Aviation interests, is president of Aviation Corporation.

No confirmation of these reports could be obtained from financial interests backing the corporation.

Merger of Four Aviation Concerns Being Rumored

NEW YORK, March 12 — (AP) — Aviation corporation, recently organized with initial capital of $35,000,000 as a development and holding concern, was understood in Wall street today to have arranged to acquire control of four large aviation companies in carrying out its program to cover all phases of aviation development.

The companies reported to be in the new group were Fokker Aircraft Corporation of the Americas and Universal Aviation corporation in the transportation line.

Aviation corporation also was reported to have made offers for interests in the Consolidated Aircraft corporation, Buffalo, N. Y. Stearman Aircraft Co., Wichita, Kas., and other companies, although it was not believed anything definite had come ou tof these negotiations.

For engines, the company was believed to be counting on obtaining rights to manufacture the motors of Armstrong-Siddeley, Ltd., of England.

Prominent officials in several of these companies are on the Aviation corporation board and Graham B. Grosvenor, identified with the Fairchild Aviation interests, is president of the Aviation corporation.

No confirmation of these reports could be obtained from financial interests backing the corporation.

AVIATION CORP. ALREADY GETS OTHER CONCERNS

N.Y. Evening World 3/12/29

New Holding Company Credited With Control in Wide Range

Aviation Corporation recently formed $35,000,000 Holding and Development Corporation, is already credited with control of several important companies prominent in both manufacturing and training fields.

In establishing its position in the manufacturing line the corporation is believed to have secured control of Fokker Aircraft Corporation of America and Fairchild Aviation Corporation, while in the transportation field it probably holds controlling interest in the Aviation Corporation of America and Universal Aviation Corporation. It is understood that aviation corporation will make an offer to the minority stockholders of the Fokker Company on the basis of two shares of Aviation Corporation for each share of Fokker.

It is also understood an offer to minority stockholders of Universal Aviation Corporation has been made and accepted on a share for share exchange basis. Universal owns 50,000 shares of Fokker which is nearly 10 per cent. of entire outstanding common stock of this company. Since Universal Aviation Corporation is closely allied with Western Air Express interests it is possible the latter company may enter the Aviation Corporation group.

Besides its interests in these companies, Avilation Corporation is actively negotiating for several other aircraft concerns. It is understood to be seeking rights to manufacture the entire line of motors of Armstrong-Siddeley, Ltd., of England. If such rights are secured it is possible a substantial portion of the plane production of the Aviation Corporation's companies may be occupied with these motors. It is understood Aviation Corporation has made an offer for Consolidated Aircraft Corporation, but it is doubtful if that company will enter the group. Aviation Corporation has also been negotiating for Stearman Aircraft Company and Kreider-Reisner Aircraft Company, Inc., but whether these negotiations will be successful is also problematical.

DENIES AVIATION TO ACQUIRE FOKKER

N.Y. Journal of Commerce 3/13/29

Talbot Says Company Not for Sale Despite Persistent Rumors

Vigorous denial to the rumors current in financial and aviation circles yesterday that the newly formed $35,000,000 Aviation Corporation had arranged for the acquisition of control of the Fokker Aircraft Corporation was made last night by James A. Talbot, chairman of the board of directors of the Fokker Aircraft Corporation, who issued the following statement:

"There is no truth in the report that the Fokker Aircraft Corporation is being absorbed by the Aviation Corporation or any other company. The control of Fokker rests with myself and a number of associates and is not for sale."

Other companies in which it was rumored that the Aviation Corporation was interested included the Fairchild Aviation Corporation, a manufacturing concern; the Universal Corporation and the Aviation Corporation of Americas, controling Pan-American Airways, both air service companies as well as Armstrong-Siddeley, Ltd., of England, manufacturers of airplane motors.

While these reports went entirely without confirmation from official sources, it was, nevertheless, pointed out that Aviation Corporation was formed for the purpose of acquiring controlling interests in existing companies, and that the above were the most logical suppositions.

Other rumors linked the new holding company with Consolidated Aircraft Corporation, the Stearman Aircraft Co. and the American Eagle Aircraft. These reports, however, seemed to be somewhat less entrenched in a basis of truth and were founded solely on the idea that, as the new corporation expands, it will doubtless seek to acquire companies manufacturing all manner of planes, in order to duplicate the performance of General Motors in the automobile field.

It was understood Aviation Corporation would offer minority stockholders of the Fokker company an exchange on the basis of two shares of Aviation Corporation for each share of Fokker. It was understood also an offer to the minority stockholders of Universal Aviation Corporation had been made and accepted on a share-for-share exchange basis. Universal owns 50,000 shares of Fokker, about 10 per cent of the entire outstanding common.

Atlantic City, N.J.

DENIES AVIATION FIRM IS TRUST

Big Corporation Not Buying Up Others, Lehman Declares

NEW YORK, March 13 (AP)—Robert Lehman, chairman of the executive committee of the Aviation corporation, recently organized with initial capital of $35,000,000 as a development and holding concern, revealed here that as yet the company has acquired interest in no other companies.

In an official announcement of the purpose of the aviation corporation it was said that it was anticipated the holdings would consist largely of the majority of the common stocks of other companies and that interests might also be held in companies not controlled. The company was understood in Wall Street reports to have arranged already for acquisition of control of four large aviation companies, but Lehman denied these reports.

"All rumors and statements that the Aviation corporation," he said, "has acquired any interest whatsoever in any other companies are entirely unfounded. It has been reported that the Aviation corporation is about to acquire the controlling interest in various other enterprises and these reports are also in large part untrue.

"An illustration of this is the Aviation Corporation of the Americas, in which the Aviation corporation has no intention whatsoever of owning or acquiring a controlling interest and at the present time owns no stock.

"The Aviation corporation also has no plans for the acquisition of the Fokker company, as has been rumored."

The companies mentioned in the Wall Street reports officially denied by the Aviation corporation chairman are the Fokker company, the Fairchild Aviation corporation, the Aviation Company of the Americas and Universal Aviation corporation. The same reports said that besides arranging for control of these companies, the Aviation corporation was also understood to have made offers for interest in the Consolidated Aircraft corporation of Buffalo, N. Y., the Stearman Aircraft corporation, of Wichita, Kas., and other companies. It was also said that the company was thought to be counting on obtaining rights to manufacture the engines of Armstrong-Siddeley Ltd., of England.

The Wall Street reports were apparently based on the fact that high officials in several of these companies are on the board of the Aviation corporation.

AVIATION CORP. BUYS COMPANIES

N.Y. Wall Street Journal

Share for Share Offer to Universal—Control of Fairchild Corp. Seen 3/13/29

Aviation Corp., recently formed $35,000,000 aviation holding and development corporation, is already credited with control of several important companies, prominent in both manufacturing and training fields.

In establishing its position in the manufacturing line, the corporation is believed to have secured a substantial interest in Fokker Aircraft Corp. of America and control of the Fairchild Aviation Corp., while in the transportation field it probably approaches controlling interest in the Aviation Corp. of the Americas and Universal Aviation Corp. It is understood that an offer to the minority stockholders of Universal Aviation Corp. has been made and accepted on a share-for-share exchange basis. Universal owns 50,000 shares of Fokker, which is nearly 10% of the entire outstanding common stock of this company.

Link With Western Air Express

Since Universal Aviation Corp. is closely allied with Western Air Express interests, it is possible the latter company may enter the Aviation Corp. group. Universal and Western not only have close working agreements, but recently exchanged substantial blocks of each other's stocks. Another reason leading to the belief Western Air Express may enter Aviation Corp. group is the fact the Hanshue-Talbot group which dominates the Fokker company controls Western Air.

Western Air recently announced it would shortly establish an air transport service between Los Angeles and Kansas City. At the latter city it would connect with the lines of the Universal Aviation Corp., which run from that city to Cleveland and which will soon be extended to New York City. The merging of the two lines would thus give Aviation Corp. the second transcontinental air service, the first being Transcontinental Air Transport's.

Interest in Aviation Corp. of America

Although control of Aviation Corp. of America by Aviation Corp. is denied in some quarters, it seems quite possible that the combination of the Fairchild-Lehman interests with market buying attributed to Aviation Corp. has given the latter at least the dominant interest in Aviation Corp. of America.

Besides its interests in these companies, Aviation Corp. is actively negotiating for several other aircraft concerns. It is understood to be seeking rights to manufacture the entire line of motors of Armstrong-Siddeley, Ltd., of England. If such rights are secured it is possible a substantial portion of the plane production of Aviation Corp.'s companies may be equipped with these motors.

It is understood Aviation Corp. has made an offer for Consolidated Aircraft Corp., but it is doubtful if that company will enter the group. Aviation Corp. has also been negotiating for Stearman Aircraft Co. and the Kreider-Reisner Aircraft Co., Inc., but whether these negotiations will be successful is also problematical.

BELL IS NEW FLEET AIRCRAFT PRESIDENT

Daily News Record 3/14/29

L.D.BELL

Lawrence D. Bell, vice-president and general sales manager of the Consolidated Aircraft Corp., of Buffalo, has been elected president and general manager of the newly organized Fleet Aircraft, Inc., of Buffalo, manufacturers of the Fleet training plane, formerly known as the Consolidated Husky Junior.

Curb Market Comment

Irregularity Develops

Tone Generally Strong with Aviation Stocks Active—Oils and Utilities Firm

While some irregularity developed at different times during the session, the list on the whole displayed a firm tone and gave evidence of growing strength at the close. Mines again forged to the front under the leadership of Newmont.

Aviation stocks continued in demand most of the interest centering about Fokker and Sikorsky. For the past two weeks aviation stocks have come in for considerable activity and many new tops were reached during this period. However, the principal movers including Aviation Corp. of America, Fairchild and Consolidated Aircraft reacted perceptibly lately. Formation of The Aviation Corp. and announced policy of company to acquire holdings in various aircraft companies caused no small amount of speculation in the field of aviation securities.

AIRPLANE PREPARED FOR "BLIND" TESTS

Buffalo Evening News 3/16/29

Lieut. Doolittle to Attempt Landing in Fog With Buffalo Craft.

Remodeling of a Consolidated Aircraft corporation NY-2 plane, which will be used by Lieut. James H. Doolittle, army flier, in a series of experimental flights to combat fog, under auspices of the Guggenheim Aeronautical foundation, was completed at the Consolidated plant in Military road Saturday. Doolittle was in Buffalo, Thursday, and inspected the plane, but was unable to remain to fly it back to New York.

Fog, the greatest adversary of all the elements in the struggle of man to conquer the air, caught Lieut. Doolittle unawares Thursday night, and for 50 minutes a struggle which might have ended in death or serious injury was waged in the fog filled skies over and around New York city. Lieut. Doolittle saw his life twice in jeopardy as he flew blindly around and around the city searching for a landing field and was about to leap from his ship, defeated, when the timely flashing of a blinker light saved the situation.

Doolittle made a forced landing in a field on the outskirts of Kenilworth, N. J. His plane, a Vought Corsair, was damaged, but the pilot escaped uninjured.

The experimental work which the noted ace plans to undertake this spring is part of the current research to combat fog and darkness, two of the worst enemies of modern aviation. Modern altimeters and other instruments to aid a flier in landing still need improvement and new types will be tested by Doolittle in the work.

A special type of hood has been installed on the rear cockpit of the plane by the Consolidated people so that Doolittle may pilot the ship "blind" as if he were flying in dense fog, according to Ray H. Whitman, assistant to the general manager of the Consolidated plant.

A fellow pilot will be riding in the front cockpit to right the ship if Doolittle miscalculates or his instruments prove faulty. Otherwise he will operate the craft solely by instrument and will take off and land without watching the earth.

Success with these tests will mean much to safety of aviation and to regularity of flight schedules, Mr. Whitman said. With reliable instruments, good pilots will be able to disregard fog and darkness. Danger of flying unknowingly too close to the ground will be eliminated. With the sensitive radio apparatus a pilot will be able to detect landing fields and alight on them without actually seeing the ground until he leaves the plane.

Despite the precaution of having a companion pilot along, the experiments are regarded as very dangerous.

NEW CONCERN SOON TO LAUNCH SCHOOLS

Buffalo News 3/18/29

Buffalo Company to Teach Aviation Students Has $1,250,000 in Cash.

With $1,250,000 cash in hand, officials of National Flying Schools, Inc., will meet soon to lay out a policy and training program for the establishment of flying instruction centers throughout the United States. A new director was announced Saturday.

Notice that the entire amount of the capital of the stock corporation had been bought and paid for was given by officials of the new Buffalo aviation concern Saturday.

The policy and training meeting is expected to be held shortly after the return of Maj. Reuben H. Fleet, president of the corporation, and president and general manager of the Consolidated Aircraft company, from New York city.

Ansley W. Sawyer, of Dudley, Stowe & Sawyer, is the new director of the corporation. Others are Maj. Fleet, Lewis G. Harriman, Harley F. Drollinger, George P. Rea, Lawrence D. Bell, Elbridge G. Spaulding and Lieut. Leigh Wade.

National Flying Schools, Inc., was organized two weeks ago by a group of Buffalo men who sensed, they said, the need for a technical and systematic program of instruction for prospective aviators.

It is expected that the cost of the course of instruction contemplated by the corporation will be in the neighborhood of $500. Subjects covered by the course will include meteorology, engines, rigging, map reading and orientation, landing and take-off and air acrobatics, according to tentative plans.

Lieut. Leigh Wade, 'round the world flyer, now vice president of the Consolidated Aircraft company in charge of sales, as well as chief test pilot, will be in charge of instruction of the proposed schools of flying.

Brand new ships and equipment will be used in the instruction, it is said. Orders for the ships probably will be placed at Buffalo aircraft factories, although this has not been definitely decided.

GOEBEL ASSOCIATES WITH KANSAS CITY MEN IN NEW FIRM

Papers Being Drawn Up for Art Goebel Aviation Co., Inc., With $200,000 Capital

Special to DAILY NEWS RECORD

Kansas City, March 18. — Arthur C. Goebel, winner of the Dole air race to Honolulu, has signed a contract with a group of Kansas City business men lending his name, his services and his money to the establishment of the Art Goebel Aviation Co., Inc.

The company, for which articles of incorporation now are being prepared by Clyde Taylor, attorney for the group associated with Colonel Goebel, will be capitalized for $200,000. All the money for the venture was subscribed at a meeting Friday at the Kansas City Club.

Wide Activities.

A wide scope of activities in aviation will be permitted by the corporate provisions. It is planned first to establish an aviation school here and then expand the school feature to other cities. Later, if the opportunity presents, the company may engage in the manufacture of airplanes and establish passenger and mail lines without changing its charter.

Associated with Colonel Goebel are the following: Herbert M. Woolf, Lou E. Holland, J. C. Nichols, E. E. Amick, Thornton Cooke, Conrad H. Mann, Roy Nafziger, E. E. Norquist, Hugh J. Curran, B. C. Adams and J. F. Porter. The directors selected for the first year are Colonel Goebel and Messrs. Woolf, Holland, Nafziger, Porter, Mann and Nichols.

The base of the new school will be on the north end of the municipal airport, a section not yet developed for flying. A ground school and administration building will be constructed on a plot to be leased from the city. Actual flying instruction will not be given on the airport, however. The Goebel company has leased a tract of 90 acres north of the airport, from which the instruction planes will take off and land.

School to Start Soon.

Immediate preparation will be made to get the school under way, Mr. Holland says. Colonel Goebel will leave for the East within the next few days to purchase ships.

The maximum enrolment for the present will be about 200 students. To train properly that number in actual flying will require at least six planes. The type which probably will be adopted for the school is the P-T two-place ship, using a radial motor, and employed by the army at its air cadet training camps. It is a product of the Consolidated Aircraft Corp., Buffalo.

The company with which Colonel Goebel has become associated will be a closed corporation, the organizers announced, with an agreement to pool the stock for a five-year period.

Five Buffalo Firms to Have Newest Planes in Show Saturday Night

Score of Ships Has Arrived—Exhibitors to Be Announced Tomorrow

Special to DAILY NEWS RECORD

Buffalo, March 18.—Five Buffalo aircraft manufacturers will exhibit their newest planes at the Buffalo Aviation show which opens Saturday night in the 106th Field Artillery Armory in Masten Park, George B. Bodenhoff, show manager, states. Almost a score of planes have arrived and it is expected that about 50 will be on the floor when the exhibit opens.

G.B. BODENHOFF

The local exhibitors will be Curtiss Aeroplane & Motor Corp., Consolidated Aircraft Corp., Fleet Aircraft, Inc., General Airplanes Corp., and Elias Airplane & Manufacturing Co. In addition, Buffalo will be represented in the accessories industries by Irving Air Chute Co., Curtiss Flying Service, Pratt & Lambert, Inc., airplane paints and varnishes; Becker Flying Service, Inc., Claude Neon Displays, Inc., Flexlume Corp., Westinghouse Electric & Manufacturing Co., Whitney-Eckstein Seed Co., Wright & Eisenwein, Penzoil Oil Co., and the Standard Oil Co., of New York.

Apparel Exhibits Also.

Five Buffalo men's apparel retailers and sporting goods stores also will be represented by exhibits, featuring apparel and accessories for the flier. They are Browning, King & Co., Kleinhans Co., H. L. Peters, Inc., A. G. Spaulding & Bros., and Kremer-Danahy Gun Corp., all of which operate aviation apparel sections.

The complete list of exhibitors will not be announced until Wednesday because of last minute changes.

George B. Bodenhoff, show manager, reports that the committee has used a policy of diversity of exhibits and is restricting manufacturers to one plane except in instances where two or more radically different types of machines are produced in the same plant. Space also has been reserved for historical aircraft in which there is considerable public interest.

The show will be open daily from 1 p.m. to 11 p.m., and the general admission charge will be 50 cents except for school children during certain afternoons when the admission fee will be reduced to 10 cents.

Trades Day Planned.

The show will continue daily until March 30. One afternoon will be set aside as Trades Day for the aeronautical industry and another feature is the banquet which will be held on Tuesday evening March 26 under the sponsorship of the Buffalo Aero Club in Hotel Statler.

The Buffalo Aviation Show, Inc., is headed by Maj. John M. Satterfield as president; Theodore C. Knight, vice-president; Frank R. Collins, of the Marine Trust Co., treasurer, and George B. Bodenhoff, secretary and show manager. The board of directors include C. Roy Keys, vice-president and general manager of Curtiss Aeroplane & Motor Corp.; Edward D. O'Dea, Ansley Wilcox Sawyer, Robert H. Tifft, Kenneth A. Wood, William T. Jebb, Jr., chairman of the aeronautics committee of the Chamber of Commerce; Maj. Robert H. Fleet, president of Consolidated Aircraft Corp.; Lieut. R. S. Biggs of the National Flying Schools, Inc., and Lieut. Nathaniel E. Duffy, director of the municipal airport.

CERTIFICATES GIVEN TO SIX COMPANIES

Fleet and Advance Planes Approved — Awards for Propellers and Engines

WASHINGTON BUREAU
DAILY NEWS RECORD

Washington, March 19. — Approved type certificates covering aircraft, engines and propellers have been issued by the Aeronautics Branch, Department of Commerce, as follows:

No. 122—Fleet Aircraft, Inc., Buffalo. Fleet Model No. 1, two place, open cockpit, land type biplane, equipped with Warner-Scarab 110 H. P. engine. Weight empty 976 pounds, useful load 554 pounds, and gross weight 1,530 pounds.

No. 123 — Advance Aircraft Co., Piqua, O., Waco Model 10-T, three place, open, land biplane, equipped with Wright Whirlwind 220 H. P. engine. Weight empty 1,787 pounds, useful load 813 pounds, and gross weight, 2,600 pounds.

Propellers.

No. 6 — Westinghouse Electric & Manufacturing Co., covering Micarta type, with diameter of 8 feet, 10 inches. Authorized power rating 250 H. P. at 2,000 R. P. M.

No. 7 — Westinghouse Electric & Manufacturing Co, covering Micarta type, with diameter of 8 feet, 6 inches. Authorized power rating 100 H. P. at 1,500 R. P. M.

No. 8 — Supreme Propeller Co., Wichita, Kan., covering design No. 750, rating 100 H. P. at 1,400 R. P. M., diameter 8 feet, 6 inches; material of birch and mahogany, and alternating laminations.

Engines.

No. 22 — Arnold Harris, Elmira, N. Y., covering Arnold Harris model, 8 cylinder, vee type, water cooled, 90 H. P., 1,400 R. P. M. According to the certificate, this is a redesigned O. X. 5 engine.

BLIND FLYING TEST PLANE COMPLETED BY FLEET AIRCRAFT

Special Type Hood Installed to Aid in Study of Fog and Darkness Hazards

Special to DAILY NEWS RECORD

Buffalo, March 20.—Fleet Aircraft, Inc., announces the completion of changes and the addition of new equipment in the NY-2 type plane which will be used by Lieut. James H. Doolittle in his blind flying test for the Guggenheim Foundation for the promotion of aeronautics. The plane has been at the Buffalo factory of the Consolidated Aircraft Corp., for several weeks.

Ray H. Whitman of the Consolidated Aircraft Corp., says a special type hood has been installed on the rear cockpit of the two-place biplane so that Doolittle will be able to pilot the ship as if flying in a fog merely by watching newly developed instruments which have been placed in his protected cockpit.

The machine, which is of dual control type has an open cockpit in front of Doolittle. Another pilot will ride in this cockpit ready to take over the second set of controls in the event of extreme emergency.

While in Buffalo last week the Army ace inspected the new ship and pronounced it ready for the continuation of his blind flying tests this spring. This experimental work is part of the current research of the Guggenheim Aeronautical Foundation to combat fog and darkness, two of the worst enemies of aviation.

The Fleet plane will be flown to New York within a short time so that Doolittle will be able to continue the experiments which were first started last fall.

Planes of All Types Flow Into Buffalo for Big Show

BUFFALO, N. Y.
NEWS
MAR 13 1929

BUFFALO AIRPLANES WILL BE EXHIBITED

City to Have Prominent Part in Aviation Show, March 23 to 30.

Buffalo-made airplanes, engines and parts will have a prominent place in the aviation show that will be held March 23-30 in the 106th armory.

The products of the Curtiss Aeroplane & Motor corporation, the Consolidated Aircraft corporation and the General Airplanes company will be on display, so that the citizens of the city may see what progress Buffalo has made in the aviation industry.

In company with the Curtiss Flying Service, which this summer will open a student training school and conduct an airways taxi service at Buffalo airport, the Curtiss Aeroplane & Motor corporation will maintain an exhibit of three planes and three motors, together with parts and skeleton fuselages at the air show here.

To Show Many Types.

The planes shown will be the Curtiss "Falcon," Curtiss "Hawk," and the Curtiss "Fledgling." Both the "Hawk" and "Falcon" form an important portion of the United States Army, Navy and Marine corps air forces, and are put to various uses by all these branches of service. The Curtiss "Fledgling," developed from a winning design over 14 competitors in a Navy competitive design contest, is now the standard primary and advanced training ship of the Navy, and, during the present year, will see extensive service at all airports maintained by the Curtiss Flying Service.

The "Hawk," known as a pursuit and attack ship, is one of the fastest plans now in any regulation service. Powered in most instances by the Curtiss D 12 435-horsepower engine, this plane is possessed of an extremely high climbing angle, and is maneuverable under all conditions.

Carries Six Guns.

The "Falcon," although in many ways similar to the "Hawk," is larger, has a larger wing, and is capable of carrying a greater load. For this reason it is not so fast, and is less used for pursuit purposes. For military uses the "Falcon" is so constructed a to be adaptable t ocarrying six machine guns, two to shoot through the propeller, two to be fired by a gunner from the rear cockpit, an done gun under each lower wing, the range of all forward-aimed guns converging at a specified point ahead of the course of flight.

In the engine department display will be a Curtiss "Chieftain" 600-horsepower radial 12-cylinder air-cooled engine. This motor, built upo na principal hereby a dozen cylinders comprise a smaller total diameter than the usual nine, thus affording considerably less surface for wind resistance, has pairs of cylinders, one behind the other. A feature of the "Chieftain" is its compactness, practically all smaller parts being enclosed.

The Curtiss "Conqueror," 600-horsepower engine, one of teh most powerful airplane power-plants in existence today, is a development of the Curtiss D-12 engine, all cylinders following the V-type design. Teh "Conqueror" has been incorporated as the twin motors of the great 20-passenger transport plane recently developed.

Governor Roosevelt Will Open Exposition Saturday Night by Radio From Albany

Special to DAILY NEWS RECORD

Buffalo, March 21.—Airplanes, seaplanes and amphibians have been arriving by air, rail and truck from all parts of the country the last 24 hours for the Buffalo Aviation Show, which will open Saturday night in the 106th Field Artillery Armory in Masten Park.

Gov. Franklin D. Roosevelt in the Executive Mansion at Albany will press a button at 7 o'clock and by radio will turn on the illumination at the formal opening. Radio equipment and other electrical apparatus required for this new experiment of short wave transmission of electric power was rushed to Albany yesterday by airplanes of the Colonial Western Airways, Inc., and electrical engineers started to instal the equipment today, so that it will be ready for operation Saturday night.

Governor Cannot Attend.

When Governor Roosevelt found it would be impossible for him to attend the formal opening of the aeronautical exhibition, the committee negotiated with the Westinghouse Electric & Manufacturing Co., for the use of its new equipment for short wave transmission by means of which Governor Roosevelt will be able to turn on the lights in the Armory by radio.

One of the largest planes to arrive is the 20-passenger Savoia-Marchetti, an Italian-built plane which came on two flat cars from New York. It was trucked to the armory immediately and today is being assembled by a corps of mechanics. The plane will be exhibited by the American Aeronautical Corp., of New York, which has acquired the American manufacturing rights for this big ship and soon will start production of them at a factory in the East.

Many Typed Models Arrive.

Among the planes which were in the armory today were the Elias Aircoupe of the Elias Aircraft & Manufacturing Co., of Buffalo which will be given its premiere at the Buffalo show; the Fleet training plane with a Kinner motor produced by Fleet Aircraft, Inc., of Buffalo; several Curtiss commercial planes; a Consolidated ship of the Consolidated Aircraft Corp.; Aristocrat of the General Airplanes Corp., Travel Air; Stinson-Detroiter and two Waco sport models.

Most of the out-of-town machines will arrive tomorrow morning so that the afternoon and Saturday morning will be busy days at the armory. A large force of mechanics from local airplane factories is available for the assembling of ships, entered by out-of-town companies and it is expected that when the show is formally opened Saturday night there will be between 40 and 50 planes of all types from small one-place baby planes to the giant Pullman airliners on the drill floor of the armory. About a score of other planes which will not be exhibited in the armory because of lack of space will be held at the municipal airport for demonstration purposes.

Miss Amelia Earhart, famous aviatrix, and the first woman to span the Atlantic, will be in Buffalo next Tues-

Continued on Page 2—Section 2

Planes of All Types in Buffalo

Continued from Page 1—Section 2

day as one of the principal speakers at the Buffalo Aero Club banquet in the Hotel Statler, which will be one of the major entertainment features of the show for those interested in the development of aeronautics. It is expected that 1,000 will attend the banquet, including representatives of all the larger airplane and commercial transport companies of the country.

Clement Kieffer, Jr., display manager of The Kleinhans Co., who is arranging the exhibit of this Buffalo men's wear store at the aviation show, reports that this display will picture the progress in aviation from the pioneering days to the present time and will feature new style ideas in apparel and accessories for both pilots and passengers. New developments in leather apparel made especially for the aviation apparel section of the store will be shown on models.

Chamber Has Six Booths.

To emphasize Buffalo's advanced position in the aircraft manufacturing field, the Buffalo Chamber of Commerce will occupy a space of six booths at the exposition. Among the exhibits will be a model of the Buffalo Airport as it will appear when planned improvements are completed.

Through the courtesy of the Museum of Natural Sciences, there also will be on display a model wind tunnel used to determine the lifting power of airplanes. Other scientific models also will be shown by the chamber. The Davis Bulletin Co., has made it possible for the chamber to have on display a group of pictures designed to give out-of-town visitors a photographic idea of Buffalo's cultural, educational and industrial advantages. Other features of this exhibit will be aircraft work by students at the Elm Vocational High School.

Irving Has Motion Film.

The Irving Air Chute Co., Buffalo, plans to exhibit a motion picture of famous aviators leaping from their planes at high altitude by means of Irving Air Chutes. The company also will show the various types of 'chutes manufactured in the Buffalo plant including the seat, lap and back types in 22,24 and 28-foot parachutes. George Waite, president of the company, will be in personal charge of this display.

Mayor Frank X. Schwab will formally open the show at 8 o'clock Saturday night. He will be introduced by Major John N. Satterfield, general chairmen of the show committee, who has just returned from Cuba.

Prize Model Contest.

A feature of the show will be the exhibition of model airplanes produced by boys and girls in Western New York for which prizes aggregating $150 have been offered by a local newspaper. The Aero Club of Buffalo is assisting in this contest and will assist in the judging. It is expected about 200 model planes will be exhibited. The judges include Michael F. Steffen, director of aviation at the Elm Vocational High School and a licensed pilot; Edward A. Taylor, Howard Kuhles and Hubert F. Boehm, all of them being licensed pilots. They will be at the 106 Armory Saturday to receive the entries.

The Fleischmann Transportation Co., of New York, which also will be an exhibitor, has offered additional prizes to those submitting the best model planes.

Doolittle Lost In Fog Over City For 50 Minutes

Army Pilot Wages Unexpected Battle With Element He Has Been Studying

Blinker Light Saves Him

Damaged HisPlane in Forced Landing in Jersey Field

Fog, the greatest adversary of all the elements in the struggle of man to conquer the air, caught the oustanding protagonist of the organized fight of aviation leaders to conquer this meteorological condition unawares on Thursday night, and for fifty minutes a struggle which might have ended in death or serious injury to Lieutenant James A. Doolittle was waged in the fog filled skies over and around New York City. Lieutenant Doolittle, army pilot, who has been conducting the fog campaign of the Guggenheim Fund for the Promotion of Aeronautics, saw his life twice in jeopardy as he flew blindly around and around the city searching for a landing field and was about to leap from his ship, defeated, when the timely flashing of a blinker light saved the situation.

Escapes Uninjured

Doolittle made a forced landing in a field on the outskirts of Kenilworth, N. J. His plane, a Vought Corsair, was slightly damaged, but the pilot escaped uninjured. The incident was reported on Thursday night as a mere forced landing, and nothing would have been known of the fifty-minute unexpected battle of Doolittle against the inclement weather if details had not leaked out through flying officers at Mitchel Field to whom Doolittle had recounted his experience.

In his work to solve the secrets of safe flying where a plane moves in a completely enveloping mass of misty white smoke and all sense of direction and equilibrium vanishes, Doolittle frequently goes in quest of his adversary fog. But on Thursday night the situation was different. The army flyer wasn't looking for fog. He had spent the day in Buffalo and he merely desired to get home to New York in time to keep an evening appointment. There was additional irony in the situation because Doolittle was not in his fog flying ship, a Consolidated plane fitted out by the Guggenheim Fund as a flying fog laboratory.

The army flyer left Buffalo at 3 o'clock in the afternoon. Everything had gone well in the opening stages of the routine flight home. But as Doolittle neared New York he noticed that he was heading into a generally hazy condition. It was dark as he reached the city line, flying down the Hudson and the city was completely enveloped in fog.

The mist kept reaching lower and lower, and Doolittle in his effort to keep under the blinding blanket was forced to fly still lower. He was literally being squashed into the river. Doolittle knew that if he pulled up through the fog he might never find his way down through it when he arrived over Mitchel Field, his destination. The fog was down to the housetops as he flew along the North River. It was so low that the flyer dared not strike directly across Manhattan.

As he swung around Manhattan the river wharves flashed by near at hand. The flyer struck down Long Island, looking for his home airport. Everything was completely blanketed in fog. Then Doolittle retreated from his adversary, going toward the ocean. Things were a little better here. But he was lost for a moment when an arm of fog reached out and enveloped him. As Doolittle brushed past this he noticed that he had just missed a dredging derrick. This was near Coney Island.

Doolittle then swung back and tried to find Miller Field, on Staten Island. He searched for some time, knowing that his fuel was running low. Then he retreated to New Jersey and began a quest for some of the New Jersey fields. He passed so close to Newark that the sound of his motor was heard at that airport, and the lights were flashed on, but Doolittle never saw them.

Prepares to Jump

The fog went up to 2,000 feet. Here there was an open space, and above that, at about 6,000 feet, there was a solid layer of clouds. Flying in the safe area between the two layers accomplished nothing, so Doolittle flew low in the fog, searching for a field. But his adversary checkmated him at all points. Finally after fifty minutes of frantic searching in which the last of his fuel supply was nearly exhausted Doolittle decided to give up the fight. He pulled his plane up in a steep climb to gain altitude for a parachute jump, after making certain that his ship, when he left it, would not fall in any congested area.

Just as the flyer was pushing up through the fog for the last time he caught sight of the blinker light on the outskirts of Kenilworth. He came down and the light showed him a small field in which he decided he could make a landing. There were trees in the middle of the field and as he swept across in a swift examination flight, Doolittle brushed the trees and wiped off the lower wing of his plane. With one wing gone he dropped down for a landing, tripped the ship on the wrecked wing in the trees for a second time and made a somersault landing.

Examination of the ship yesterday showed that only the lower wing and tail of the plane were broken. Doolittle was only slightly shaken up by his tumble out of the fog.

Group of Bankers Seeking Arrow-Grip Factory for Manufacture of Airplanes

One Hundred Men to Be Put to Work Immediately If Dix Avenue Plant Is Acquired by Syndicate

Airplanes will be manufactured in Glens Falls if negotiations now in progress are consummated, it was learned yesterday.

A group of New York and Baltimore bankers, which has taken up the manufacture of planes is negotiating for the purchase of the Arrow-Grip company's plant in Dix avenue and if the property is acquired one hundred men will be placed at work there immediately, making all parts of the machines, including the engines, and assembling them.

Lieutenant Colonel J. J. Brady and Charles Dee of Rochester, representing the banking syndicate, have been in town for several days conferring with the owners of the plant. When seen at The Queensbury by a reporter last night Colonel Grady would not discuss the plans of the bankers.

He is a test pilot for the Aircraft Manufacturing company of Buffalo and is also associated with the Consolidated Air Craft company and Taylor Brothers of Rochester.

Although Colonel Grady would not discuss the purpose of his visit to Glens Falls, it was learned that the present quarters of Taylor Brothers in Rochester are not large enough to meet the demands, and that the company was attracted to Glens Falls for several reasons.

First, because the Floyd Bennett field has the reputation of being the best natural field east of the Mississippi and therefore an ideal place to test and demonstrate the machines and second because of the location of the city on the direct route between New York and Montreal.

The plant, a one story building, is surrounded by a large lot which will permit a wide expansion of the business.

It is understood the company will manufacture two and four-passenger planes and that they will have a new type of air-cooled motor.

NAVY TESTING OUT XPY-1, GIANT PLANE BUILT HERE

From the Washington Bureau
of the BUFFALO EVENING NEWS.

WASHINGTON, March 20.—Taking advantage of springlike weather, naval officials are losing no time in putting the XPY-1, giant patrol ship built in Buffalo by the Consolidated Aircraft corporation, through her paces. As long as good flying weather obtains, the flight test board at the Anacostia naval flying station intend sending the ship aloft every day. Official tests have been hampered the past two weeks by cold and wet weather.

The ship now has been equipped with a wind-driven radio generator, and radio tests are to be made between the ship and the navy radio station at Arlington, Va.

BUFFALO LEADS IN PLANE MAKING

With the Output Totaling $20,000,000 This Year, City Is First in U. S.

"Airplane and airplane engine manufacture in Buffalo this year will total approximately $20,000,000, placing Buffalo first among all American's cities in aircraft production," says Samuel B. Botsford, general manager Buffalo Chamber of Commerce.

"In 1928 its five aircraft manufacturing plants had a combined output of nearly $5,000,000, just a step behind New York iCty. This does not include production figures of airplane accessory industries, nor of the Irving Air Chute Company, largest manufacturer of parachutes in the world and sole source of supply fo rthe air services of thirty governments.

"The companies which last year contributed most to Buffalo's advancement in the aeronautical industry — Curtis Aeroplane & Motor Company, Inc., Consolidated Aircraft Corporation and the General Aircraft Corporation—used 295,625 square feet of manufacturing space, employed 2,105 persons and produced 397 planes and 198 engines valued at nearly $5,00,000. The new $4,00,000 Curtiss plant, which will be opened in April of this year with 448,000 square feet of floor space and a working force of more than 3,000 persons, will give Buffalo the largest aircraft and aircraft engine manufacturing plant in the world.

Great Airport.

The Buffalo Airport has been called secon donly to Le Bourget, France. It is owned and operated by the city and occupies 557.5 acres of level ground. There are two main runways, each 100 feet wide and 3,000 feet long, drained and vailable for service regardless of weather conditions. A general lighting system has just been installed, practically elminating the hazards of night flying in the vicinity of Buffalo. There are three hangars on the field. Two new ones are now being completed, construction of a third will be started immediately, and plans are under way to bring the number of thirty within a short time.

"A temporary site for a marine airport has just been chosen through the co-operation of the Airport Advisory Board and the Aeronautics Committee of the Chamber of Commerce, which will likewise be owned by the city. Temporary hangars will be erected for public use and for the assembling and testing of seaplanes manufactured in Buffalo, until a permanent field may be acquired and improved.

Traffic Grows.

"Since Buffalo was placed on the air mail map on December 17, 1927, traffic along its lines has grown from a monthly poundage of 546 to 10,023. Direct lines from Buffalo, operated by the Colonial Western Airways, go east to Albany and west to Cleveland, connecting with linking transcontinental lines. Night lights are now being installed along this route by the federal government, and when this 24-hour-a-day service becomes available, over two-thirds of the United States can be reached from Buffalo by air mail overnight.

"The intense interest of the public in the recent show proved that Buffalo has become a truly air-minded city.

0 "Already Buffalo has made rapid strides in this newest of industries. In 1929 it will, I believe, reach its natural goal—first aeronautical city of America."

CONSOLIDATED AIRCRAFT GETS GOVERNMENT ORDERS

Buffalo, April 1.—Two orders for $102,000 worth of airplane spare parts for the United States army have been placed with Consolidated Aircraft Corporation. Company also has received an order from Peruvian government for six husky type training planes with aggregate value of about $75,000.

Buffalo Journal of Commerce Aeronautical Number March 1929

Selling the Aeroplane

By Lawrence D. Bell

President and General Manager, Fleet Aircraft, Inc.

Vice-President and Sales Manager, Consolidated Aircraft Corp.

SIX thousand aeroplanes were manufactured in the United States during 1928. In 1929 this figure will be increased by at least 2000.

The business of selling and distributing these aeroplanes has become almost as large a business as making them, and it is being developed with the same rapid strides that characterizes all other branches of this new industry.

LAWRENCE D. BELL.

Borrowing heavily from its older brother, the automobile, commercial aviation is now providing its customers and prospective customers with a complete service by a chain of dealers and distributors linked throughout the nation.

Dispelled the "Old Idea"

This in answer to the great interest in aviation that has been developed in the past two years, for the aeroplane, through flights of almost unbelievable distances and duration, in that time has commanded the attention of the world with a positiveness never before even approached. By sheer merit it has given convincing evidence of its reliability and safety. By its own work it has dispelled the "old idea."

By doing so it has created a demand that must be supplied. Governments now recognize the aeroplane as the leading weapon in national defense. Transport companies utilize it as a money-making proposition. Business men welcome it as the most recent contribution to our daily commerce. Sportsmen find in it the "new thrill." Young men want to learn how to fly it and thereby enter a very lucrative field.

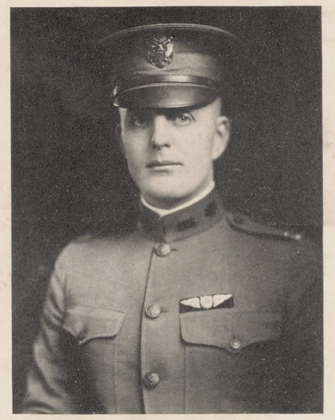
Governments, of course, comprise a large market for the distribution of planes. Millions are now being spent for aeroplanes as a branch of national defense. The wisdom of this policy is obvious — the aeroplane is the only weapon of any value in time of peace.

The second largest outlet for manufactured aircraft will be found in the field that comes, generally, under the classification of commercial. This includes air transport companies handling air mail and air express, passenger routes, and sight seeing tours. These companies also keep on hand a number of reserve, or emergency, planes.

Its Opportunities Unlimited

The development of this field is new, its opportunities practically unlimited. Existing transport opportunities are being expanded, daily, and new ones formed with amazing rapidity. This is suggested in federal plans that call for the linking of all nations on the American continents in a vast network of aerial routes. Soon we shall be able to fly to any point in North, South and Central America over a system of interconnecting airways operating on schedule with the regularity of surface lines.

Flying schools, where young men are training for pilots' licenses and individual owners are learning how to handle their own stick, also draw heavily from the manufacturer of aircraft. This is only in line with the general expansion of aviation and the crying need for more, and better, pilots, and the necessity for those who fly to be able to operate their own machines.



MAJOR R. H. FLEET

Outstanding in the American aeronautical picture is Major Fleet, president and guiding genius of the Consolidated Aircraft Corporation. To him is due much of the credit for Buffalo's place as second among all U. S. cities in aircraft manufacture. Consolidated is Buffalo's second largest aircraft plant.

The number of private owners and industrial concerns maintaining one or more planes is increasing. The greatest expansion found here is in the industrial field. Successful business men are now using aeroplanes more and more —to save time and to find enjoyment. The oil industry is perhaps the outstanding example in this field and the extreme value of the plane to it is at once evident. Officers and sales executives are quickly transported from place to place, geologists are provided with the most ideal vehicle in which to survey distant prospective oil fields.

So it goes with every business interested in saving time and making money more rapidly.

These planes are being placed before the public through the activity of what may be called a new industry within a new industry. A system of dealers and distributors is being formed and it will touch every section of the country. A new advertising business is being developed that calls for a translation of aeronautical terms into language understandable to the layman.

Money In Distribution

Municipal and privately owned airports, established adjacent to all of our metropolitan centers, have become the scene of sales and display rooms for aeroplanes, engines and accessories. In general, the relation between manufacturer, distributor and retail buyer is similar to that of other automotive lines.

Corporations and individuals, particularly those familiar with modern methods of merchandising motor cars, are obtaining sales franchises for commercial aeroplanes and investing huge sums in distribution facilities. At the present rate of growth these organizations will soon exceed those of manufacturers. These distributors, generally, maintain flying schools in connection with their sales organization.

Aviation shows, such as the one soon to be held in Buffalo, also are a great center for distributor-purchaser meetings, much the same as an automobile show.

(Continued on page 31)

Selling the Aeroplane

(Continued from page 25)

The most efficient way to get these planes from the manufacturing plant to the purchaser is, naturally, to fly them there. It is preferable to a customer, too, for it provides him with the opportunity to have his machine assembled by experts, put it through a test flight and gives cheaper delivery. The saving between flying your plane to the purchaser and shipping it by rail is, acccording to estimate, about 75 percent in time and about 80 percent in transportation charges.

During the past years, planes manufactured in Buffalo by the Consolidated Aircraft Corporation were flown not only to every section of the United States, but as far as Havana, Cuba. It was impossible to fly our seaplanes, used by the United States Navy, because there is so far no seaplane base at Buffalo at which to assemble and test these giant ships. To compete further in this line, it will be necessary to have a marine airport, for no manufacturer can compete with rivals who can save the difference involved between rail and air delivery.

PLANE WRECKED

Two Escape When Craft Hits Telegraph Wires

Telegraph wires along the railroad tracks near Elmwood Ave. and Knocke Street proved disastrous for two fliers who were trying to land their plane at the Consolidated Aircraft Corporation's field yesterday afternoon. The plane struck the wires and crashed onto the tracks below badly wrecked. The two men escaped serious injury.

The fliers, said to be I. R. Graham and Robert Boucher, were visitors at the aviation show. Unfamiliar with the topography surrounding the Consolidated Field, they sought to circle it for a landing. Trying to avoid some high tension cables they failed to see the telegraph wires.

The plane fell on the tracks with a smashed propeller and a cracked wing about 5:30 P. M. The fliers extricated themselves from the debris and with the help of some workmen from the field nearby managed to clear the tracks before a train came through.

Boucher and Graham said the plane had functioned perfectly and assumed all blame for the accident. They suffered a few scratches and bruises.

AIRPLANE IS WRECKED BY TELEGRAPH WIRES

Visiting Pilots Escape Without Scratch in Accident.

Circling to effect a landing on the Consolidated Aircraft corporation landing field with which they were unfamiliar, two pilts in one of the new Fleet ships of the company, drove headlong into telegraph wires strung along the Michigan Central right of way and wrckd thir plan, about 6 o'clock, Friday evening. The two men, I. R. Graham and Robert Beucher, aviation show visitors, escaped without a scratch when the airplane turned over on the railway tracks.

The fliers, who had been making a trial trip in the plane, were attempting to reach the Consolidated field. They were unacquainted with the ground and while spiraling to discover the whereabouts of the landing field, they failed to notice the wires.

The propeller was damage and one wing torn in the crash. The fliers worked swiftly and managed to remove the ship from the rails before the arrival of a train. The men declared the motor and plane were functioning perfectly before the accident and assumed al blame for the smashup.

FAIRVIEW PORT HAS BUSY WEEK WITH AIR MEN

Ten Planes Stop For Refueling—Give High Praise to Field

With a total of ten planes stopping for refueling, the week just closing has been the busiest since the Erie airport was opened at Fairview. Among the "visitors" was a Fokker monoplane from New York, on its way west.

Seven of the planes were from the Consolidated Aircraft company of Buffalo. One was on its way to Los Angeles, four to Chicago, one to Detroit and one to Cleveland. All of the air folk were in high praise of the condition of the field and the splendid service given, much better, it was asserted, than at many municipal air ports.

More improvements are being made to the field. Progress is being made on the drainage system, rolling and grading is being done and it will not be long nnail the port is in first-class condition.

There are now eight planes at Fairview and three more are expected shortly.

The class of young men training for flying is progressing splendidly and several of the iandidates will be ready to take the air before very long.

Buffalo Leads U. S. in Planes and Motors

Engine and Craft Expected to Reach $20,000,000 Total This Year.

Airplane and airplane engine manufacture in Buffalo this year will total approximately $20,000,000, placing Buffalo first among all American cities in aircraft production.

In 1928 its five aircraft manufacturing plants had a combined output of nearly $5,000,000, just a step behind New York city. This does not include production figures of airplane accessory industries, nor of the Irving Air Chute company, largest manufacturer of parachutes in the world and sole source of supply for the air services of 30 governments.

The companies which last year contributed most to Buffalo's advancement in the aeronutical industry—Curtiss Aeroplane & Motor Company, Inc., Consolidated Aircraft corporation and the General Aircraft corporation—used 295,625 square feet of manufacturing space, employed 2105 persons and produced 397 planes and 198 engines valued at nearly $5,000,000. The new $4,000,000 Curtiss plant, which will be opened in April of this year with 448,000 square feet of floor space and a working force of more than 3000 persons will give Buffalo the largest aircraft and aircraft engine manufacturing plant in the world.

The airport is owned and operated by the city and occupies 557.5 acres of level ground. There are two main runways, each 100 feet wide and 3000 feet long, drained and available for service regardless of weather conditions. A general lighting system has just been installed, practically eliminating the hazards of night flying in the vicinity of Buffalo. There are three hangars on the field. Two new ones are now being completed, construction of a third will be started immediately, and plans are under way to bring the number to 30 within a short time.

A temporary site for a marine airport has just been chosen through the co-operation of the Airport Ad-

(Continued on Page Two)

visory board and the Aeronautics committee of the Chamber of Commerce, which will likewise be owned by the city. Temporary hangars will be erected for public use and for the assembling and testing of seaplanes manufactured in Buffalo, until a permanent field may be acquired and improved.

Since Buffalo was placed on the air mail map on December 17, 1927, traffic along its lines has grown from a monthly poundage of 546 to 10,203. Direct lines from Buffalo, operated by the Colonial Western Airways, go east to Albany and west to Cleveland, connecting with linking transcontinental lines. Night lights are now being installed along this route by the federal government, and when this 24-hour-a-day service becomes available, over two-thirds of the United States can be reached from Buffalo by air mail overnight.

FIVE NEW HANGARS WILL BE ERECTED AT BUFFALO PORT

NY-Daily News Record 3/26/29

Buildings at Municipal Airfield Will Be Built at Total Cost of $300,000

Special to DAILY NEWS RECORD

Buffalo, March 25.—Three commercial transport companies and two flying schools will erect hangars and terminal buildings at the municipal airport involving expenditures aggregating almost $300,000 as soon as the engineering bureau of the Public Works Department completes a survey of 37½ acres of land adjoining the flying field which recently was acquired by the city.

This additional property will be subdivided and leased by the city to airplane manufacturing and operating companies but before any development can be started ,the property must be surveyed, runway areas laid out and a drainage system installed. It is expected at least six weeks will elapse before any construction work is started by the various companies whose application for sites now are being brought before the city for approval.

The Colonial Western Airways, Inc., operating the Albany, Buffalo, Cleveland air mail and passenger route, plans the erection of a modern passenger terminal and hangar costing $100,000. This structure will be a duplicate of the terminal recently completed by the company at the Albany airport. The Gray Goose Lines, Inc., and the Sky View Lines, Inc., also have applied for space upon which to erect hangars and other service buildings.

The Curtiss Flying Schools, Inc., of New York and the National Flying Schools, Inc., Buffalo, the latter a new $1,250,000 corporation headed by Major Reuben H. Fleet, president of the Consolidated Aircraft Corp., of Buffalo, will establish the first of 25 student training schools in Buffalo, and are awaiting completion of surveys so they can select sites for hangars.

The new plant of the Elias Aircraft & Manufacturing Co., also will adjoin the flying field with direct connections with the Lehigh Valley Railroad. Several other plants also are contemplating deveolpment either at the airport or on sites adjacent to the flying field.

Construction work is progressing rapidly on the two new hangars for which contracts recently were awarded by the city. Each of the two new structures will be 102 feet wide and 183 feet long with lean-to structures 20 feet wide and 183 feet long for machine shops, offices, supply rooms, heating facilities and sanitary arrangements. This work is expected to be completed early in May.

Lieut. Nathaniel E. Duffy, airport director, says the new beacon-way between Buffalo and Cleveland, to make night flying of air mail possible, will be completed early in April, so there is urgent necessity for speed in the development of the new night lighting system at the Buffalo airport. Bids for this work already have been received and it is expected the contract will be awarded within the next two weeks.

Plans for the construction of a control tower and additions to the administration building have progressed to the point where the city is ready to advertise for bids. These additions will provide for customs, immigration and postoffice facilities and for waiting rooms for passengers. The control tower will carry the new beacon and will be used for directing incoming and outgoing planes.

PLANE WRECKED

Buffalo Times

Two Escape When Craft Hits Telegraph Wires

3/30th

Telegraph wires along the railroad tracks near Elmwood Ave. and Knocke Street proved disastrous for two fliers who were trying to land their plane at the Consolidated Aircraft Corporation's field yesterday afternoon. The plane struck the wires and crashed onto the tracks below badly wrecked. The two men escaped serious injury.

The fliers, said to be I. R. Graham and Robert Boucher, were visitors at the aviation show. Unfamiliar with the topography surrounding the Consolidated Field, they sought to circle it for a landing. Trying to avoid some high tension cables they failed to see the telegraph wires.

The plane fell on the tracks with a smashed propeller and a cracked wing about 5:30 P. M. The fliers extricated themselves from the debris and with the help of some workmen from the field nearby managed to clear the tracks before a train came through.

Boucher and Graham said the plane had functioned perfectly and assumed all blame for the accident. They suffered a few scratches and bruises.

PLANE TANGLES WITH TELEPHONE WIRES, CRASHES

Buffalo Courier-Express

Two fliers escape with minor injuries in mishap at Consolidated landing field

3/30/29

Lack of familiarity with the field they were trying to reach, was blamed last night for the crash here of an airplane containing two visiting pilots, who escaped with minor injuries. Their plane was badly wrecked.

The plane, one of the sturdy and dependable little Fleets, was flown by two men said to be I. R. Graham and Robert Boucher, who are here visiting the aviation show. It crashed on the railroad tracks near Elmwood avenue and Knocke street.

The accident happened when the flyers, trying to reach the Consolidated company's nearby field, and entirely unfamiliar with the topography of that section, started to circle for a landing. In their efforts to avoid some high tension cables, they failed to notice the telegraph wires strung along the railroad's right of way.

Hits Telegraph Wires

The plane crashed into the telegraph wires, was thrown out of control and toppled down onto the tracks below. The propeller was smashed and one of the wings cracked. Graham and Boucher, neither of whom had visited the Consolidated's field before, managed to free themselves from the wreckage and take a hurried inventory of the situation.

This was about 5.30 p. m., yesterday. At 5.45 o'clock an express train was due to pass. Although considerably shaken by their fall, Graham and Boucher, working frantically, cleared the tracks before the train approached, a task which they accomplished with the aid of workmen from the field.

Then, for the first time, both flyers, who said the plane had functioned perfectly until it was dashed into the telegraph wires and who assumed all blame for the accident, gave attention to their own injuries, which were confined to a few bruises and abrasions.

Aviators to attend reserve officers' dinner Thursday

Aces of the aviation world will be present Thursday night at the joint dinner and dance to be held by the Buffalo chapter of the Reserve Officers' Association and the Air Corps Reserve organization, at Hotel Lafayette. The speaker will be Capt. Harrison W. Flickinger of the United States Air Corps. Maj. J. J. Kingsbury of the local U. S. Veteran bureau will preside.

Those invited to attend include Leigh Wade of the Round-the-World flight, and vice-president of the Consolidated Aircraft Corporation; F. Trubee Davidson, secretary of war in charge of aviation; Col. Delos Emmons, Capt. Ira Eaker, pilot of the Question Mark; and Lieut. Lester Maitland, pilot of the Army Fokker plane from San Francisco to Hawaii.

Officers from Wright field, Dayton; Selfridge field, Mt. Clemens, Mich., and Mitchell field, Long Island, are expected to attend. Manufacturers and exhibitors who have planes at the aviation show, have been asked to attend.

PERU BUYS HUSKY PLANES

Six Training Ships Ordered from Consolidated Aircraft.

3/28/29

Six Husky-type training planes have been ordered from the Consolidated Aaircraft corporation by the government of Peru for military purposes, according to announcement Tuesday. The order involves approximately $75,000.

Three other military contracts also have been awarded the company, one from the Navy department and a second from the Army air corps. The two United States army contracts aggregate $102,000 and are for spare parts only. The navy ship is to be a Consolidated Husky.

The six biplanes ordered by the Peruvian government were sold by Leigh Wade, chief test pilot of the company, who sold his own ship to the South American government for experimental purposes. The order was the result of tests made by Peruvian pilots.

WORK STARTED BY CONSOLIDATED ON TRI-MOTORED LINE

Daily News—Record, NY, 3/26/28

Two Planes to Be Ready in Early Summer for New York-Buenos Aires Service

Special to DAILY NEWS RECORD

Buffalo, N. Y., March 25.—Construction work has been started by the Consolidated Aircraft Corp. on the six giant multi-motored Pullman type seaplanes which have been ordered by the Tri-Motored Safety Airways, Inc., of New York, for passenger service between New York and Buenos Aires.

Ray H. Whitman, an executive of the Consolidated company, reports that the first two of these giant ships will be delivered early in the summer and the other four will be completed and ready for service on the New York-Buenos Aires route later in the summer. These planes are being built at the Buffalo plant at a cost of $150,000 each, the total order aggregating $900,000.

NAVY PLANE TO HAVE THIRD WASP ENGINE

NY-Daily News Record 3/27/29

Buffalo, N. Y., March 26. — A third Wasp engine will be installed on the giant Admiral type seaplane known as XPY-I by the Consolidated Aircraft Corp., of Buffalo, which built the plane for the Navy Department at a cost of approximately $300,000.

This machine, which now is undergoing Navy department tests at the Anacostia Naval Air Station, has an emplacement for the third engine and the company announced the receipt of an order from the Navy department for the placing of a third Wasp engine on the plane after the present tests are completed.

Contract To Install Wasp Motor on Navy Patrol Ship

Air Transportation 3/29/29

WASHINGTON, D. C. (ATN).—The Navy Department has awarded to the Consolidated Aircraft Corp., of Buffalo, the contract to install an additional engine on the new Navy patrol flying boat manufactured by Consolidated.

The third motor will be placed over the center section. All three engines are Wasps.

AIRPLANE IS WRECKED BY TELEGRAPH WIRES

3/30/29

Visiting Pilots Escape Without Scratch in Accident.

Circling to effect a landing on the Consolidated Aircraft corporation landing field, with which they were unfamiliar, two pilots in one of the new Fleet ships of the company, drove headlong into telegraph wires strung along the Michigan Central right of way and wrecked their plane, about 6 o'clock, Friday evening. The two men, I. R. Graham and Robert Boucher, aviation show visitors, escaped without a scratch when the airplane turned over on the railway tracks.

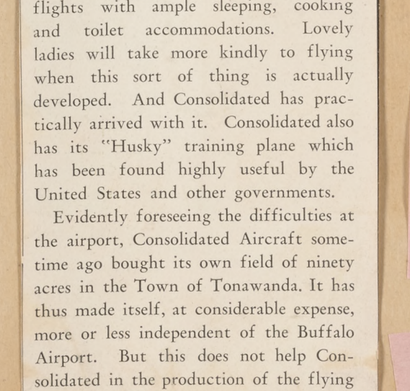
The fliers, who had been making a trial trip in the plane, were attempting to reach the Consolidated field. They were unacquainted with the ground and while spiraling to discover the whereabouts of the landing field, they failed to notice the wires.

The propeller was damaged and one wing torn in the crash. The fliers worked swiftly and managed to remove the ship from the rails before the arrival of a train. The men declared the motor and plane were functioning perfectly before the accident and assumed all blame for the smashup.

Town Tidings --

March 1929

Three famous "Made-in-Buffalo" aircraft. Top, the "Aristocrat" of the General Airplanes Corp., which Commander Byrd took with him on his South Polar Expedition. Center, the "XPY-1," the largest flying boat in the U. S.



Politics and the Airport

HERE is the Consolidated Aircraft Corporation which recently covered itself with glory in the production of a large flying boat which the United States Navy calls "XPY-1". This Consolidated baby is a monoplane with a wing span of 100 feet. The boat is sixty feet long. It has two 430 horsepower motors with a high speed of 120 miles per hour and a cruising speed of 100 miles per hour. With its crew of five men including two pilots, a radio man, a man in the bow who acts as machine gunner, observer and navigator, and another machine gunner aft, this boat has a patrol range of 3,000 miles without refueling. It can take off from the water in thirty seconds.

But, most significant for Buffalo is the fact that this boat has unique possibilities for commercial use on the Great Lakes, along other national waterways, on routes from Buffalo to the St. Lawrence and to the lakes of northern Canada. With three motors it can carry 32 passengers, with two pilots and a steward. This craft makes possible luxury air travel — long over-night flights with ample sleeping, cooking and toilet accommodations. Lovely ladies will take more kindly to flying when this sort of thing is actually developed. And Consolidated has practically arrived with it. Consolidated also has its "Husky" training plane which has been found highly useful by the United States and other governments.

Evidently foreseeing the difficulties at the airport, Consolidated Aircraft sometime ago bought its own field of ninety acres in the Town of Tonawanda. It has thus made itself, at considerable expense, more or less independent of the Buffalo Airport. But this does not help Consolidated in the production of the flying boat. If this boat is anything like the commercial success which is indicated, Consolidated will have to have a seaplane base. It is keenly interested in Buffalo's waterfront plans and fervently hopes that something will actually be done about it.

ASIDE from the interest of Consolidated and also the Hall-Aluminum managements in the seaplane base, it is quite evident that Buffalo can hold out no inducements to other aircraft industries interested in the construction of seaplanes without this base. It can hold no inducements to transport companies using seaplanes on the Great Lakes, to northern Canada, the lower St. Lawrence or other points, without this base; especially in view of the obvious natural handicap of ice along the waterfront so many months of the year.

Someone has asked the question, "Why should the city of Buffalo be expected to develop a seaplane base for the use of producing companies?" But this, flying men feel, is not a question of right and wrong or the fitness of things, but just how far Buffalo wants to go to attract aircraft industries and transport business to the city.

Incidentally, it may be mentioned that the site for a seaplane base most favored by air-minded men is in that portion of the waterfront near the foot of Porter Avenue. The city owns the land. Necessary filling could be done cheaply and the total expense of development including hangars and incidental equipment might be kept down to $250,000. Three or four men would be able to care for the place adequately.

CONSOLIDATED GETS AIRCRAFT ORDERS

Army Places Order for Spare Parts, Costing $102,000.

Two United States army contracts aggregating nearly $102,000 and said to be one of the largest orders ever placed for spare parts only, have been received by the Consolidated Aircraft corporation, 2050 Elmwood avenue, Ray P. Whitman, assistant to the general manager, said today.

An order for six Consolidated Husky-type training planes from the Peruvian government in South America, involving approximately $75,000, in addition to an order from the Navy department for a Consolidated Husky of the NY-3 type, powered with a Wright whirlwind J-5 220-horsepower motor, have been also received, Mr. Whitman said.

Construction work has been started on the six multi-motored Commodore type seaplanes which are to be made for the Tri-Motored Safety Airways, Inc., at a cost of $900,000, Mr. Whitman said. It is expected that two of these seaplanes will be delivered by the middle of summer and the remaining four by the end of the year.

A third Pratt & Whitnew geared Wasp motor of 570-horsepower will be installed on the giant "Admiral" military type seaplane, which was recently given a two-motor test by Navy department officials, Mr. Whitman said. Navy officials wish to obtain comparative data, Mr. Whitman said.

AERONAUTICS

Buffalo Show

Buffalo this week held its first air show. The event had significance less for number of planes exhibited (50) and the amounts of planes sold and dealer contracts closed than for two other reasons:

1) The Buffalo show, more than the Detroit show, which will occur the second week in April, has international aspects. Detroit has across its international Detroit River only small Windsor in rural Ontario. Buffalo has beyond the Niagara River prosperous Toronto in industrialized Ontario.

2) It was the first time that Buffalo had made much boom-boom over its eminence in the aviation industry. Greater New York City last year produced $9,000,000 worth of flying goods in 16 manufacturing plants. Buffalo, eleventh in U. S. population last year produced $4,911,252 worth.* Detroit, fifth city, produced $3,500,000 worth; Los Angeles, fourth city, $2,750,000.

To the Curtiss Aeroplane & Motor Co., Inc., the Buffalo Chamber of Commerce grants prime importance in the community. President Clement Melville Keys, who has every one of his fingers in some aviation pie or other, and Vice President C. Roy Keys, his brother, have made Curtiss Aeroplane & Motor one of the largest self-contained units of the industry. Almost all present aircraft concerns make only planes, buy their motors elsewhere. Curtiss manufactures motors as well as ships. Curtiss builds *Hawks, Falcons, Condors* and *Fledglings*, all military planes which can be modified for transports and gadabouts. In motors it builds the powerful *Challenger* and *Chieftain*, both air-cooled, and the *Conqueror* and *D-12-d*, both water-cooled.

By building *Huskies* and other training planes favored by U. S. military forces, Consolidated Aircraft Corp. has attained high rank. President R. H. Fleet and associate executives have recently formed the Fleet Aircraft Corp. to manufacture *Huskies*, renamed *Fleets*, for civilian purchase.

Less than a year ago General Airplanes Corp. (A. J. Brandt, president), began business in Buffalo. Already it has sold more than $1,000,000 worth of its *Aristocrats* and *Surveyors*. It counts on selling $3,000,000 worth this year. Commander Byrd took an *Aristocrat* to Antarctica.

Hall-Aluminum Aircraft Co. (Charles Ward Hall, president), G. Elias & Bro., Inc. (A. J. Elias, president), and Eberhart Aeroplane & Motor Co., Inc. (Cleburne Eberhadt, Jr., president), have produced little so far but are experimenting much.

*Detroit's All-American Aircraft Show will display 107 planes, surpassing Chicago's International Aeronautical Show of last December (TIME, Dec. 17). Manhattan conducted a much smaller show in February (TIME, Feb. 18). Pittsburgh's first exhibition a fortnight ago held 23 planes and five gliders, initiated many a sale and agency. Other important air shows this year are scheduled at Indianapolis and Cleveland. The Gardner Annual Trophy Race at St. Louis also functions as a show.

SIX BIPLANES COMPLETED

Fleet Aircraft Corporation Makes Delivery This Week.

Delivery of six Fleet biplanes, manufactured by the Fleet Aircraft corporation will be made Friday, according to announcement Thursday by Lawrence D. Bell, president.

Two of the new machines will go to Chicago, two to Tulsa, Okla., one to Chattanooga, Tenn., and the sixth to the aviation show at Detroit and later to New York.

The last ship, which was purchased by Earl B. Osborne, editor and former published of "Aviation," an aeronautics magazine, will be flown by him to the Detroit exposition and at its conclusion, to New York.

200 READY TO TAKE LESSONS IN AVIATION

Local school soon to start large class in aero study

By ANNE M. McIHENNEY

The first of the new flying schools, predicted, presaged, enthusiastically described and ballyhooed at the recent Aviation show, is under way at the Consolidated Aircraft Airport, where a group of students are finishing up individual courses in training and preparations are being made to start off a new class numbering close to 200 young women and men this week.

The school, unit one of the National Flying Schools, Inc., is sponsored by Consolidated Aircraft and comprises a succinct answer to the cry of moderns—"What must we do—join the Army in order to fly safely and sanely?—and what about girls?"—that has echoed throughout the country ever since the Lindbergh flight so graphically and vividly fired young imaginations.

Two Noted Instructors

National Flying Schools intends to operate throughout the country with Buffalo as the hub and headquarters of both its primary training course and advanced and instructors' schools and in addition to starting out in first place with such a tremendous class all ready to hop off and with its own training field and organization, Lieut. Leigh Wade, famous flyer who is vice-president of the Consolidated company, announced yesterday that the school will begin under the guidance of two of the most noted flying instructors in the country, Lieuts. Fred C. Neelson and Hez McClellan of the U. S. Army.

Every army flyer and every man graduated from any army flying school since the war has passed under supervision of either or both Nelson and McClellan. The former is noted as the dean of the Instructors' School of the United States Army and will be in charge of the actual flying training of students and head the school for flying instructors. Both hail from Duncan Field, San Antonio, Tex.

"It is our aim to establish a school using a standardized method of instruction in flying from standard equipment," said Lieut. Wade. "The day when a person could pick up a haphazard knowledge of flying, do a few hours solo and then start out as a pilot, is gone. The Department of Commerce and the Aeronautical Chamber of Commerce has raised strict requirements for licenses. We intend to build up the flying industry through developing pilots in the manner the public would want if they knew as much about the essentials and requirements of flying as we do.

"For eight years the army has been experimenting, devising, enlarging and concentrating on an instruction course. And in that time it has succeeded so admirably and instituted such splendid training that most people believe, and rightly so, that the army is the best place to learn to fly.

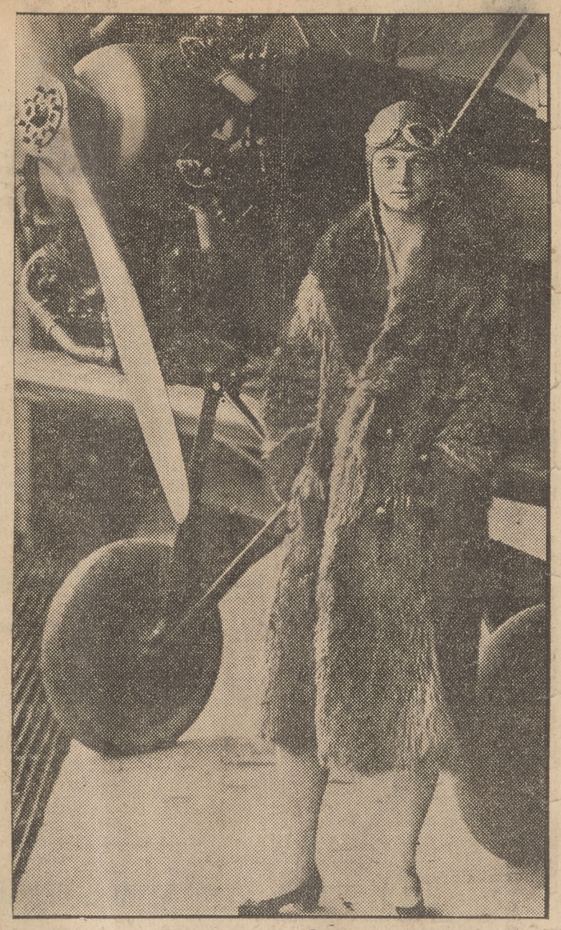
"With Nelson and McClellan here, the planners and biggest participants in standardizing the army course, our system more than conforms to the requirements set up by the Department of Commerce and the Aeronautical Chamber of Commerce. It is the first course comparable to the army's."

And so, 200 youngsters, one of whom has journeyed 600 miles from South Bend, Ind., to attend the course, will report for roll call next Monday, don flying "monkey" suits for the first time and get an official whiff of the ozone way up there and a personal introduction to a cockpit which will be theirs for some time to come. Most of the students are enrolled for twenty-hour flying course, which means that they are taken through the instruction school, given classes in meteorology, navigation, air engines, airplane analysis, instrument analysis, aerodynamics, parachuting, airplane and air engine design and air commerce rules and regulations, in addition to completing under supervision their twenty hours of solo flying needed for a pilot's license. Many of these are expected to go on to the 50-hour course and many others are already enrolled for the course which takes them through 210 hours of flying and instruction.

The Consolidated Fleet plane, until recently named the Consolidated Husky and evolved after years of experimenting in army training planes, will be used as standard equipment for this school and the others to be soon founded in other centers. The Fleet is the finished product of specialized development of training planes by the government and is essential for the proper tutelage, maximum benefit in the minimum time and greatest safety for students. The plane is almost crash proof and has been crashed into the ground at full speed in testing and come out without major damage to plane and no damage to cockpits. Parachutes are also supplied with the course and a special class will be given in this by Lieut. McClellan.

Shortly after the start of the student school the army officers will begin operation of the instructors' school, graduates of which will be used in organization work of the other unit schools of the system. Lieut. Wade, who was one of the round-the-world flying crew, will personally go through this school as an inspection tour and later will be in active charge of many of the branches.

Aero Record-Holder Visits City



MISS LOUISE McPHETRIDGE

West Leads East in Flying, Pacific Coast Aviatrix Finds

Woman who set two records to have one broken, believes they mean little

Mrs. Herbert Thaden of Pittsburgh, a young lady of much personality and ability, who is better known as Miss Louise McPhetridge, the girl flyer of the Pacific coast who set the ball of women's endurance flights a-rolling a year ago, visited Buffalo yesterday to inspect the Fleet training plane of the Consolidated Aircraft Company and to view local aviation manufacturing.

It was Mrs. Thaden's endurance record of 22 hours, three minutes and twelve seconds which Miss Eleanor Smith, seventeen-year-old flyer, broke last week.

Records Must Fade

"These flying records don't last long," Mrs. Thaden said yesterday, laughing with great humor. "I only set that March 16th and 17th, a little over a month ago. And now look what's happened!"

Mrs. Thaden still has the women's altitude record of 20,270 feet and may try soon to regain the endurance mark.

"I'm out of sensational flights" she said soberly in the early part of an engaging interview, but later changed her mind to opine that she might "try again."

"They don't mean such an awful lot, these records," she said. "It's all the plane, the motor and the conditioning. If everything is all set all you have to do is to sit there and fiddle with the controls. Of course there must be a lot of preparation—re-designing so as to include more gas space, and motor and stress tests to make sure that everything is right. After that it becomes a sitting contest."

250 Hours to Credit

Mrs. Thaden, who is but 23 years old, has been flying but a year and a half and in that time has completed more than 250 hours of solo flying. She is known on the Pacific coast as the leading woman flyer and has an expert knowledge not only of piloting but of aerodynamics. She went to the coast as an employe of the Trevelair Company and in this capacity learned to fly. Later as head of one of the Pacific offices she had a plane at her disposal.

Although "out of sensational flying," Mrs. Thaden went on to discuss her entry in the woman's air derby in connection with the national air races, with enthusiasm. The event will be run off in August and already ten entrants have been listed, including Eleanor Smith. The race will be from Los Angeles to Cleveland and will be made up of daily four-hour flights, the race to be determined on a total time basis. She will pilot a Travelair in the race.

Says West Aero Leader

Flying on the west coast is far ahead of the rest of the country, the girl flier stated.

"Oakland has one of the largest airports in the country and certainly the finest," she said. "It has four large hangars, each capable of housing 60 or 65 ordinary commercial planes. The coast is dotted with airports and emergency fields. Of course, geographically and climatically, the west coast is ideal for flying. Fine weather and few storms make flying possible at all times.

"In the East things are much different. There are few emergency fields and you never see the number of planes continually in the air that you do in the West.

Finds Flying Safe, Sane

"Everybody flies out there and soon the whole country will be taking to the air," she continued. "Flying is now both safe and sane. The new planes are almost self maneuverable. Learning to fly is certainly as easy as learning to drive a car. Personally, I prefer it. To me the only dangerous thing about flying is driving to and from the airports:

"These recent crashes, air-accidents, are due to bad operating. All department of commerce investigations have discovered that each and every one was due to some error on the part of the pilot. The answer is more flying and better pilots."

Mrs. Thaden motored to Buffalo from Pittsburgh with her husband who is an official of the Pittsburgh Metal Airplane Company. He is negotiating the purchase of sixteen Fleet training planes for the Pittsburgh Aviation Industries, a subsidiary of the airplane company which is establishing flying schools there.

Mrs. Thaden took one of the Fleet planes up for an hour yesterday, stunting and testing the craft for her husband. She acclaimed it the finest training plane she has flown and spent an hour or so going over the major features and engine. The Thadens will leave for Pittsburgh again Thursday morning.

June 1929 THE AERONAUTIC REVIEW

Navy Tests "The Fleet"

Two-place training and sports plane before board

THE FLEET, training and sports airplane, formerly designed and manufactured by the Consolidated Aircraft Corporation, Buffalo, under the name of "Consolidated Husky, Jr.," is now undergoing rigid service tests by the Navy's flight test board at the Naval Air Station, Anacostia. The plane has been purchased by the Navy as a possible standard training plane for Naval aviation students.

The Fleet is the outgrowth of the experience gained in almost eight years of specialization in the design and production of training aircraft. The many advanced features found in *The Fleet* are based upon the lessons learned during the operation of more than 700 Consolidated Husky training planes at 140 different stations throughout the Western Hemisphere. For the past five years, the Consolidated Husky has been the standard training plane of the United States Army Air Corps and Naval Air Service and also has been widely used in five foreign countries.

TWO-PLACE SHIP

The Fleet is a two-place, single-bay type with seats in tandem closely coupled to facilitate training. It is designed to take engines in the 60 to 150 horsepower range of radial air-cooled motors.

The plane has a wing span of 28 feet, an overall length of 20 feet 9 inches, and an overall height of 7 feet 10 inches. The wings are rectangular in plan form, and both upper and lower wings are set at zero degrees incidence. The lower wings are rigged with four degrees dihedral, while the upper wing has none. Both wings are based upon the Clark "Y" airfoil section, expanded to 15 per cent. The wing structure incorporates spruce spars and aluminum alloy ribs. It is possible to replace either front or rear spar in either upper or lower wing panels without destroying or losing a single rib or fitting, a point of great advantage from the standpoint of ease and cheapness of maintenance. Ailerons incorporating a Frise-type balance are installed on the lower wings only and afford excellent lateral control because the lower wings do not reach the burble point until their angular relation to the horizontal is 8 degrees greater than that of the upper wing. The aileron control system is patented and is a feature of this plane.

GRAVITY FEED

The fuel system incorporates a 24-gallon tank built into the center section of the upper wing, thereby providing simple gravity feed.

The Fleet at present is manufactured in two models under Department of Commerce approved type certificates 122 and 131, allowing the choice of either the Kinner or the Warner engines.

The weight empty of the Model 1 is 976 pounds, the disposable load is 554 pounds, and the gross weight loaded is 1,530 pounds. The Model 2 empty weighs 1,022 pounds, the disposable load is 560 pounds, and the gross weight is 1,582 pounds.

High speed of the Model 1 with full load at sea level is 111 m.p.h., while the Model 2 is 3½ miles faster. The cruising speed of either ship is 90 miles per hour and the landing speed 40 miles per hour. The climb at sea level is 930 feet per minute and the ceiling is 16,000 feet.

"THE FLEET" IN FLIGHT

This is a direct descendant from a noble ancestor

OFFICIAL AVIATION NEWS

BY LIEUT. EMIL M. FARRIS

The President of the United States has said: "If the people are to remain politically free, they must be economically free." Business welcomes aviation to share the wonderful times ahead, welcomes it to the lists of those who believe in America's industrial system, a system which allows business to regulate itself, a system which insists that the government is cast in the role of umpire, assuring fair play to each individual.

We, the people of Buffalo, those of us who are air-minded and those who are fast becoming air-minded, are indeed proud to know that the above words reflect upon our industries in Buffalo. Some of these most prominent are: The Fleet Aircraft Corp., Consolidated Aircraft, Inc., the Curtiss Airplane Corp., A. J. Elias & Son, Irving Air Chute, and many others.

* * * *

The airplane has come to the rescue of the airplane industry as far as the minority stockholders in Buffalo of the Kinner Motor Co., located in far away California, are concerned. Papers in a suit to restrain the sale of the Kinner Airplane Motor Corp. assets were forwarded by airplane at one o'clock yesterday in a race against time in which four to six million dollars are actually involved. The possible saving of this huge sum could not be realized but for the saving of time by the use of the airplane.

The papers in this suit will be served on the Kinner officials Thursday and the argument will be in court the same day. If it were not for the airplane the minority stockholders of Buffalo would be "out of luck" because there would be no way by which they could have filed suit in time but for this tremendous speed of the airmail.

Comments on this column, the first of which apepared in Monday's TIMES, were received. The aviation editor wishes to thank those who so kindly took the time to write. The complimentary comments were overwhelming. It will be our policy to follow those laid down by the publishers of the Buffalo TIMES, and that is to be fair, honest and do all possible to promote the aviation industry to its highest extent.

* * *

It is about "time" that somebody put the "bug" in Councilman Frank Perkins' ear about "his" gas well, located on the city airport. This gas well is without question the greatest danger to fliers who visit the airport. Up to date there hasn't been a single accident at the Buffalo Airport. A record well accomplished due to the field management. It will be a catastrophe some day when some pilot unfamiliar with the field, will fly into this obstruction and cause a fatality. If the well was of any benefit nothing would be said. But who wants to gamble a few dollars' worth of gas with that of human life? Won't the city officials get together and pass a resolution or whatever is necessary to eliminate this danger? It will be greatly appreciated by all pilots and all concerned.

* * *

It was indeed a very worthy deed that Pilot Earnest E. Bashan performed Monday when he went to the rescue of the Ford plane piloted by Carl Rach. Fog is the aviator's greatest danger. Excellent judgment was shown by the Ford pilot when he stayed in the same location flying around attracting attention so that some effort would be made to direct him to the airport. Many folks were under the impression that Pilot Rach was in great danger. This is foolish inasmuch as he had enough gasoline supply to return to Detroit from where he started. The whole secret of the incident was that he found a clear space in the fog and made this his rendezvous until Pilot Bashan appeared in front of him. No less than 100 telephone calls were received at the airport, most of them complaints stating the pilot was doing tricks with his three-motored ship. Lieut. McClennen, from the Consolidated Airport on Military Road, also tried to locate the missing plane, but was a little late.

* * *

After the lost flier arrived over the field another hazard was ahead: "No lights to show the runways." Some quick thinking was done by Chief Mechanic Charles (Dolley) Froesch and Pilot Moultrop of the Ford Company. Gasoline and oil was streamed along the edge of the runway and ignited, and another barrel was ignited in the middle of the field. The smoke from the latter acted to show the direction of the wind while the other directed the pilot where to land.

It is hoped that when the lights are installed at the field, good judgment will be used in selecting the proper and most efficient light. Let's forget politics for just this once, this is too important. And while the council is about it, why not change the beacon? The one that is there now is an insult to one's integrity.

* * *

Lawrence D. Bell, president of the Fleet Aircraft Corp., vice-president and sales manager of the Consolidated Aircraft, Inc., was born in Mentone, Indiana, a little unbeknown town way out west. He was educated in the schools of sunny California. In 1912 he became associated with the Glenn L. Martin Aircraft Co., building the giant Martin bombers for the government until 1917 when he became involved in the merger of the Wright-Martin Co. Here Mr. Bell went to Cleveland and built the Wright-Martin plant and organized its personnel. He became connected with the Buffalo organization last July in the capacity of sales manager. Since then his promotion has been rapid. Vice-president of Consolidated in a few months, and president of the new Fleet Corp., a few months later.

* * *

Sherman M. Fairchild, airplane authority, said, "If we are ever to be a flying nation, we must first fly as individuals."

* * *

What does the immediate future hold? It would be rash to venture a prediction. Already one of our experienced airmen is planning a non-stop flight around the world. Great projects are "in the air" and for the air. An interest and almost feverish activity is everywhere in evidence.

* * *

And Rear Admiral W. A. Moffett tells us "That ships using airplanes can see farther and shoot farther and hit harder than any weapon known." American aviation activity is accomplishing two things: Commercializing the airplane and giving civilians a training that will prove most valuable in time of war.

* * *

Airport Slang Expressions.

Barracks Flying—The conversational brand of aeronautics. Productive of the world's best airmanship. Favorite occupation of all "aviators."

Balloonite—One who flies balloons.

Cabre—To fly at a stalling angle, waiting for other planes in formation to catch up.

Ceiling—The maximum altitude to which any given plane can rise.

Crab—Pointing the plane one way to fly another; method of correcting for a cross wind.

Crash—Anything worse than a bad landing.

* * *

The National Flying Schools, Inc., is building an airport just opposite the one belonging to the Consolidated Aircraft. The new field is located on Military Road, south of Tonawanda. One side of the field borders on the Niagara River. This probably means Buffalo's first water landing facilities.

* * *

A new invention, the air siren, is a very practical one for aviators. This is attached to the plane on one of the wings. Its power is derived from a small propeller attached to the armature of the siren. When in operation it makes a screeching noise similar to the fire engine. It can be used in many ways as warnings, and if properly legislated should prove very beneficial in case of emergency.

* * *

APRIL IN THE AIR.

April was a memorable month to the old-time aviators. Here are a few of the outstanding events that took place in April:

1875, April 15—Gaston Tissandier Civel and Croce-Spinelli made an ascension to 8,600 meters. Tissandier alone escaped death.

1902, April 4—The first American airship Leo Stevens' first ascent in the first American airship, on which he had been working since 1900. The flight was made in front of the Oriental Hotel at Manhatten Beach, New York. Over fifty ascents were made during the year.

1908, April 2—Aviation section of the Aero Club was formed. Its purpose was to promote experiments and providing opportunities for such experiments.

1909, April 5—First motion pictures from an airplane were taken.

1910, April 10—For five days Glenn Curtiss, C. F. Willard and J. C. "Bud" Mars gave exhibition flights at Memphis, Tenn. This was the beginning of extensive exhibition flying done by Curtiss fliers all over the country in the years to follow.

1910, April 10—First intercollegiate aeronautical convention. Delegates from University of Pennsylvania, Cornell, Columbia, Princeton, University of Virginia, Haverford, Swarthmore and Tufts were present. The convention was held in Philadelphia.

1913, April 3—Calbraith P. Rodgers, first man to make transcontinental flight. Miss Harriet Quimby flew across the English Channel.

1913, April 24—New world altitude record for hydros, established at Pensacola by Lieut. P. N. L. Bellinger, U. S. N.

1917, April 6—Declaration of war and the expansion of the aviation section, Signal Corps, through various stages to the Air Corps of today.

1921, April 11—Numerous bills were introduced for the regulation of air navigation, the majority of which are laws today.

1923, April 17-19—New world endurance record at Dayton, Ohio. Made in Army transport plane (monoplane), Liberty motor, by Lieutenants J. D. McReady and O. G. Kelley. Time, 36 hours.

1924, April 24—The start of the round-the-world flight.

* * *

ANSWERS TO INQUIRIES.

Earl Hansman—In order to become a pilot you must be 16 years of age for private pilot's license and 18 for commercial transport. If you will send a self-addressed envelope, will mail you names of accredited flying schools in Buffalo.

D. Barone—In order to become a mail pilot you must have an ordinary education. I know of some pilots who have not completed the high school course. An average air mail pilot's salary is from $4,000 to $7,000 per year. Some transport pilots receive as high as $12,000 per year.

Chas. McHenery—Before you can take your first lesson in piloting you must have a student's license issued by the Department of Commerce. This is issued after a physical examination as set by the Department of Commerce.

Harold Russell—The average student takes about 10 hours of dual instruction before he is allowed to fly alone (solo). This by no means makes you a proficient flier. A number of schools are now requiring 15 to 25 hours dual instruction.

LAWRENCE D. BELL.

Buffalo Times 4/10/29

20 NEW PLANES ORDERED

Consolidated Aircraft Company Sells 83 Ships in 14 Days.

Buffalo News 4/16/29

Coincident with the placing of a Fleet planes agency with the Universal Aviation corporation, of St. Louis, Mo., an order for 20 of the new ships was given Monday to the Consolidated Aircraft company. The planes will be drafted for use in establishing flying schools in Missouri and Minnesota.

Delivery of the new airplanes will be made on a deferred basis. Three will be shipped this week, two others this month, and five in each of the three succeeding months. The contract placed by Universal brings the sale of Fleet planes to a total of 83 within the past two weeks.

Lawrence D. Bell, general sales manager and president of the Fleet Aircraft company, declared his organization had given orders for 182 such ships to the consolidated company since Jan. 1.

Sixty-three other Fleets have been sold to Garland-Clevenger schools of Oklahoma, the Pittsburgh Aircraft Agency corporation, and two smaller agencies on Long Island.

PENDING MERGERS SWING SEVERAL ISSUES UPWARD

Daily News Record 4/23/29

Fokker, Consolidated Air and Consolidated Instrument Make Swift Advances

UNITED A & T UP

Continues Sensational Gains by 7¾ Rise — Aviation Corp. Group Down

By JOHN T. GIBBS.

A strong upward movement in a number of air securities yesterday led to a belief in Wall Street that the great aviation stock boom was about to begin. But, while gains were large and impressive, they were not spread over the entire list. Many prices were stationary and a few issues fell slightly behind. Those which forged ahead were not confined to any particular group and were not prompted by any single influence. The impression therefore is given that a number of mergers are in prospect, or that great expansion plans are soon to be announced.

United Aircraft & Transport, the outstanding feature of last week's market, opened this week with another demonstration of strength, the common stock going up to a new high at 116¾, and closing at 116, with a net gain of 7¾, while the preferred advanced also to a new top price of 81¾ and closing at 81, a net gain of 1½. On the "big board" with United, Wright stood still at 245, while Curtiss closed at 149¼, a net gain of 1⅛. Curtiss, by a series of slow advances, has gradually approached its year's high of 153½.

* * *

While the New York Stock Exchange afforded only one big aviation thrill, the Curb furnished several. Fokker, Consolidated Air and Consolidated Instrument all made swift and sensational advances.

Fokker was the day's feature stock. After a dull morning, it began to advance in the afternoon, going up to 41⅝ and closing at 41, with a net gain for the day of 6½, on a total trading of 35,000 shares, an unusually large number.

Fokker's rise was attributed by traders to inside buying, but by whom no one would venture a guess. Any one of the three big vertical combinations, it was said, would be glad to get Fokker, but the company is independent and control is not likely to pass through market purchases. Nevertheless, it is understood that bids have been made for domination of the company.

Consolidated Aircraft Impressive.

Almost equally impressive was the advance of Consolidated Aircraft, which sold up to 35¼ and closed at that figure, with a net advance of 5¼ points. This advance is another puzzle, as this company was recently disappointed in a projected deal. It had planned to take over Kinner Aircraft, provided that company put through a financial reorganization. Kinner stockholders vigorously objected to the proposed refinancing and the plan was abandoned, leaving Consolidated without the engine it sought to control. However, the stock's action may have been due to a statement made yesterday by Maj. R. H. Fleet, president of Consolidated, who announced that the company now has orders on its books for more than 300 commercial planes.

RED KNIGHTS CONQUEROR VISITS CITY, FLIES PLANE

5/10/1929

Captain Roy Brown, famous Canadian flyer who brought down Baron Manfred von Richtofen, the Red Knight of Germany in the World war, visited the Consolidated Aircraft Company factory yesterday to discuss possibilities of marketing the Fleet training plane of that company in Canada.

Capt. Brown flew the little training ship at the Consolidated Airport on Elmwood avenue and highly praised its manoeuvrability. He returned to Toronto last night.

CONSOLIDATED NOT INVOLVED IN MERGER, MAJOR FLEET SAYS

Buffalo Firm Has Been Approached by Leading Factors, He Declares, but Will Retain Own Identity

My Daily News Record 4/26/29

ADAMS MAIL TESTS TO GET UNDER WAY

Arrival of Leviathan Today Expected to Speed Arrangements — Lockheed "Vega" Prices Reported Cut

By DONALD L. PRATT.

Rumors to the effect that the Consolidated Aircraft Corp. of Buffalo is to figure in a merger with a leading aeronautical group were set at rest yesterday by Major R. H. Fleet, president of the company. Major Fleet, who was in town for the day, said that his company never had been offered for sale, but admitted that a number of leading factors in the industry had approached his organization with a view toward effecting a merger. Recent strength in the stock of the Consolidated had given renewed impetus to the merger reports, but Major Fleet made it clear that the company would continue to maintain its individual identity.

"The prospects of the company are brighter than ever before," the major said, adding "all four of our plants in Buffalo are running at capacity, and we will manufacture more than 1,000 airplanes this year. This schedule should make our company the country's largest producer for the year. We are earning an excellent return and also are investing in several new designs of aircraft, details of which will be made known from time to time."

Aviation News

Colonial Airways Purchases 50 Buffalo-Made Airplanes

Fleet Corporation Receives Largest Commercial Craft Order Ever Placed in City, Involving $275,000.

The largest commercial aviation order ever placed in Buffalo was announced Thursday by Colonial Airways System, Inc., which has contracted with the Fleet Aircraft corporation of Buffalo for 50 Fleet training and sport planes. The order involves more than $275,000.

The order was placed with the local firm by Richard W. Fulton, director of sales, and Charles H. Wooley, director of schools for the Colonial service, who are now in Buffalo. The ships will be equipped with Kinner & Warner 110 horsepower motors and delivery will be made at the rate of eight planes a month between June 15 and Dec. 1.

To Increase Output.

"It is gratifying to us that the largest airplane order ever received in the city comes from a company operating in Buffalo," Lawrence D. Bell, president of the Fleet corporation, said in acknowledging the contract. "The cooperation of local aviation interests is a further proof of their belief in the city as a coming center of the industry."

"Buffalo is fast becoming a production center," Mr. Bell said. "Although both the Consolidated and Fleet companies are now working night and day to triple their facilities they have never at any time been within 150 planes of catching up with deliveries. The Fleet company, in operation since Feb. 13, now is producing two planes daily and expects to increase the output to three a day as soon as possible."

First Five Sold.

The planes ordered by the Colonial service are the direct commercial development of the Consolidated Husky training plane (P. T.), the standard ship used by all branches of the United States government.

According to W. Heath Proctor, divisional superintendent of Colonial Flying service, the Fleets will be used by both the flying schools and sales division of the company. The first five to be delivered have been sold to the Donald Woodward Flying service, of LeRoy, according to Mr. Proctor.

The planes, holding approved type certificates of the Department of Commerce, have a cruising speed of 90 to 95 miles an hour, a top speed of 105 miles, and a ceiling of 16,000 feet.

PURCHASE 50 PLANES

Courier 4/15/29

Colonial Service places record order with Fleet Company

Officials of Colonial Flying Service, Inc., yesterday announced the purchase of 50 Fleet training and sports planes, having an aggregate value of $275,000, from the Fleet Aircraft Corporation of Buffalo. This is the largest order ever received by the Fleet Company and the largest single commercial aviation order ever received in Buffalo.

The planes will be equipped with Kinner & Warner 110-horsepower motors and delivery will be made at the rate of eight a month. The Fleets will be used by both the flying schools and the sales division of the Colonial company, distributors for New York State and New England. Five already have been sold to the Donald Woodward Flying Service at Le Roy.

Fleets will be used exclusively for instruction by the Colonial schools already in operation in Buffalo, Schenectady and Utica. The planes have a cruising speed of 90 to 95 miles an hour, a top speed of 105 miles an hour, landing speed of 40 miles an hour and a ceiling of 16,000 feet.

Mt. Daily News Record - 4/26/29

NATIONAL FLYING SCHOOLS MAY OPEN KANSAS CITY UNIT

Kansas City, April 25.—The National Flying Schools, Inc., a subsidiary of the Consolidated Aircraft Corp., of Buffalo, is considering the location of a base here. Leigh Wade, vice-president of the corporation, has written to the Fairfax Airport Co. for plans and figures pertaining to the establishment of buildings and a complete air training unit.

The Consolidated Aircraft Corp. is manufacturer of the primary training plane now used by the Army Air Corps. The company also makes the Consolidated "Courier" and the Consolidated "Husky." The corporation plans a chain of flying schools throughout the country.

BUFFALO EXPRESS

BUFFALO, N. Y., WEDNESDAY MORNING, JUNE 5, 1929

THROUGH BUFFALO ON DEC

OUTSIDE LOOP IS NEGOTIATED BY ARMY FLIER

Lieut. F. C. Nelson shares honors of Jimmy Doolittle, Al Williams and Fred Lund

DROPS MILE IN STUNT

Starts circle at height of 7,500 feet, is only 2,500 feet above ground at finish

Lieut. Frederick C. Nelson, A. C., one of the army's best pilots and known to every flyer as dean of the flying school at Kelly field, yesterday morning chalked himself up on the list of air record holders by negotiating the almost impossible and dread "outside" loop.

Nelson, by his successful negotiation of the dangerous stunt, joins a noted company of air aces, being one of four pilots to achieve the feat. The first to accomplish the loop that everyone said couldn't be done was the famous Jimmy Doolittle of the Army. Al Williams, Navy ace, repeated Doolittle's feat and Fred Lund, a commercial pilot last year accomplished the loop in a commercial job.

All of these men did the stunt in planes especially rigged and stressed for the feat. Nelson yesterday took up one of the ships warming up on the starting line, without special preparation. He achieved the loop from a height of 7,500 feet on his second attempt, doing a straight loop while 30 spectators cheered.

Fails on First Attempt

The army expert has been practicing for the stunt for several days and figuring just what pressure on the controls was needed to check the tendency to half roll as the plane assumed the upside down vertical position at the bottom. He rolled out on his first try yesterday, but did a beautiful job on his second try.

He started at 7,500 feet and dove 5,000 feet in completing the loop, ending 2,500 feet above the ground. The feat has seldom been attempted at less than 10,000 feet and Doolittle did his first try from 8,000 feet. Nelson estimated that his terminal velocity at the turn was more than 250 miles per hour.

The Fleet, examined by mechanics at 11.30 o'clock yesterday morning, was said to be in perfect condition, with wires and wings unstrained.

Nelson tried unsuccessfully to negotiate the loop many times with the army PT training ships when he was stationed at Kelly field as dean of the instructors' school.

"How did the landscape look at the bottom?" one of the fliers asked him as he landed.

"Well," the soft voiced instructor smiled. "It was mostly landscape. Looked all the same to me."

After accomplishing the feat Nelson took off for a spin in another plane.

Flier Accomplishes Unusual Feat

LIEUT. FREDERICK C. NELSON, A. C.

Lieut. Nelson, director in charge of student training at the national flying schools, who yesterday negotiated here what is known as an outside loop. Nelson is the fourth flier to accomplish an outside loop, according to aviation records, and his feat is attracting nation-wide attention. Attempted only by the most daring airmen, it has been successful only on three previous occasions. Nelson took off yesterday from the Buffalo airport and succeeded on his second attempt.

THE HASKELITE MANUFACTURING CORPORATION,

Armies and Navies Use Consolidated Planes

Over 450 Consolidated planes of the Husky and Trusty type have been used by the U. S. Army and Navy, Canada, Cuba, and Brazil for training purposes all over the

western hemisphere. The Consolidated Aircraft Corporation employs Haskelite in the building of its planes and states in a recent letter—"No trouble—and no waste because we use Haskelite." The new Consolidated "Courier" model, illustrated herewith, is a Haskelite-equipped, convertible land or sea, advanced training plane.

Chamberlin Here to Buy Planes

Buffalo Courier-Express, June 14, 1929.

Picture shows Lawrence C. Bell, president of the Consolidated Aircraft Company, and Clarence D. Chamberlin (right) looking over the dual control on a training ship during the transatlantic flier's visit here yesterday to order training planes to be used in a series of flying schools he contemplates opening soon.

Perils of Aviation Fading, Transatlantic Flier Says

Chamberlin talks freely on future of air, but is silent about Mr. Levine

Clarence D. Chamberlin, famed transatlantic flier and erstwhile partner of stormy petrel, Charles A. Levine, concerning whom he didn't care to talk, flew into Buffalo yesterday in his Bellanca plane, to confer with Consolidated Aircraft Company officials anent ordering Fleet training planes.

Chamberlin, on his way to New York from Detroit, arrived in Buffalo at noon and stayed here until shortly after 4 o'clock, when he took off for New York. During his stay he talked with Lawrence C. Bell and Ray P. Whitman of the Consolidated company and exchanged planes with Jack Little of the Colonial Flying Service on trips from the Consolidated airport to the Buffalo airport and back.

Quiet, unobtrusive and easy to meet, Mr. Chamberlin proved a delightful visitor. He balked only on the question of Mr. Levine.

Dangers Being Eliminated

"Am I going to do any more ocean flying? Sure, I'm going around the world—upside down," he laughed. Later he seriously declared that he would not mind, and possibly might make another ocean flight, but not in the near future.

Transatlantic flying was most feasible, he declared, and the present bugaboo, the east to west hop, most certainly would be negotiated eventually.

"The transatlantic flight is not so difficult now, knowing what we know from our experiences and with new instruments and mechanical developments. The elimination of the dangers of fog flying are not far off. One company has perfected an electric altimeter which automatically lights yellow when you are 500 feet from the earth, green when you are 100 feet distant and red when 50 feet from the ground. Instruments such as these, together with the radio, will solve the problem of fog flying. Then there is the automatic pilot, whereby you turn a dial setting your course, and go to sleep or read a book, if you like. It's all a question of using the navigating instrument devices, which already have been perfected for ships, and making them light enough to be carried on planes. With such instruments, any long flights, including ocean trips, will be made not only possible, but easy."

Mr. Chamberlin digressed to compliment the flying of young aviatrix Elinor Smith. He praised her highly, saying she was one of the best all-round fliers to his knowledge.

Praise for Elinor Smith

Questioned about aviation conditions in general, Mr. Chamberlin said that the United States is progressing mightily. In the matter of air lines, air mail and passenger trade, this country is now on a par with Europe, he said.

"There are many fine planes being built abroad, many fine engines and they have marvelous airports," he continued. "In these matters, we are no further ahead than they. Some German ships particularly are claiming recognition for their excellence. If some of these ships are groomed for the job, there is little doubt in my mind, but that they will make the east-west ocean hop. The trouble is, the transatlantic flier has a hard time getting backing. It took me seven years to get the ship I had, and then it was not so good. I may make an ocean hop again, but not in that ship."

Flying Schools Planned

Taking off and refueling in the air for ocean flights would not be feasible, Chamberlin said.

"The ultimate transatantic ship will be a seaplane, with a hull for landing," he concluded. "Then if you have a gas leak, or water gets in the gas line, it will be easy. On our flight, we had that proposition licked. We covered the gas line with a rubber hose completely, so that if it broke, the rubber would still carry the supply, and we could refill from the cockpit."

Chamberlin, who is part owner of the Crescent Aircraft Company, soon will start a series of flying schools in his own name. The first one will be opened in New Jersey and the second in Flushing, L. I. The training planes of the Consolidated Aircraft Company may be used in these schools and it was regarding this matter that Mr. Chamberlin came to Buffalo yesterday.

"I haven't been here since a year ago Easter, when Mayor Schwab gave me an Easter egg with a key to the city in it," he said. "That was a great party. The key has a thermometer on it, you know, and it works."

BUFFALO COURIER-EXPRESS,

TUESDAY, JULY 9, 1929

$400,000 NAVY AIRPLANE ORDER RECEIVED HERE

Local aircraft company to build machines for government's aeronautical program

That the Navy and Army five-year aeronautical expansion program is being carried out to the letter is evinced in the reception in Buffalo yesterday of one of the biggest training plane orders of the year, a contract for 51 NY I's, standard Navy training planes, awarded to the Consolidated Aircraft Company located in Elmwood avenue.

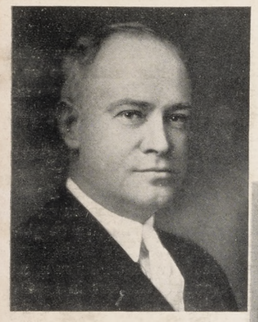
The Consolidated contract is notable in that it brings to Buffalo $400,000 worth of airplane business and is the first big navy production order received in this city in the past year. It is additionally significant in that it is a repeat order for the Consolidated Aircraft Company and means that Buffalo is to supply the bulk of the navy demand in student training airships.

The NY I's are dual-controlled, two seaters, with a Wright Whirlwind J 5-motor. In the past three years the Consolidated company has supplied more than 200 of these planes to the navy and is constantly manufacturing parts for them. The plant in Elmwood avenue will go into production on the navy order immediately and delivery will be made in four months. Announcement of the contract was made yesterday by Ray P. Whitman, assistant to the general manager of the company.

Among N. A. A. Members

A brief visit with those who are working daily for the advancement of aeronautics

SENATOR ARTHUR CAPPER, a member of the Wichita, Kansas, Chapter of the National Aeronautic Association, has in addition to his many legislative duties the responsibility of being head of the Capper publications, which consist of two large dailies and eight magazines. Born in Garnett, Kansas, in 1865, he early developed an interest in printing and learned the practical side of it during his school days. From typesetter he became a correspondent, then editor, then owner of a newspaper, then governor of Kansas, and is now in his second term in the United States Senate.



CHARLES E. McCULLOUGH

RALPH H. UPSON

MAJ. R. H. FLEET

SENATOR ARTHUR CAPPER

Senator Capper has been president of the Kansas State Editorial Association, the Kansas State Good Roads Association, and the Board of Regents of the Kansas State Agricultural College; he also organized the Capper Fund for Crippled Children and through its activities has given timely assistance to many unfortunate children. In September, 1919, Senator Capper was elected president of the International Farm Congress, and he is now a national director of the American Red Cross.

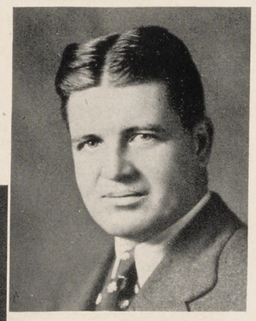
MAJOR REUBEN HOLLIS FLEET, a member of the National Aeronautic Association living in Buffalo, New York, is president of the Consolidated Aircraft Corporation.

Major Fleet attained the rating of Junior Military Aviator at the Signal Corps Aviation School in San Diego in September, 1917, and was subsequently made executive officer in charge of training in the office of Chief of Air Corps, Washington. He was placed in charge of the air mail when it was first inaugurated between Washington and New York, and personally flew the first trip. He was also selected by the Air Corps to attend the Gosport School of Advanced Flying for Flying Instructors in England. Upon his return to the United States, he was appointed contracting officer of the Air Corps, in which capacity he served from January, 1919, to November, 1922, negotiating airplane contracts involving many millions of dollars.

After his resignation from the Air Corps, he accepted the position of general manager of the Gallaudet Aircraft Corporation, and in May, 1923, organized the Consolidated Aircraft Corporation, which was then a consolidation of the Dayton-Wright and the Gallaudet Companies.

Major Fleet is a native of Montesano, Washington, and a graduate of Culver Military Academy.

CHARLES E. McCULLOUGH, a member of the Aero Club of Washington Chapter of the National Aeronautic Association, served with the rank of captain in the Air Corps during the World War, and is now a major in the Air Corps Reserve. A graduate of the U. S. Army Balloon Schools at Fort Omaha, Nebraska, and Arcadia, California, with a rating of aerial observer and licensed balloon pilot, he piloted *The American Legionnaire*, representing the American Legion and the Officers' Reserve Corps, in the 1922 National Balloon Race.



ROBERT B. SNOWDEN

Last summer Mr. McCullough, who is general passenger agent of the Pennsylvania Railroad, was a member of a committee of three sent to Europe by Transcontinental Air Transport, Inc., Curtiss Aeronautical interests, and the Pennsylvania Railroad, to study the development of commercial aviation there. He was co-author of the publication, "Study of Commercial Aviation in Europe."

Mr. McCullough is a Chevalier, Order Leopold II. of Belgium, and a Chevalier, Legion of Honor of France.

ROBERT B. SNOWDEN, JR., president of Command-Aire, Inc., is a native of Memphis, Tennessee, and a former N. A. A. governor for that state, until the pressure of his business necessitated a change of residence to Little Rock, Arkansas.

Mr. Snowden's interest in aviation dates back to the war. At that time he left the University of Tennessee to enter the air service, serving throughout the war, and returned to the university after the Armistice. Completing his course, he acquired a large cotton plantation at Hughes, Arkansas, and from that time on became a successful cotton grower.

Looking for new fields to conquer, he bought the controlling interest in Command-Aire, Inc., in September, 1928, and the progress of the company under his administration has been outstanding. Through his efforts, the company was adequately refinanced in February, and shortly thereafter a contract was concluded with the Curtiss Flying Service, Inc., as national distributors.

RALPH HAZLETT UPSON, a member of the National Aeronautic Association since 1922, is an aeronautic engineer now in charge of research for the Aeromarine-Klemm Corporation at Keyport, New Jersey. First engaging in airplane research in 1908, Mr. Upson also contributed to the development of the balloon and airship for the Goodyear Tire and Rubber Company, and is the co-author of "Free and Captive Balloons," as well as the author of numerous technical papers and magazine articles. Since 1920, he has engaged in the development of the metal-clad airship, and also spent five years as a member of the faculty of the University of Michigan.

CONSOLIDATED AIRCRAFT CORPORATION

CONSOLIDATED AIRCRAFT CORPORATION has leased additional space from the American Terminal Warehouse Company to accommodate its expanding activities; it now is employing over 600 men, the largest number in its history. The Corporation reports that it is manufacturing the only commercial training airplane built to military strength specifications and production of this type is estimated at between 500 and 1,000 during next year, of which approximately 300 already have been sold.

Consolidated Aircraft planes and flying boats have flown more than 20,000,000 miles in the military service of the United States. More than 4,200 Americans have received flying training in Consolidated "Huskies" with not a single fatality reported which could be traced to a failure of any part of the airplane.

More and more busy executives are finding it expedient to cover great distances in the shortest possible time and this is reflected in the ever increasing number of orders received by Consolidated Aircraft Corporation for commercial planes. The convenience of air transportation by flying boats daily is becoming more apparent and the tremendous future of this form of transportation will be shared by Consolidated Aircraft Corporation, which at present is manufacturing the only large passenger transport flying boat built in the United States. The Corporation also rapidly has been developing a foreign demand for its products and reports an order for twelve military training planes recently received from South America.

Offers $1,000,000 for Lindbergh Field Just as It Stands as Finest City Airport Anywhere in World

San Diego Union — 8/3/29

In New York It Would Be Worth $100,000,000, Consolidated Aircraft Head Tells S. D. Aviation Body

"San Diego has the finest municipal airport in the making of any city in the world. If the municipality will sell it I'll purchase it any time for $1,000,000 cash," said Maj. Reuben Fleet, president of the Consolidated Aircraft company of Buffalo, N. Y., in addressing members of the aviation committee of the Chamber of Commerce at a special meeting yesterday.

"Lindbergh Field as it stands today is worth $1,000,000 to any aircraft operating firm, and when it is completed it will be worth double that sum," said the major. "If it was in New York it would be worth $100,000,000."

The city thus far has expended $650,000 on Lindbergh Field.

NEW YORK TO BUENOS AIRES

The president of one of the six largest aircraft companies in the United States gave a graphic recital of the developments of commercial air transport within the last two years.

"The new generation is a flying generation," he declared. Tracing the marvelous growth of the air mail service since he, with other pioneer fliers, carried "a stamped envelope as ballast," Major Fleet called attention to the tremendous development of air mail and passenger lines throughout the United States. He said the company of which he is president is constructing twelve 32-passenger planes at a cost of $300,000 each for air mail, package freight and passenger service between New York and Buenos Aires. These ships will be of the all-metal flying boat type, with 100-foot wing spread.

Citing the safety of flying, Major Fleet said that his company produced 99½ per cent of all the training planes used by the army, navy and marine corps. These ships have flown 20,000,000 miles during the last six years in the training of pilots, with a loss of only 12 lives, several of which were due to midair collisions. Not one of these planes ever caught fire, either in the air or on the ground.

REFUELING SOLVES PROBLEM

The speaker predicted that the recent midair refueling flights will have an important bearing on the future of commercial aviation. "There is no profit in carrying gas," he said. He believes that within the very near future floating airports will be established in both the Atlantic and Pacific oceans, where aircraft, winging their way to Europe or to Asia, will be refueled by planes that will return to their floating bases after their mission has been accomplished.

Aviation is forging ahead so rapidly, Major Fleet asserted, that the smaller companies cannot stand the pace, and predicted within another year or so that fewer than 75 of the present total 175 airplane manufacturing companies in this country will be in active business. He said that the Ford factory is now producing one huge all-metal plane a day, and other factories from three to five smaller aircraft every 24 hours.

He said that Buffalo is spending $250,000 in hangar equipment at its municipal airport, and other cities are expending similar sums properly to handle the commercial aviation business and to reap the maximum of profit. He declared that San Diego is unsurpassed as a great flying center, and urged the community to nurse along the aircraft schools and industries now established here.

Major Fleet won his wings at North Island in 1914, and was a pupil of Maj. Theodore Macaulay, now executive manager of the Chamber of Commerce. He flew here yesterday from Phoenix in two hours and fifty minutes.

BUFFALO EVENING NEWS:

AUGUST 14, 1929

HUGE FLYING BOAT TO BE TESTED HERE

Consolidated Commodore to Make First Trip Over Lake.

Initial test flights of the largest flying boat ever constructed in America will be made over Lake Erie early next month by the Consolidated Aircraft corporation, 205 Elmwood avenue, when the first of the fleet of Consolidated Commodores, under construction for the New York, Rio & Buenos Aires Lines, Inc., of New York, is completed.

With a wing span of 100 feet and powered by two Pratt & Whitney Hornet motors of 575 horsepower each, this giant craft represents the peak of luxury in passenger air travel. It has a carrying capacity of 22 passengers in two eight passenger compartments and two drawing rooms, each of which will seat three passengers. In addition there will be two pilots and a combination radio operator-steward.

Designed originally for 32 passengers, the cabin was remodeled to carry a cargo of air mail and express and 22 passengers, thus giving more spacious seating arrangements and accommodations.

Large Windows in Ship.

Large unbreakable plate glass observation windows run the entire length of the passenger compartments. Buffet service will be provided and the ship will be radio equipped.

The first of these Buffalo-built ships will be placed in service over the new route between New York and Buenos Aires this fall. The trip has been divided into seven divisions with overnight stops at various points along the route. Each hop will average 1090 miles. Among those interested in the new air line are Maj. Reuben H. Fleet, president of the Consolidated Aircraft corporation; Seymour H. Knox, vice president of the Marine Trust company, and James H. Rand Jr., chairman of the Remington-Rand board.

The Commodore flying boat was designed by I. M. Laddon, chief of the engineering staff of the company, who formerly was aeronautical engineer for the army air corps in charge of big ship design and construction.

Weight is 17,500 Pounds.

The hull lines which govern the water performance of the boat were developed by Capt. H. C. Richardson of the Navy Bureau of Aeronautics.

The gross weight of the plane is 17,500 pounds, and the fuselage is 61 feet nine inches in length. It has a high speed of 130 miles an hour and a normal cruising speed of 110 miles an hour. The absolute ceiling for the ship is 17,000 feet.

Twelve of these planes, costing $150,000 each will be built at the Elmwood avenue plant of the Consolidated Aircraft corporation. After the first delivery is made the remainder will be delivered at the rate of one a month

MAJOR FLEET

HIGH SPEED PLANE IS READY FOR TEST

Buffalo News

Consolidated Craft Expected to Exceed 175 Miles an Hour.

10/17/29

A new high speed transport plane, which is designed to be the fastest ever manufactured for commercial service in the United States, will receive its first test flight at Buffalo airport this week, according to Lawrence D. Bell, president of the Consolidated Aircraft corporation, 2050 Elmwood avenue, where the ship was built.

The plane will be of the mono sesqui wing type and will have places for eight persons. The speed of this revolutionary ship is expected to exceed 175 miles an hour and it will have a cruising rate of between 150 and 155 miles an hour, Mr. Bell says.

The plane represents the results of experiments conducted by the entire engineering staff of the Consolidated interests. The test flight probably will be made by Lieut. Leigh Wade, chief test pilot for the company.

PRIVATE AIRPORT READY

Consolidated Official Erects Hangar on Transit Road Field

The first private airport in the immediate vicinity of Buffalo has been laid out and constructed by Thomas Kenny, secretary and treasurer of the Consoladited Aircraft corporation, on a site in Transit road, six miles out of the city.

Mr. Kenny and his wife are both competent pilots and they own a Fleet biplane, manufactured by the company with which he is associated. The port is solely for their private use. It comprises about 85 acres of land and a hangar approximately 60 feet square has been erected with lean-to and machine shop.

Mrs. Kenny made her first solo flight some months ago, and Mr Kenny has been a flier for several years.

U.S. NAVY ORDERS 20 MORE PLANES FROM LOCAL FIRM

With receipt of a supplementary order for an additional 20 Husky type planes for the United States navy this week and a recent order for 71 all-metal Thomas Morse pursuit ships, the Consolidated Aircraft corporation is now working on the largest governmental plane orders ever received in Buffalo.

The Consolidated company recently absorbed the Thomas Morse interests and will manufacture the sturdy fighting planes of that company. The contract for a score of additional Huskies completes an order for 50 of the same type received last June. The Thomas Morse order is expected to be completed early in February.

BUFFALO-BUILT SHIP BEGINS MAIDEN TRIP

Buffalo News

Huge Consolidated Plane Is on Way to Buenos Aires.

10/17/29

From the Washington Bureau of the BUFFALO EVENING NEWS.

WASHINGTON, Oct. 17.—Following last-minute repairs to her hull, the Buffalo-built Consolidated-Commodore plane Buenos Aires, christened two weeks ago by Mrs. Herbert Hoover, took off at crack o' dawn today on the first leg of her maiden flight to South America.

Uncertainty prevailed as to the exact time of her departure, due to the fact that when the ship first was taken from Buffalo to New York her hull was injured in the New York landing and was not strictly watertight. For a time it was thought the ship would have to be returned to Buffalo for the repairs which eventually were effected at the United States Naval air station here.

It was exactly 5:54 A. M. when the Buenos Aires, under a sky which had just begun to show a pink tinge in the east took off from the Potomac river channel. There was practically no wind and Chief Pilot William S. Grooch got the boat into the air in about 45 seconds.

The first stop was made for fuel at Charleston, S. C., and an overnight stay will be made at either Miami or Jacksonville, Fla., before the giant ship starts on the leg of the trip which will bring her to the South American port for which she is named.

It was declared that on this first trial trip final decisions may be made regarding hangar sites at points in South America.

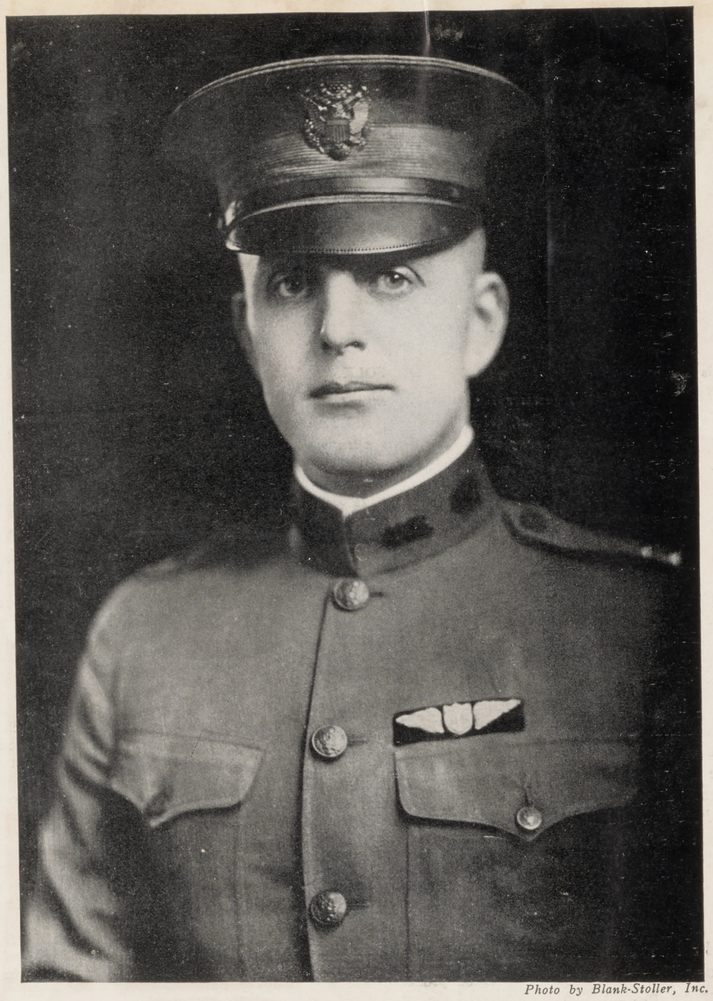

Photo by Blank-Stoller, Inc.

Major Reuben H. Fleet

President and General Manager, Consolidated Aircraft Corporation

MAJOR Fleet was born in Montesano, Washington, while Cleveland was serving his first term as President. Straight grain hickory rubber tired top buggies brought $50 up in the open market, which was brisk. They were advertised as being absolutely safe. Fleet was just 30 years old when the United States entered the World War, and when he was six months older had attained rating of Junior Military Aviator, at the Army School, San Diego; was made Executive Officer in Charge of Training in the office of the Chief of Air Corps, Washington, D. C., until June 1, 1918; was in charge of the first Air Mail between Washington and New York, and flew the first trip. From June to September, 1918, he was Officer in Charge of Testing and Proving at Wilbur Wright Field, studied the Gosport System in England, and returned to become Contracting Officer of the Army Air Corps.

Major Fleet is one of the few pilot executives. His hours in the air number more than 1,800, so when he undertakes to make and dispose of the popular products of his Consolidated Aircraft Corporation the results are what might be expected, only more so. His company benefits not only from his business sagacity—genius they called it at Dayton—but also from Major Fleet's comprehension of and resultant sympathy with the problems and viewpoint of his brother flyers. No proof of these inadequately expressed statements is needed. The Consolidated Aircraft Corporation and Major Fleet speak for themselves every time they produce another 1,000 airplanes. The Major is fleet, but no reuben

MERGERS GIVE LOCAL PLANE CONCERN LEAD

Buffalo News — 8/15/29

Consolidated Aircraft Acquires Complete Stock of Three Companies, Interest in Others.

Through the purchase of a number of smaller aviation interests, announced Thursday, the Consolidated Aircraft corporation of Buffalo has become the largest independent unit in the aircraft industry in point of production and earnings.

Included in the interests, which have been acquired through stock purchase, are the complete stock of the Fleet Aircraft corporation of Buffalo, complete stock holdings of the Thomas-Morse company, airplane manufacturers of Ithaca, N. Y.; a substantial block of stock in the Kinner Airplane and Motor corporation, Glendale, Cal.; the entire stock of the National Flying Schools, Inc., and 100 acres of land across the Canadian border near Buffalo for a factory site and flying field.

Operating Three Plants Now.

The announcement of the merging of these interests was made by Maj. Reuben H. Fleet, president and general manager of the company, now on tour throughout the middle-west.

The Consolidated company was incorporated in May, 1923, to engage in design and manufacture of airplanes. The concern owns a 98-acre airport in use on Military road, which includes a 20-acre factory site, and is operating three plants with a total floor area of 105,000 square feet.

Planes manufactured by the company include the Consolidated Admiral, a long-distance multi-engine flying boat, officially designed for the United States navy and designated by that service as PY-1; the Consolidated Commodore, an adaptation of the Admiral to the requirements of commercial air transport; the Husky, standard training plane of the United States army and navy, and the Fleet, a light training plane.

All-Metal Plane Acquired.

The Thomas-Morse company has been operating for the past three years on the construction of an all-metal single motored open cockpit observation plane of which the Army Air corps has purchased several for experimental purposes. The facilities of the company will be transferred to the Consolidated factory, which will be enlarged to accommodate them.

Purchase of stock in the Kinner corporation will insure delivery to the Consolidated group of as many motors as are needed for installation in Fleet planes. The Fleet Aircraft corporation will continue to operate as a separate company, functioning as the commercial selling organization for the Consolidated group. The company, which has been in production since February, is producing two planes daily. More than 300 planes have been sold and are in use throughout the country.

Officers of New Concern.

National Flying schools was organized by Maj. Fleet last winter and is now operating a school in Buffalo.

Officers of the new company in addition to Maj. Fleet, are: G. Newman, vice president and factory manager; Lawrence D. Bell, vice president and general sales manager; Ray P. Whitman, assistant to the general manager, assistant general sales manager and advertising manager; and Thomas Kenny, secretary and treasurer.

Directors are: Maj. Fleet, Mr. Bell, Mr. Whitman, Mr. Newman, George M. Pynchon Jr., of the firm of Pynchon & Co., New York; Francis Dean Schnacke, member of the firm of Craighead, Cowden, Smith & Schnacke, of Dayton, O.; Preston Lockwood, of the firm of Davisson & Manice, New York, and F. L. Morse, president of the Thomas-Morse company.

Unparalleled Hardship Tags Buffalo Woman in Air Derby

Buffalo News — Aug. 28, 1929

Through Cracked Lips Mrs. Keith Miller Recites Ill-Luck, Starting With Desert Landing.

By CHARLES A. MICHIE
Buffalo Evening News Staff Correspondent.

CLEVELAND, Aug. 27.—A grim narrative of hardship and ill-luck, unparalleled in the history of American air racing, poured from the cracked lips of Mrs. Keith Miller, Australian aviatrix, and Buffalo entry in the women's cross-country derby, when she taxied her fleet biplane into Cleveland airport late Monday afternoon.

In an interview with newspapermen the hardly little Anzac flier told of her many forced landings. Of the dogged determination which carried her through to take eighth place in the race and third money in the light planes division she said nothing, but Lawrence D. Bell, president and general manager of the Consolidated Aircraft company of Buffalo, who met her when she landed, said it for her. Her elapsed time was 53 hours, 20 minutes and 44 seconds.

Makes No Charge.

Although Mrs. Miller refused to make a charge of sabotage, or any direct charges that her plane was tampered with in the early stages of the "Sunburn Derby" she was obviously suspicious of the circumstances which brought her down in the desert 20 miles out of Douglas, Ariz., with an empty gas tank.

Let her tell of her experiences as she told them to reporters:

"The mechanics at Phoenix, Ariz., told me they filled my gas tank," she said. "But it's strange that an hour and three-quarters later I ran completely out of gas and had to come down in the mesquite. I knew at once when the motor started to spit that I was out of gas. I made a good landing despite the sand and then started to walk.

"And what a walk it was! I tramped for more than five miles through the mesquite under a red hot sun until I came to a desert farmhouse. A man and a woman lived there and I might have been a visitor from another planet, they were so surprised.

Borrows Machine.

"I borrowed their Ford car and drove 12 miles to Douglas where I got a ten-gallon can of gas and returned to my ship.

"I could hardly sit in the cockpit, it was so hot, after I had filled the tank again.

"Then," she said with a smile which well-nigh split her sun-scorched face, "I couldn't get the ship off the ground. A garageman, the farmer and myself pushed it for three miles through the soft sand, before I was able to get hard enough ground for a takeoff."

A broken valve the night before last prevented Mrs. Miller from arriving at Columbus, O., with the rest of the derby entrants and she caught up with them Monday after having repairs made to her hard-luck plane.

The dogged little Australian woman, who made a name for herself in 1928 by her flight from London, Eng., to Tasmania, insists that a jinx rode the tail of her plane ever since she left Santa Monica. It was either jinx or —possibly some human agency, she infers.

Proud of Ship.

Mrs. Miller and Lawrence Bell, whose Buffalo company in 2050 Elmwood avenue manufactures what is termed "the trimmest ship in the race," are as proud as punch—fully as proud as though Mrs. Miller had won the race. She will fly it back to Buffalo after the races are over.

"I'm mad about it. It's the peachiest little ship I ever flew," she said of the training plane which is being adopted as standard equipment throughout the country.

"I licked along at about 115 miles an hour ever since I left Santa Monica airport, and I didn't have a bit of trouble with the ship itself," she said.

"There isn't much I can say," Mr. Bell declared, "because all the credit is due to Mrs. Miller. She has proved herself one of the finest women pilots in the world. In view of her many forced landings she made an excellent record. I'm satisfied."

There is a possibility that Mrs. Miller may return to Buffalo and begin a tour of the country for the Consolidated company, it was indicated by company officials.

Two Hard-Luck Pilots.

She and Mrs. Neva Paris, Great Neck, L. I., sympathized with each other for a minute. They were the two hard-luck pilots of the race. All had a word to say about the unfortunate death of Marvel Crosson, who crashed in the early days of the derby and lost her life.

Because she landed her plane without injury to herself or the ship, when its propellor fell off in mid-air, Neva Paris won comment from veteran pilots at the races. She learned to fly at the Curtiss Flying Service school in Detroit. William A. Winston, in charge there, watched her bring her ship up to its place in front of the grandstand and said:

"Women are the equals of men flying light planes and Mrs. Paris is one of the best students our school ever turned out. It was only necessary to install a new propellor to put the ship back in service but it was a feat bringing it to the ground after it dropped off."

Buffalo News 8/29/29

Aviation

ARGENTINE GOVERNMENT ORDERS TWO PLANES HERE

An order for two Fleet training planes was received Monday from the Argentine government, it was announced Tuesday, by the Consolidated Aircraft company, in Elmwood avenue. The air ministry of the South American country ordered the planes with the understanding that if they test out satisfactory, an order will be given. The two planes will be delivered immediately.

U. S. Air Services — Sept. 1929

Consolidated Aircraft Buys Several Interests

THROUGH the purchase of a number of smaller aviation interests, announced recently, the Consolidated Aircraft Corporation of Buffalo becomes the largest independent unit in the aircraft industry in point of production and earnings. The announcement was made by Maj. Reuben H. Fleet, president and general manager. Those interests which have been acquired through stock purchases are: The entire stock of the Fleet Aircraft Corporation of Buffalo; the entire stock of the Thomas-Morse Company, airplane manufacturers of Ithaca, N. Y.; a substantial block of stock in the Kinner Airplane and Motor Corporation at Glendale, California; the entire stock of the National Flying Schools, Inc., and one hundred acres of land located across the Canadian Border, near Buffalo, suitable for a factory site and flying field for the purpose of establishing a Canadian factory. The purchase was made through Pynchon and Company, bankers of New York City.

FIRM TO BUILD 70 PLANES HERE

Buffalo Times 8/1/29

Former Ithaca Plant, with Contract for Army Ships, Moves to Buffalo

Seventy all-metal single cockpit observation planes will be built for the Army air service in Buffalo, as the result of the awarding of a contract to the Thomas-Morse Aircraft Corporation.

The concern, now located at Ithaca, recently was acquired by the Consolidated Aircraft Corporation. It was decided to move the Ithaca plant to this city because the airport at Ithaca is not large enough to test machines and the plant there is not large enough to take care of present contracts.

A large section of the property at 2050 Elmwood Avenue, now in control of the Consolidated Corporation, will be devoted to the Thomas-Morse unit.

Contracts held by the Thomas-Morse concern now aggregate $1,000,000. The contract for the Army observation planes will be filled by next June.

F. L. Morse, president of the Thomas-Morse concern, has been named a member of the board of directors of Consolidated. The announcement of the move to Buffalo was made today by Lawrence D. Bell, vice-president of the Consolidated corporation.

AIR TRANSPORTATION

August 29, 1929

MRS. MILLER'S PLANE SLIGHTLY DAMAGED

Plane Used in Women's Derby Damaged Before Start of Fifty-Mile Race

CLEVELAND, O.— (Special)—There was much excitement previous to the Women's 50-mile derby, held at the airport Tuesday. As the Fleet plane, which was to be flown by Mrs. Keith Miller, was being taxied across the field by a mechanic, the wheels struck a hole and nosed over. The prop was bent as a result, and needless to say, Mrs. Miller, who had flown the same ship from Calif. without mishap, was greatly agitated.

Representatives of the Fleet Aircraft Corp. immediately asked that the race be postponed until another ship could be wheeled to the starting line. The request was granted and another Fleet was brought from the hangar. After arranging many cushions on the pilot's seat, so that Mrs. Miller could reach the rudder bar, the ship was brought to the starting line and the race finally started.

After all this anxiety, Mrs. Miller proceeded to win the race.

BULLETIN

Mrs. Phoebe Omlie won the women's speed race this afternoon, completing the 50-mile course in 26 minutes 41 seconds, average 114 miles an hour. Mrs. Keith Miller, Buffalo, finished second in 30 minutes 23 seconds, and Lady Mary Health, Irish aviatrix, was third with a time record of 31 minutes 11 seconds.

Cleveland Press 8/27/29

Minor accidents marred the start of the women's speed event at 1:20 p. m. The Fleet ship entered by Mrs. Keith Miller of Buffalo nosed over in the mud while being taxied to the line. Mrs. Miller obtained another ship and remained in the race.

Cleveland Press 8/28/29

land.

Mrs. Keith Miller of New Zealand won a 50-mile race against other women pilots, with Lady Mary Heath of Ireland second. Mrs. Phoebe Omlie of Memphis, Tenn., had finished first but was disqualified with Amelia Earhart, transatlantic flyer, for alleged flying inside of pylons and crowding of other planes.

CONSOLIDATED BUYS SEVERAL AIR INTERESTS

Milwaukee Sentinel 9/3/1929

Flying School and 2 Plants Acquired by Buffalo Concern.

BUFFALO, N. Y., Sept. 7.—Through the purchase of a number of smaller aviation interests the Consolidated Aircraft Corporation of Buffalo becomes the largest independent unit in the aircraft industry in point of production and earnings.

The announcement was made by Maj. Reuben H. Fleet, president and general manager of the Consolidated company. Those interests which have been acquired through stock purchases are: The entire stock of the Fleet Aircraft Corporation of Buffalo, the entire stock of the Thomas-Morse company, airplane manufacturers of Ithaca, N. Y., a substantial block of stock in the Kinner Airplane and Motor Corporation at Glendale, Cal.; the entire stock of the National Flying Schools, Inc., and 100 acres of land located across the Canadian border, near Buffalo, suitable for a factory site and flying field for the purpose of establishing a Canadian factory.

OPERATES THREE PLANTS.

The Consolidated Aircraft corporation was incorporated in May, 1923, to engage in the designing and manufacturing of airplanes. The corporation owns a ninety-eight acre airport in daily active use near Buffalo, which includes a twenty acre factory site, and is operating three plants with a total floor area of 105,000 square feet.

The company manufactures the Consolidated "Admiral"—a long distance multi-engine flying boat—officially designed for the United States navy and designated by that service as PY-1; the Consolidated "Commodore"—an adaptation of the "Admiral" to the requirements of commercial air transport; the Consolidated "Husky"—standard training plane of the United States army and navy, and the "Fleet"—a prototype of the "Husky" which is manufactured under a cost plus contract. These various planes have flown more than 20,000,000 miles in the service of the United States alone. More than 4,000 Americans have received flight training in Consolidated "Huskies" since the world war—a greater number than have been trained in all other types combined.

OFFICERS, DIRECTORS NAMED.

Officers of the Consolidated company, in addition to Maj. Fleet, are: G. Newman, vice-president and factory manager, Lawrence D. Bell, vice-president and general sales manager; Ray P. Whitman, assistant to the general manager, assistant general sales manager and advertising manager, and Thomas Kenny, secretary and treasurer.

The directors are: Maj. Fleet, Mr. Bell, Mr. Whitman, Mr. Newman, George M. Pynchon Jr., of the firm of Pynchon & Co.; Francis Dean Schnacke, member of the firm of Craighead, Cowden, Smith & Schnacke of Dayton, Ohio; Preston Lockwood, of the firm of Davisson & Manice, New York City.

Consolidated Gets Six New Agents on Coast

Daily News Record 9/19/29

Sales Efforts During Fall Will Be Concentrated in California and South

Special to DAILY NEWS RECORD

Buffalo, Sept. 18. — Lieut. Leigh Wade, chief flight testing officer of the Consolidated Aircraft Corp., who has just returned from a trip to the Pacific Coast, booked orders for more than 50 Fleet dual control training planes in California and closed six new dealer contracts. According to Ray P. Whitman, assistant general sales manager of the company.

"The reduction in the price of the Fleet plane from $5,500 to $4,985 has had a stimulating effect upon sales and our present unfilled orders are sufficient to enable the plant to operate on a normal production schedule for some time to come," added Mr. Whitman.

"During the late fall and throughout the winter months, we will concentrate our sales efforts on California, the South and the Southwest so that we anticipate no big curtailment in our production of this type of light plane. The six new dealer contracts closed by Mr. Wade in California are regarded as a favorable outlet for our planes on the Pacific Coast during the next six months."

All of the old type landing gears on the Fleet dual control training planes will be replaced by the Consolidated Aircraft Corp., without charge to the purchasers of the planes, Mr. Whitman said.

"About 150 planes are affected by this replacement offer," explained Mr. Whitman. "It has been found that the original landing gears which were standard equipment on the Fleet training planes were too light and are being replaced with a new improved type, which are reinforced and are considerably stronger."

The replacements have forced a temporary curtailment in the weekly production of Fleet planes.

HUGE PLANE ASSEMBLED

New 20-Passenger Flying Boat to Be Tested Here Saturday.

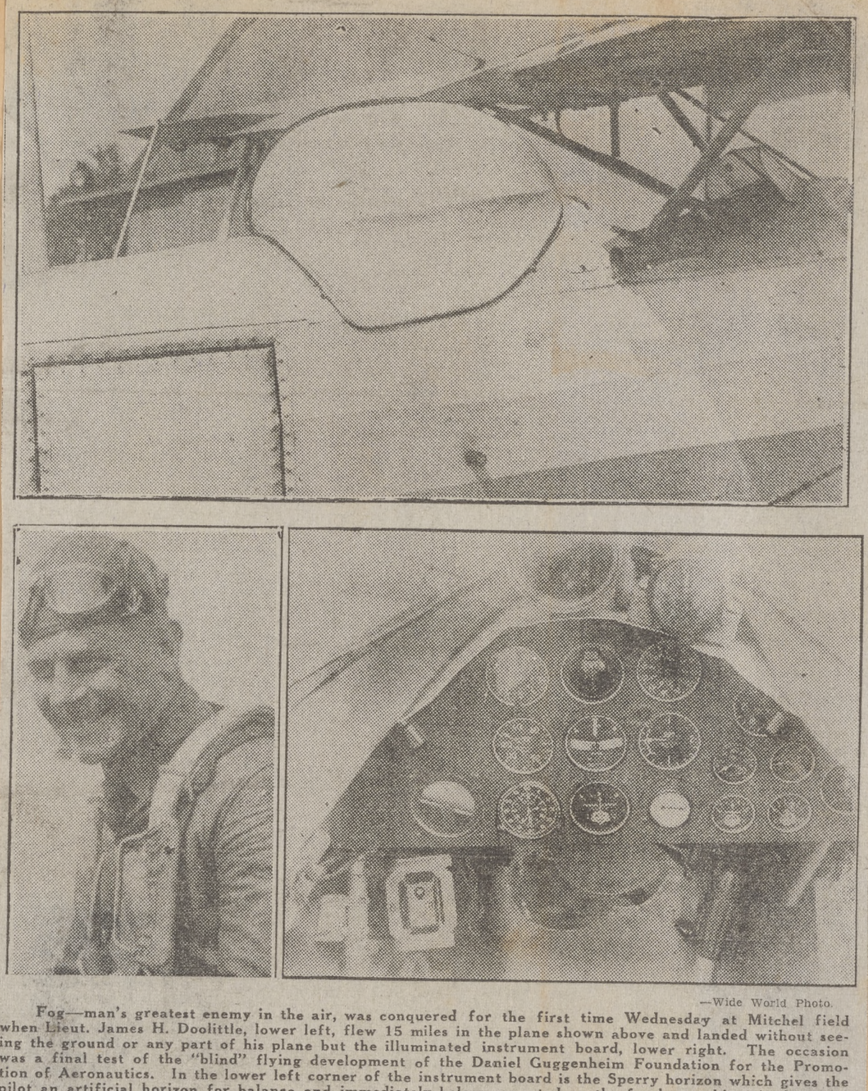
News 9/26/29

The new 20-passenger Consolidated Commodore flying boat, flag-plane of the New York, Rio & Buenos Aires Lines, Inc., will be launched and test flown sometime Saturday, according to latest advices from the factory. The ship stood assembled Thursday, but its designers wished to have it thoroughly inspected before it goes into the water and the air.

The Commodore is the largest flying boat thus far built in the United States and is a commercial adaptation of the Admiral, patrol plane, delivered by the Consolidated Aircraft corporation to the United States naval air service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of 12 similar planes which have been ordered by the transport company, the remaining 11 to be delivered at the rate of one a month.

Plane Is Flown 15 Miles "Blind" and Lands Safely



—Wide World Photo.

Fog—man's greatest enemy in the air, was conquered for the first time Wednesday at Mitchel field when Lieut. James H. Doolittle, lower left, flew 15 miles in the plane shown above and landed without seeing the ground or any part of his plane but the illuminated instrument board, lower right. The occasion was a final test of the "blind" flying development of the Daniel Guggenheim Foundation for the Promotion of Aeronautics. In the lower left corner of the instrument board is the Sperry horizon which gives the pilot an artificial horizon for balance and immediately below, mounted on the fuselage tubing, is the radio direction finder.

Who's Who in Aviation

New York Tribune - Sept 29

Major Reuben Hollis Fleet

Army flyer and contracting officer for the Air Corps, officer in charge of the first air mail service, now an airplane manufacturer.

Major Reuben Hollis Fleet, president of the Consolidated Aircraft Corporation, combines the qualities of a flyer and a keen business executive. He began flying in the aviation section of the Signal Corps, entering their flying school in San Diego in September, 1917. Afterward he became executive officer in charge of training in the office of the Chief of Air Corps in Washington.

He was put in charge of the experimental air mail route between New York and Washington, and flew in the plane that inaugurated the service. This line was the forerunner of the network of mail lines now in operation.

During his service in the Army Air Corps Major Fleet saw many different kinds of duty. At McCook Field, the Army's experimental proving ground, he was always sent to Washington to fight for pay increases for the McCook flyers when the budget was being made up, and he earned the reputation of getting what he went after. He was selected by the Army to attend the Gosport School of Advanced Flying for Instructors in England. When he returned to this country he was made contracting officer of the Air Corps, handling airplane contracts involving the expenditure of millions of dollars.

He left the Army in 1922 and became general manager of the Gallaudet Aircraft Corporation. He organized his own company, the Consolidated Aircraft Corporation, in 1923, by consolidating Gallaudet with the Dayton-Wright company. His training plane has been used widely for flying instruction, and the company is beginning production of a series of thirty-two-passenger flying boats.

In shooting mass formations from camera planes and from the ground we arranged to do so at times when such formations were being flown for practice, tactical training or review, thus interfering as little as possible with the routine work of the units. Admiral Reeves, Commander of the Aircraft Squadrons, Battle Fleet, Captain McCrary of the Naval Air Station at San Diego, and Admiral Raby at Pensacola afforded the "Hill Company" splendid cooperation, and it is for this reason that *The Flying Fleet* gave as accurate a portrayal of Naval Aviation as it did.

For economy it was not desired to take the entire cast of the picture to Pensacola, where all the training sequences were supposed to take place. Close-ups in the air, both dual and solo, were made in an NY-2 at San Diego, over a part of San Diego Bay and county that does not look unlike the country near Pensacola. Wing mounts were used. One such mount at the outboard struts showed both cockpits, and was used for shots of dual training, and also for solo shots, the pilot bending so

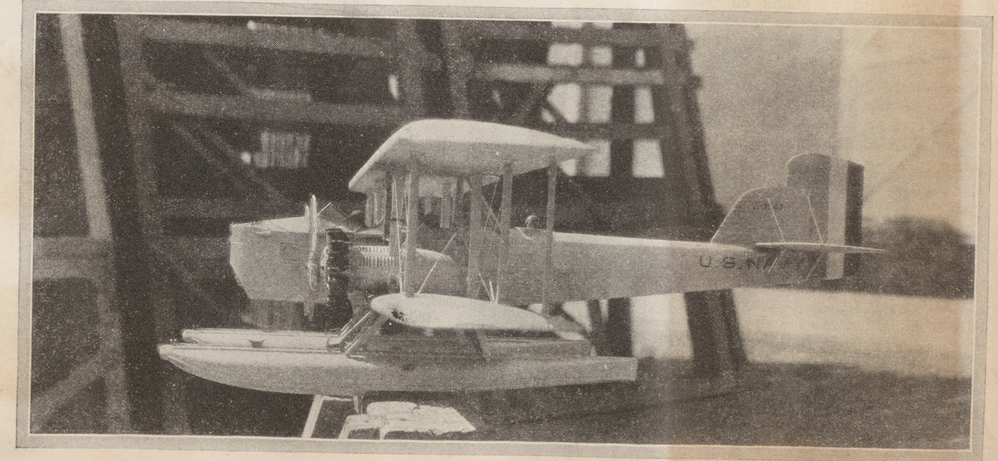
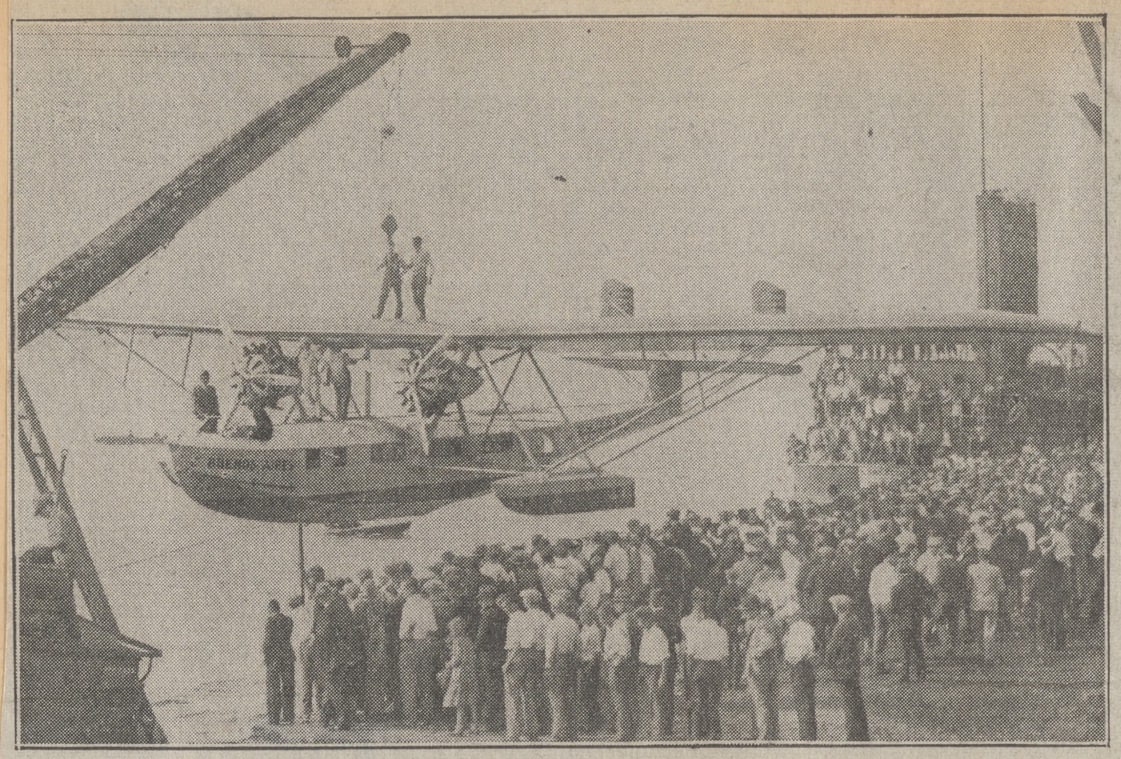
Aeronautics — September 1929

A NEW USE OF MODELS

Models like the one below were used for the crash sequences so as not to endanger the pilots



— Big Flying Boat Launched Here



—Evening News Staff Photo.

The largest flying boat ever built in the United States, the 20-passenger Commodore, constructed here by the Consolidated Aircraft corporation for the New York-Buenos Aires route, was launched Saturday in the Niagara river and successfully flown.

The big yellow and orange air liner was assembled on the sand and gravel dock at the foot of Hertel avenue and all day Saturday was the magnet which drew hundreds of curious citizens to watch its launching and first flight. Late in the afternoon a barge crane lifted the giant off its base and carried it to the middle of the river. While scores of speedboats, outboard sea-fleas and a cloud of other small craft hovered around it was lowered into the water and its two motors revved. Roaring, it plowed downstream to Motorboat island, headed into the wind, and arose gleaming and dripping into the air.

Lieut. Wade, chief test pilot for the Consolidated company, and William S. Grooch, chief pilot for the New York, Rio and Buenos Aires line, handled the dual controls in the limousine cockpit. Among those who made the first flight were Lawrence D. Bell, president of the Consolidated Aircraft corporation; F. E. Flader, Lewis Butts, D. M. Laddon, designer of the ship; James Stackak and Robert Clark.

—Evening News Staff Photo.

At the launching of the huge $100,000 flying boat, the Commodore, Saturday, were, left to right: Lawrence D. Bell, general manager of the Consolidated Aircraft corporation; Lieut. Leigh Wade, noted flier; Col. Ralph O'Neil, president of the Rio line; I. M. Ledden and Lieut. W. Stephen Grooch, who will pilot the ship.

Mrs. Hoover to Christen Giant Buffalo Air Liner Wednesday

Buffalo News 9/30/29

Plans Flight in "Buenos Aires," First of Fleet in Building Here for Rio Route.

From the Washington Bureau of the Buffalo Evening News.

WASHINGTON, Sept. 30.—Everything is in readiness at the naval air station here for the christening of the Buffalo-built Commodore Consolidated airplane Wednesday afternoon. The ship was launched at Buffalo Saturday.

Mrs. Herbert Hoover then will christen the ship the "Buenos Aires," and it is her present plan to make a short flight in the ship. A stand has been erected, which will place her at the proper elevation at the bow of the ship to break a bottle of carbonated water over the ship's prow.

Soon after these ceremonies the great airplane, which is the largest and most luxurious flying boat ever constructed in the United States, will start on its way to the Argentine capital, after which it is named, with a full load of 20 passengers.

Stood Severe Tests.

This will mark the beginning of the ship's regular service on the Buenos-Aires Rio de Janeiro division of the New York, Rio and Buenos Aires line, in which many prominent Americans, including Paul A. Schoellkopf and Col. William J. Donovan of Buffalo are interested.

A statement issued here by the operating company, which tells of the plane and the use to which it will be put, reads in part as follows:

"The plane has a wing spread of 100 feet and is powered with two Pratt & Whitney hornet motors, each having 575 horsepower. It has a cruising speed of 110 miles an hour and a high speed of 130 miles an hour. It is a commercial adaptation of the Admiral Patrol plane delivered to the United States Navy by the Consolidated Aircraft company. Acceptance of the airplane by the Navy was announced several days ago after severe 'rough water' tests off the Virginia capes.

First of Fleet of Twelve.

"While the original specifications of the Commodore called for a 32-passenger plane, with accommodations for a crew of four, the "Buenos Aires," as delivered will accommodate 20 passengers and a crew of four.

"The reduction in passenger accommodations was made to give greater comfort to passengers and to provide for express and mail cargoes.

"It is capable of flying with a full load on one engine and can take off with a full load in a dead calm in 45 seconds. The cabin is 8½ feet wide with a six-foot headway.

"The 'Buenos Aires' is the first of a fleet of 12 air liners of the type which will be standard equipment on the New York, Rio and Buenos Aires line. The additional 11 planes are to be delivered at the rate of one a month and the company holds options on eight additional. These planes cost $150,000. Smaller Sikorsky planes are used by the liner on 'feeder' routes.

"No expense has been spared in designing and furnishing the interior of the plane. It sets a new standard in beauty and comfort for air lines.

Latest Mode Followed.

"Each of the three passenger cabins, as well as the dressing room, is designed in accordance with the latest developments in interior decoration. A modernistic scheme developed by Frederick J. Pike, decorator, of Buffalo, is followed throughout with basic tones of silver henna and green predominating.

"In turning their attention to beauty and comfort, plane designers, according to Maj. Reuben H. Fleet, president of the Consolidated Aircraft corporation, are merely following the normal cycle of development of various modes of transportation.

"'The history of transportation,' Maj. Fleet points out, 'shows that once a new vehicle is invented, the attention of the builders is concentrated on speed and safety. After these two have been attained, the next step is making travel comfortable and enjoyable.

Complete Service by Jan. 1.

"This cycle of development has been followed by the horse-drawn coach, the railroad, the steamboat and the automobile. Now the airplane is following suit.'

"By the first of the year, the New York, Rio and Buenos Aires line will have a complete airplane service between the two Americas. Service will probably be inaugurated with a rail connection between New York and the vicinity of Cape Charles, Va., where actual plane service to Buenos Aires will begin. Four Commodores, ten Sikorsky and four tri-motor Fords will be in service then. Air operations out of New York will commence in the spring and the 8500 miles separating the metropolis of North America from that of South America will be traversed in seven days.

"Four Ford tri-motor all metal planes are now operating over the Andes mountains, linking Buenos Aires and Santiago, Chile. This route is the first of the company's eight divisions to be equipped and in operation."

AIRCRAFT MEN PROMOTED

Buffalo News 9/30/29

Lawrence D. Bell Is Made General Manager of Consolidated Interests.

Lawrence D. Bell, formerly vice president and general sales manager of the Consolidated Aircraft corporation, has been appointed general manager of all Consolidated interests, and Ray P. Whitman, formerly assistant to the general manager, becomes assistant general manager, it was announced Monday.

The change in the general management of the concern is coincident with the announcement that Maj. Reuben H. Fleet, president, and George Newman, vice president and factory manager, are retiring to devote their time to policy, expansion and the future development of the Consolidated interests. They will retain their titles but will not participate actively in management.

The Consolidated Aircraft corporation is now the largest airplane manufacturing unit in Buffalo. Mergers with the Fleet Aircraft corporation, a subsidiary, and the Thomas Morse Airplane company of Ithaca, made it one of the largest in this part of the country. Possibility of establishment of a branch on the Pacific coast is under consideration.

LOCAL PLANE IN AIR DERBY

Buffalo News 10/1/29

Consolidated Company Ship Entered in Ford Reliability Test Saturday.

Between 40 and 50 planes will take off from the Ford airport, near Detroit Saturday on the 1929 National Air tour for the Edsel B. Ford reliability trophy, including ships piloted by nationally famous men and women fliers.

The Consolidated Aircraft corporation has entered a Fleet biplane which will be flown by William Wheatley, test pilot. Mrs. Keith Miller, Australian aviatrix, who flew the same type plane in the "powder puff" derby from Santa Monica, Cal., to Cleveland during the National air races, will pilot a Kreider-Reisner training plane for the Fairchild company.

Lee F. Schoenhair of Los Angeles, whose pure white Lockheed-Vega monoplane rested at Buffalo airport for several days three weeks ago, will carry scorers and assistants over the route of the 16-day tour.

Cash prizes for the tour run from $200 to $2500.

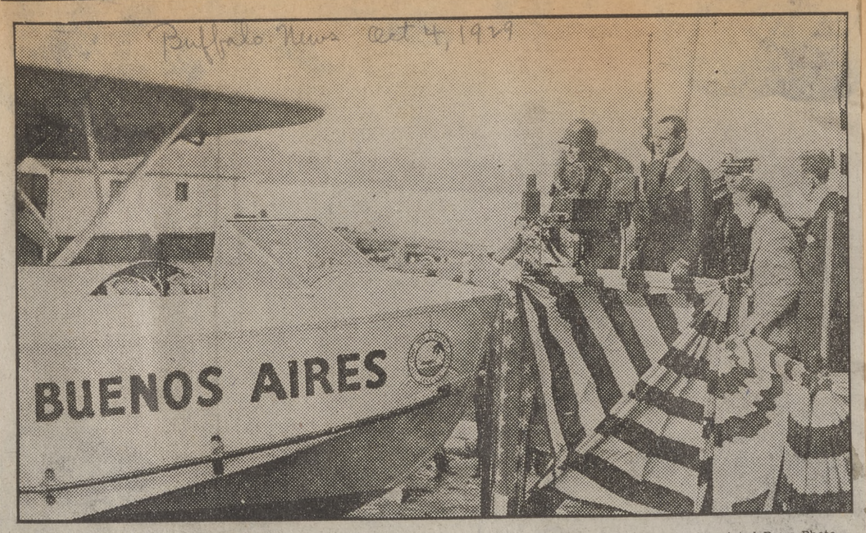
Success Attends Launching and First Flight of Seaboat

Shaking the water of Niagara river from its pontoons late Saturday afternoon, America's largest flying boat air liner, the Commodore, rose easily to the air on its first test flight. Its brief journey over Grand Island and along the frontier will be exchanged next week for the more arduous grinds of the Rio de Janeiro to Buenos Aires run, a new passenger line.

After a day in New York Monday and christening in Washington Wednesday by Mrs. Herbert Hoover, the mammoth ship will be flown south to inaugurate the first partial service of the company, plying along the coastline which borders the jungles and pampas of South America.

It was said in official aviation circles Saturday that the new air line may increase its order of these flying boats —at $100,000 apiece—to 20. The New York to Rio leg of the run will be made by tri-motored Ford planes and Sikorsky amphibians, but will not be inaugurated until next year.

First Lady Christens Huge Buffalo-Built Air Liner



—Associated Press Photo.

Mrs. Herbert Hoover christened the Buenos Aires, the new 20-passenger flying boat which was built in Buffalo and will ply between the United States and South America. Beside Mrs. Hoover at the ceremony is Col. Ralph O'Neill, president of the New York, Rio & Buenos Aires air line.

Giant Air Liner Built Here Is Christened by Mrs. Hoover

Messenger of Good Will, She Calls Ship for South American Line—2000 Witness Ceremony.

From the Washington Bureau of the BUFFALO EVENING NEWS.

WASHINGTON, Oct. 4.—"God speed you, messenger of good will."

With these words, amidst a colorful throng of diplomats representing the 21 South American republics, Mrs. Herbert Hoover late Thursday christened the Buffalo built Commodore Consolidated airplane Buenos Aires.

On Oct. 11, the huge and luxurious monoplane, operated by the New York, Rio and Buenos Aires Line, Inc., in which many Buffalonians are interested, with a list of 20 passengers, will start on its maiden voyage to the port after which has been named. It was launched Saturday, Sept. 28, at Buffalo.

The event was a gala occasion. It had an almost martial air as the United States Navy band, borrowed for the occasion, alternated in playing military selections and music of Spanish lilt. The hangar which will house the huge plane until its trip next week was draped with the flags of the South American countries present.

Sailors Snap to Attention.

As the White House car arrived, bearing Mrs. Hoover and her naval aide, Lieut. Commander John F. Ostrander Jr., a full company of sailors snapped to attention and formed a cordon through which she passed.

Officials of the Consolidated Aircraft company of Buffalo present were Lawrence D. Bell, general manager, and I M. Laddon, who designed the ship, accompanied by Mrs. Laddon. Buffalonians interested in the company which will operate the ship in regular service between this country and South America include Paul A. Schoellkopf and Col. William J. Donovan.

Herbert Hoover Jr., son of the President and Mrs. Hoover, also was an interested spectator at the christening.

Murmurs of Admiration.

For the christening ceremonies, the giant orange and cream flying boat had been wheeled from the water at the United States naval air station and nosed into the ten-foot christening stand, draped in red, white and blue bunting, upon which Mrs. Hoover stood. Behind her, in addition to the South American diplomats were Secretary of Commerce Robert P. Lamont, Col. Ralph A. O'Neill, president of the New York-to-Rio line, and Dr. L. S. Rowe, director of the Pan-American union, who acted as master of ceremonies.

A crowd of more than 2000 spectators witnessed the christening.

A murmur of admiration was voiced from the crowd as Mrs. Hoover, dressed attractively in blue, wearing a fur piece and carrying an arm bouquet of yellow roses, stepped forward to accept the christening bottle from the hands of Col. O'Neill.

Mimic Battle Staged.

The bottle, said to have been champagne by Buffalo officials of the air line, was encased in gold metal mesh adorned with the combined colors of the United States and Argentine.

As the christening ceremonies got under way, the annual mimic war show staged by the Army on the War college grounds across the channel from the naval air station began. From the Navy side of the river could be seen the smoke from the rumbling cannonade, while overhead mimic "dog-fights" were staged in the air by a group of pursuit planes from Selfridge field, Mich.

Mrs. Hoover advanced to the front of the christening stand. The multitude on the ground below was still. Then came her words clearly, above the din of airplane motors and the rat-a-tat-tat of machine gun fire, "God speed you, messenger of good will," as with a single, steady blow she shattered the golden bottle over the bow of the ship.

Wright's Feat Recalled.

Heads uncovered, and arms raised to snappy salutes as the "Star Spangled Banner" concluded the exercises.

The ceremonies were opened by Dr. Rowe, who declared in a short address that the event possessed real significance for members of the Pan-American union. He was followed by Secretary Lamont, who recalled an event of 20 years ago, when Orville Wright, flying an 800-pound plane, attained a speed of 42 miles an hour on a round trip flight between Washington and Alexandria, Va., five miles away. Col. O'Neill concluded the speech-making by declaring that his company would do all in its power to knit the South American countries as closely to the United States as any of its component parts.

Rowe Sees Significance.

"The extraordinary development of improved means of communication between the countries of this hemisphere has given an added impetus to Pan-Americanism," said Dr. Rowe. "We now begin to see the service which the airplane is destined to render in the future. Through this agency the nations of the Americas will be brought into such close touch with one another that the misunderstandings which in the past have arisen because of lack of acquaintance will disappear."

After the christening was over, the crowd surged forward to get a better view of the ship, which is strikingly painted, with a cream body, edged in black, and huge orange wings. Herbert Hoover Jr. was among the first to go inside the craft, which is entered from the top of the fuselage. Without the aid of a ladder, he hoisted himself upon a foot rest and scrambled into the opening. Upon emerging he voiced his approval of the ship.

Ruth Bryan Owen Pleased.

Another notable to view the inside of the ship was Mrs. Ruth Bryan Owen, representative in Congress from Florida, and daughter of William Jennings Bryan. The decorations of the ship's interior, executed in excellent taste, took Mrs. Owen's eye. She showed particular interest in the seat cushions, which are life preservers when stripped of their decorative covering.

The crowd collected at the naval air station far in advance of the arrival of the Consolidated ship, which flew to the ceremonies from New York. Although the ship, piloted by William Gooch and Lieut. Leigh Wade, was due prior to 3:30 P. M., it did not arrive until nearly 4 o'clock, due to rough weather.

Gooch to Pilot Ship.

Gooch will pilot the ship on its South American flight, and after the ship landed at the station, absented himself, soon to emerge in the natty powder blue pilot's uniform of the New York to Rio line.

The "Buenos Aires" has a wing spread of 100 feet and is powered with two Pratt and Whitney "hornet" motors, each having 575 horsepower. It has a cruising speed of 110 miles an hour and a high speed of 130 miles an hour, and carries a radio set with a radius of 250 miles. It is a commercial adaptation of the Admiral patrol plane delivered to the United States Navy by the Consolidated corporation, and which now is at Annapolis.

While the original specifications of the Commodore, which is the trade name of the "Buenos Aires," called for a 32-passenger plane, with accommodations for a crew of four, the Buenos Aires as delivered will accommodate 20 passengers and a crew of four.

First of a Fleet of 12.

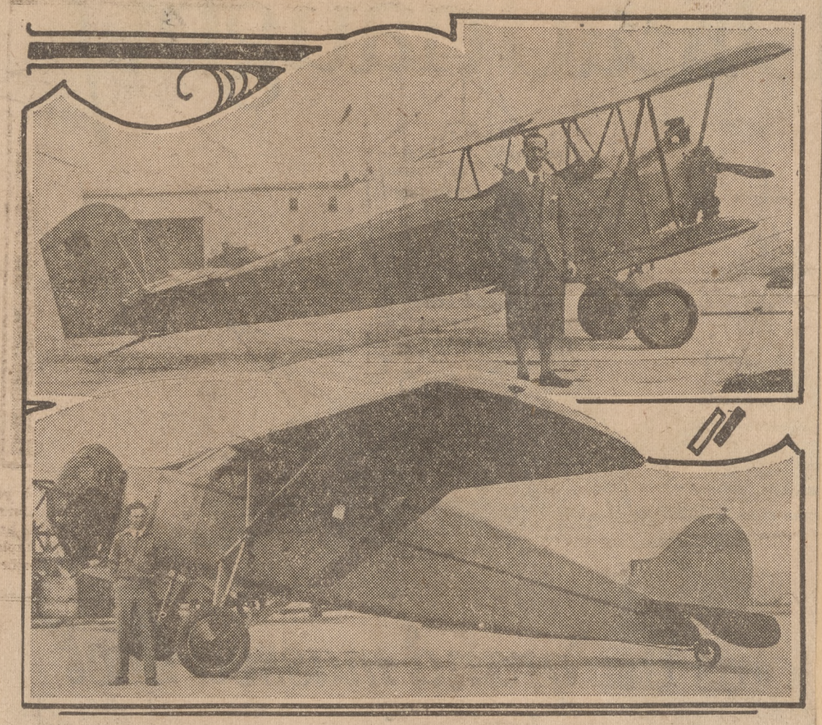
The reduction in passenger accommodations was made to give greater comfort to passengers and to provide for express and mail cargoes.

The Buenos Aires is the first of a fleet of 12 air liners of the type which will be standard equipment on the New York, Rio and Buenos Aires line. The additional 11 planes are to be delivered at the rate of one a month. These planes cost $150,000.

Nothing has been spared, according to official statements, in equipping and furnishing the interior of the plane. Each of its three passenger compartments, as well as the dressing room, is designed in accordance with the latest developments in interior decoration.

A modernistic scheme developed by Frederick J. Pike, decorator, of Buffalo, is followed throughout, with basic tones of silver, green and henna predominating.

New and Fast Planes at Airport



Attracting attention at Swan island last week were the trim and speedy Fleet plane (top) of Gordon Nounce, appointed as factory representative for the Fleet Aircraft corporation, and the Stinson Junior (below)

The Fleet plane being flown by Mounce is designed for training purposes with particular attention paid to the safety factor. It is the first of its kind to be used here.

Mounce's appointment as coast representative of the Fleet corporation follows out announcement made by Major R. H. Fleet here recently that the company plans to give attention to western business. At the time he reported that a Fleet branch factory would be established on the Pacific coast.

Mounce has announced plans of establishing a distributing agency for the corporation here and of naming dealers in Oregon.

Until his new appointment, Mounce was with Aerial Mapping Engineers Inc., and the Shields-Clark Aviation company. He established one of the Pacific Northwest's early flying schools at Everett in 1924 and, coming from there, has flown for three years in Portland. Besides his commercial work, he is a lieutenant in the air reserves at Pearson field, Vancouver, Wash.

Pilot of Airplane Exonerated For Fatality Near West Lorne

10/2/29

London, Ontario

Inquest Held Here Into Death of Mrs. Loretta Golem, of Buffalo

That no one was in any way responsible for the injuries received by Mrs. Loretta Golem, aged 31, of Buffalo, in an airplane accident near West Lorne on Friday, September 13, of this year, which resulted in her death the day following. This was the verdict of the jump impaneled by Coroner Dr. E. L. Hodgins to inquire into the accident. The verdict was returned after 10 minutes' deliberation.

The inquest last night was a continuance of the one of September 14 and adjourned to allow Major R. H. Fleet, pilot of the ill-fated plane to be present. The evidence adduced left no doubt of the complete exoneration of Major Fleet, the only occupant of the craft, in addition to Mrs. Golem. The latter was the private secretary of the pilot.

The verdict read: "Loretta Golem came to her death on September 14, 1929, at Victoria Hospital, London, as a result of injuries received in an airplane accident on the Russell Reid farm, Dunwich Township, and that no blame can be attached to anyone."

MAJOR FLEET TESTIFIES

Major Fleet was the principal witness. Supported by crutches, he was assisted into the witness box by Arthur Farnoff and W. B. Wheatley, mechanical engineers of the Consolidated Aircraft Corporation of which witness is the president.

The plane they were flying was a Fleet sport biplane, he said, with an open cockpit. In reply to a question of Crown Attorney Judd, Fleet stated this was considered to be among the safest of the different types of airplanes. It had been passed by the department of commerce of the United States, he said.

The plane had a dual control system, and Mrs. Golem herself a licensed pilot, had flown the plane on part of the trip from Detroit to Buffalo. When the motor began to miss witness said he immediately took the controls.

Crown attorney: "Had any other

Pilot

(Continued From Page One.)

stops been made since you left Detroit"?

Witness: "None."

The plane was at an altitude of 750 feet when he first considered it expedient to take the controls.

"I first flew straight ahead, edged to south in order to find a suitable landing place. As the motor continued to miss I lost altitude and at a height of 475 feet I ascertained for sure that a forced landing must be made.

Crown Attorney Judd: "Did you become alarmed?"

Witness: "Not alarmed, sir, but very alert. I realized that I must do one or two things. I could either fly straight ahead and land with the wind, or turn and land into the wind. At this time I had sufficient power to inveigle me into making the turn."

RIGHT LANDING.

Crown Attorney: "It is considered the best policy to land into the wind, is it not?"

Major Fleet: "Yes. I banked around on a turn of about 180 degrees, so that I was flying due west."

Crown attorney: "Were there any obstructions which prevented you from landing?"

"Yes, there were two trees directly in the path of my flight. I tried to get the motor to carry me over the top of these, but in so doing lost flying speed, so that there was nothing to keep the plane in the air, and, veering to the left, it dived almost straight downwards."

The motor had stalled after making the turn, said the witness.

Major Fleet burst into tears when asked if he remembered seeing Mrs. Golem immediately after the accident.

"When I regained consciousness I asked where she was. They told me she was beside me. I tried to crawl over to where she was lying. I—"

At this juncture witness was unable to suppress his emotions, and tears streamed down his cheeks. It was several minutes before he was able to reply by stating that it was the next day before he knew that his secretary had been seriously injured. He was not informed of her death until Tuesday.

An interesting caincidence connected with the accident was revealed when Major Fleet replied to a question stating that he had just completed 13 years of active flying when the crash occurred. The unfortunate day came on Friday, the 13th. It was the first serious smash Major Fleet had ever been in.

MR. REID

Russell Reid, on whose farm the plane crashed, stated that it was about 2 o'clock when he noticed the craft pass over his barn, almost on its side. The motor was missing. The plane was righted again and then the engine ceased to function, the plane going into a straight nose dive. The pilot had apparently done all in his power to avoid an accident, witness said.

Mr. Reid said that he had immediately called Drs. A. T. Ripley, of West Lore, and C. McKinnie, of Dutton. He had not tried to talk with the injured, being chiefly concerned in getting them to the hospital.

W. B. Wheatley, employed as a testing pilot with the Consolidated Aircraft Company, was brought to the city by Major Fleet to testify. He stated that he had tested the motor and plane before it was sent out. The motor was a five-cylinder Wright Whirlwind. At that time both were in perfect condition.

Witness said that he had been among those to overhaul the motor following the accident in order to ascertain the cause of its stalling. This, he said, was due to a deficiency in the adjustment of the rocker valve of one of the cylinders, preventing it from opening more than a 15th of an inch.

The accident was unavoidable, he said, and Major Fleet could not tell definitely from the cockpit what was causing his motor to miss.

In reply to a question of the crown, asking whether Canadian customs had been consulted before the wreckage was removed to the United States, witness replied that he believed both St. Thomas and London authorities had given their consent, and the removal was made in a legal manner.

Dr. John Lindsay, of London, who conducted the post-mortem, also testified. Mrs. Golem's death was directly due to a broken neck, he said. She also received a laceration of the scalp, about eight inches in length, lacerations of the left hand and injuries to the spinal cord.

High Constable Wharton explained that since the accident occurred in Elgin County, it was naturally inferred that the inquest should be held there. But Crown Attorney McCrimmon, of Elgin, had consented to having it transferred to Middlesex. The cost was being borne by the County of Elgin, he said.

The jury consisted of C. R. Walker, foreman; Allan Wadell, C. R. Walker, Ed. Johnston, Frank Baratta, George Tustin and Arthur Bentley. Dougal Graham and David C. Wilson.

Consolidated Aircraft, Buffalo, Sell 150 Fleet Sports Planes In Seven Months

The Fleet Sports Plane Manufactured by the Fleet Aircraft Corporation of Buffalo, New York.

Editor's Note—Since this article was put in type, Major Fleet met with an accident in Ontario due to airport not being lighted. His Co-pilot was killed and Major Fleet seriously injured.

Within seven months after its incorporation as the selling organization for the Consolidated Aircraft Corporation, Fleet Aircraft Inc. has sold more than 150 of its sport planes. These two-place dual control sport bi-planes have been purchased by individuals, dealers and various flying services operating throughout the United States.

To meet orders which are coming in steadily, two Fleets are now being produced daily and it is planned to increase this output to three planes a day. Additional machinery is being installed to enable the company to effect this increase, and the three a day schedule will be in operation by the end of the year.

The increased sales of the Fleet plane are due in large measure to an aggressive policy instituted by Lawrence D. Bell, president of the Fleet Aircraft Corporation. Mr. Bell's connection with the Consolidated Company began on July 1st, 1928, when he took charge of the manufacture of the Consolidated XPY-I ship which the company was producing for the United States Army. On January 1st, 1929, he became general sales manager for the Consolidated Company and in February, after the incorporation of the Fleet, he was elected as its first president.

Mr. Bell immediately started a sales campaign which resulted in securing more than a dozen representative aviation companies as distributors and dealers for the plane. Among the organizations handling the Fleet plane which are located in all parts of the United States are: Colonial Flying Service, Universal Flying Service, Art Goebel Aviation Company and the Pittsburgh Aircraft Agency Corporation.

Through a series of national tours arranged by Mr. Bell, the interest of the aviation industry and the general public has been focused on the plane. Through these tours it is demonstrated thoroughly and put through a series of tests to show the dealers themselves its sturdiness and reliability.

Lieutenant K. B. Wolfe, on leave from the United States Army, is now touring the northeast, while Lieutenant W. B. McCoy, also on leave from the Army, is touring the southeast. Demonstrations of the Fleet are being given on the Pacific coast by Lieutenant Leigh Wade, chief test pilot for the Consolidated Company, who flew across the country from Buffalo in a standard Fleet sport model.

Major Reuben H. Fleet, president of the Consolidated Company and chairman of the Fleet board of directors, is using one of the planes for a 15,000 mile tour of the country. He will visit important aircraft centres in the United States as well as all of the Fleet dealers. This is the first time that an executive of a national selling organization has made a survey of this particular field in an airplane. Mayor Fleet, an expert pilot, is taking his secretary along with him on his trip.

Mrs. Keith Miller, British aviatrix, who captured a world's long distance point to point record for women in her flight from London to Tasmania with Captain W. Newton Lancaster in 1928, piloted a Fleet in the first women's air derby held in connection with the National Air Races at Cleveland.

Among prominent people who have recently purchased Fleets for their private use are: George Pynchon, Jr., of Pynchon and Company, New York City; Earl D. Osborn, former editor of Aviation; Lorillard Spencer, of New York and Newport; Roger Wolfe Kohn and Colonel Merian Cooper, president of Federal Aviation Corporation.

The record of every plane sold proves the merit of the Fleet for flying instruction, for sport and for business use. Formerly known as the Husky Junior, it was the little brother of the Consolidated Husky, standard training plane of the United States Army and Navy for the past five years. It has back of it the eight years of engineering effort which the Consolidated Company has devoted to the production of reliable aircraft.

As a result of the experience gained in producing over seven hundred training planes which have flown millions of miles, all features found to be essential for a sturdy plane of this type have been incorporated in the Fleet.

The ship has a wing span of 28 feet and is equipped with either a Warner or Kinner K-5 engine. Although its gasoline capacity is 24 gallons, extra fuel tanks may be installed to afford a total fuel capacity of 50 gallons, providing seven and a half hours endurance at cruising speed. The main fuel tank is placed in the upper wing and can be drained in any flight position. The engineer is bolted to

USE THE AIR MAIL

Major Fleet Succeeded by Bell

BUFFALO (N. Y.)—Lawrence D. Bell, vice-president and general sales manager of Consolidated Aircraft Corporation, has been appointed as general manager of the Consolidated group of aeronautical interests succeeding Maj. R. H. Fleet, president, who will retire from active management of the plant. Ray P. Whitman, formerly assistant to the general manager, will become assistant general manager. It is also announced that George Newman, vice-president and factory manager of Consolidated, will also retire from active service. Major Fleet and Mr. Newman will devote all of their time in the future to determining the policies of the corporation and its plans for future business expansion.

Husky Plane Parts to Army

BUFFALO (N. Y.)—Consolidated Aircraft Corporation here has received an order from the U. S. Army Air Corps for an order of spare parts for Consolidated Husky trainer planes, valued at $265,000, according to Ray P. Whitman, assistant general manager of the company, who says the order will be filled within the next few months. Delivery is also to be made to the Siamese Government of spare parts totaling $7,000.

Simulated Landings, Take-Offs In Fog Made by Lieut. Doolittle

Employ New Devices In Guggenheim Tests

MITCHEL FIELD (L. I.)—The possibility that planes may soon be able to make practical safe landings in a fog was demonstrated at this airport recently by Lieut. James H. Doolittle, leading Army flier.

Doolittle, seated in the cockpit of a Wright powered, Consolidated Training plane—the cockpit enclosed in order to obscure all vision—guided his craft safely into the air, made a flight of 15 mi., and then returned to a landing near the spot of his take-off.

For several weeks, secret experimental flights testing out three new instruments and the improvement of a fourth had been made here. On the first public exhibition of the plane equipped to take-off, fly and land "blind," he was accompanied by Lieut. Benjamin Kelsey.

Use Special Radio Beacon

The Daniel Guggenheim Fund for the Promotion of Aeronautics has been working many months on these devices which would conquer what is termed the flier's worst enemy—fog. The successful termination of experiments indicated that craft and flying fields might soon be practically outfitted with a development of this new equipment at an appreciably small cost.

A system of visual radio control as well as the ordinary audible type of communication received through ear sets, was one of Doolittle's greatest aids.

A special radio beacon was installed here for that purpose as well as the long distance type already in use, and cost around $2,000, but its use on a large commercial scale would considerably lower that figure.

This beacon throws a beam of from fifteen to twenty miles in length and registers on the pilot's instrument board through two delicately adjusted reeds. They tell the pilot by vibrations one way or the other, whether he is off or on his course. By regulating his distance from the airport, Doolittle was able to work out the proper gliding distance necessary for a safe landing.

It was when nearing the ground that the new types of instruments especially helped him. One of them was a very sensitive altimeter, corrected for variations of atmospheric conditions, which gives the distance from the earth within a dozen feet or less. Another was a gyroscope which established an "artificial horizon" which gave him his lateral and longitudinal positions.

The third was a directional gyroscope which indicated his directional and also his longitudinal angles. This instrument, being very delicately adjusted, is only of real service when landing or taking off.

Harry F. Guggenheim, president of the Fund, has the following to say concerning the successful experiments:

"It is significant that the achievement is realized through the aid of only three instruments which are not already the standard equipment of an airplane. In other words, with the commercial manufacture of these instruments, the necessary equipment for fog flying will be neither expensive nor complicated, but of such a nature that it is readily available to the average pilot, and easily comprehended. The commercial practicability of the development is, therefore, assured from the start.

"Many individuals and organizations have participated in making this development possible. Lieutenant Doolittle has been in charge of the full-flight laboratory from the start, and was made available for this work through the courtesy of the Army Air Corps. He studied at both the University of California and the Massachusetts Institute of Technology, and his aeronautical achievements, including the winning of the Schneider Cup Race in 1925, rank him as one of the country's leading pilots. Professor William Brown of the Department of Aeronautics, Massachusetts Institute of Technology, was his technical assistant and for some time has been actively engaged in various phases of aviation with the Navy, the Army and the National Advisory Committee for Aeronautics.

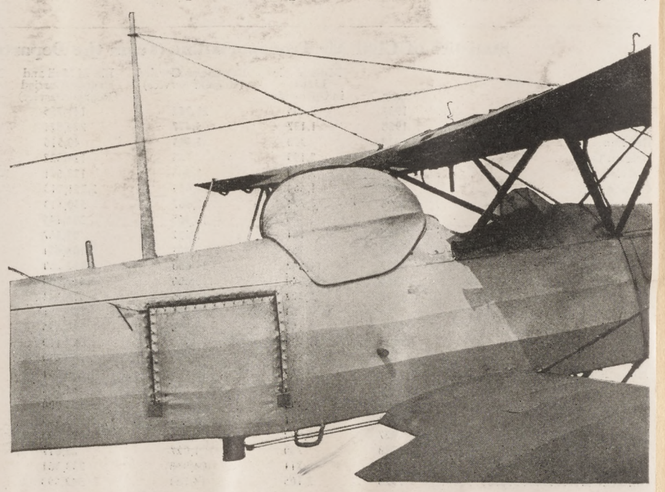
"The Bureau of Standards and the United States Army and Navy have both contributed to the work, and mention should also be made of the following companies whose instruments and experimentations made possible the necessary equipment: Pioneer Instrument Company, Taylor Instrument Company, Sperry Gyroscope Company, Bell Laboratories, Radio Frequency Laboratories, and Kollsman Instrument Company.

Development Still Required

"The new principle which has been demonstrated solves what I have considered in the past one of the two remaining fundamental problems of aviation. The application of this principle, however, and the final perfection of the best equipment for all phases of fog flying will require time and effort on the part of commercial and military organizations.

"For example, in our demonstration, use was made of the barometric altimeter which must be corrected for variation of atmospheric conditions. This correction is made by telephonic communication from the ground to the plane. Other altimeters not subject to at-

(*Concluded on Page* 724)



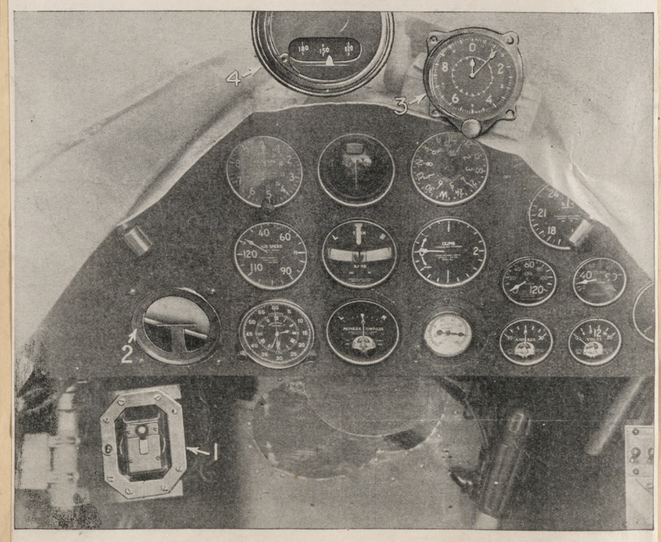
Showing Covered Cockpit and Radio Antenna on Test Plane

mospheric change are now in process of development, and the Fund is assisting in this experimentation. Notable among these is the sonic altimeter, a development by Dr. Elmer Sperry, and the radio altimeter now being developed by the General Electric Company.

"Also, while the pilot flies at sufficient altitude to clear all surrounding obstructions in coming into the field, the problem of collision with other aircraft in the air when flying through fog is a serious one. This can only be eliminated today by telephonic orders from the ground directing the planes flying over the same routes so as to keep out of each other's way. The perfection of an instrument to warn of the approach of another plane is a device for the future. In addition, while the particular beacon used in the Fund's experiment is located at the edge of the field, the beacons of the future will be so located that it will be possible to land always into the wind. These are examples of the developments that should be greatly stimulated from now on."

Lieut. Doolittle also speaks of a plan whereby a radio border marking the outlines of an airport would greatly aid the pilot in guiding an airplane to a landing during foggy weather.

Instruments Used in Fog Flying Experiments

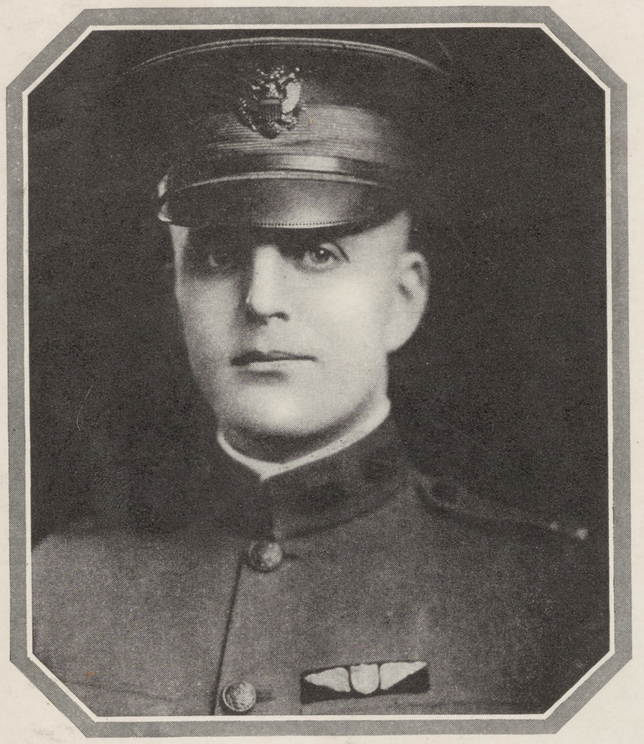


A Glance Into the Cockpit of Lieutenant Doolittle's Consolidated training plane is afforded in the above photograph, which shows the instruments used by the Army flier in his recent blind flying test in which fog landings and take-offs were simulated. Beside the standard Pioneer panel, the four special instruments are shown as follows: 1—visual radio beacon, 2—Sperry gyroscopic artificial horizon, 3—Kollsman sensitive altimeter recording height above the earth within a dozen feet, and 4—extremely sensitive directional gyroscope.

This man FLEET

by

HELEN K. SCHUNCK



Blank-Stoller

Reuben Hollis Fleet

THERE is one man in aeronautics whose surname, according to Funk & Wagnalls' "Practical Standard Dictionary," means — "Rapid, nimble, swift"; or, "to fly swiftly"; and there is one man whose personality those very words conjure up: Reuben Hollis Fleet, President of the Consolidated Aircraft Corporation, Buffalo, New York.

Fleet is a dynamic person; one never forgets him. He is restless, untiring; one whose nature demands activity; a man made for accomplishment and success. Failure is a word he does not recognize; a fight cannot last long enough to exhaust him; he is victorious a goodly portion of the time because of his will to win. He overpowers his adversary by his sheer force of will, and wears him out with his insistence. That is why McCook Field always sent Major Fleet to Washington when promotions were in order. The Air Service was known for its stringent methods regarding salaries, and the story goes that Fleet's success in bringing back an approved list of raises was due to his getting the man with the deciding voice, blocking his way by sitting directly in front of him, and then talking him into submission.

Fleet is a pilot, of course. His connection with aviation dates back to March, 1917, when he became a student at San Diego. His assignments in the Air Service were varied, and his record always brilliant. "Who's Who in American Aeronautics" gives the following regarding his career:

"Born, Montesano, Washington, March 6, 1887; Culver Military Academy.

"Aeronautical Activities and War Service: Student, Air Service Signal Corps, San Diego, California, March 31 to September 10, 1917; O. C. Machine Shops, S. C. A. S., September 10, 1917 to January 3, 1918; Assistant Executive Office, Chief of Training, O. D. M. A., January 9 to May 30, 1918; O.C., Training Aerial Observers and Army Corps pilots; O.C., Air Mail Inauguration; Flying Course, Brooks Field, June 2 to June 18, 1918; O.C., Flying, Mather Field, June 20 to September 20, 1918; O. C. Experimental Test Flying, Wilbur Wright Field, September 23 to 28, 1918; on Board of Officers, Standardizing Training Course, September 29 to October 15, 1918; Special Mission Investigating Training Abroad, October 17 to December 21, 1918; graduate, School of Advanced Flying for Instructors, Gosport, England; Office of the Chief of Air Service, December 21 to January 23, 1919; Contracting Officer, Air Service Engineering Division, January 25, 1919 to November 30, 1922; General Manager, Galluadet Aircraft Corporation, December 1, 1922 to April 30, 1923; President and General Manager, Consolidated Aircraft Corporation, May 29, 1923, to date. . . . ."

My own acquaintance with this picturesque personage of aviation dates back to 1918, when Major Fleet was Contracting Officer for the Air Service. That was a man sized job! Its duties consisted of purchasing all the airplanes, engines, and aviation accessories used by the entire Air Service (now it's the "Air Corps"). The man in charge had, first of all, to be absolutely aboveboard, one whose integrity could not be questioned, for certainly if there was a chance for graft anywhere in the Service it was here. Next, he had to be a good horse-trader; he had to make every dollar go as far as possible, for the Air Service at that time was only the stepchild of the General Staff and of Congress. There were no five year programs then! Suffice it to say that the men in the industry still tell what a hard-boiled customer Fleet was! And they also say, with a laugh, that he is just as hard-boiled now when he is selling his own product!—Which only goes to prove that one's attitude depends upon the side of the fence one is on.

[*Continued on page 93*]

He gave himself as unstintedly to the Service as he gives himself to his own business now. We, who worked closely with him, knew that when the day was too short to accomplish all our work, we worked into the night. The last few days of our fiscal year, he and all of us worked all night long! I remember one occasion when the office force left the Field at 5:30 A. M. And all of this activity was for the purpose of *spending* money! You see, every cent of the appropriations that remained unspent on July 1, reverted to the Treasury of the United States; and it wasn't wise to allocate all of the money early in the year, for aviation design in those years (1919-1922) was really less stable than it is today.

Possibly the mention of one appropriation only will explain just a little of the situation we were in. The Engineering Division was allotted the sum of $10.00 per quarter of a year for telegrams! How did we get around that? By a gentleman's agreement with the contractors that all telegrams from us would be sent them collect, and, of course, their answers would be prepaid; and that they would be charged to us on a purchase order under some such term as "bolts and nuts," or anything else applicable to their particular job.

Now you can understand why we needed a man of Fleet's type as Contracting Officer.

He drove his associates by the force of his own zeal. There were no loafers on his force; but, in turn, he was much more interested in the contents of their pay envelopes than the average Army Officer whose own pay is regulated by statute—regardless of his worth to the Service.

All was not pleasant working with him. Being of a nervous, flamboyant temperament, it was inevitable that there would be occasions when he would go on a rampage when things went wrong. I remember one occasion particularly when he threw everything off his desk—ink and all—because his secretary refused to work overtime. Whenever he had occasion to refer to any of the papers which had been among those on his desk that day and which, of course, were sadly marred from their nose-dive with the ink, he smiled and remarked — "This went through the war!" He wasn't ashamed of his outbursts; he rather gloried in being able to get away with them. But he was absolutely fair; if one were shouted at one day, and Fleet found he was wrong about it, he never forgot to apologize. It takes a big man to apologize to a subordinate.

He is tender hearted. One Christmas when various groups at McCook Field decided to play Santa Claus to the poor of Dayton, Fleet not only contributed money generously, but he made a personal investigation of the families assigned to us to see what was most sorely needed, and on Christmas morning he personally delivered our gifts! I've seen him approached by hungry men on the street; he doesn't give them money, but he does take them to dinner. He is basically a real philanthropist.

He is an individualist,—an egoist, too; what successful man is not? He loves to do the conspicuous thing; keep people waiting for him for hours; secure a table in a restaurant where reservations have long been exhausted; obtain admission to a big football game without tickets; convince the Police Department the traffic cop was wrong in moving his car, and insist and have it driven to the spot from which it was moved.

He is a delightful companion,—amusing, interested in people and in things; at home anywhere; enjoying everything except inactivity. He likes campfire suppers, and will even wash the dishes after one—and do a thoroughly good job of it.

As for hobbies, unless one could call his business that, I don't believe he has any.

His success has really been phenomenal when one considers that he formed the Consolidated Aircraft Corporation as late as 1923. Training planes have been their specialty, but recently they have developed a huge seaplane to accommodate from 20-32 passengers. The company owns its own airport of 90 acres, near Buffalo, including a factory site of 20. It also owns a sight-seeing and taxi company. It will, according to a recent press report, do a business of more than $7,000,000 this year.

The cares of his large business are showing on him a bit; he has learned that gates were designed to be walked thru, instead of jumped over. He has been tremendously successful, and has not yet nearly reached his zenith.

* Little Miss Schunck, former able and efficient secretary to that giant figure in aviation, Anthony Fokker, was in an enviable position to know intelligently the personalities she writes so understandingly about.

THE AERONAUTIC REVIEW • October 1929 •

N.A.A. Lauds Guggenheim and Doolittle for Fog-Flying Success

THE sincere congratulations of the National Aeronautic Association were sent to Harry F. Guggenheim, president of the Daniel Guggenheim Fund for the Promotion of Aeronautics, Inc., by President Hiram Bingham on the occasion of the successful fog-flying tests made by Lieut. James H. Doolittle, Army Air Corps, at Mitchel Field on the morning of September 24.

Official notification of the success met by Lieut. Doolittle, who is on duty with the Fund for the fog-flying experiments, was contained in the following telegram to President Bingham from Mr. Guggenheim:

As a result of tests successfully conducted this morning at Mitchel Field I take pleasure in informing you that the Daniel Guggenheim Fund for the Promotion of Aeronautics is able to report a solution of the hitherto unsolved last phase in the problem of flying through fog under conditions representing the densest fog-flying in a covered cockpit and guided entirely by his instruments Lieut. J. H. Doolittle conducting the experiments was able to take off from the airport fly from it and return to a given spot and make a landing It is significant that the achievement is realized through the aid of only three instruments which are not already the standard equipment of an airplane.

Senator Bingham's congratulatory message follows:

Deeply appreciate your telegram informing me results of fog-flying tests by Lieutenant Doolittle stop The solution of this problem of fog-flying by Lieutenant Doolittle under auspices Guggenheim Fund opens door to hitherto undreamed of field of safety reliability and comfort in aircraft operations air transportation and air piloting stop By being able to fly land and take off in dense fog the airplane becomes superior to every other vehicle of transportation in existence stop The National Aeronautic Association congratulates you and the other members of the Fund including Lieutenant Doolittle first for your belief in the solution of this problem second for your willingness to undertake the solution and lastly for your accomplishment of what has appeared to be an impossible task.

Thomas-Morse On Army Order

Building 70 All-Metal Observation Airplanes

NEW YORK (N. Y.)—Production of 70 all-metal observation planes for the Air Corps is being started by the Thomas-Morse Aircraft Corporation, a division of Consolidated Aircraft Corporation. The manufacture of these planes will involve the sum of nearly one million dollars.

The craft, which will have a wing span of 40 ft. and length of 28 ft., will be known as 0-19-B type and constructed of duralumin and steel. They will be powered with Wasp engines. With a gross weight of 4,900 lb., they will be equipped with three guns and 125 lb. of bombs which can be released through a special cockpit. A crew of two will be carried.

Delivery of the first planes will be made shortly after the first of the year and the full order will be completed by July, 1930. As the production increases, the working staff will be increased to approximately 450 men, according to B. D. Thomas, vice-president, chief engineer of the Thomas-Morse company.

Approximately 73,000 sq.ft. of floor space in Unit 4 of the Consolidated Aircraft plant will be used by the Thomas-Morse division. Raymond Ware, secretary of the company, will be in charge of the sales division, while Mr. Thomas will act as vice-president and chief engineer, working with Lawrence D. Bell, general manager of all Consolidated interests.

The Thomas-Morse company is developing several other new types embodying their new type of construction, the first of which is an experimental Army pursuit plane powered with a Curtiss Hex 600 hp. engine. The first plane of its type has been completed and is now undergoing test flights by the Army Air Corps at Dayton, Ohio. It is a single seater having a 28 ft. wing span known as the Viper pursuit.

The company is also developing a new type of metal mail plane powered by a 475 hp. Wasp engine which will be capable of handling 1,200 lb. of mail. This plane has a 40 ft. wing span and is 30 ft. in length with large gasoline capacity.

PLANE TO BE LAUNCHED

Buenos Aires Sister

Rio, Sister Ship of the Buenos Aires, Nears Completion. 10/21/29

Another great air liner, the Rio, sister ship of the Buenos Aires, which was launched in Niagara river several weeks ago, is being assembled at the Consolidated Aircraft corporation plant and will take the water and the air before the week is out.

An interior decorator is achieving a tropical ensemble in the interior of the ship, using damasks, satin and velvet in the upholstery of walls and compartment seats.

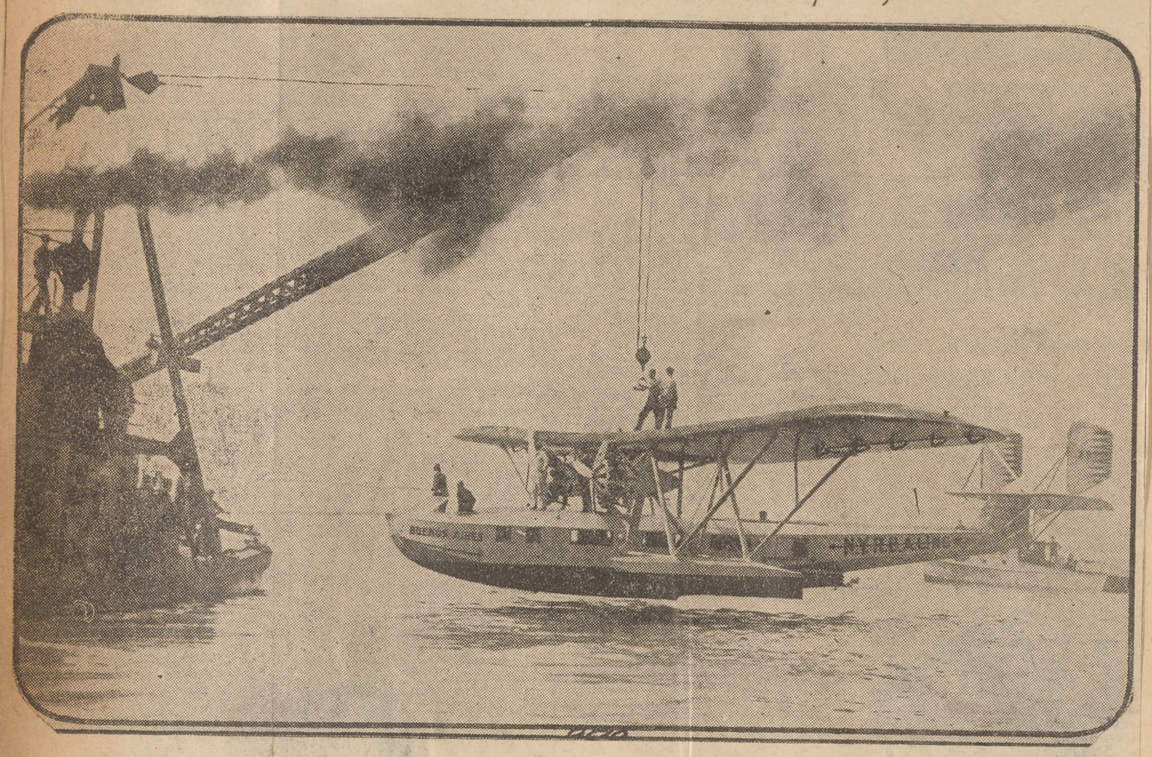
The Rio will have space for 20 passengers with chaise longue chairs, and in two cabins will be installed day beds and chairs. A buffet, wash rooms, as large as the ordinary Pullman car accomodations and other conveniences will be part of the modern equipment of the Commodore. Two other Commodores will be manufactured before Dec. 1, it is announced, and these will be assembled at New York due to Buffalo's lack of seadrome facilities.

BUFFALO, SUNDAY, SEPTEMBER 29, 1929 Scripps-Howard Newspaper Alliance

S DESTRUCTION IN FLO

Times

TAKE IT EASY, SHE'S WORTH $100,000



The derrick is gently lowering the huge Commodore flying boat into the Niagara river prior to its takeoff on its test flight Saturday afternoon. The ship had to be handled carefully. It cost $100,000.

* * *

AIR GIANT TEST IS SUCCESSFUL

Huge Buffalo-Built Commodore Flies to Falls with Leigh Wade at Controls

Success crowned the first flight Saturday of the Commodore, the largest flying boat ever built in the United States.

The ship has a 100-foot wing spread, weighs 9,000 pounds, carries 32 passengers and is powered with two 525 horsepower Pratt & Whitney motors. It was built by the Consolidated Aircraft Corporation for the New York-Rio-Buenos Aires line. It cost $100,000.

Motors roaring, the great plane rose into the air from the middle of the Niagara River just 23 seconds after Lieut. Leigh Wade, famous around-the-world flier, opened the throttle.

One flight to Niagara Falls was made. Then, with Lieut. W. S. Grooch, chief pilot of the Rio line, at the controls, the huge ship settled easily on the river at a landing speed of about 40 miles an hour.

So many stowaways crowded the small boats ferrying prospective passengers to the Commodore that Col. Ralph O'Neil, president of the Rio line, was unable to board the plane for its maiden flight.

The Commodore is one of 12 planes ordered for the air line connecting New York with South America. It was scheduled to take off for New York about noon Sunday with Grooch at the controls. Mrs. Herbert Hoover will christen it Wednesday in Washington, after which it will be commissioned for regular passenger service.

LOCAL SHIP TO ENTER "FOOLPROOF" CONTEST

Buffalo News 10/23/29

Standard Fleet Plane After Guggenheim Prize.

A Buffalo-made airplane which will be in most respects a standard stock model will be entered in the Guggenheim Fund competition for the closest approach to a "foolproof" airplane, for which manufacturers in all parts of the world are preparing.

The plane, a standard Fleet training ship, is the product of the Consolidated Aircraft corporation. It is being flown daily at the Consolidated airport in Military road with Lieut. Leigh Wade, chief test pilot, at the controls.

A feature of the easy flyability of the ship, upon which success in the contest depends, will be a landing speed of 30 to 35 miles an hour, made possible by wing flaps. These flaps are attached to the upper wings and to the lower surfaces between wing and aileron.

The Fleet will be equipped with standard ailerons. Other minor changes in the plane will include a larger stabilizer and a set of wheel brakes.

The 90-horsepower Kinner motor is of the radial type and will develop under ordinary circumstances 110 horsepower.

First award under the Daniel F. Guggenheim fund terms of the competition is $100,000 for the most successful plane of this type.

SPEEDY FLEETSTER TO BE TESTED TODAY

Buffalo News 10/23/29

Fastest Buffalo-Made Plane to Carry Eight Persons.

A silver airplane, claimed by its designers to be the speediest ever manufactured in Buffalo, will be flown at Buffalo airport Wednesday by Lieut. Leigh Wade, chief test pilot for Consolidated Aircraft corporation, makers of the ship.

The plane is an eight-place transport job with an all metal fuselage and aptly named Fleetster. It is powered with a Pratt & Whitney Hornet motor which is completely cowled. The ship, which resembles in general outline the speedy Lockheed Vega, is cigar shaped with a covered wheel at the tail. It is a monoplane.

Three trucks brought the plane to the Colonial hangar at the airport Tuesday where it was assembled ready for its first test flight Wednesday. The Consolidated flying field on Military road was too small to test the big ship, which is said to have a high speed of 175 miles an hour and being capable of crusing at 150 miles.

OCT 22 1929

Whitman
Case 33 T30

Consolidated Aircraft, Buffalo, Sell 150 Fleet Sports Planes In Seven Months

The Fleet Sports Plane Manufactured by the Fleet Aircraft Corporation of Buffalo, New York.

Editor's Note—Since this article was put in type, Major Fleet met with an accident in Ontario due to airport not being lighted. His Co-pilot was killed and Major Fleet seriously injured.

Within seven months after its incorporation as the selling organization for the Consolidated Aircraft Corporation, Fleet Aircraft Inc. has sold more than 150 of its sport planes. These two-place dual contro sport bi-planes have been purchased by individuals, dealers and various flying services operating throughout the United States.

To meet orders which are coming in steadily, two Fleets are now being produced daily and it is planned to increase this output to three planes a day. Additional machinery is being installed to enable the company to effect this increase, and the three a day schedule will be in operation by the end of the year.

The increased sales of the Fleet plane are due in large measure to an aggressive policy instituted by Lawrence D. Bell, president of the Fleet Aircraft Corporation. Mr. Bell's connection with the Consolidated Company began on July 1st, 1928, when he took charge of the manufacture of the Consolidated XPY-I ship which the company was producing for the United States Army. On January 1st, 1929, he became general sales manager for the Consolidated Company and in February, after the incorporation of the Fleet, he was elected as its first president.

Mr. Bell immediately started a sales campaign which resulted in securing more than a dozen representative aviation companies as distributors and dealers for the plane. Among the organizations handling the Fleet plane which are located in all parts of the United States are: Colonial Flying Service, Universal Flying Service, Art Goebel Aviation Company and the Pittsburgh Aircraft Agency Corporation.

Through a series of national tours arranged by Mr. Bell, the interest of the aviation industry and the general public has been focused on the plane. Through these tours it is demonstrated thoroughly and put through a series of tests to show the dealers themselves its sturdiness and reliability.

Lieutenant K. B. Wolfen leave from the United States Army, is now touring the northeast, while Lieutenant W. B. McCoy, also on leave from the Army, is touring the southeast. Demonstrations of the Fleet are being given on the Pacific coast by Lieutenant Leigh Wade, chief test pilot for the Consolidated Company, who flew across the country from Buffalo in a standard Fleet sport model.

Major Reuben H. Fleet, president of the Consolidated Company and chairman of the Fleet board of directors, is using one of the planes for a 15,000 mile tour of the country. He will visit important aircraft centres in the United States as well as all of the Fleet dealers. This is the first time that an executive of a national selling organization has made a survey of this particular field in an airplane. Mayor Fleet, an expert pilot, is taking his secretary along with him on his trip.

Mrs. Keith Miller, British aviatrix, who captured a world's long distance point to point record for women in her flight from London to Tasmania with Captain W. Newton Lancaster in 1928, piloted a Fleet in the first women's air derby held in connection with the National Air Races at Cleveland.

Among prominent people who have recently purchased Fleets for their private use are: George Pynchon, Jr., of Pynchon and Company, New York City; Earl D. Osborn, former editor of Aviation; Lorillard Spencer, of New York and Newport; Roger Wolfe Kohn and Colonel Merian Cooper, president of Federal Aviation Corporation.

The record of every plane sold proves the merit of the Fleet for flying instruction, for sport and for business use. Formerly known as the Husky Junior, it was the little brother of the Consolidated Husky, standard training plane of the United States Army and Navy for the past five years. It has back of it the eight years of engineering effort which the Consolidated Company has devoted to the production of reliable aircraft.

As a result of the experience gained in producing over seven hundred training planes which have flown millions of miles, all features found to be essential for a sturdy plane of this type have been incorporated in the Fleet.

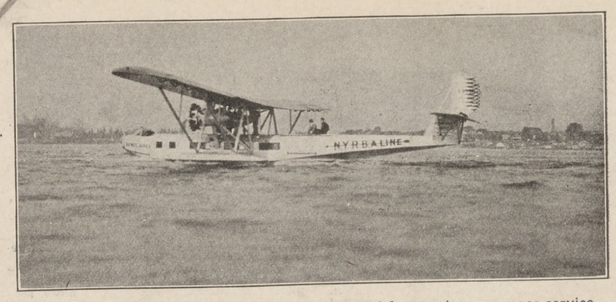
The ship has a wing span of 28 feet and is equipped with either a Warner or Kinner K-5 engine. Although its gasoline capacity is 24 gallons, extra fuel tanks may be installed to afford a total fuel capacity of 50 gallons, providing seven and a half hours endurance at cruising speed. The main fuel tank is placed in the upper wing and can be drained in any flight position. The engineer is bolted to

venting it from flying back into the cockpit. The cockpit is completely lined with the material used in insulating the cabin of the Condor transport to keep out drafts and cold, and is heated by a small steam radiator similar to those used in the Condor.

The flying instruments are grouped in a special panel on the instrument board in front of the pilot. This panel can be removed as a unit to facilitate testing and repairs, and is accessible from the mail compartment. The instrument board is illuminated by two hood lights which are controlled by a rheostat and may be dimmed to eliminate reflections from the glass coverings while flying at night.

The rudder pedals are adjustable, and may be moved either forward or back. By means of a hand lever, they may be made to operate both the rudder and wheel brakes or the rudder only. This lever has three positions. In the first, the brakes are completely off and the pedals operate only the rudder; in the second, the rudder pedals operate the rudder and brakes, and in the third, the lever itself applies the brakes to both wheels. In the third position, the lever acts exactly the same as the emergency brake of an automobile, holding the plane motionless while the engine is being warmed or under other conditions where the ship might roll. All joints and bearings in the mechanical system operating the controls are visible through inspection windows.

Unusual quietness in flight has been achieved in the Carrier Pigeon by equipping the air cooled exhaust manifolds with two bayonet type outlets which discharge under the lower wings, one on either side of the fuselage. Also, the reduction gearing causes the propeller to revolve at only one-half the speed of the engine. When the engine is running on full throttle, it makes 2,400 revolutions per minute, while the propeller turns at a rate of only 1,200 revolutions per minute.



The Consolidated Commodore which is to be used for regular passenger service between N. Y. and South America.

Oil capacity	16 Gallons
Propeller	Curtiss-Reed Adjustable Blades
Propeller diameter	13 Ft.
Cooling system	Vertical Tunnel Radiator
Weight, empty, (with 150 Lbs. water)	4,212 Lbs.
Structure	2,053 Lbs.
Power plant	1,807 Lbs.
Fixed equipment	352 Lbs.
Useful load	3,388 Lbs.
Crew	200 Lbs.
Fuel and oil	1,110 Lbs.
Equipment	78 Lbs.
Pay load	2,000 Lbs.
Gross weight	7,600 Lbs.

The Curtiss Carrier Pigeon II one of the fastest mail planes built.

The cruising speed of the Carrier Pigeon II, with the engine turning over at 85 per cent of its maximum revolutions per minute, is 122.5 miles per hour, and the rate of climb is 850 feet per minute. This last characteristic is of extreme importance in mail flying because of the demands made upon the plane when flying over mountainous country in bad weather. The ship has a service ceiling of 12,200 feet and an absolute ceiling of 13,900 feet. An unusually large dihedral of three degrees has been rigged into the wings to provide stability in flight.

Characteristics

Type of machine	Tractor Biplane
Wing loading (Lbs. Sq. Ft.)	13.37
Power loading (Lbs. H.P.)	12.33
Aerofoil section	C–72

CONSOLIDATED COMMODORE DEMONSTRATED

The 32-passenger Consolidated Commodore, the Buenos Aires, flagplane of the New York, Rio & Buenos Aires Lines, Inc., which was satisfactorily tested at Buffalo Saturday, September 28, was flown for its first public demonstration on Monday, September 30, at Miller Field, Staten Island.

The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express.

Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment.

In order to take care of special express and mail, the Buenos Aires is arranged to seat 20 passengers. The other Commodores, however, will be built to accommodate the full passenger load.

Two of the cabins on the Buenos Aires accommodate 8 passengers, while the third —a lounge room—has seats for 4 passengers and includes two day beds. Chairs and

245 FLEET PLANES SOLD

Open Cockpit Training Models Gain in Popularity.

Nine months' production and sales figures, announced Friday by Lawrence C. Bell, president of the Consolidated Aircraft corporation of Buffalo, show the sale of 245 of these open cockpit training planes since incorporation of the company, Feb. 13, 1929.

Since the Fleet, which is a commercial adaptation of the Consolidated Husky, standard training plane of the United States government, was first put on the market it has been placed for sale with ten distributing agents and more than 60 dealers in all parts of the country.

Of the 245 planes sold, according to Ray P. Whitman, assistant general manager of the company, 176 had been delivered up to Oct. 1, including one to Mexico and two to the Argentine government.

In August the company was merged with its parent organization, the Consolidated Aircraft corporation, but continues to operate as a separate company functioning as the commercial selling organization of the Consolidated group.

Southern Aviation - 10/15/1929.

Lieutenant Wendel B. McCoy, commandant of Maxwell Field, Montgomery, army flying post is on a three months leave of absence which he is spending traveling over the Southeast in a Fleet biplane in an effort to interest civilians in aviation. His first stop was Candler Field, Atlanta, where he demonstrated the handling of the Fleet biplane to a number of aviation enthusiasts from Atlanta. He made an address before the Atlanta chapter of the National Aeronautical Association at its regular meeting on Monday September 16.

LAWRENCE D. BELL APPOINTED GENERAL MANAGER CONSOLIDATED AIRCRAFT

Aviation Engineering Oct. 1929

Announcement is made from the offices of the Consolidated Aircraft Corporation at Buffalo of the appointment of Lawrence D. Bell, vice-president and general sales manager, as general manager of the Consolidated group of aeronautical interests succeeding Major R. H. Fleet, president, who will retire from active management of the plant. Ray P. Whitman, formerly assistant to the general manager, will become assisting general manager.

George Newman, vice-president and factory manager of Consolidated, will also retire from active service. Major Fleet and Mr. Newman will devote all of their time in the future to determining the policies of the corporation and its plans for future business expansion.

General T. Edward Hambleton

Aviation Engineering - October 1929

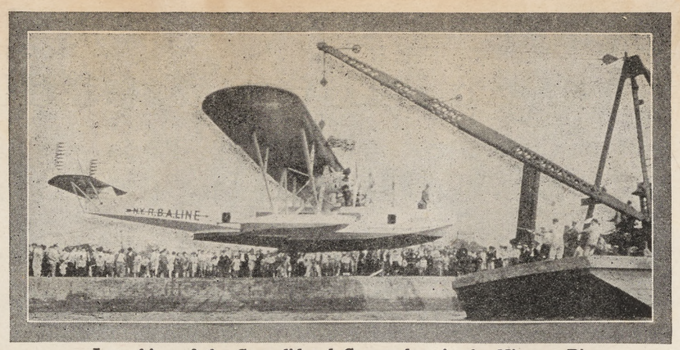
THOMAS-MORSE RECEIVES ORDERS FOR ARMY PLANES

The Thomas-Morse Aircraft Corporation, which was recently acquired by the Consolidated Aircraft Corporation of Buffalo, has received orders from the Army Air Corps for the construction of seventy all-metal corps observation planes.

These planes will embody a unique type of metal construction which has been pioneered and developed by the Thomas-Morse Corporation for many years and which is definitely in advance of anything at present in general use. The planes will be built in a new section of the Consolidated plant at Buffalo, which has been greatly enlarged to provide facilities for the manufacturing of these planes on a mass production basis.

Following the merger of the Thomas-Morse Corporation with the Consolidated group, F. L. Morse, president of the Ithaca concern, has been made a member of the board of directors of the parent corporation.

CONSOLIDATED COMMODORE FLYING BOAT



Launching of the Consolidated Commodore in the Niagara River

THE 32-passenger Consolidated Commodore, the *Buenos Aires*, flagship of the New York, Rio & Buenos Aires Lines, Inc., which was tested at Buffalo late in September, was flown for its first public demonstration a few days later at Miller Field, Staten Island, N. Y.

The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane XPY-1 delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. (The Navy XPY-1 was fully described in the February issue of AERO DIGEST.) It includes a number of improvements designed to increase the comfort and convenience of passengers. The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

The Commodore is powered with two Pratt and Whitney 525 horsepower Hornet engines, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles per hour. In addition to accommodations for thirty-two passengers and a crew of three, space is provided in the Commodore for mail and express.

The interior of the plane, which was designed and furnished under the direction of Frederick J. Pike, interior decorator, incorporates several interesting features of beauty and comfort. The general appointments follow a modernistic scheme with basic tones of silver, henna and green predominating. Three cabins are provided for passengers, as well as a lavatory, buffet room and radio compartment. Two of the cabins accommodate eight passengers each; the third has two day-beds and seats for four passengers.

In order to take care of special express and mail, the *Buenos Aires* is arranged to seat twenty passengers. The other Commodores, however, will be built to accommodate the full passenger load.

The chairs and day-beds in all cabins, as well as the small adjustable tables, are of aluminum construction finished in natural color. The seats are equipped with rubber life preservers fastening by snaps which enable them to be removed in a few seconds. Cushions upholstered in various colors, are placed on top of the life preservers.

The walls of the compartment with the day-beds are covered with a Deauville rep material of pale lavender and silver. The day-beds are upholstered in turquoise damask; the seat cushions are of raspberry, gold and tan striped material. Print draperies in lemon yellow and tan are used.

Following out the plan for an individual color scheme for each cabin, the walls of the center salon are done in green and gold, a henna colored modern damask being used for the seat cushions. The third cabin has chairs upholstered in a green moire with a modernistic fabric in peach and silver for the cushions. Tan damask covers the walls.

The main passageway of the ship is carpeted with a jade green rug. Rugs in the three cabins correspond to the color scheme of each room.

The dressing room is painted in horizontal graduated lines in colored shades ranging from burnt sienna at the top to cream at the bottom. The ceiling is of turquoise blue. Special nickel fixtures were designed for this room. The lavatory is equipped with running water, wash basin, toilet, drinking water, towel racks and mirror.

A central dome light in each cabin and over the seats small lamps finished in black and silver furnish artificial illumination. Between the seats in each of the passenger compartments, a panel holding timetables, magazines and newspapers has been placed under the window. The adjustable tables for writing or card playing fit in slots under the window directly between the seats.

The walls of the radio room are done in silver, over which is placed a deep blue glaze. The ceiling is also decorated in silver, with coral colored streaks representing lightning.

Access to the cabin, which is 8 feet 5 inches in width with a 6-foot headway, is through a companionway in the afterbody of the ship.

The plane is of all-metal construction and is said to be very seaworthy. The flotation system consists of a single hull, having a submerged displacement of 100,000 pounds, and two outboard floats, each having a bouyancy of 3,700 pounds. The outboard floats are located 14 feet 3 inches from the center line of the main hull and provide good lateral stability in the water. According to the manufacturer, the Commodore is capable of flying with a full load on one engine and can take off with a full load in a dead calm in 45 seconds. A magnetic compass, altimeter, air speed indicator, tachometers, clock, oil temperature and pressure gauges, earth inductor compass, and a turn and bank indicator are included in the instruments with which this transport is

(*Continued on next page*)

provided. Dual control of the swing-over type is provided. Throttles, stabilizer control, fuel control, etc., are located conveniently for both pilots.

The plane was flown on its test flights by Lieut. Leigh Wade, Army 'round-the-world flier, who is chief pilot for the Consolidated company.

Specifications

Span overall	100 feet
Chord	11 feet, 6 inches
Length overall	61 feet, 9 inches
Height	16 feet
Wing area	1,110 square feet
Weight empty	9,500 pounds
Disposable load	8,000 pounds
Gross weight loaded	17,500 pounds
Wing loading	15.8 pounds per square foot
Power loading	15.1 pounds per horsepower
Fuel capacity	700 gallons
High speed	130 miles per hour
Cruising speed	110 miles per hour
Landing speed	55 miles per hour
Take-off (loaded; calm)	45 seconds
Climb (initial)	750 feet per minute
Climb (one engine)	100 feet per minute
Ceiling	17,000 feet
Cruising radius (600 gallons of fuel)	1,000 miles

LIEUT. WADE PLEASED WITH SPEEDY PLANE

Tests Show Fleetster Surpasses 200 Miles an Hour.

Buffalo News 11/1/29

Preliminary tests made at Buffalo airport this week with the new Fleetster, eight-place cabin monoplane of the Consolidated Aircraft corporation, indicated it was one of the fastest ships for its size. Lieut. Leigh Wale, chief test pilot, reported after a third flight Thursday, that the ship had exceeded expectations. Department of Commerce officials are watching the tests with interest.

Designed to have a cruising speed of 180 and a top rate of 200 miles an hour, the Fleetster is intended for high speed transportation for commercial operators and is particularly appropriate for private corporations desiring to own private ships.

The entire design is predicated on a new special monocoupe construction developed and patented by Lawrence D. Bell, general manager of the company. This type was announced immediately after the National Advisory council developed the NACA cowling and is the only plane built so far to which the cowling has been applied with 100 per cent. success.

The fuselage is barrel-shaped with no cross-construction in the interior. A two-inch padding of insulation ensures quiet. Six passengers are accommodated on two rows of seats facing each other and space for a small table for reading, writing or card-playing is provided. The seventh passenger sits forward with the pilot.

While the wings of the first Fleetster are wood fiber, all other ships will be all metal construction, steel and duraluminum being used throughout. The ship has a wing span of 45 feet, is 31 feet long and nine feet high. Loaded, it weighs 5000 pounds and has a disposable load of 2100 pounds. It is powered with a Pratt & Whitney Hornet engine of 575 horsepower.

CONSOLIDATED PLANT COMPLETING AIRPORT

Tonawanda Gets One of East's Largest Private Fields.

Buffalo News 11/1/29

One of the largest and most completely equipped, privately-owned airports in the east will be opened by the Consolidated Aircraft corporation of Buffalo this month in Tonawanda, near the company's plant. The field contains two sections, one of 126 acres and a second of 20 acres.

The larger field has been drained and leveled under the supervision of the Industrial Planning corporation of Buffalo. It contains a 3000-foot slag runway, with turns at each end and in the center. A 3600-foot dirt runway has also been constructed, as well as roads for vehicles. Construction of hangars will be started soon.

The field will be used as a testing ground for all land planes manufactured by the company, and as a special field for owners of these ships. Service facilities will be installed.

The new port adjoins two concrete boulevards leading into Buffalo and is 20 minutes by motor from the business district of this city. It is two miles from the Consolidated plant The port also adjoins the tracks of the New York Central railroad. The smaller field has a 3000-foot cinder runway in good condition and a small hangar containing offices and storage space for 20 small planes.

In addition to this port the Consolidated has in process of construction a 100-acre port in Ft. Erie.

PLANE OFF TO BUENOS AIRES

Buffalo News 11/1/1929

Buffalo-made Craft Soon to Join Gotham-South America Service.

ROOSEVELT FIELD, N. Y., Nov. 1 (AP).—The first airplane to operate directly between New York and Buenos Aires, an eight-passenger Sikorsky amphibian christened Bahia, left Roosevelt field en route to South America today.

The ship's first stop will be at Washington, and she will take off on her long trip over water from Tampa, Fla. Her owners, the New York, Rio, Buenos Aires Line, Inc., expected the Bahia to reach Buenos Aires in 11 days.

No passengers were carried on this first trip. There was a crew of five, Burten Brown Barker, chief pilot; Robert J. Nixon, co-pilot, and F. G. Neff, J. H. Leeper and Harry Berger, mechanics.

The line is to put into service shortly. Several 34-passenger Commodores, now are being built in the factory of the Consolidated Aircraft corporation at Buffalo. These, it is expected, will make the New York-to-Buenos Aires flight in 90 hours of flying time.

Navy Orders More Planes

Aeronautical World-November 1929

The United States Navy has placed an order for 71 standard military type Husky land and seaplanes, involving approximately $550,000, with the Consolidated Aircraft Corporation of Buffalo. The order includes 41 standard Consolidated Husky (NY-1) land planes and 30 Consolidated Husky (NY-2) seaplanes.

Production of the ships will start at once and the schedule has been set at four planes weekly. R. P. Whitman, assistant general manager, expects the order to be completed by the end of February.

The planes, equipped with Wright J-5 motors, will be shipped from Buffalo by freight to their various destinations.

Quarter Million Parts Order

Aeronautical World-November 1929

An order totaling $256,000 for spare parts for Consolidated Husky Trainers, used by the government as its standard training ship, has been received by the Consolidated Aircraft Corporation of Buffalo from the United States Army Air Corps. The order is to be completed within eight months.

The Consolidated company has also received orders from the Siamese government for Husky Trainer spare parts totaling $7,000. Delivery on these orders will be made as soon as possible.

Sells 245 Planes In 9 Months

Aeronautical World-November 1929

Nine months' production and sales figures announced by Fleet Aircraft, Inc., of Buffalo show the sale of 245 open cockpit training planes since incorporation of the Company on February 13, 1929.

Since the Fleet, which is a commercial adaptation of the Consolidated Husky, standard training plane of the United States Government, was first placed on the market it has been placed for sale with ten distributing agencies and more than sixty dealers in all parts of the country.

Of the 245 planes sold, according to R. P. Whitman, assistant general manager of the Company, 176 had been delivered as of October 1, including one to Mexico and two to the Argentine Government.

Production has steadily increased during the nine months' period reaching a peak of two daily at the end of the summer.

In August the Company was merged with its parent organization, the Consolidated Aircraft Corporation, but continues to operate as a separate company functioning as the commercial selling organization for the Consolidated group.

New Army Observation Plane

Aeronautical World-November 1929

Work has been started by the Thomas-Morse Aircraft Corporation, a division of Consolidated Aircraft Corporation, on initial production of the United States Army Air Corps order for 70 all-metal corps observation planes, involving approximately one million dollars.

This new observation plane will be known as O-19-B and will be of duraluminum and steel construction. The airplanes have a wing span of 40 feet and are 28 feet in length. They will carry a crew of two, three guns and 125 pounds of bombs which can be released through a special cockpit. Equipped with Pratt & Whitney 475 h.p. Wasp motors, they will have a top speed of 150 miles an hour and a normal cruising speed of 130 miles per hour. Gross weight is 3900 pounds.

Delivery of the first ship will be made shortly after the first of the year, and the full order will be completed by July, 1930. As the production increases, the working staff will be increased to approximately 450 men, according to B. D. Thomas, vice-president and chief engineer of the Thomas-Morse Company.

Commodore Gets Public Demonstration

Aeronautical World-November 1929

The 32-passenger Consolidated Commodore, the Buenos Aires flagplane of the New York, Rio & Buenos Aires Lines, Inc., which was satisfactorily tested at Buffalo recently, was flown for its first public demonstration at Miller Field, Staten Island, last month.

The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of three, ample additional space is provided in the Commodore for mail and express.

In order to take care of special express and mail, the Buenos Aires is arranged to seat 20 passengers. The other Commodores, however, will be built to accommodate the full passenger load.

Total of 245 Fleet Training Planes Sold

Aviation 11/2/1929

BUFFALO (N. Y.)—Figures released by Fleet Aircraft, Inc., here, show 245 open cockpit training planes have been sold since the organization of the company in February of this year. Ten distributing agents and over 60 dealers have handled this type of craft which is a commercial adaptation of the Consolidated Husky, a training plane used by the Government.

R. P. Whitman, assistant general manager of the firm, states 176 of the 245 machines sold, had been delivered as of Oct. 1, and included one to Mexico and two to the Argentina Government.

A two-plane-a-day production schedule was reached at the end of the summer, following an increased rate over a period of nine months. A division of Consolidated Aircraft Corporation with which it was merged in August, it is operating as a separate company as the selling end of the Consolidated group.

SEAPLANE TO BE LAUNCHED

Buffalo News 11/4/29

Country's Largest Passenger Plane Ready to Take Water Here.

The second of a dozen 32-passenger flying boats being manufactured by the Consolidated Aircraft corporation for the New York, Rio & Buenos Aires air lines, will be launched in the Niagara river at the foot of Austin street Tuesday or Wednesday.

The giant Commodore type ship, which is to be christened the Rio de Janeiro, awaits only installation of special propellors and minor mechanical adjustments. It will be flown to New York by Lieut. Leigh Wade, vice president and chief test pilot of the company, and thence to South America for service on the Pan-American route.

It is the largest passenger plane ever built in the United States and embodies the most advanced principles of plane design and construction. It is powered with two Hornet motors of 575 horsepower. The interior of the plane is modernistically decorated, and equipped with lounge, day beds and comfortable seats.

E. Daily News 11/4/29

CIGAR SHAPED PLANE MAKES 197 MILE SPEED

Lieut. Leigh Wade, chief test pilot of the Consolidated Aircraft corporation, guided the company's newest speed ship, the Fleetster, through the skies over the municipal airport Saturday at the terrific speed of 197 miles an hour. The test proved the silver bullet to be the fastest stock model airplane built in the United States.

The formed army 'round-the-world flier claims the cigar shaped plane will hurtle through space at a speed of 250 miles with a few minor refinements. It is powered with a Pratt & Whitney 575 horse-power engine, equipped with standard NACA cowling.

Consolidated Appoints Four New Distributors.

Aircraft Age-November 1929

BUFFALO, N. Y.—Four new distributors have been named by the Consolidated Aircraft Corporation, according to Lieut. Leigh Wade, chief testing officer for the company, who returned recently from the west coast. Lieut. Wade also booked orders for more than 50 Fleet dual-control training planes in California.

A reduction in price of Fleet planes from $5,500 to $4,985 has had a stimulating effect upon sales, according to Ray P. Whitman, assistant general sales manager of the company.

Whitman announced that all of the old type landing gears on Fleet dual-control planes will be replaced, without charge, with the new type gear which is reinforced and much stronger.

Navy Buys 71 Airplanes

Aircraft Age, November 1929

The Consolidated Aircraft Corporation of Buffalo has received orders from the United States Navy for 71 of its standard military type Husky land and seaplanes involving approximately $550,000. The orders include 41 standard Consolidated Husky (NY-1) land planes and 30 Consolidated Husky (NY-2) seaplanes.

Production of the ships will start at once and the schedule has been set at four planes weekly. R. P. Whitman, assistant general manager, expects the order to be completed by the end of February.

The planes, equipped with Wright J-5 motors, will be shipped from Buffalo by freight to their various destinations.

PLANE LAUNCHING DELAYED

Buffalo News 11/4/29

Huge Commodore Flying Boat to Be Tested Thursday.

Launching of the "Rio de Janeiro," giant Commodore flying boat, which will be a unit in the Pan-American transportation system of the New York, Rio & Buenos Aires line, has been deferred until Thursday, according to officials of the Consolidated Aircraft corporation, builders of the ship.

The postponement was made necessary as the interior of the hull is incomplete. The motors have yet to be tested also.

There will be no formal ceremony at the launching or official christening. The first of the series of ten such ships being manufactured by the Buffalo firm was christened "Buenos Aires" by Mrs. Herbert Hoover at Washington a few days after it was launched. The "Rio" has been assembled at the foot of Austin street.

Mrs. Herbert Hoover christening the airplane "The Buenos Aires" at Anacostia Naval Air Station

AVIATION
November 2, 1929

New York-Buenos Aires Line to Open in January

NEW YORK (N. Y.)—New York, Rio & Buenos Aires Line, Inc., will have its 9,000-mi. route from this city to Argentina in operation on or about Jan. 1, 1930, according to present plans. The route has been surveyed, a tentative schedule worked out, and equipment of Consolidated Commodore flying boats, Ford transports (both with Hornet power) and Sikorsky amphibions has been ordered. At first, one trip will be made in each direction weekly, and the time will be seven days for the full route, with no night flying. The line from Montevideo, Uruguay, to Buenos Aires is already in operation, and will be extended to Rio de Janeiro within the next few days. In general, the line will be extended from the southern end until it reaches this city.

Proposed stops are as follows: Wilmington, Del.; Baltimore, Md.; Washington, D. C.; Norfolk, Va.; Charleston, S. C.; Savannah, Ga.; Jacksonville and Tampa, Fla.; Havana, Cienfuegos, Camaguey and Santiago, Cuba; Port au Prince, Haiti; Santo Domingo, Dominican Republic; San Juan, Porto Rico; Guadeloupe; Martinique; Port of Spain, Trinidad; Georgetown, British Guiana; Paramaribo, Dutch Guiana; Cayenne, French Guiana; Para, Sao Louis, Fortaleza, Natal, Parahiba, Pernambuco, Maceio, Aracaju, Bahai, Carabello, Victoria, Campos-Barra, Rio de Janeiro, Santos, Paranagua, Slorianopolis, Porto Allegre and Pelotas, Brazil; Montevideo, Uruguay; Buenos Aires, Argentina. A branch line will connect with Caracas, Venezuela. The company has in operation at present a line from Buenos Aires to Santiago, Chile.

Fleet Aircraft Sells 245 Planes In 7 Months

Aircraft Age November 1929.

NEW YORK, N. Y.—Nine months' production and sales figures announced today by Fleet Aircraft, Inc., of Buffalo show the sale of 245 of these open cockpit training planes since incorporation of the Company on February 13, 1929.

Since the Fleet, which is a commercial adaptation of the Consolidated Husky, standard training plane of the United States Government, was first placed on the market it has been placed for sale with ten distributing agencies and more than sixty dealers in all parts of the country.

Of the 245 planes sold, according to R. P. Whitman, assistant general manager of the Company, 176 had been delivered as of October 1, including one to Mexico and two to the Argentine Government.

Production has steadily increased during the nine months' period reaching a peak of two daily at the end of the summer.

In August the Company was merged with its parent organization, the Consolidated Aircraft Corporation, but continues to operate as a separate company functioning as the commercial selling organization for the Consolidated group.

32 Passenger Commodore PUT IN SERVICE

The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express.

Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment.

In order to take care of special express and mail, the Buenos Aires is arranged to seat 20 passengers. The other Commodores, however, will be built to accommodate the full passenger load.

Two of the cabins on the Buenos Aires accommodate eight passengers, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction, finished in natural color. A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions.

The lighting fixtures also carry out the modern design.

Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Each plane will be equipped with a completely equipped lavatory, including running water, wash basin, toilet, drinking water, ice water, towel racks and mirror.

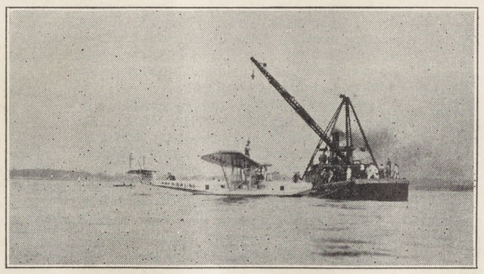
Access to the cabin which is 8 feet 5 inches in width with 6 feet headway, is gained through a companionway in the afterbody of the ship.

The plane is of all-metal construction and is so designed as to make it very seaworthy. It has a wing span of 100 feet and a total wing area of 1,110 square feet. Its length is 61 feet 9 inches.

The weight of the plane empty is 9,500 pounds. The useful load is 8,000 pounds and the gross weight is 17,500 pounds. The useful load of the ship may be divided into passengers, mail, express and fuel in any manner in which the operator desires. Tankage is provided for 700 gallons of gasoline.

Landing speed of the plane is 55 miles an hour and the initial rate of climb 750 feet per minute with a ceiling of 17,000 feet. The Commodore is capable of flying with a full load on one engine and can make a take-off with a full load in a dead calm in 45 seconds. Magnetic compass, earth inductor compass, turn and bank indicator, are included in the latest navigation equipment with which this luxurious transport is provided.

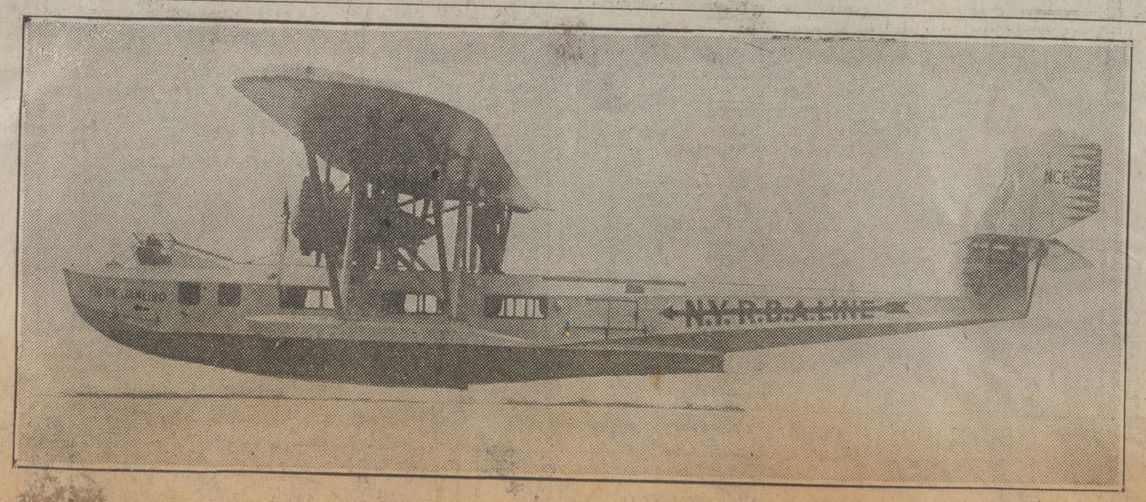
The plane was flown on its test flights by Leigh Wade, army round-the-world flyer, who is chief pilot for the Consolidated Company.



Launching of Buenos Aires, flagship of the New York, Rio Line at Buffalo. This is the first of 12 Commodore seaplanes to be built by the Consolidated Aircraft Corporation of Buffalo.

Buffalo Built Seaplane Is Tested —

Buffalo News — 11/7/1929



—Evening News Staff Photos.

Thousands of Buffalonians saw the test flight of the Rio, second of the big seaplanes to be built here by the Consolidated Aircraft corporation for the New York-Buenos Aires line. The big orange and cream ship droned over the city for a long time Wednesday afternoon. It seats more than 20 passengers.

NEW AIRLINER READY FOR RIO LINE SERVICE

Buffalo News — 11/7/1929

Big Craft Will Be Flown to New York Thursday.

Rising gracefully from the blue waters of the Niagara river Wednesday afternoon, the giant airliner Rio de Janeiro, made its first test flight. Lieut. Leigh Wade, vice president of the Consolidated Aircraft corporation, manufacturers of the craft, was at the controls.

After being lifted into the water at the docks at the foot of Austin street, the great orange and cream ship taxied down river for the takeoff. It churned the water for several hundred feet before taking the air, glistening and dripping. Swinging around over Grand Island, Wade headed back over the city flying low over the business district.

The plane will be flown to New York Thursday by Wade, when it will be placed in immediate service on the New York, Rio and Buenos Aires lines, which company has contracted for ten such planes with the Buffalo manufacturers. The first of the fleet was delivered a month ago.

The Rio seats 20 passengers. It is modernistically furnished and the airline patron is transported in comfort comparable only to luxurious ocean liners. It has a radio cabin with full equipment and will be manned by two pilots and a radio operator. Capt. Ralph O'Neil, president of the line, watched the test flight.

FLEETSTER PLANE TO TOUR COUNTRY

Buffalo News 11/8/1929

Further Tests Here to Show Absolute Ceiling.

Buffalo's fastest airplane, the silver Fleetster of the Consolidated Aircraft corporation, which attained a speed of 187 miles an hour in tests at the municipal airport this week, will tour the country from coast to coast in coming months, it was announced on Thursday.

The bullet-like ship will be given further test flights for more than a month before taking off for Chicago and St. Louis. It will be flown on the tour by Capt. James Berry, former army officer, now in the employ of Consolidated, who is conducting the tests.

Thursday the plane left the ground from a standing start in 12 seconds and climbed to a height of 10,000 feet in 12 minutes—a rate of climb higher than that of an army pursuit ship. On Friday it will be flown to a height of 15,000 feet, and on Saturday Capt. Berry and a mechanic will attempt to determine the absolute ceiling of the ship; that is, fly the plane as high as it is possible for it to go.

After visiting Chicago, St. Louis and other nearby aircraft centers, the Fleetster will be ferried west to the coast for demonstration flights at Pacific air fields and back to Buffalo through Texas or a northern route. The exact itinerary has not been decided.

LIEUT. LEIGH WADE LEAVES SOON FOR SOUTH AMERICA

Lieut. Leigh Wade, vice president and chief test pilot of the Consolidated Aircraft corporation, and army 'round the-world flier, will leave for South America next week in the interests of his company, which has many customers in the southern part of the hemisphere.

Lieut. Wade will assume direction of sales work for Fleet and Husky training planes as well as the larger passenger carriers manufactured at the company's Buffalo plant in 2050 Elmwood avenue. He was in various South American countries last year for about six months on the same mission. The company has sold many trainers to the larger countries there.

Aviation 11/9/29

Consolidated to Open Fields

TONAWANDA (N. Y.)—Two adjoining private fields near here and close to the company's Buffalo plant will be opened this month by Consolidated Aircraft Corporation. The larger field, 126 acres, has a 3,000-ft. slag runway and a 3,600-ft. dirt runway. Hangars will be built soon. The smaller field, 26 acres, has a 3,000-ft. cinder runway and a hangar with office rooms, work shop and storage space for twenty small planes has already been erected. The larger field, to be used for testing, was drained and leveled under the supervision of the Industrial Planning Corporation, of Buffalo.

Aviation 11/9/1929

Test New Eight-Place Consolidated Fleetster

BUFFALO (N. Y.)—Tests of the new "Fleetster," an eight-place plane recently developed by Consolidated Aircraft Corporation, have been made by Lieut. Leigh Wade, chief test pilot, and Department of Commerce officials are to inspect the craft in the near future. The plane, designed by Lawrence D. Bell, general manager of the firm, is of monocoque construction and is said to be especially suited for high speed transportation and commercial service.

The "Fleetster" has a span of 45 ft., is 31 ft. long, 3 ft. 9 in. wide, and 9 ft. in height. N. A. C. A. Cowling and Pratt & Whitney power are used. Six passengers are seated in two rows of three chairs, while the seventh sits forward near the pilot. The upholstery has been placed over a two-inch thick insulation padding designed to insure quiet for the passengers. Baggage and express matter is carried in the rear.

A Train-Load of Consolidated Training Planes Being Made up for Shipment to the Cuban Government. Private Railroad Sidings Extend Through Both Units 1 and 2 of the Consolidated Plant

BUFFALO, N. Y.—It will be remembered that shortly after the close of the World War the United States government began to release a large number of planes to the public at prices that were ridiculously low when compared with the original purchase price paid by the government. The result was that the bottom fell out of the already fluctuating airplane market and all except the strongest companies began to fail. The only orders available were those from the military services, and these seldom included over six planes—usually only one. Financial assistance for strengthening a company was practically unobtainable. It admittedly was not the most promising period in which to enter into the manufacturing of aircraft. Major R. H. Fleet, however, had faith in the aeronautical industry and with a very limited capital (for no one wanted to buy airplane stock then), he began the organization of the Consolidated Aircraft Corporation.

After brief negotiations Major Fleet acquired the equipment and good will of the Dayton - Wright Airplane Company. He also bought up an unfinished contract with the army for about 25 TW-3's. Of this number only about five had been built. The Gallaudet Airplane Company of East Greenwich, R. I., was the next acquisition. This concern, not unlike its competitors, was in a state of very poor financial stability when purchased.

Major Fleet became interested in aviation during the World War. He was formerly in the lumber business in Oregon and the experience acquired in this field has proved invaluable when purchasing materials for building aircraft; not infrequently he will go out personally and order the desired lumber. Upon the entrance of the United States into the World War Major Fleet was sent to Europe to study flight training. After spending some time there, he returned and became one of the leaders in organizing for the United States government a training course for pilots. He became chief contract officer at the close of the war and had charge of liquidating war contracts for aircraft. On May 29, 1923, he organized the Consolidated Aircraft Corporation. He also is interested in the Fleet Aircraft Corporation and the New York - Rio - Buenos Aires Corporation.

Company Officials Inspecting The Buenos Aires, First of the Consolidated Commodores, Previous to its Launching at Buffalo. Left to Right: Thos. Kenny, Sec.-Treas.; F. J. Rossoll, Production Mgr.; George Newman, Vice-President; I. M. Laddon, Designer of the Plane; Ray Whiteman, Vice-Pres. and Asst. Gen. Mgr.; Lawrence D. Bell, Vice-President and General Manager of Consolidated; Col. Ralph O'Neill, President New York, Rio, and Buenos Aires Lines.

When Major Fleet purchased the Dayton-Wright company, he was joined by Colonel V. E. Clark, one of the best known aeronautical engineers and designers of aircraft in the country. Colonel Clark was Commanding Officer of McCook Field and directed much aerodynamic development there. He is responsible for many good airfoils (i. e. the

Aeronautical World - November 1929

Sells 245 Planes In 9 Months

Nine months' production and sales figures announced by Fleet Aircraft, Inc., of Buffalo show the sale of 245 open cockpit training planes since incorporation of the Company on February 13, 1929.

Since the Fleet, which is a commercial adaptation of the Consolidated Husky, standard training plane of the United States Government, was first placed on the market it has been placed for sale with ten distributing agencies and more than sixty dealers in all parts of the country.

Of the 245 planes sold, according to R. P. Whitman, assistant general manager of the Company, 176 had been delivered as of October 1, including one to Mexico and two to the Argentine Government.

Production has steadily increased during the nine months' period reaching a peak of two daily at the end of the summer.

In August the Company was merged with its parent organization, the Consolidated Aircraft Corporation, but continues to operate as a separate company functioning as the commercial selling organization for the Consolidated group.

Navy Orders More Planes

The United States Navy has placed an order for 71 standard military type Husky land and seaplanes, involving approximately $550,000, with the Consolidated Aircraft Corporation of Buffalo. The order includes 41 standard Consolidated Husky (NY-1) land planes and 30 Consolidated Husky (NY-2) seaplanes.

Production of the ships will start at once and the schedule has been set at four planes weekly. R. P. Whitman, assistant general manager, expects the order to be completed by the end of February.

The planes, equipped with Wright J-5 motors, will be shipped from Buffalo by freight to their various destinations.

Conduct Preliminary Tests On New Consolidated Plane

Fleetster, Eight-Place Monoplane, Designed To Have a Top Speed of 200 m.p.h.

BUFFALO, N. Y. — (Special) — The Fleetster, eight-place cabin monoplane manufactured by Consolidated Aircraft Corp., of this city, was given preliminary tests here on October 30. Lieut. Leigh Wade, chief test pilot for Consolidated was at the controls.

The plane has been designed to have a cruising speed of 180 and a top speed of 200 miles per hour. It has been constructed on a new special monocoque type which was devised and patented by Lawrence D. Bell, general manager of the company.

The fuselage is barrel-shaped with no cross-construction in the interior. The six passengers are accommodated on two rows of three seats facing each other and space for a small table is provided. The seventh passenger sits forward beside the pilot. In the rear is space for baggage or express matter.

The Fleetster has a wing span of 45 feet, is 31 feet long, three and three-quarters feet wide and is nine feet high. Loaded the plane weighs 5,000 pounds and has a disposable load of 2100 pounds and a pay load of 1,448. A 575 h.p. Pratt & Whitney engine is the power plant of the new Fleetster ship.

CONSOLIDATED TO BUILD TWO AMPHIBIAN TYPES

Buffalo News 11/17/29

Plans for experimental production of two ambhibian types at the Consolidated Aircraft corporation plant, 2050 Elmwood avenue, are being made according to announcement Monday. One of these is a twin motor ship and the other is a baby amphibian of somewhat smaller type.

A high speed mail plane of Fleetster type may follow the successful tests conducted at the municipal airport of the first of these bulletlike models. The company may build a series of these mail ships along the same lines at once wtih little2engineering change. Unfilled orders at the plant amount to approximately $4,000,000.

LIEUT. LEIGH WADE, vice-president and chief test pilot of Consolidated Aircraft Company, has gone to South America to direct sales of Fleet and Husky planes. Aviation - 11/30/29

New Army Observation Plane

Work has been started by the Thomas-Morse Aircraft Corporation, a division of Consolidated Aircraft Corporation, on initial production of the United States Army Air Corps order for 70 all-metal corps observation planes, involving approximately one million dollars.

This new observation plane will be known as O-19-B and will be of duraluminum and steel construction. The airplanes have a wing span of 40 feet and are 28 feet in length. They will carry a crew of two, three guns and 125 pounds of bombs which can be released through a special cockpit. Equipped with Pratt & Whitney 475 h.p. Wasp motors, they will have a top speed of 150 miles an hour and a normal cruising speed of 130 miles per hour. Gross weight is 3900 pounds.

Delivery of the first ship will be made shortly after the first of the year, and the full order will be completed by July, 1930. As the production increases, the working staff will be increased to approximately 450 men, according to B. D. Thomas, vice-president and chief engineer of the Thomas-Morse Company.

New "Fleetster" Which Proved Fast in Tests

Aviation - November 23, 1929

SHOWN ABOVE is the new metal "Fleetster" developed by the Consolidated Aircraft Corporation, Buffalo. The sesquiplane, which has a monocoque fuselage and uses Pratt & Whitney power, is reported to have attained 187 m.p.h. in initial speed tests, Lieut. Leigh Wade piloting. The craft is soon to be taken on a coast-to-coast tour with Capt. James Berry at the controls.

"Fleetster" is Monoplane

A captain in the last issue of AVIATION incorrectly referred to the new Consolidated "Fleetster" as a "sequiplane." The craft is, of course, a monoplane.

"U. S. A." series and the "Clark" series). In 1920 Colonel Clark resigned from the army and became chief engineer of Dayton-Wright. Upon organization of Consolidated he became vice president and chief engineer of that company. In the fall of 1927 he resigned and spent nearly a year in Europe, studying aeronautical development there. At present he is connected with Aviation Corporation, serving in a technical capacity.

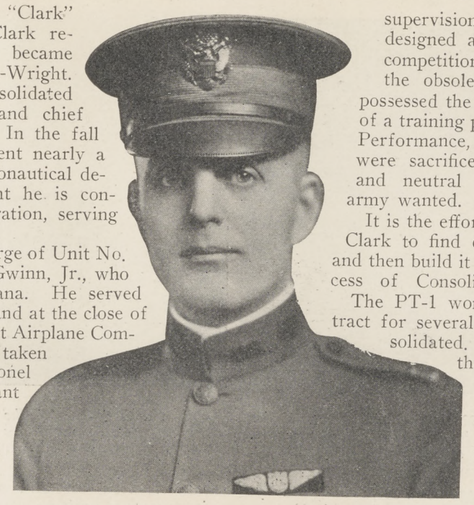
The project engineer in charge of Unit No. 1 engineering is Joseph M. Gwinn, Jr., who came originally from Louisiana. He served overseas with the air service and at the close of the war he joined the Gallaudet Airplane Company. When this concern was taken over by Major Fleet and Colonel Clark, he was appointed assistant to Colonel Clark. He too studied aeronautics in Europe for some time.

I. M. Laddon, who is project engineer of Unit No. 2 engineering came from McCook Field where he did a considerable amount of all-metal development for the army. He also is the designer of the well-known Bendix-Laddon wheels. He served with Consolidated at their Dayton office where an engineering department was maintained for some time. This branch department has been transferred to Buffalo and since Laddon's removal to that city he has been especially interested in the naval patrol boat XPY-1 and the Commodore, a commercial flying boat; both planes are of all-metal construction.

All of these key-men of Consolidated have flying experience for a background which enables them to understand aeronautics from the actual flying side of the game. Consolidated has always encouraged its employees to obtain flight instruction and only a short time ago arrangements were made with National Flying Schools, Inc., whereby any employee physically eligible for a student permit, was allowed a substantial discount on all costs of instruction.

Consolidated completed the contract with the army for TW-3's in East Greenwich. The TW-3 was designed by Colonel Clark and was a development of the original "Chummy." It was a side-by-side training plane powered with a Hisso or a Wright "E" motor.

In 1924 the company moved to Buffalo and under the supervision of Colonel Clark the PT-1 was designed and entered in the army open competition for a training plane to replace the obsolete "Jenny." This new plane possessed the requisites that were demanded of a training plane and which the army liked. Performance, appearance, and streamlining were sacrificed for ruggedness, simplicity, and neutral stability, but it was what the army wanted.



Major R. H. Fleet, President of the Consolidated Aircraft Corporation

It is the efforts of Major Fleet and Colonel Clark to find out what the services desired and then build it for them, that explain the success of Consolidated Aircraft Corporation. The PT-1 won the competition and a contract for several planes was awarded to Consolidated. In the first year of service these machines saved the army more than the original cost of the ships in maintenance as compared to the equipment they formerly had. Also the crash pads (a TW-3 feature) and the strength of the fuselage gave them a clean record of no fatalities, so the army came back for more.

The navy became interested in the PT-1 but it is rather interesting to know that they desired entirely different flying characteristics in their planes. They liked a ship with considerably more stability and yet sensitive controls. Consolidated's ability to accomplish this again spelled success.

The NY-1 was offered the navy and it was accepted. Since then about 107 NY-1's, and 165 NY-2's have been produced. The O-17, or Courier, was designed and about 32 of these were built for the National Guard. Consolidated has also produced about 260 PT-3's and PT-3A's which are now being built under regular schedule.

More than 800 training planes designed and built by Consolidated are now in daily use and constantly subjected to the handling and mishandling of student flyers. They have been "flown over 20 million miles of record." They have never worn out nor have they been condemned. Sturdiness of construction, simplicity of design, and ease of maintenance have reduced the necessary ground crews 50 per cent, according to the makers.

The planes have been adopted after open competition as standard for training by the United States Army Air Corps, Naval Air Service, Marine Corps, Naval

Four PT's Built for the Cuban Army Air Corps, Lined up for Flyaway Delivery at the Consolidated Airport at Tonowanda. N. Y.

signing military training planes. Although it was designed and originally sold by Consolidated, the rights have been sold to the Fleet Aircraft Corporation which now handles the sales; Consolidated continues to build this machine for Fleet Aircraft.

Perfect training balance, light and positive controls, almost pursuit-like performance, large crash pads, internal aileron operation, and neat appearance are some of the features of the Fleet.

Aluminum alloy ribs and spruce spars are used in the construction of the wing. Except those ribs whose extended cap strips carry the aileron hinges, all ribs are built of heat-treated duralumin stampings .014 in. in thickness. The excepted ribs are of .045 in. stock. A flanged "U" section is employed in the cap strip while the vertical members are of channel section. Cement coated nails are used to fasten all ribs to the top and bottom of the spars; these nails merely locate the ribs as the upper and the lower cap strips are tied to the spars. The walk-boards are of .065 duralumin and will support a man at the trailing edge with a safety factor of three.

The aluminum alloy used in the wing structure is of the same composition as that used on the first PT models built by Consolidated. A special heat-treating furnace has been developed and is installed close to the stamping press to insure a continuous flow of materials to the press.

The Dope Room of the Consolidated Plant Features Adequate Heating and Ventilation Systems. All Departments Are Designed to Admit Plenty of Natural Light

Eight bays are made in the drag bracing of the upper wing exclusive of the center section and six are provided in each lower wing panel. The single, unswedged tie-rods, which are employed are to give rigidity rather than strength, are set at an angle of 45 degrees. This setting has been found by experience to give the greatest rigidity in this type of bracing. Compression struts are 9/16 x .028 in. chrome molybdenum steel tubes, cut off squarely in a lathe and set over the heads of the drag wire fitting bolts.

A single bolt through a Bakelite spool inserted in a reamed hole is used to attach each drag fitting to the spar, and large duralumin disks ⅛ in. thick are placed on the faces of the spars. A rigid assembly is thus made by this form of attachment and washers are prevented from embedding themselves in the spars.

It is possible to replace either rear or front spar in either lower or upper wing panels without losing or destroying a single rib or fitting. This feature is of great advantage in training operations where minor crashes are not infrequent.

The main wing fittings are of one-piece design, the single welds being under practically no stress. Through Bakelite spools inserted in reamed holes they are bolted to the spars, increasing the bearing area in the wood by 150 per cent and eliminating the trouble caused by bolts embedding in the spar. The centroid of the bearing area in the wood coincides with the truss center line due to the layout of the position of these bolts. A rotating tendency between the fittings and the spar is thus eliminated and one bolt is not allowed to take more than its proper share of the load. This is very important as a small shift in the location of one bolt will add 25 to 50 per cent to its load and cause premature embedding in the spars.

One of the most interesting features of the Fleet is the patented aileron control system. It consists essentially of a push-pull tube in each wing connected directly to the stick and attached to a lever pivoted to the aileron on an axis that is inclined in both side and front elevation. When this lever is moved the aileron transversely moves up and down with a differential action. Since the operating lever attached to the aileron is telescoped, assembly of the aileron to the wing is a simple matter.

Another original feature in the production of the Fleet is the patented method of fastening the fabric to the wing. Holes .05 in. in diameter are punched into the cap strips of the ribs and a die and a tapered end-punch is next run through each, producing bell-mouth holes .089 in. in diameter. A ⅜ x .02 inch duralumin washer is laid on the fabric over each hole. Attachment is done by the use of No. 4 x ¼ in. Parker-Kalon sheet metal screws, having special heads. Even if the thread is damaged, these screws when used in this type and size of hole will hold hold firmly and not come out. The screwheads are covered with round fabric patches, one inch in diameter and stamped out in large quantities at the factory. These are doped on to the fabric. The wing structure is protected by three coats of spar varnish. "Zippers" are used on the fuselage covering to enable easy inspection of the stabilizer adjusting mechanism.

The planes in production are powered with the Kinner 100 h.p. motor. Two of these machines have been built as experimental models, powered with a Curtiss 170 h.p. and a Wright 150 h.p.; the latter recently was taken up by Lieut. "Nelly" Nelson and put through an outside loop from a dive of about 3,000 feet.

Many flying schools have adopted the Fleet as part of their equipment. These include United Aviation Corp., Colonial Flying Service, Universal Aviation Corp., Cleveland Institute of Aviation, Inc., Mid-west Airways, Inc., Lloyd-Mosier Air Commerce, Inc., Pittsburgh Aviation Industries Corp., Yellow Cab Airways, Inc., Pocahontas Air Transport Corp., Garland Aircraft Corp., and Art Goebel's school.

CRASHES TO DEATH ON FIRST SOLO HOP

Newly Licensed Flier, in Hired Plane, Hits Porch of House in Westbury, L. I.

BROKE RULE, SAYS TEACHER

Lost Control in Sharp Turn Over Town, Witness Asserts—Craft Grazed Auto.

Special to The New York Times.

WESTBURY, L. I., Nov. 27.—Shortly after noon today and ten minutes after hiring an airplane from Roosevelt Field nearby, James Pisani who had passed the private license tests as a pilot of the Department of Commerce on Nov. 2, suddenly dove and sideslipped from a height of 400 feet over the business section here and crashed into the street. Witnesses said the young pilot was standing up in the cockpit of the little training plane just before it struck and was catapulted along the top of the fuselage. His head struck the top cylinder of the five in the radial engine of the plane, he caromed off into the street and was picked up unconscious. Although he was rushed to the Nassau Hospital in Mineola by an automobile into which his plane nearly crashed, he died an hour later without regaining consciousness.

The fall of the airplane was broken twice, and in the opinion of those who viewed the wreckage Pisani would not have been seriously hurt had he remained in the cockpit with his safety belt securely hooked. The cockpit itself was intact even to the instruments, the switches were turned on as was the gasoline line when the officials of the Roosevelt Field Flying School arrived to salvage the plane.

Broke Rule, Instructor Says.

According to F. Ray Cullman, chief instructor at the field, and who instructed Pisani before his first solo flight some four months ago, the flier violated one of the rules at the field after taking off. He turned to the right instead of to the left as he left the ground, an act which brought him directly over this town while the rules of student and private flying at the field insist on turning left, holding to the perimeter of the landing area until considerable altitude is gained.

Cullman said the plane seemed to be flying easily as it neared the town. He continued to watch and saw Pisani flounder into a turn and a sharp bank from which he went into a dive. Pisani tried to right the craft, apparently by reversing the position of his rudder. This act caused the plane to side slip with the engine running at flying speed. As the lateral controls of the wing were found to be in working order, it is believed that Pisani became confused and neglected to right the wing by that method, thus continuing in his side slip at an ever increasing rate until his propeller cut through a thick telephone duct, the first break in the fall. Tearing through the line of wires, the plane's wing then hit a porch of the real estate office of Daniel McLaughlin at Maple and Post Avenues, Westbury. It caromed off the building, grazed the parked automobile in front and crashed in the centre of Maple Avenue.

Pisani was thrown clear of the wreck. The owner of the car, whose name was not learned, rushed him to the Nassau Hospital where he died shortly afterward. His parents, Mr. and Mrs. John Pisani, with whom he lived at 2,250 Metropolitan Avenue, Queens, were informed by the phone and his father reached the hospital just as he died. The young pilot will be buried on Saturday morning with funeral services at 10:30 A. M. in St. Margaret's Roman Catholic Church in Middle Village, Queens.

Fifth Training Plane Crash.

Inspection of the wrecked plane by officials of the Department of Commerce disclosed that the controls and motor were functioning perfectly in their opinion. Today's crash of the training plane is the fifth among the planes of the Roosevelt School and as a consequence the management has announced that no more planes will be rented for private use other than student training. Each of the planes is valued at $5,000.

Colonel N. J. Boots, head of the Roosevelt Field organization, said that the fleet of planes in the school averaged more than forty hours of flight training each day or about 120,000 miles a month. Of the five planes which were wrecked only two crashes proved fatal to the occupants and both of these involved licensed pilots, one on a mission of his own over New York, who crashed into a building in West Sixty-fourth Street, and that of Pisani today.

Under these conditions rigid requirements for students must be passed before any solo flights are allowed in the future, and Colonel Boots said that though flying instruction has been maintained in his school under the strictest standards, these and similar occurrences seemed to indicate that the requirements for licensed pilots might well be raised to include more advanced flying.

Daily News Record 12/2/1929

BUFFALO AIRCRAFT FIRMS CUT FORCES

Employment Curtailed About 35 Per Cent in Month — Further Reductions Planned

Special to DAILY NEWS RECORD

Buffalo, Dec. 1.—Employment in the aircraft industry in the Buffalo area has been curtailed about 35 per cent within the last month, according to reports from leading manufacturers. This is due to the slowing up of production of small sport and training planes and greater concentration upon heavier military type and transport models.

Operating executives report there will be some further curtailment but probably not to exceed 10 per cent of the present working force which will bring the employment figures for the winter season down to approximately 50 per cent of what it was during the peak of the summer months.

General Causes Decline.

Some of this decline is attributed to the suspension of activities at the plant of the General Airplanes Corp., brought about by bankruptcy proceedings. Plans are being made, however, for a rehabilitation of the property by the new owners and a skeleton crew will be maintained during the winter to keep the key workers intact so the organization can be built up again in the spring.

Of the local aircraft industries, Consolidated Aircraft Corp. is reported to be employing the largest working force. The Thomas-Morse division of the Consolidated expects to reach peak production within the next three weeks on the Government contract for 70 all-metal observation planes. Production of the Fleet dual control training planes is now reported on a basis of eight to 10 ships weekly in addition to the large Commodore type transports which are being produced on a basis of one every five weeks.

Daily News Record 12/2/1929

Consolidated Testing Fourth Plane for N.Y. to Rio Service

Buffalo, N. Y., Dec. 1.—The fourth of the giant twin-motored Commodore type seaplanes under construction by the Consolidated Aircraft Corp. for the New York, Rio & Buenos Aires Lines, Inc., of New York, has been launched and now is being flight tested over the Niagara river and Lake Erie before being flown to New York to be placed in the South American passenger-mail air service.

Construction work is progressing rapidly at the Consolidated plant on other Consolidated Commodores for the same company. Twenty ships are included in the first order.

U. S. Navy and Army Places Orders With Consolidated

The Consolidated Aircraft Corporation of Buffalo has received orders from the United States Navy for 71 of its standard military type Husky land and seaplanes, involving approximately $550,000. The order includes 41 standard Consolidated Husky (NY-1) land planes and 30 Consolidated Husky (NY-2) seaplanes.

Production of the ships will start at once and the schedule has been set at four planes weekly. It is expected the order will be completed by the end of February.

The planes, equipped with Wright J-5 motors, will be shipped from Buffalo by freight to their various destinations.

An order totaling $256,000 has been received from the United States Army Air Corps for spare parts for Consolidated Husky Trainers, used by the government as its standard training ship. The order is to be completed within eight months.

The Consolidated company has also received orders from the Siamese government for Husky Trainer spare parts totaling $7,000. Delivery on these orders will be made as soon as possible.

Work will be started this week by the Thomas-Morse Aircraft Corporation, a division of Consolidated Aircraft Corporation, on initial production of the United States Army Air Corps order for 70 all-metal corps observation planes involving approximately one million dollars.

This new observation plane will be known as O-19-B and will be of dur-aluminum and steel construction. The airplanes have a wing span of 40 feet and are 28 feet in length. They will carry a crew of two, three guns and 125 pounds of bombs which can be released through a special cockpit. Equipped with Pratt and Whitney 475 h.p. Wasp motors, they will have a top speed of 150 miles an hour and a normal cruising speed of 130 miles per hour. Gross weight is 3900 pounds.

Delivery of the first ship will be made shortly after the first of the year and the full order will be completed by July, 1930. As the production increases, the working staff will be increased to approximately 450 men, according to B. D. Thomas, Vice-Pres., Chief Engineer of the Thomas-Morse Company.

Approximately 73,000 sq. ft. of floor space in Unit 4 of the Consolidated Aircraft plant will be used by the Thomas-Morse division. Raymond Ware, secretary of the company, will be in charge of the sales division, while Mr. Thomas will act as vice-president and chief engineer, working with Lawrence D. Bell, general manager of all Consolidated interests.

The Thomas-Morse Company is developing several other new types embodying their new type of construction, the first of which is an experimental Army pursuit plane powered with a Curtiss Hex 600 h.p. motor. This plane will be capable of a high speed of 195 miles per hour. The first plane of its type has been completed and is now undergoing test flights by the Army Air Corps at Dayton, Ohio. It is a single seater, having a 28 foot wing span and will be known as the Viper pursuit.

The company is also developing a new type of metal mail plane powered by a 475 h.p. Pratt and Whitney Wasp motor which will be capable of handling 1,200 pounds of mail. This ship has a 40 foot wing span and is 30 feet in length with large gasoline capacity.

New York-Buenos Aires Flagship Launched at Buffalo

The Buenos Aires, first of the completed Consolidated Commodore seaplanes, largest thus far built in the United States, in the Buffalo harbor immediately after its launching.

The 32-passenger Consolidated Commodore, the Buenos Aires, flag-plane of the New York, Rio & Buenos Aires Lines, Inc., which was satisfactorily tested at Buffalo Saturday, September 28, was flown for its first public demonstration on Monday, September 30, at Miller Field, Staten Island.

The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express.

Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment.

In order to take care of special express and mail, the Buenos Aires is arranged to seat 20 passengers. The other Commodores, however, will be built to accommodate the full passenger load.

Two of the cabins on the Buenos Aires accommodate 8 passengers, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction finished in natural color. A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions.

The lighting fixtures also carry out the modern design.

Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Each plane will be equipped with a completely equipped lavatory including running water, wash basin, toilet, drinking water, ice water, towel racks and mirror.

Access to the cabin which is 8 ft. 5 in. in width with a 6 ft. headway, is gained through a companionway in the afterbody of the ship.

The plane is of all-metal construction and is so designed as to make it very seaworthy. It has a wing span of 100 feet and a total wing area of 1,100 square feet. Its length is 61 ft. 9 in.

The weight of the plane empty is 9,500 pounds. The useful load is 8,000 pounds and the gross weight is 17,500 pounds. The useful load of the ship may be divided into passengers, mail, express and fuel in any manner in which the operator desires. Tankage is provided for 700 gallons of gasoline.

Landing speed of the plane is 55 miles an hour and the initial rate of climb 750 feet per minute with a ceiling of 17,000 feet. The Commodore is capable of flying with a full load on one engine and can make a take-off with a full load in a dead calm in 45 seconds. Magnetic compass, earth inductor compass, turn and bank indicator, are included in the latest navigation equipment with which this luxurious transport is provided.

The plane was flown on its test flights by Leigh Wade, army round-the-world flyer, who is chief pilot for the Consolidated Company.

New Consolidated Flag-Plane Now in Service

THE new 20-passenger Consolidated Commodore, the Buenos Aires, flag-plane of the New York, Rio & Buenos Aires Lines, Inc., has been satisfactorily tested at Buffalo and was flown for its first public demonstration early in October at Miller Field, Staten Island.

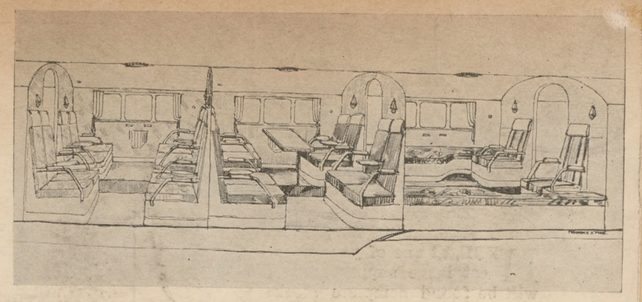
The Commodore is the largest passenger flying boat thus far built in the United States and is a commercial adaptation of the Admiral patrol plane delivered by the Consolidated Aircraft Corporation to the United States Naval Air Service in December, 1928. It includes a number of improvements designed to increase comfort and convenience of passengers.

The ship will be used for regular service between New York and South American ports. It is the first of twelve similar planes which have been ordered by the transport company, the remaining eleven to be delivered at the rate of one a month.

Following the recent trend in large plane construction, the Commodore is powered with two motors. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express.

Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, as interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment.

Two of the cabins accommodate 8 passengers each, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction finished in natural color.



Interior view of luxurious cabin of the Consolidated Commodore

A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions.

The lighting fixtures also carry out the modern design.

Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Each plane is equipped with a completely equipped lavatory, including running water, wash basin, toilet, drinking water, ice water, towel racks and mirror.

Specifications of the Commodore,

Dimensions: Wing span, 100 ft.; total wing area, 1,100 square ft.; length, 61 ft., 9 in.; cabin width, 8 ft. 5 in.; height of cabin, 6 ft.

Power Plant: Twin Pratt and Whitney 525 h.p. Hornet engines.

Weight: Empty, 9,500 lbs.; useful load, 8,000 lbs.; gross weight, 17,500 lbs.

Performance: High speed, 130 m.p.h.; cruising speed, 110 m.p.h.; landing speed, 55 m.p.h.; climb, 750 ft. per minute; ceiling, 17,000 ft.; take off with full load in calm, 45 seconds.

Construction: All-metal.

Equipment: Magnetic compass, turn and bank indicator, earth inductor compass.

Police Pilot's Circus Stunt Wrecks Plane After He Hops a Ride on Tail

If Patrolman Otto A. Kafka, one of Police Commissioner Whalen's student flyers, can repeat the feat he performed so casually yesterday, he can make his fortune in any circus.

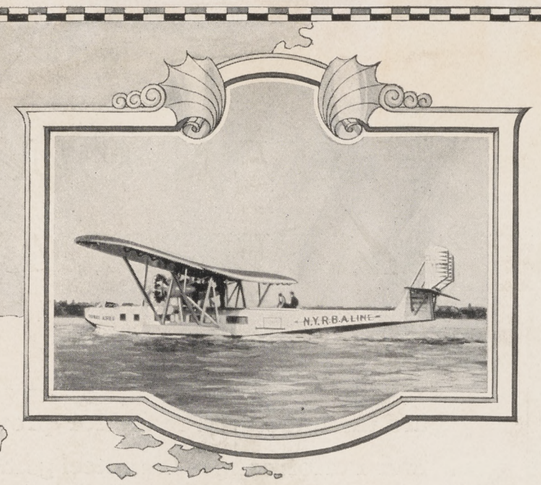
Kafka, who is being trained at Roosevelt Flying School, took off on a solo flight from Roosevelt Field, L. I., in a fleet biplane. He decided for experimental purposes to land at a small emergency field near the Aviation Country Club.

The landing was perfect. Kafka stepped out of his plane and regarded it with satisfaction. Then he decided to resume his flight, but could find nothing to block the wheels.

Kafka decided to dispense with the starting blocks. He set the spark, opened the throttle, tied back the stick, and, stepping in front of the plane, spun the propeller.

The engine roared and the plane lurched forward. Kafka, directly in its path, did a lightning fall-away from the propeller and managed to dive under the lower left wing.

As the plane passed over him the student flyer, panicky at the thought of its running away without him, grabbed its tail to hold it back. The plane dragged him along the ground some distance and then took to the air with Kafka's legs hanging in space. Despairing at last, the patrolman let go and dropped five feet to the ground, unhurt. As he picked himself up Kafka saw the biplane stall suddenly in the air, and dive to the ground, smashing the lower wings and the propeller.



The COMMODORE
"The pride of the sky"

IF any evidence were needed that aviation had changed from a hazardous adventure to a world industry of vast importance it is furnished by the Consolidated Commodore.

These giant sea-going air liners, with a wing spread of 100 feet, and a carrying capacity of 25 passengers and thousands of pounds of air mail, operate safely and regularly along an 8000 mile route—spanning the distance between New York City and Buenos Aires in seven days.

Designers of planes capable of accomplishing such vast transportation enterprises now turn unerringly to Aluminum and its alloys, as the one material that will serve their purpose.

The Consolidated Commodore is a notable example. Practically the entire ship is fabricated from strong heat treated Aluminum Alloy, surfaced on exposed parts with pure Aluminum —a protection against corrosion known as the ALCLAD process.

Even the Commodore's twin 'Wasps' depend upon strong Aluminum Alloys to eliminate dead, useless weight—and all sluggishness and inertia from moving parts. Crank case, accessory drive housing, pistons, cylinder heads, diffuser section and nose and rear sections of these reliable Pratt & Whitney engines are made of strong, heat-treated Aluminum alloys.

* * *

The technical staff of Aluminum Company of America, creators of strong Aluminum Alloys and ALCLAD products invite contacts with designers and builders on all phases of the application of Aluminum to aircraft.

The *Fleetster*, the New Eight-Place Cabin Monoplane of the Consolidated Aircraft Corporation

Consolidated Eight-Place Cabin Monoplane, the *Fleetster*

DESIGNED to have a cruising speed of 180 miles per hour and a top speed of 200 miles per hour, the *Fleetster*, the new eight-place cabin monoplane of the Consolidated Aircraft Corporation of Buffalo, N. Y., is intended for higher speed transportation for commercial operators and for private corporations desiring to own individual ships.

The design of the ship is predicated on a new special monocoque body construction developed and patented by Lawrence D. Bell, general manager of Consolidated. This monocoque construction was announced following the National Advisory Council of Aeronautics development of the NACA cowling. It is claimed that the *Fleetster*, through its design, obtains 100 percent efficiency from this cowling. Because of the added width of the fuselage, it is wide enough to seat three passengers side-by-side instead of the usual two. The Consolidated engineers say that the NACA cowling adds 15 to 20 miles to the speed of the plane.

The fuselage is barrel-shaped with no cross-construction in the interior. A two-inch padding of insulation, over which the upholstery lies, insures quiet. Six passengers are accommodated on two rows of three seats facing each other and space for a small table for reading, writing or card playing is provided. The seventh passenger sits forward beside the pilot. In the rear is space for baggage or express matter.

While the wings of the first *Fleetster* are wood fibre, all other ships will be all-metal construction, steel and duraluminum being used throughout. The *Fleetster* has a wing span of 45 ft., is 31 ft. long, three and three-quarters ft. wide and nine ft. in height. Loaded, the plane weighs 5,000 lb. and has a disposable load of 2,100 lb. and a pay load of 1,448. The *Fleetster* is powered with a 575 hp. Pratt and Whitney engine.

Leigh Wade to South America

BUFFALO (N. Y.)—Reports from the Consolidated Aircraft Corp. of this city, state that Lieut. Leigh Wade, round-the-world Army flier and chief test pilot for the Consolidated concern, is on his way to South America, where he is expected to spend most of the winter and spring in the interests of the company. He will direct the sales work of the Fleet and Husky training planes and the larger planes of the firm, such as the "Commodore." The Consolidated Aircraft Corp. has sold planes to the Argentine and Mexican governments and to Central and other South American countries.

BUFFALO, N. Y.,
DECEMBER 20, 1929

CONSOLIDATED GETS LARGE PLANE ORDER

Local Plant to Build Eight Huge Ships, Giving 1100 Men Year's Work.

Orders received Friday morning by the Consolidated Aircraft corporation of Buffalo from the New York, Rio & Buenos Aires lines for eight additional ships will keep the plants working at capacity for the next year, it was announced by Ray P. Whitman of the Consolidated company.

The orders were for two Commodore flying boats and six Fleetsters. The present crew of 1000 men employed in the plants will be increased by approximately 100 to permit the filling of orders, Mr. Whitman said. The order for the six Fleetsters stipulates that they shall be ready for delivery early next spring. To produce these machines within that period will require that the staff be increased by approximately 100, Mr. Whitman said.

The Consolidated company now has 10 unfilled orders for ships of this class. Four such boats have already been delivered. The estimated value of all the orders, including those delivered and the six Fleetster ships, is in excess of $400,000, Mr. Whitman said.

The Commodore ships are rated the fastest in commercial service. One of them, in test flights here a month ago, attained a speed of 197 miles an hour. The boats are all-metal monoplanes, with a passenger capacity of 32, but are used as 20-passenger ships in the New York to Buenos Aires service.

The Commodore ships are to be equipped with either Wasp or Hornet motors.

The Fleetsters are eight-place ships, also for passenger service. The order received Friday morning was the first for ships of that class received by the Consolidated company from the New York, Rio & Buenos Aires lines, Mr. Whitman said.

The New York, Rio & Buenos Aires line now is using four classes of ships in its service to South America. These are the Buffalo-made Commodores and Fleetsters, the Sikorski amphibian and the Ford Tri-motor machines.

Aeronautical December 29

Consolidated Opens New Airport

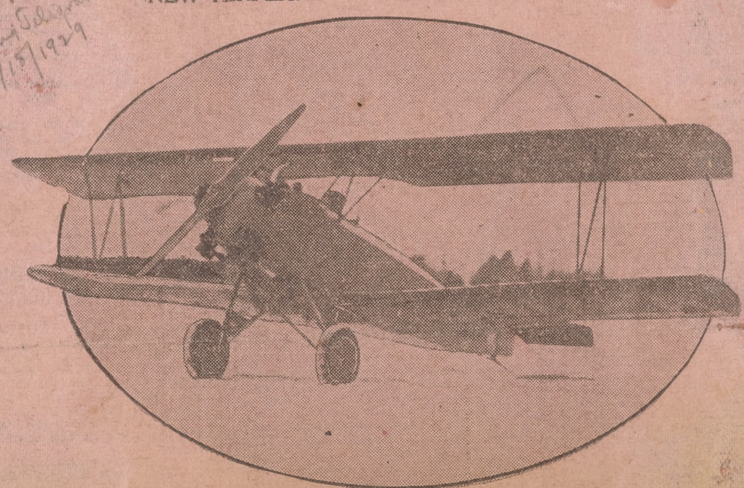
CONSOLIDATED AIRCRAFT CORPORATION, Buffalo, N. Y., recently opened a private airport at Tonawanda, N. Y,. a short distance from the company's Buffalo plant. The field contains two sections of ground—one of 126 acres and one of 20 acres.

The larger field has been drained and levelled under the supervision of the Industrial Planning Corporation of Buffalo. It contains a 3,000-foot slag runway with turns at either end and in the center. A 3,000-foot runway has also been constructed and has a dirt finish at the present time, although surfacing will be provided in the near future. Roads for vehicles have been provided, and construction of hangars will be started as soon as possible. The field will be used as a testing ground for land planes manufactured by the Consolidated group as well as a special field for owners of these ships.

The new airport is located 20 minutes by motor from Buffalo's business center, and two miles by road from the Consolidated plant. The property adjoins the tracks of the New York Central railroad.

NEW AIRPLANE PLANT FOR CANADA

Evening Telegram 12/15/1929



The Consolidated Aircraft Corp., of Buffalo, has announced plans for an airplane plant at Fort Erie, Ont., to manufacture "Fleet's," two-place training and sport biplanes, for the Canadian and world market. Jack Sanderson, formerly instructor for the London (Ont.), Light Airplane Club, is in the cock-pit of the above machine which he is demonstrating at Camp Borden, Leaside, and other Ontario flying fields.

Evening Telegram 12/15/1929

Consolidated Aircraft, Ltd., of Buffalo, one of the largest manufacturers of aircraft in the United States, and makers of the huge Commodore flying boats which will be used in the New York-South American run, will, in all probability establish a manufacturing plant in Toronto.

The proposed plant will be large enough to handle all Canadian requirements, and it is likely that only light training planes will be manufactured for the first few years of operation.

The light two-cockpit "Fleet" has been demonstrated in Toronto during the past few days and on every field it has been greeted favorably. This has induced the manufacturer, evidently, to give Toronto another aircraft industry. The site for the new plant has not been announced, but it is likely that the plan will proceed at once in order that the "Fleet" manufacturers will be ready for spring business. Consolidated already have a field at Fort Erie.

Regarding the new biplane, a well known local instructor said, "It is the sweetest thing I ever handled." The "Fleet" has a top speed of 109 m.p.h., is shorter than the usual design of similar machines (from nose to tail), and is reputed by the makers to be the only machine, powered with one-hundred horses, that can accomplish an outside loop. The landing speed is about 44 m.p.h. and it has an approximate gross load capacity of 2,000 lbs. It is powered with a Kinner motor, and has a fuel capacity for 9 hours flight, flying 18 miles to the gallon. 200 of the same type as that proposed for the Canadian market are already in use as training and sport machines in the U.S.A. The instrument board is in the front cock-pit and the pupil takes his early instruction in the back pit, moving forward when he has had a few hours' dual.

Jack Sanderson, the popular instructor for London Flying Club, resigned to become the demonstrator of the "Fleet" in Canada. It was demonstrated at Leaside and at De Lissops Field at Weston, and immediately won a good reception Pilot Sanderson also demonstrated for the army pilots at Camp Borden. The army men flew it and did everything with it in the air that such a type can do. They predicted a great future for the trim biplane.

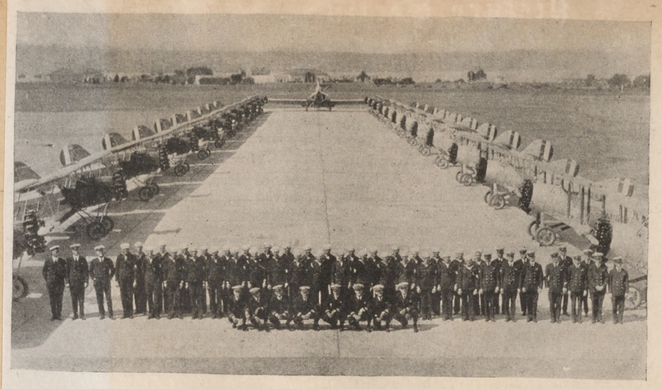
LEARNING TO FLY AT SKY HARBOR . . . CHICAGO

. . . Flying has a strong appeal to the red-blooded American girl as witness two of the star pupils at Sky Harbor. Girls of this type are quick to learn the game, instructors state.

NEW - YORK, 6. — Le lieutenant Leigh Wade, qui fit le tour du monde en avion, est en route pour l'Amérique du Sud, où il passera l'hiver à titre de représentant de la "Consolidated Aircraft Corporation". Il dirigera la vente des avions Fleet et Husky et des aerobus du type Commodore de la compagnie.

Lt. Leigh Wade, who flew on a tour of the world, is enroute to South America, as representative of the Consolidated Aircraft Corporation. He directs a fleet of ships, the FLEET and HUSKY and a flying boat of the COMMODORE type.

Naval Squadron Which Won Herbert Schiff Trophy



WASHINGTON (D. C.)—President Hoover on Dec. 14, presented the Herbert Schiff Trophy to Lieut. Thomas Geary Fisher on behalf of Training Squadron Seven of the Naval Air Station at San Diego, Calif., which he commands. Formerly given to the Naval aviator who had flown the greatest number of hours during the year without an accident, a change in the awarding of the trophy has been made, whereby it will be won by the squadron or unit making the best safety record during the year.

Training Squadron Seven led the Navy with a score of 1.164, this being figured out on a handicap basis with the number of accidents and their seriousness counted in. The squadron flew a total of 8,159.35 hr. with a handicap of 1.10. (The handicap is figured out according to units where the hazards are greatest, a fighting squadron, for instance, being rated 1.0, as its flying is probably the most dangerous in type.)

Approximately 571,130 mi. were flown during the fiscal year 1929 by the Seventh Squadron, 478 "green" students were trained, and of that number, 157 were qualified for further training. Six officers and eight enlisted men comprised the personnel of instructors. Only three minor accidents were incurred by the unit and none of these resulted in personal injury.

Capt. Frank McCrary, U. S. Navy, commanded the entire Naval Air Station and Lieut. Comdr. William Masek, flight officer, and Lieut. Fisher, squadron commander, had charge of the Seventh unit, one of whose members was Lieut. James E. Dyer, who won the Schiff award in 1928 with a total of 1251.25 hr. to his credit.

High Speed Record for New "Fleetster"

Southern Aviation News

Consolidated Aircraft Company's new ship, known as the "Fleetster," recently attained a speed of 197 miles per hour in a test flight with Lieut. Leigh Wade at the controls.

Officials of the Consolidated Company believe that the plane will attain a high speed of 225 miles an hour with a few minor changes and refinements.

PILOT HOPES TO PUSH FLEETSTER PAST 200

Buffalo News — 1/9/1930

Further Altitude Tests Also to Be Given Consolidated Ship.

Advanced altitude and speed tests of the Fleetster, newest and fastest product of the Consolidated Aircraft corporation, will be made this week at the municipal airport by William S. Wheatley, chief test pilot for the company. The fleet eight-passenger monoplane was returned to the port for the additional tests Thursday.

The machine made a high-speed record of 198 miles an hour more than a month ago, while equipped with a Pratt & Whitney Hornet engine. This power plant has been replaced with a Wasp of the same manufacture and it is expected that further tests will show a speed greater than 200 miles an hour, making the ship the fastest commercial stock job built in the country.

stock job built in the country.

Pilot Wheatley said Thursday he believed it would be necessary to equip the plane with oxygen apparatus before altitude tests could be made, as the powerful Wasp engine is expected to pull the silver ship so far into the clouds as to be dangerous to a flier not prepared for the rarefied air.

Six of these planes already have been ordered by the New York, Rio & Buenos Aires line for operation over a South American leg of the service.

Navy Places Huge Parts Order

Aeronautical World – January 1930

Orders totaling $15,000 have been received by the Consolidated Aircraft Corporation of Buffalo from the United States Navy Department for spare outboard floats and float struts. Delivery is to be made within thirty days.

The Consolidated "Admiral," officially designed for the United States Navy for patrol duty and designated by that service as XPY-1, will be taken by the Fleet on winter maneuvers, according to advices received by the Buffalo company.

Fleet is the Name

And He Builds 'Fleet' Ships

President of Consolidated Aircraft Is Swift and Restive by Nature.

SOME men run true to their names. Commander Richard E. Byrd, who has winged his way over the North and South Poles, is one of them. Reuben Hollis Fleet, president of the Consolidated Aircraft Corporation, is another.

Literally, when properly searched for in a dictionary, the word "fleet" means rapid, light and quick in going from place to place; a group of vessels under a single command. These words, better than any others, describe Major Fleet. At the age of 42, he is swift, restless, untiring. His nature demands activity. With more than 2,500 hours of flying to his credit he is one of the few aircraft corporation presidents to hold a transport pilot's license.

Major Fleet is the kind of a man who never stops. Last Fall, returning from a 13,000-mile air tour of the United States, he was injured in an accident at London, Ontario, a hundred miles from Buffalo. Within an hour and a half all his executive staff was at his bedside receiving orders pertaining to the Consolidated factories, and for three weeks, while Major Fleet remained in bed, the same executives went back and forth, between Buffalo and London, almost daily, receiving and executing orders for business changes, expansion and policy.

Major Reuben H. Fleet, president of Consolidated Aircraft, one of the few presidents in the industry to hold a transport pilot's license.

Business Is His Hobby

Suave, amusing and charming, Major Fleet is completely engrossed in his business. If he has a hobby, that is it. His friends say that years ago when he was in the army, McCook Field commanders invariably sent him to Washington when promotions were in order. The air service was noted for its conservative attitude toward salaries and Major Fleet's success in bringing back approved raises was due to the fact that he was always able to get hold of the man in charge, stay with him and talk him into submission.

He is a companionate sort of man interested in people and things. At home, anywhere he happens to be, enjoying everything except inactivity.

He is known as an individualist. He often does the conspicuous thing; keeps people waiting hours for him, goes to football games without tickets; argues with traffic cops until he convinces them they were wrong in accusing him of speeding; goes to trains and obtains a compartment when reservations have long been exhausted.

Reputed Tender-Hearted

They say he is tender-hearted. One Christmas while stationed at McCook Field he heard that members of the air force stationed there were going to play Santa Claus to the poor of Dayton. Not content with a contribution, he made a personal investiation of the families to see what was most sorely needed. And on Christmast morning he personally delivered the gifts.

Following America's entry into the World War, Major Fleet was selected to represent the State of Washington at the Aviation School in San Diego, which was then a part of the Signal Corps of the air service. Here he obtained the rating of Junior Military Aviator and was later made executive officer in charge of training in the office of the Chief of the Air Corps at Washington.

Major Fleet was placed in charge of the air mail when it was first inaugurated between Washington and New York, and he flew the first ship over the run. In 1918 he served as officer in charge of flying at Mather Field, Sacramento, and later as officer in charge of testing and approving at Wilbur Wright Field, Dayton, Ohio. He was later selected by the Air Corps to attend the Gosport School of Advanced Flying in England and on his return was appointed contracting officer of the Air Corps in which capacity he served until he resigned from the army in 1922.

After his resignation Major Fleet became general manager of the Gallaudet Aircraft Corporation of East Greenwich, Rhode Island. In 1923 he organized the Consolidated Aircraft Corporation which has grown until it is now one of the largest independent aircraft manufacturing concerns in the country, producing the training biplane that bears the president's name.

Consolidated Aircraft Plans Virginia Branch

Aviation – 1/4/1930

RICHMOND (VA.)—The Consolidated Aircraft Co., of Buffalo, N. Y., is considering the Virginia Peninsula as a site for a southern branch. The company has leased from the Navy Department half of the seaplane hangar at Langley Field until June 30, 1930, for the assembly and storage of aircraft. Twelve planes are to be assembled for the New York-Rio & Buenos Aires Line.

An assembly crew of eighteen from the Buffalo factory has been sent to Langley Field. George Newman, vice-president of the company, is in charge of the work. The flying boats are to be of the Consolidated "Commodore" type. They will carry two Pratt & Whitney Hornet engines.

While the planes are being assembled, officers of the company will survey the Peninsula with the view to finding a site close to water. A study of labor conditions also will be made. The completed planes will be tested in flight by William Wheatly, of Buffalo.

Sky News 1/1/1930

Safest flying may result from "blind flight" made by Lieut. Jimmy Doolittle, who took off and landed solely by instruments in hooded cockpit.

$30,000 Airplane Hangar Proposed at Bridgeburg

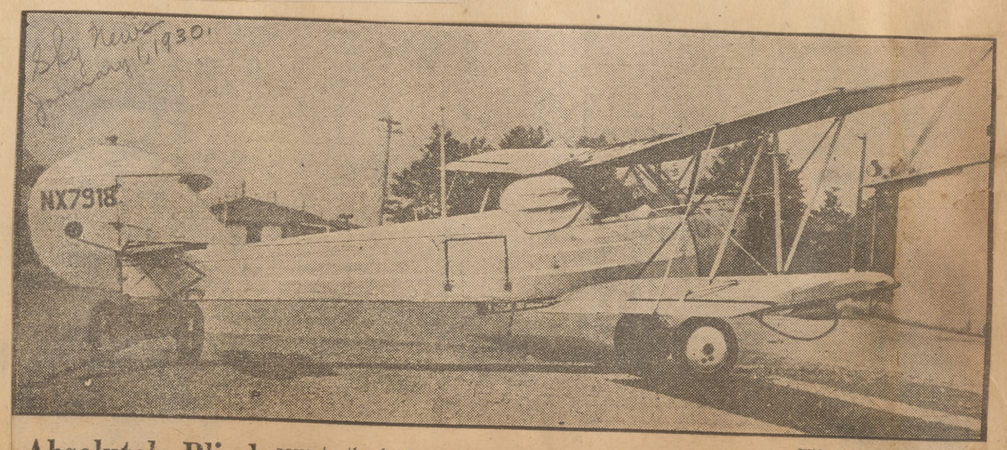
JAN 15

Daily Commercial News 1/14/30

(From Our Own Correspondent.)

BRIDGEBURG, Jan. 13.— Construction of a $30,000 airplane hangar here is contemplated by Consolidated Aircraft Company; C. E. Leigh, 2050 Elmwood avenue, Buffalo, in charge of construction. Further action will not be taken until the spring. Hangar is to be one storey, 100 feet square, of steel and brick construction.

Sky News January 1, 1930

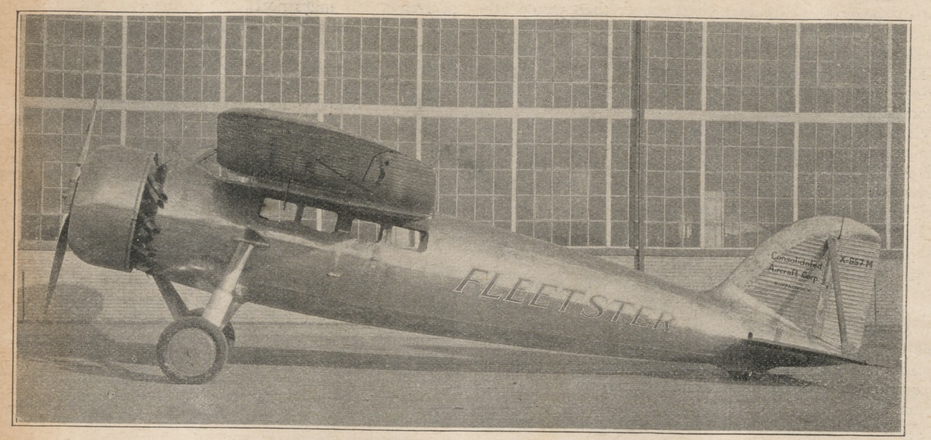


Wide World Photo.

Absolutely Blind, save to the instruments in front of him, Lieutenant Jimmy Doolittle flew this Consolidated training plane at Mitchel Field, N. Y., September 24, scoring a spectacular victory for scientific research. Only the "artificial horizon" in his hooded cockpit guided him, by means of radio, in taking off and landing.

The Consolidated "Fleetster"

General Description



The new "Fleetster" manufactured by the Consolidated Aircraft Corp., Buffalo. This machine has attained a speed of over 190 miles an hour in test flights.

The Consolidated "Fleetster" is an 8-place, single-engine, high speed, cabin, monoplane. It is powered with a Series "B" Pratt and Whitney Hornet engine rated at 575 horsepower at 1950 RPM.

Feature of Design

The feature of the design is the aluminum alloy monocoque fuselage. The overall shape is a perfect streamline and the exterior is smooth with the exception of an extruded moulding which borders each section of plate. The fuselage is practically circular in cross-section. The engine mount is made of aluminum alloy sheet and extruded members arranged in conical form and tying the mounting ring directly to the outside fuselage shell. The engine mount serves as the rearward boundary for the N.A.C.A. cowl. The engine, itself, is mounted in rubber so that practically no vibration is transmitted therefrom to the cabin structure. The N.A.C.A. cowling hood is built in three pieces so anchored to the structure that the entire cowl can be removed in less than five minutes.

Seating Arrangement

The seating arrangement consists of the regular pilot's seat and an auxiliary seat in the pilot's compartment. There are two seats in the main cabin, these seats face each other and each seat will accommodate three persons. The cabin is upholstered throughout with modernistic materials. All of the cushions are down-filled, the individual seat cushions being removable.

An alternate arrangement of the cabin consists of six individual seats, three on each side of the aisle, the door being moved aft of the rearmost seat.

Wing and Tail

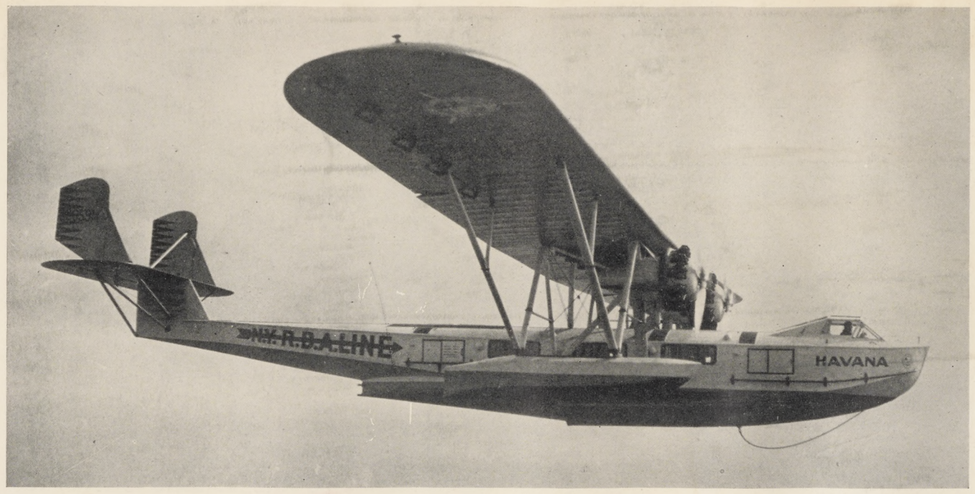
The "Fleetster" wing is built in one piece and is internally braced. The wing covering is laminated plywood. The large area Frise ailerons can be operated as flaps to reduce landing speed. The tail surfaces are constructed of aluminum alloy and covered with the same material. The fin is built integral with the fuselage and the stabilizer and elevator are braced thereto by a single streamline tube. The stabilizer is adjustable in flight through a range of plus or minus 3 degrees.

Performance

Horizontal speed at ground 175 m.p.h.
Climb in 10 min. full load 10,000 ft.
Cruising speed 150 m.p.h.

"Rolling down to Rio"—the Consolidated Commodore

The Sportsman Pilot - January 1930



Sportsman Pilot - Feb. 1930

Lower

A reduction of $1,000 in the price of the standard Kinner Fleet training plane is announced by the Consolidated Aircraft Corporation. The plane is now listed at $3,985, flyaway Buffalo. This is the second reduction made by the Fleet company in the past year and is in line with its general policy of bringing the sport plane within reach of the general buying public.

Toronto Evening Telegram 1/10/1930

Fort Erie Airplane Factory In Operation Before Spring

American Firm Hopes to Compete With Europe by Taking Advantage of Canada's Trade Treaties —Will Employ Canadians

Manufacture of airplanes on a large scale in Ontario is forecast with the announcement of the Consolidated Aircraft Corporation of Buffalo, N.Y., that their plant will be in operation at Fort Erie before spring, producing light "Fleet" training machines.

The plan of the Consolidated organization, makers of the giant Commodore flying boats on the Buenos Aires-New York airline, and of several smaller types of craft, not only provides for sale to the Canadian market, but also to Europe. By manufacturing in Canada and taking advantage of Canada's preferential trade treaties, the American airline firm, one of the largest in the United States, believe they can compete with British, German, French and Italian-made aircraft.

Interviewed last night in Toronto, Major J. R. Fleet, president of the Consolidated Aircraft Corporation, predicted early and large extension of American manufacturing organizations to Canada.

MASS PRODUCTION.

"American designed motor cars are manufactured extensively in Canada for the European market so why not airplanes? We can compete easily with Europe by mass production," said Major Fleet. "The United States is a high tariff country, Canada has preferential trade arrangements with the rest of the British Empire and with European and Asiatic countries. We are going to take advantage of that and, in turn, will be giving Canada a new and thriving industry, one that is destined to be, perhaps, the largest in the world."

The plan has been under advisement for some time and members of the consolidated organization are certain that other large manufacturers will turn to Canada in order to expand.

"The employes of the new plant will be almost entirely Canadians," stated Major Fleet. "We already have many Canadian and British workmen in our Buffalo plant amongst the skilled staff, especially."

The new plant will concentrate on the "Fleet," a light, two-cockpit training and sport biplane, for the first year or two of operation. Work is already proceeding on the firm's new flying field at Fort Erie, which is almost ready for use. It is the intention to start at once erecting the factory.

IMPORT MOTORS.

The "Fleet" will be assembled there, with the Kineer motor, with which the type is equipped, being imported from Buffalo, but the greater part of the balance of the craft's structure, being made on the Canadian side.

Jack Sanderson, Canadian war-flyer, and formerly instructor for the London (Ont.) Light Airplane Club, is Canadian representative for the Consolidated organization. He has demonstrated the machine at Leaside, Camp Borden and other Ontario and Quebec fields during the past three months.

The head of the firm, Major Fleet, is himself an active airman, and has flown much in Canada. He crashed near Aylmer, Ont., on a day during last summer, which happened to be "Friday, the Thirteenth," and his passenger, his secretary, was killed. He is still crippled from his injuries.

It is claimed by the manufacturers that the "Fleet" is the only machine, powered with one hundred "horses" or less, which can accomplish an outside loop. It is also claimed that safety and sturdiness are the outstanding features in the design of the new machine. It has a fuel capacity for nine hours' flight, flying 18 miles to a gallon. Two hundred of the same type are already in use as training and sport planes in the United States.

Aeronautical World February, 1930.

Cuban Government Places Plane Order

The Consolidated Aircraft Corporation of Buffalo has received orders from the Cuban National Government for the purchase of two Consolidated Husky training planes and a quantity of spare parts totalling approximately $23,000. Delivery will be made within thirty days.

Fleet and Husky training planes of the Consolidated company have been sold to a number of foreign governments during the past year including Siam, Argenia, Mexico and Peru.

Fleet Reduced $1000

Aeronautical World February 1930

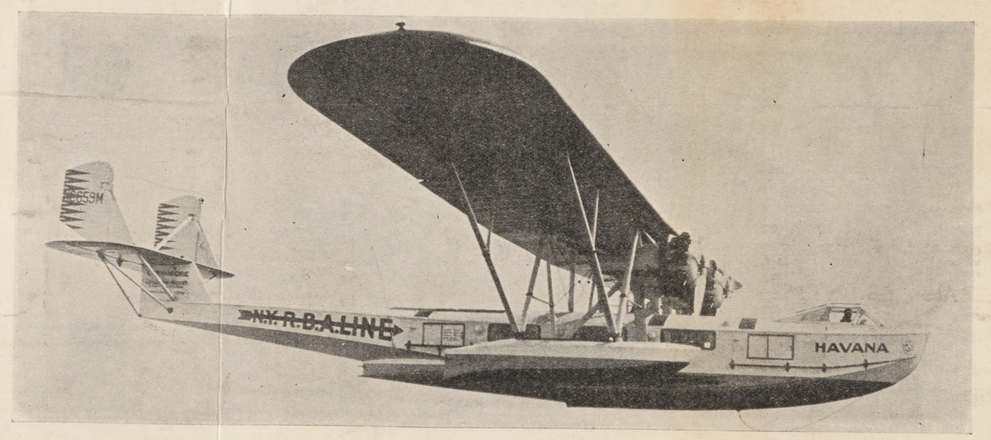
A reduction of $1,000 in the price of the standard Kinner Fleet training plane is announced by the Consolidated Aircraft Corporation. The plane is now listed at $3,985 flyaway Buffalo.

This is the second reduction made by the Fleet company within the past year and is in line with its policy of bringing the sport plane within reach of the general buying public.

AVIATION

EARLY in June Buffalo was again privileged to view one of the largest flying boats in the world and the greatest built in this country — the Consolidated Commodore. With a capacity of 32 people, the giant craft compares favorably with even the greatest of the world's landplanes. It is powered by two Hornet engines, and tests indicate that it can fly with a full load on one alone.

The latest Commodore, the Miami, is more spacious than its predecessors and will be one of the most luxurious ships on the New York, Rio and Buenos Aires Line. Consolidated Aircraft has orders on hand for several more of these ships which will also be used in the South American service.



CONSOLIDATED COMMODORE, 32-PASSENGER FLYING BOAT, IN FLIGHT

Torrid Blast Blocks Fliers

Foils Sunday Program for Circus at County Airport

A 36-mile gale, accompanied by a temperature of 104 degrees whipped the county airport into a seething caldron Sunday afternoon and thwarted efforts of Milwaukee fliers to stage an air circus for 3,000 spectators. All but two events were canceled.

The wind bore down upon the field in great jerking gusts. It picked up heat that sizzled from the huge concrete apron and forced the onlookers to retreat first to refreshment stands, then to their cars and finally away from the airport, looking for relief. It twirled dust and cinders into blinding clouds.

Three Fliers Try Stunts

Three fliers—Elmer (Buck) Leighton, Albert Malcik and Carl Martin—tried to execute a series of acrobatics. They did the best they could but that was not enough to satisfy either themselves or the spectators.

The fliers complained that the gale buffeted their ships about until it was far too dangerous to do anything but simple maneuvers at slow speed. They declared that the higher they went the stiffer the wind became and the more treacherous were conditions.

Leighton reported that the air was so light that he was constantly forced to climb to maintain any safe altitude for stunting.

Seem to Stand Still

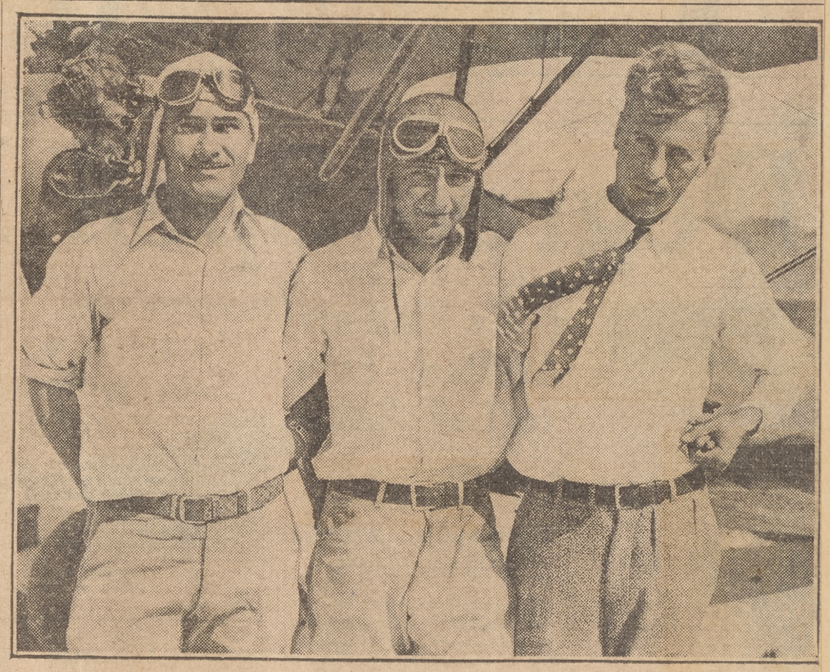
When the fliers took off the wind helped to lift them off with a short run and after they were in the air it held them back so that they were moving only at half speed and sometimes appeared to stand still.

The three pilots managed to execute inside loops, barrel rolls, whip stalls, an inverted loop or two, a few wingovers and they flew on their backs, but they refrained from more dangerous stunts such as tailspins. Leighton and Martin put on a dog fight, chasing each other about the skies, but they were careful not to get too close.

Cancel Student Events

A number of student events had been carded but they were called off as perilous. A parachute jump was abandoned for the same reason. A. J. McKenna went up 5,000 feet to let go of the controls and type a letter, but it was so rough that all he could do in a half hour was to address an envelope to President Hoover.

Midwest Airways, Weeks Aircraft corporation and Westfahl Airways booked the show with the help of Maj. Stanley E. Piasecki, airport manager. They announced the full program will be put on next Sunday, weather conditions permitting.



—Journal Staff Photo

Stunt in Gale and Heat

These three fliers Sunday afternoon stunted over the the county airport in the face of a 36-mile gale and a temperature that was above 120 degrees in their cockpits. They are (left to right) Elmer (Buck) Leighton, Carl Martin and Albert Malvick. The program was canceled except for two events because of the dangerous condition of the air.

El Biplano Fleet

Sus Caracteristicas

L biplano Fleet es construído por la Consolidated Aircraft Corporation de Buffalo para la Fleet Aircraft Inc.

Es biplaza, asientos en tandem para motores de 60 a 150 caballos enfriados por tire. Primiitvamente fué concebido para motores radiales de 7 cilindros del tipo Warner Scarab que desarrollan 110 caballos a 1.850 revoluciones por minuto, pero últimamente le fué aplicado el cinco cilindros en estrella Kinner K. 5 que desarrolla una potencia de 100 caballos a igual número de revoluciones.

El Scarab se monta en el Fleet modelo 1 y el Kinner en el 2. Este modelo tiene una velocidad máxima al nivel del suelo de 113.5 millas por hora a 1.900 revoluciones por minuto, y una mínima de 40, siendo su velocidad ascensional con plena carga de 930 pies por minuto. El modelo 1 tiene una velocidad máxima de 111 milas por hora. Su peso vacío con hélice de madera y sin arranque es de 976 libras, pudiendo llevar una carga de 554. En cuanto al modelo 2, vacío con hélice de metal y arranque de aire comprimido, es de 1.022 libras, cargando 560.

Los planos. — Las alas son rectangulares. El plano inferior tiene un ángulo dihedro de 4 grados y el superior está colocado a nivel. La célula comprende un solo plano superior y dos inferiores. El superior tiene un corte que permite mayor visibilidad y facilidad para salir del asiento con paracaídas.

El plano superior tiene un superficie portante de 99 pies 7 pulgadas cuadradas, y los planos inferiores, cada uno, 47 pies 35 pulgadas cuadradas.

El perfil de ala es del tipo Clark "Y" que permite un aumento del 15 por ciento del rendimiento. El ala está construída de madera spruce y pino Oregón y las costillas en duraluminio estampado en caliente de 4/10 de milímetro de espesor. Cada costilla pesa aproximadamente 141 gramos 5. Entre estas costillas, otras son colocadas de diferentes curvaturas.

Todo el plano es recubierto en tela barnizada.

Fuselage. — Está construído en tubos de acero forjado

En su parte delantera se monta el motor en tres puntos.

El tren de aterrizaje tiene un eje dividido. Un par de amortiguadores de aceite permite un desplazamiento de las ruedas de 7 pulgadas.

El patín de cola también es de acero, con amortiguador de aceite.

Los estabilizadores son ajustables en pleno vuelo.

Combustible. — En el ala superior se encuentra un depósito para la gasolina con capacidad para 24 galones.

Actúa por gravedad y puede ser desagotado en cualquier posición de vuelo.

El tanque de aceite se halla separado del motor por una pared. La capacidad normal del tanque es de 2 galones.

Características principales

LA AVIACION EN EL CENTENARIO DEL URUGUAY.

(Continuación de la pág. 19).

con aviación, homenaje a los aviadores nacionales fallecidos, prueba nacional de patrullas para aviadores militares y navales Copa "Centenario" (premio donado por el Ministerio de Guerra y Marina); prueba de transporte y entrega de correspondencia, para aviadores civiles (premio donado por la Dirección de Correos; prueba de acrobacia "Capitán Boiso Lanza" para aviadores civiles, militares y navales (premio en metálico y medallas); prueba de parejas debiendo llevar el piloto como pasajero una señora; verbena de los aviadores, fiesta característica a realizarse en el aerodromo de la Escuela Militar de Aviación, etc.

Comisiones de organización

El Círculo de la Prensa de Montevideo y Centro Nacional de Aviación, designaron a los señores Manuel Oribe y capitán de navío José Aguiar para integrar la Comisión de organización.

Para la Comisión del Congreso fueron designados: doctores Francisco Ghigliani, Carlos Quijano, Juan José Campisteguy, Alberto Domínguez Campora; capitán de fragata Carlos Carbajal; mayor Tiddeo Larre Borges y señor Adolfo Agorio.

Para la Organización de Fiestas: doctores Enrique Cornú, Félix Polleri; teniente coronel, Cesareo Berisso; capitán de navío, José Aguiar; señores Manuel Oribe Coronel, Enrique Andreoli y Lorenzo Torres Cladera.

Para el concurso literario: doctores Juan Zorrilla de San Martín, Carlos María Prando, coronel Julio A. Roletti y señor Daniel Martínez Vigil.

El capitán de fragata Atilio Frigerio, autor del proyecto, es una de las figuras más destacadas de la aeronáutica del vecino país. Cursó sus estudios de electricidad y mecánica en Nápoles, obteniendo en la aviación militar italiana sus despachos correspondientes de aviador. En diversas ocasiones le fueron confiados difíciles misiones por orden del gobierno relacionados con la aeronáutica mereciendo sus trabajos elogiosos comentarios. Además es profesor de aviación en la Escuela Naval y dicta otras asignaturas en la Escuela Militar y de Ingenieros.

Actualmente desempeña el cargo de Jefe del Servicio Aeronáutico de la Armada.

Aspectos del hidroavión Porto Rico, que aterrizó forzosamente en la finca Pastrana, del Calvario, sufriendo considerables desperfectos, esta tarde.

The Porto Rico was forced to land because of engine trouble when it was fully loaded including 15 passengers. The plane made a 180° turn on the ground just before coming to a stop. None of the passengers or crew were injured in any way. Radio communication was maintained through the entire landing and two way conversation established thereafter. In addition to the damage shown in the picture I understand the step was also damaged.

Lawrence D. Bell

Specifications and Performance of the Commodore Flying Boat

Built By the Consolidated Aircraft Corporation of Buffalo, the First Twelve to Be Used By the New York-Rio-Buenos Aires Line

The Consolidated Commodore is a twin-engined, twenty passenger flying boat, powered with Pratt and Whitney series "B" hornet engines.

Passenger Arrangement

The two compartments forward of the step provide for the accommodation of sixteen passengers, eight in each. The comfortable seats are arranged in facing pairs on either side of the aisle. The compartment aft of the steps is provided with two single seats and two day beds, one set on either side of the aisle.

Each of the three compartments is provided with sockets to anchor removable tables and to provide support of ash trays. Two tables of folding type are provided for each plane. All seats are removable and the side adjacent to the aisle let down so hand luggage can be stowed underneath.

A lavatory is provided forward of the passenger compartments.

Crew

Seats and controls are provided for pilot and auxiliary pilot, and additional seat for the radio operator.

Mail and Baggage

The forward mail or baggage compartment has a capacity of 75 cubic feet; the two after compartments have a combined capacity of 125 cubic feet. The total weight of mail which can be carried is 4,000 pounds.

Weights

Weight empty ..... lbs.	9,700
Useful load .....lbs.	7.900
Gross weight .....lbs.	17,600

The useful load consists of fuel, oil, radio, crew, passengers and mail or baggage.

Performance

With the above load the first Commodore completed had the following performance:

Top speed on the water, miles per hour	118
Time of takeoff, still air.....seconds	55

The airplane proved capable of maintaining level flight with one engine out.

Power Plant

The planes are powered with twin Pratt & Whitney hornet engines each delivering 575 h.p. at 1,950 revolutions per minute. The propellers are of the three-bladed metal type, approximately 9 feet 6 inches in diameter.

The exhaust manifolds conform to a design submitted by the New York, Rio & Buenos Aires Line. Each manifold has a hot-air stove and a control box, with the hot air control extending into the hull for heating purposes. The exhaust outlet is provided on the outboard side of the nacelle and is louvred to reduce the sound.

Fuel System

The main gas-line tanks are carried in the center section and have a total capacity of 650 gallons. They are provided with fuel quantity gauges. The fuel system controls are located in the pilot's cockpit.

A view showing the seating arrangement of the two main passenger compartments in the Consolidated Commodore flying boat. The seats are arranged in facing pairs on either side of the aisle, the two forward compartments caring for eight passengers each.

Lubrication System

The oil tanks have a capacity of 25 gallons each and are located in the centre section above the engine with the lower surface of each tank exposed to the slipstream. The tanks are provided with baffles which force the oil to pass over the cooling fins before returning to the engine.

Structure

The structure of the hull, floats, wings and empennage is of extruded dural shapes and dural sheet. The wing hull bracing is of dural tubular members, with the exception of the horizontal float struts, which are of heat-treated chrome steel.

The wing and empennage surfaces are covered with doped and painted fabric.

Watertight Doors

Two watertight doors which can be quickly adjusted to any opening into or between compartments are provided for each airplane. They can be placed in thirty seconds.

Pilot's Cockpit

The flight controls consist of a control column of the hinge type which can be used by either the pilot or auxiliary pilot, and an additional control wheel to permit conversion of the swing-over control to a Y-type, suitable for training purposes. The pilot's cockpit is provided with an aluminum map case. The seats are adjustable on the ground for both tilt and height and are provided with bottom and back cushions.

Instrument Board

The following instruments are placed in the pilot's compartment:

1 compass
2 tachometers
1 rate-of-climb indicator
1 turn indicator
1 airspeed indicator
1 altimeter
2 gasoline pressure gauges
2 oil pressure gauges
2 oil thermometers
1 clock
1 rheostat for controlling instrument board lights

The following are mounted in the forward passenger compartment:

1 airspeed indicator
1 altimeter
1 clock

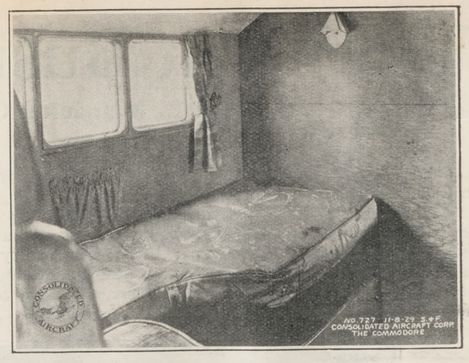
Electrical System

The port engine carries a 50-ampere generator. An 80-ampere-hour Willard battery is installed in the radio compartment with connections to provide current through concealed wiring for cabin lights, navigation lights, etc. There is a voltage regulator in the radio compartment.

Provision is made for mounting landing lights in the leading edge of the wing.

Handling Truck

Each airplane is provided with a handling truck to be used when the plane is on land for overhauling. The truck mounts two 44 inch x 10 inch wheels forward, and one tail wheel.



A view of the "salon de Luxe." This compartment is provided with two single seats and two day beds, one set on either side of the aisle. The upholstering, draperies and wall covering are modern in design.

Airway Age - February 1930

R. W. Fulton, formerly director of sales of the Colonial Flying Servive, Buffalo, N. Y., has been appointed general sales manager of the Consolidated Aircraft Corporation of Buffalo.

Airway Age-February 1930-

The Consolidated Aircraft Corporation, Buffalo, N. Y., is to open a factory branch for the production of *Fleet* training planes in Toronto this spring. Sales are expected to be made in Canada and Europe from there.

Aviation - 2/5/1930.

Consolidated Aircraft Co. now has its factory and equipment opposite Buffalo on the Canadian side ready and will begin manufacture of planes, both for the Canadian market and for export.

Aircraft Age — February 1930

Second Price Reduction Made By Fleet Corp.

A reduction of $1,000 in the price of the standard Kinner Fleet training plane is announced by the Consolidated Aircraft Corporation. The plane is now listed at $3,985 flyaway Buffalo.

This is the second reduction made by the Fleet company within the past year and is in line with its policy of bringing the sport plane within reach of the general buying public.

MISS VON ...INS AIRPLANE COMPANY

Detroit News - 2/2/1930

Will Demonstrate Machines in Michigan.

Miss Mary Elisabeth Von Mach, who was Detroit's only contestant in the women's transcontinental air derby last year, is to head a new sales division of the Airplane Sales Co. of Michigan, Gene Searle, manager of the firm, announced Saturday.

Miss Von Mach.

Miss Von Mach plans to make regular flying tours of the state demonstrating planes for the company and will make headquarters at the company's offices in Dearborn.

Coincident with the announcement of Miss Von Mach's affiliation Searle announced a price reduction on the Fleet biplane, one of the company's chief products. The price has been reduced from $4.985 to $3,985 for the plane powered by a Kinner engine.

The Fleet is a two-place training and sport plane manufactured by Consolidated Aircraft, Inc., of Buffalo, N. Y.

Consolidated Opens Assembly Plant at Langley 2/15/1930 Southern Aviation

Establishment of an assembly plant at Langley Field, Virginia, for Commodore flying boats is announced by Ray P. Whitman, assistant general manager of Consolidated Aircraft Corporation, Buffalo.

A part of one of the large army seaplane hangars at Langley Field has been leased by the Consolidated company and the fourth of the twelve Commodores being manufactured for the New York, Rio & Buenos Aires Line is now being assembled in this hangar, where water and weather conditions are said to be ideal. A staff of eighteen men, including a chief company inspector, are now stationed at the new plant and this staff will be increased as additional Commodores are sent there from Buffalo.

Fleetster is Newest Product of Consolidated Corpn. 2/15/1930 Southern Aviation

The Consolidated Fleetster is one of the latest products of the Consolidated Aircraft Corporation of Buffalo. It is an 8-place cabin plane with aluminum alloy monocoque fuselage. The wing is of the full cantilever type. The tail wheel is built into the fuselage. The N. A. C. A. engine cowling, built in three pieces, is used.

The seating arrangement consists of the regular pilot's seat and an auxiliary seat in the pilot's compartment. There are two seats in the main cabin. The cabin is upholstered throughout with modernistic materials.

Southern Aviation - 1/15/1930

Leigh Wade Goes to South America

Lieut. Leigh Wade, army round-the-world flyer and chief test pilot of the Consolidated Aircraft Corporation of Buffalo, is en route to South America in the interest of that company. Lieut. Wade sailed the latter part of November and expects to spend most of the winter and spring in South America.

He will direct the sales work in that country of the Fleet and Husky training planes manufactured by the Consolidated company, as well as the larger passenger carriers such as the Commodore.

During the past year the Consolidated Aircraft Corporation has sold many planes in South America.

R. W. Fulton Joins Consolidated Southern Aviation - 2/15/1930

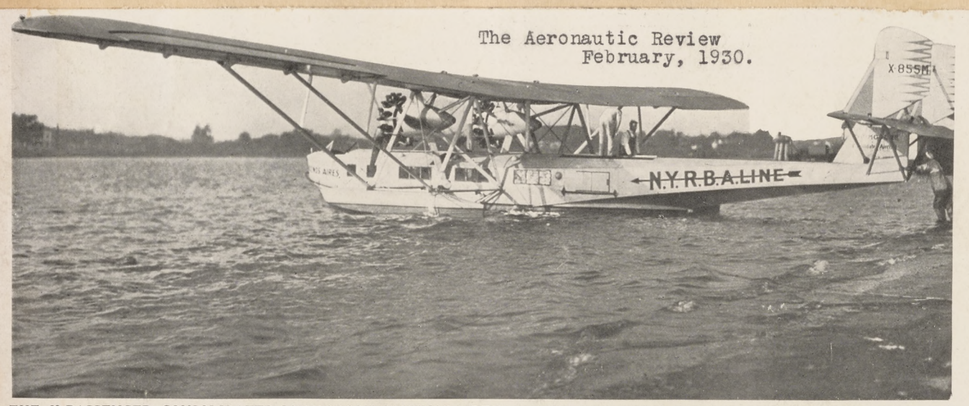
Announcement is made by the Consolidated Aircraft Corporation of Buffalo of the appointment of R. W. Fulton, formerly director of sales of the Colonial Flying Service, to be general sales manager. Before going

R. W. Fulton

with the Colonial system in the spring of 1929, Mr. Fulton was associated with the Tide Water Oil Company, first as chief engineer and later as manager of the aviation division whch he organized. He has been closely associated with the industry for the past twelve years, having received his training during the war at Ellington Field, Houston, Texas. He later served oversees with the 20th Aero Squadron, A. E. F.

BOUND FOR SOUTH AMERICA

Giant yacht on wings speeding out over New York Harbor en route to South America. This ship, the "Havana," is the third in a fleet of twelve built for the New York, Rio and Buenos Aires line. Travel is cut from twenty days to seven between New York and Argentina by this line which is the world's longest, stretching 9,000 miles through fifteen countries. Today more than 14,000 miles of air routes are already in operation between Latin-American republics.



THE 32-PASSENGER CONSOLIDATED COMMODORE, "BUENOS AIRES" OF THE NEW YORK, RIO AND BUENOS AIRES LINES, INC.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express. Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment. Two of the cabins on the Buenos Aires accommodate 8 passeners, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction finished in natural color. A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions. Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Consolidated Outlines Fleet Dealership Policy

Aviation 2-15-1930

NEW YORK (N. Y.)—Under the new sales system recently announced by the Consolidated Aircraft Corp., dealers will be compelled to take a minimum of three planes in order to secure the 25 per cent discount offered. The dealer must post a $500-per-plane deposit for these craft at the time dealership is granted. This money is returned as deliveries are made, and deposits are not required beyond the third plane.

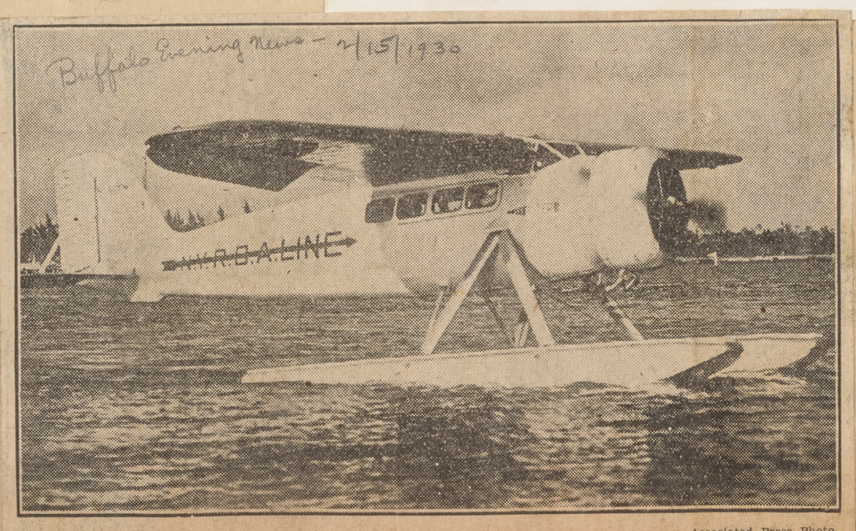
R. W. Fulton, sales manager of Fleet Aircraft, Inc., Buffalo, announces that although the closed territory and distributorship policy has been eliminated, it is not the intent of the company to provide competition for several dealers in the same district unless representatives fail to make proper sales efforts. He also states that individual sales at dealer discounts will not be made by the factory.

The price of the recently reduced Kinner Fleet sport training planes is now $3,985. Kinner-powered Fleets equipped with Edo pontoons are listed at $4,995 and dealers are privileged to the same discount rates on that craft as apply to the other machines.

NYRBA Receives Fleetster

2/15/1930 Aviation

BUFFALO (N. Y.)—Performance tests are now taking place on the first of the Consolidated Fleetsters to be delivered to the New York, Rio & Buenos Aires Line, Inc. The craft was flown directly from the factory here to Miami where it was equipped with Edo pontoons.



—Associated Press Photo.

One of the fastest planes yet built, the eight-passenger Fleetster, constructed in Buffalo by the Consolidated Aircraft corporation, completed speed tests at Miami, Fla., preparatory to inaugurating service between New York, Rio de Janeiro and Buenos Aires, an 8000-mile route which it will cover in seven days. The plane carries eight passengers and makes a speed of 190 miles an hour.

RESULTS OF TESTS

Throughout Fifty Hours on stand at Department of Commerce Testing Bureau, Washington, there was not a single forced stop, not even a spark plug was changed, valves were gasoline tight, H. P. was greater at end than at beginning of run.

Throughout One Hundred Hours of gruelling tests in the air, in warm as well as zero weather, not a single replacement; not a single repair other than two new spark plugs.

Has any other engine equaled the combined results of these two tests?

TRENTON STATE GAZETTE, TRENTON, N. J.,

Feb 19, 1930.

Airplane Among Attractions at Trenton Auto Show

This is a view of the two-seater "Fleet" sports plane now on exhibit at the Automobile Show at the Armory. The ship is the property of W. S. Johnson, who flew it down from Buffalo. First placed on view yesterday, it attracted considerable attention from the crowds looking over the new motors. Mr. Johnson, who received his flying instruction at the Brooks Field Army School, San Antonio, Texas, will act as local distributor for this model. Besides the craft shown above, which is for his own use, he has ordered two others of the same type. This design is particularly favored by the United States Air Forces, about $5,000,000 having been expended by the Army and Navy for their purchase.

Aeronautical World - February 1930

$2,300,000 Air Fleet for New Line

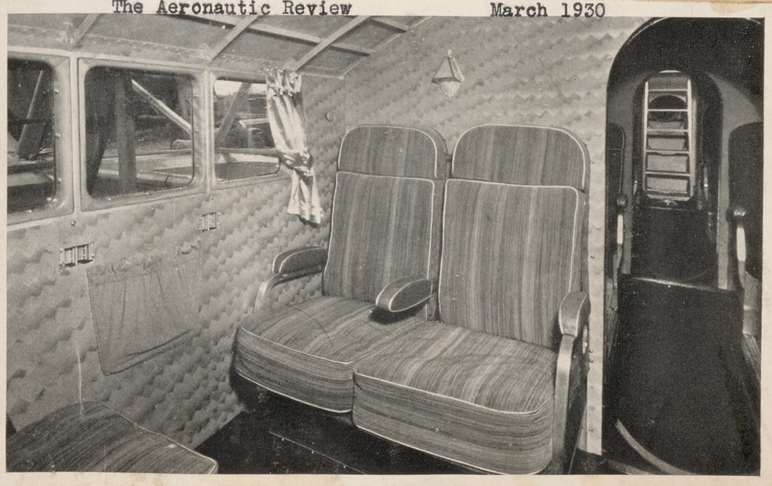
Completing the largest fleet of flying boats and amphibians operated by any airline in the world, William P. MacCracken, Jr., formerly Department of Commerce Air Chief, Chairman of New York Rio & Buenos Aires Line, Inc., added final orders for flying equipment that will place an air fleet of 27 multi-motored transport planes in operation over the 9000 mile route between New York and Buenos Aires.

The planes, on which the company is investing in excess of $2,315,000, call for a major fleet of 14 giant 20-passenger flying boats, adapted from designs of the Navy's PY1 boat, by the Consolidated Aircraft Company, in conjunction with NYRBA engineers, especially for South American service and are the largest aircraft operated on any commercial line in the world. Constructed at a cost of $100,000 each, the big boats are powered by twin Hornet motors, aggregating 1150 horsepower, provide luxurious accommodations for 20 passengers and crew, are completely radio equipped and have a high speed of 135 miles per hour.

Representing this country's first major commercial seaplane operation, these boats were adapted for service over the 9000 mile coastal route along the Atlantic Seaboards of North and South America, where the major centers of industry and commerce of both continents are located.

To be used for "Express" service over the seven main divisions between Argentina and the United States, the flying boats will be backed up with a fleet of 9 twin-motored Sikorsky amphibians. Over the 2000 mile network of airways now operated by the company between Argentina, Uruguay, Bolivia and over the Trans-Andean airline to Santiago, Chile, a fleet of four tri-motored 14-passenger Ford transports are in regular operation in addition to a fleet of amphibians on the water routes between Buenos Aires and Montevideo.

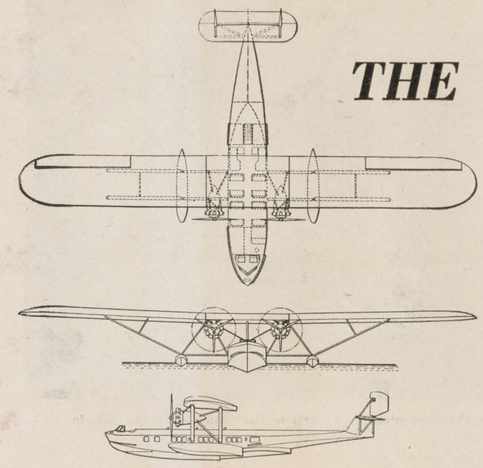
The Aeronautic Review March 1930



CABINS DECORATED IN TROPIC COLORS

An indication of the increasing luxury of air transport travel is shown in this interior of one of the de luxe cabins of America's giant twenty-passenger flying boat, the largest yet built in this country, for the New York, Rio and Buenos Aires service. The cabin decorations are carried out in color schemes characteristic of the countries over which the ship will fly. Cabins are nearly nine feet square with six-foot ceilings and are commodious enough to permit easy going about from one part of the cabin to another.

Reprinted from AVIATION, January 11, 1930



THE CONSOLIDATED "Commodore" FLYING BOAT

A Description of the Commercial Adaptation of the Navy XPY-1

By Leslie E. Neville
Technical Editor of Aviation

THE CONSOLIDATED COMMODORE, Model 16, largest commercial flying boat to be built in numbers in the United States, is now under production at the plant of the Consolidated Aircraft Corporation, Buffalo, N. Y. A production unit of twelve of these craft is now under way to fill an order of the New York Rio and Buenos Aires Line, Inc., which is now operating on regular schedule between South American ports and is planning to extend its service to New York. Several of the Commodores have been delivered and are now in South American service.

The Commodore is a central hull, monoplane flying boat powered with two Pratt & Whitney Hornet engines rated 575 hp. at 1,950 r.p.m. The craft has a wing span of 100 ft., a length of 61 ft. 9 in. and a height on handling gear of 16 ft. Its weight empty is 9,785 lb. and its gross weight 17,600 lb.

IN DESIGN the Commodore is the commercial adaptation of the XPY-1 Navy patrol boat built by Consolidated under a contract awarded as a result of a design competition. It was designed by I. M. Laddon, assisted by Frederic Flader and J. L. McClane. Hull lines were developed for the original flying boat by Captain Holden C. Richardson of the Bureau of Aeronautics, Navy Department.

Wind tunnel tests of a model of a the consolidated XPY-1 showed a maximum L/D ratio of 11.4. The

BOUND FOR SOUTH AMERICA

Giant yacht on wings speeding out over New York Harbor en route to South America. This ship, the "Havana," is the third in a fleet of twelve built for the New York, Rio and Buenos Aires line. Travel is cut from twenty days to seven between New York and Argentina by this line which is the world's longest, stretching 9,000 miles through fifteen countries. Today more than 14,000 miles of air routes are already in operation between Latin-American republics.

The Aeronautic Review
February, 1930.

THE 32-PASSENGER CONSOLIDATED COMMODORE, "BUENOS AIRES" OF THE NEW YORK, RIO AND BUENOS AIRES LINES, INC.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express. Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment. Two of the cabins on the Buenos Aires accommodate 8 passeners, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction finished in natural color. A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions. Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Consolidated Outlines Fleet Dealership Policy

Aviation 2-15-1930

NEW YORK (N. Y.)—Under the new sales system recently announced by the Consolidated Aircraft Corp., dealers will be compelled to take a minimum of three planes in order to secure the 25 per cent discount offered. The dealer must post a $500-per-plane deposit for these craft at the time dealership is granted. This money is returned as deliveries are made, and deposits are not required beyond the third plane.

R. W. Fulton, sales manager of Fleet Aircraft, Inc., Buffalo, announces that although the closed territory and distributorship policy has been eliminated, it is not the intent of the company to provide competition for several dealers in the same district unless representatives fail to make proper sales efforts. He also states that individual sales at dealer discounts will not be made by the factory.

The price of the recently reduced Kinner Fleet sport training planes is now $3,985. Kinner-powered Fleets equipped with Edo pontoons are listed at $4,995 and dealers are privileged to the same discount rates on that craft as apply to the other machines.

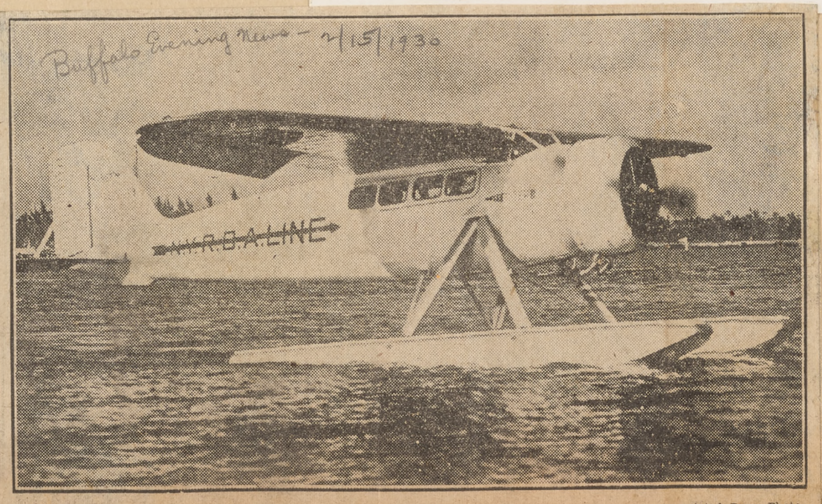
RESULTS OF TESTS

Throughout Fifty Hours on stand at Department of Commerce Testing Bureau, Washington, there was not a single forced stop, not even a spark plug was changed, valves were gasoline tight, H. P. was greater at end than at beginning of run.

Throughout One Hundred Hours of gruelling tests in the air, in warm as well as zero weather, not a single replacement; not a single repair other than two new spark plugs.

Has any other engine equaled the combined results of these two tests?

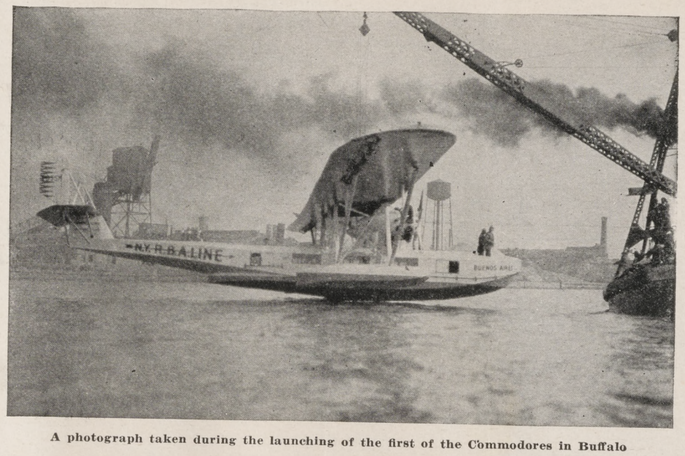
Buffalo Evening News – 2/15/1930



—Associated Press Photo.

One of the fastest planes yet built, the eight-passenger Fleetster, constructed in Buffalo by the Consolidated Aircraft corporation, completed speed tests at Miami, Fla., preparatory to inaugurating service between New York, Rio de Janeiro and Buenos Aires, an 8000-mile route which it will cover in seven days. The plane carries eight passengers and makes a speed of 190 miles an hour.

advisability of moving the engines to a point above the wing was considered at this time and the model was modified with this idea in mind. Tests of the modified model showed that the maximum L/D value was reduced to 7.5 by this change and the drag at all angles of attack was increased to a prohibitive extent. The L/D ratio of the original model is attributed to the high aspect ratio (8.9) monoplane wing and to the general cleanness of design. Placing the power plants above the wing was abandoned also because it was believed that it would result in an increased landing speed due to the fact that the propeller disk areas would block off a relatively important percentage of the air reaching the wing when the engines were throttled.



A photograph taken during the launching of the first of the Commodores in Buffalo

Model basin tests of the Admiral or XPY-1 indicate a peak requiring maximum power at 33 per cent of the getaway speed or approximately 20 mi. per hour. In actual tests this peak is not apparent, acceleration being uniform and rapid until take off. With a gross weight of 13,600 lb. the XPY-1 takes off in 31 sec. in still air and under the same conditions with the gross weight increased to 16,000 lb. the craft requires 45 sec. to take off. Commodore performance is on this basis.

Practically all of the aerodynamic features of the XPY-1 are retained in the Commodore, the modifications being mainly structural. A crown deck has been substituted for the cylindrical deck of the patrol boat to provide additional headroom for passengers and sufficient height for the possible installation of sleeping berths.

The monoplane wing is of constant chord, this value being 11 ft. 6 in. throughout the span. A Gottingen 398 airfoil section is employed, affording a good combination of maximum L/D ratio and spar depth for such a long span. Ailerons are of a balanced type and have a total area aft of the hinge of 110 sq.ft. The 1,110 sq.ft. of wing area is so distributed that 207 sq.ft. constitute the center section and the remainder the two wing panels. The angle of incidence is + 4 deg., while the dihedral angle is 2 deg.

In order to facilitate manufacture of the first Commodore the hull lines were laid down to full scale on a smoothly finished floor board 75 ft. long and 25 ft. wide in the engineering department. From this layout, full size templates were made of all of the necessary sections and sent directly into the shop for use. This practice has certain obvious advantages and it is apparently an adaptation of the "mould loft" used in the construction work of ship building firms.

PROBABLY the outstanding features in the construction of the Commodore are the extensive use of forgings and the open sections used in the structure, the advantages of open section construction being accessibility of members for riveting and elimination of the possibility of internal corrosion. Particular care has been taken to avoid hammering of the skin, the only important irregular shape being found at the nose. Forming of this member is done on a Pettingill No. 2 hammering machine. Small parts are hand hammered. It is noteworthy that a maximum of athwart-ship bracing is employed in the structure and a large proportion of the weight of the floor system is carried by longitudinal members which also contribute to the general strength of the hull.

WITH THE EXCEPTION of the fabric covering the wing of the Commodore is built entirely of metal, Aluminum Company of America designation 17ST alloy being used. Spars are of the Warren truss type having extruded bulb T sections for the flanges and back to back channels for the web members. These members are separated at the center by spacers. The flanges both top and bottom are joined by lighter aluminum alloy extruded trusses which act as drag truss compression members. Double drag bracing is used with one pair of wires in the plane of the upper flange and one in the plane of the lower. The T section flanges are finished with a cover plate of extruded aluminum alloy.

Ribs are also of Warren truss type formed from strip stock rolled to channel section. Connection between the flange and web members is made by means of a small + shaped aluminum alloy forging, fitting inside of the channels and providing anchorage points for four 1-in. diameter through rivets. The ribs thus constructed weighing approximately 2 lb. each and under low and high incidence static tests withstood substantial overloads. The main beams are built up on jigs by means of squeeze riveting. Hand squeezers are used whenever possible in final assembly.

One fuel tank, 315 gal. capacity, is set between the spars in each of two compartments of the center section. Oil tanks, each having 25 gal. capacity, are placed in each end of this section. The drag truss is made up of top and bottom chord members of extruded bulb T section, while the web members are extruded bulb angle sections in Warren truss form. Center section ribs are standard. This structure is protected by red oxide and zinc chromate of Navy department specification, while the final finish is lacquer or aluminum enamel.

Fittings are of chrome molybdenum steel and all sheet metal of this specification used in fittings is heat treated to 125,000 lb. per sq.in. TS after welding. Following the heat treating cadmium plating is applied.

External bracing of the wings consists of streamline aluminum alloy tubing. The forward outboard strut is drawn from a 5 in. OD aluminum alloy tube of 0.134 in. gauge material. It is said to be the largest member of this type thus far used in aircraft production. Two other special sizes of streamline tubing are employed, both being drawn from 4 in. OD aluminum alloy tube of 0.148 and 0.09 in. gauge respectively. In addition to these three sizes, two Aluminum Company standard sizes of streamline tubing are used.

THE HULL, under present production methods, is built in inverted form. Bulkheads are set in place in jigs and all of the structural members of the bottom are put in place in this position. After the bottom plating has been applied, the hull is turned to normal position and the sides and upper structural members are added. This is followed by the application of the plating for the sides and the top. Bulkheads of 0.030 plate are provided at appropriate intervals, the sheet material being bordered by extruded bulb angle section aluminum alloy. Extruded longitudinal stringers of bulb angle section are riveted to the deck and bottom plating on approximately 7-in. centers throughout the deck area and much closer than this along the bottom. These longitudinal stringers are supported in turn by intermediate floor frames built up of extruded angle and channel section members in the form of a truss. These floor frames are supported at five points, the two chines, the two keelson plate girders and the central keel truss. The hull analysis was made in accordance with naval architectural methods basing external loads on three criteria:

1—Hogging condition with the crest of the wave amidships.
2—Sagging condition with the trough of the wave amidships.
3—Landing condition with the load concentrated on the bottom forward of the step.

These were the determining factors in the thickness of plating, spacing of longitudinal stringers, design of the floor frame trusses, the keelsons and the central keel truss.

In the forward portion of the hull there are four floor frames between each set of bulkheads. These floor frames are formed and assembled in jigs. They are made up of extruded bulb angle section members with two main trusses at the bottom. Plate girders are set 11 in. on each side of the center. The skin or plating is applied with splices staggered and is made water tight by the application of cotton tape, soap and soya bean compound.

In the process of fabrication the skin is held in place by small L-hooks and wedge shape blocks, making it possible to drill the plating and structural members at the same time. The blocks are easily removable for riveting the skin to the structure. Following the completion of the bottom plating the completed hull is turned over as previously mentioned and at this point it is filled with water approximately to the lower chine as a test for water tightness.

The watertight splices in the plating are made up of a double row of staggered rivets. All contacting surfaces are coated with varnish and assembled while the varnish is still wet.

No break is made in the structure to provide for the step, this unit being built up by a V-shaped form piece, while the keelson girders and chine members are carried through. The stringers are built down to form the step.

Diagonal members run from top to bottom of the main bulkhead and connect with fittings at the attachment points of the structure. They are reinforced by steel fittings riveted within the skin and are double or single angle members, depending on the stresses to which they are subjected.

Formed members of bulkheads and belt frames are cold worked and in heat treated condition.

THROUGHOUT THE CONSTRUCTION section sizes have been standardized to as high a degree as practicable, the result being that stock sizes are relatively few in number.

In addition to the five sizes of streamline tubing previously mentioned, two sizes of extruded bulb T section material are used in the wing structure. These are $2\frac{3}{8}$x$1\frac{1}{2}$x$\frac{3}{16}$ in. and $2\frac{1}{4}$x$1\frac{1}{2}$x$\frac{1}{8}$ in. Two sizes of plain angles, $\frac{3}{4}$x$\frac{3}{4}$x$\frac{3}{32}$ in. and 1x1x$\frac{3}{32}$ in., three sizes of bulb angle section material, $\frac{7}{8}$x$\frac{9}{16}$, 1x$\frac{11}{16}$, and $1\frac{5}{16}$x$\frac{3}{4}$, are used. The channel sections are three in number, $\frac{7}{8}$x$\frac{3}{8}$x$\frac{1}{16}$ in., $\frac{7}{8}$x$\frac{3}{8}$x$\frac{3}{32}$ in. and 1x$\frac{1}{2}$x$\frac{3}{32}$ in. Two 1x1 plain angles formed by extrusion are used for the after part of the keel and two extruded plain angles are employed for the floats. The top and side plating of the hull is 0.030 sheet, while the bottom plating forward of the step is 0.064 and aft of the step is 0.040. Two sizes of rivets are used in the hull; $\frac{1}{8}$ in. in sides and top plating and $\frac{3}{16}$ in. in bottom

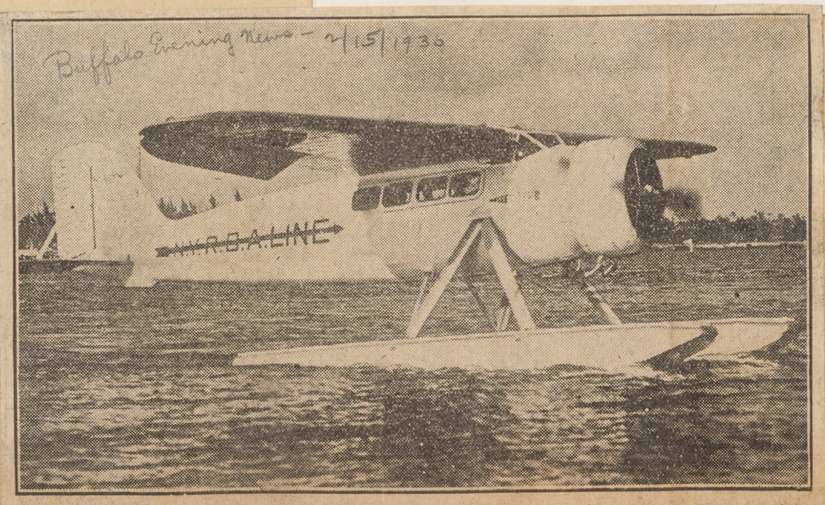
Buffalo Evening News – 2/15/1930



—Associated Press Photo.

One of the fastest planes yet built, the eight-passenger Fleetster, constructed in Buffalo by the Consolidated Aircraft corporation, completed speed tests at Miami, Fla., preparatory to inaugurating service between New York, Rio de Janeiro and Buenos Aires, an 8000-mile route which it will cover in seven days. The plane carries eight passengers and makes a speed of 190 miles an hour.

plating. Riveting is relatively easy on account of the open section material employed. Forgings are used for strut ends at the points of wing attachment.

The mooring pendant is $\frac{9}{16}$ in. diameter bronze cable attached to the keel at bulkhead No. 2, and the anchor cable, which is 150 ft. in length, is $\frac{5}{16}$ in. diameter bronze and is equipped with fittings at 25 ft. intervals by which the pendant can be attached. A cork canvas covered bumping pad is rigidly attached to the nose.

STABILIZING FLOATS, whose center lines are located about 14 ft. from that of the hull, are structurally similar to the hull and each is divided into three water tight compartments by means of bulkheads. An unusual feature of these floats is that they have no drain plugs. Each compartment is fitted with a $\frac{1}{2}$ in. tube running from the bottom to a point $1\frac{1}{2}$ in. above the deck. A hose may be attached to the abutting pipes, making it possible to pump up the compartments individually.

Right and left floats are interchangeable and are attached to struts projecting from either side of the hull and also providing a point of support for the external bracing struts of the wing. Thus the flotation system is so tied into the external wing bracing that, while the overall span is large, the overhang at the wing tips is less than $1\frac{1}{2}$ chord lengths. Each float is held in place by means of eight studs and can be easily and quickly removed without disturbing the wing bracing. The ends of the projecting struts are squared to provide bearing area for the floats and squared ends are filled with cork and painted to provide water tightness.

THE CABIN is 8 ft. 5 in. wide and has 6 ft. head room. The hull is entered through a hatch in the deck and is divided into several compartments. The subdivision furthest aft, which is directly accessible by means of the companionway leading from the hatch, is devoted mainly to mail, one compartment being provided on each side of the companion ladder, and the combined capacity of the two being 125 cu.ft. Sliding hatch covers are also built into the side of the hull to facilitate loading of mail. The capacity of the two rear mail compartments is 200 cu.ft. All bulkheads aft of the entrance compartment are fitted with apertures through which it is possible to gain access to the tail post for inspection.

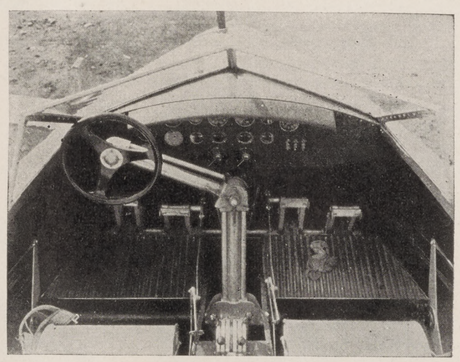
Forward of the step are three passenger compartments, each $73\frac{1}{4}$ in., providing a total capacity of twenty persons. There are three windows in the outer wall of each compartment and these windows are permanently closed. Ventilation is provided by circular openings with semi-spherical air scoops on the outer surface of the hull. Provision to vary the area of the openings is made through the use of an internally mounted metal semi-sphere controlled by a shaft having a knurled knob in the cabin. There are two inlet and two outlet openings in each compartment, two in the deck and the other two in the side plating of the hull. The ventilators for the forward portion of each compartment open toward the rear and provide suction, drawing the air from the compartment, while those at the rear open forward, furnishing an inlet for fresh air. In order to prevent drafts the main current of air passes between the skin or plating of the boat and the interior lining of the compartments.

The compartment just forward of the entrance compartment is furnished with two single seats and two dayheds, one of these being on either side of the center aisle. Forward of this compartment are two others, each of which has double seats facing each other on both sides of the aisle, providing a capacity of eight passengers per compartment. Forward of these is a division in the hull, the port side of which is devoted to a washroom and radio room, while the starboard provides an additional mail or baggage compartment of 75 cu.ft. capacity. This division is separated from the control cockpit through a water tight door which can be opened from either side.

With this interior arrangement the boat has a capacity of 20 persons. Additional passenger capacity can be provided, however, by sacrificing one or more of the mail compartments.

The first Commodore was outstanding in interior finish and design, the decoration being under the direction of Frederick J. Pike, a Buffalo interior decorator. A modernistic motif was developed by Mr. Pike through adaptation of the tropical colors that were to be seen along the route over which the plane is to operate. The basic tones are silver, henna and green. The inner walls, as well as the partitions, are of wallboard covered with damask, while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions.

The walls of the salon de luxe (the compartment containing the daybeds) are covered with a Deauville rep material of pale lavender and silver, the daybeds being upholstered in turquoise damask and the seat cushions in raspberry, gold and tan stripe material. Print draperies in lemon yellow and tan have been used. In order to provide an individualistic color scheme for each cabin the central compartment has walls in green and gold with a henna color modern damask for seat cushions. The foremost cabin has chairs upholstered in a green moire, while a modernistic fabric in peach and silver is used for the cushions. Tan damask is used for the wall coverings. The central passageway through the compartments is carpeted with a jade green rug, while rugs between the seats in the cabins correspond to the color scheme of each room.

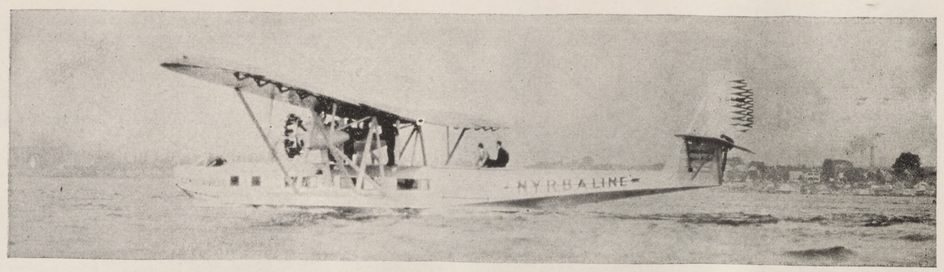


Photograph showing the open control compartment of the first commodore.

Between the seats and under the windows in each of the passenger compartments are panels for time tables, magazines or newspapers. Adjustable card or writing tables can be fitted into appropriate slots in the same manner as that employed in Pullman cars.

CABINS DECORATED IN TROPIC COLORS

An indication of the increasing luxury of air transport travel is shown in this interior of one of the de luxe cabins of America's giant twenty-passenger flying boat, the largest yet built in this country, for the New York, Rio and Buenos Aires service. The cabin decorations are carried out in color schemes characteristic of the countries over which the ship will fly. Cabins are nearly nine feet square with six-foot ceilings and are commodious enough to permit easy going about from one part of the cabin to another.



A photograph of the Commodore taxiing on the water during one of its trial flights.

External finish also was specially attractive in the first Commodore. A cerise wing with yellow and brown hull was chosen to harmonize best with a tropical setting.

IN THE FIRST PLANE the control cockpit was open but was later inclosed to provide protection for the pilots against weather conditions in the tropics. Both top and sides open by sliding to provide entrance to the control compartment without passing through the cabin. The pilots are seated in the bow just behind an anchor compartment in the nose which is accessible through a hatch in the deck and separated from the pilot's compartment by a bulkhead. Control is of the standard wheel and pedal type, a single swinging wheel being used. All moveable steel parts in the cockpit are made of Allegheny metal. Cables are used for the most part in the control system with a combination of these in push pull tubes being used for the ailerons. Tail surface structures are built up of extruded 17-ST spars, drag trusses and sheet duralumin ribs and are covered with fabric. An externally braced monoplane stabilizer, single unbalanced elevator and twin fins and balanced rudders above the stabilizer and elevator are employed.

The rudder travel is 30 deg. each side of neutral position, while the elevator travel is 30 deg. up and 20 deg. down. Travel of the rudder pedal is 4 in. either side of neutral, while the neutral position is $1\frac{1}{2}$ in. forward of the vertical. An adjustment range of 3 in. is provided for the rudder pedal. The travel of the control column amounts to 18 in. Normal setting of the stabilizer is at 4 deg. incidence, while an adjustment range of 3 deg. up and 3 deg. down is provided.

The area of the two rudders including the balance is 40.2 sq.ft., while that of the balance on each rudder is 3.3 sq.ft. The total vertical area of the tail surfaces is 54.95 sq.ft., while the center lower fin is 14.75 sq.ft. The total horizontal area is 135.5 sq.ft., 81 sq.ft. of which constitute the stabilizer. Fin and rudder are built with a 50 per cent Gottingen section.

THE ENGINE MOUNTS are of welded steel tubing and rubber bushings are used around the engine bolts to absorb vibration. Three-blade metal propellers of approximately 9 ft. 6 in. in diameter are used on the Hornet engines and an exhaust manifold having a hot air stove and control box for interior heating purposes is also employed. Controls for the power plant, as well as the fuel system, are led through streamline fairings to the pilot's cockpit and auxiliary gasoline tanks can be installed in the hull if desirable. The port engine is provided with a 50 ampere generator which, together with an 80 ampere hour Willard storage battery, constitutes the electric generating system. The storage battery is installed in the radio compartment from which the electric system is controlled. A voltage regulator is also used in the system and is located in the radio compartment. Provision for mounting landing lights on the leading edge of the wing structure also has been made.

Each Commodore is provided with a handling truck to be used when the plane is on land for overhauling. This truck provides mounting for two 44 in. x 10 in. wheels forward and one tail wheel.

Specifications as furnished by the manufacturer are:

Type	Monoplane flying boat
Span	100 ft.
Overall Length	61 ft. 6 in.
Overall Height	14 ft. 2 in.
Wing Airfoil	Gottingen 398
Chord	11 ft. 6 in.
Incidence	+4 deg.
Dihedral	2 deg.

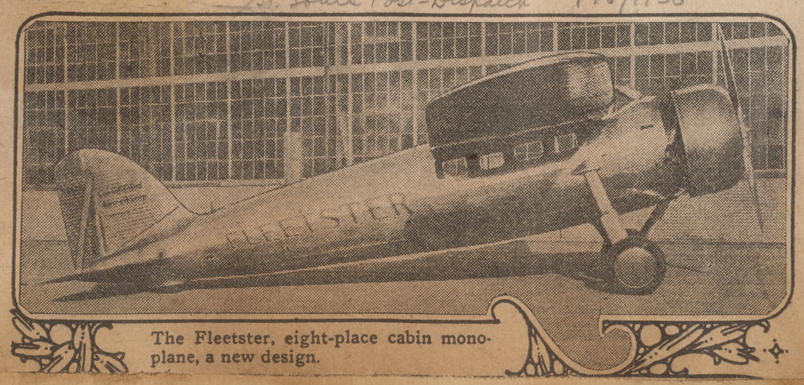
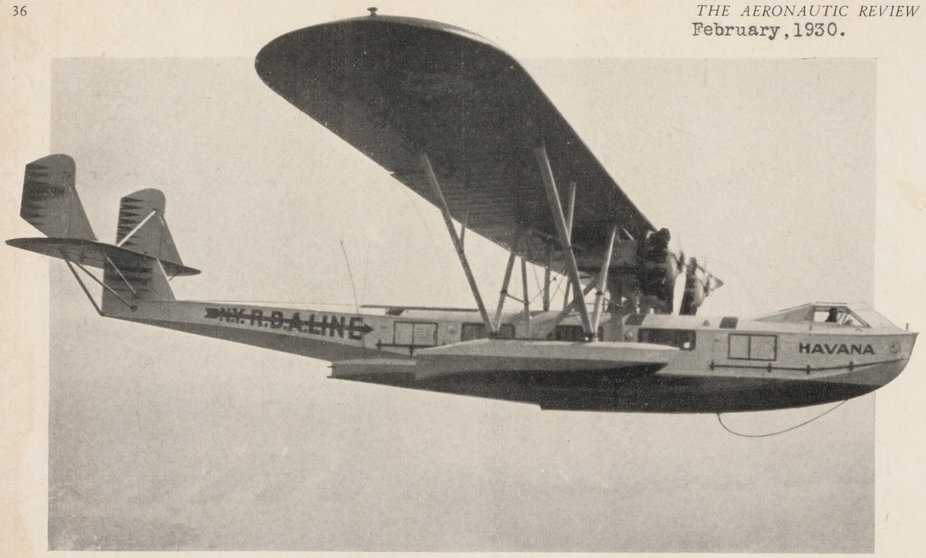
Biplane and Monoplane of Newest Lines

St. Louis Post-Dispatch 7/16/1930



The Fleetster, eight-place cabin monoplane, a new design.



BOUND FOR SOUTH AMERICA

Giant yacht on wings speeding out over New York Harbor en route to South America. This ship, the "Havana," is the third in a fleet of twelve built for the New York, Rio and Buenos Aires line. Travel is cut from twenty days to seven between New York and Argentina by this line which is the world's longest, stretching 9,000 miles through fifteen countries. Today more than 14,000 miles of air routes are already in operation between Latin-American republics.

The Aeronautic Review
February, 1930.

THE 32-PASSENGER CONSOLIDATED COMMODORE, "BUENOS AIRES" OF THE NEW YORK, RIO AND BUENOS AIRES LINES, INC.

Following the recent trend in large plane construction, the Commodore is powered with two motors. Twin Pratt & Whitney 575 h.p. Hornet engines are used, giving the ship a high speed of 130 miles per hour and a cruising speed of 110 miles. In addition to comfortably carrying 32 passengers and a crew of 3, ample additional space is provided in the Commodore for mail and express. Interior of the plane has been designed and furnished under the direction of Frederick J. Pike, an interior decorator, and sets a new standard in beauty and comfort. Three cabins are provided for passengers as well as a lavatory, buffet room and radio compartment. Two of the cabins on the Buenos Aires accommodate 8 passeners, while the third—a lounge room—has seats for 4 passengers and includes two day beds. Chairs and day beds as well as small adjustable tables are of aluminum construction finished in natural color. A modernistic scheme has been developed by Mr. Pike, using an individual color scheme adapted from the tropical colors of the route for each cabin. The walls of each of the cabins are covered in damask while a separate material is used in draperies with still other fabrics for upholstering of the chairs and cushions. Between the seats in each of the passenger compartments are panels holding timetables, magazines and newspapers which have been placed directly under the windows. Attractive carpets are used in the center aisle and on the sides in each of the small compartments.

Consolidated Outlines Fleet Dealership Policy

Aviation 2-15-1930

NEW YORK (N. Y.)—Under the new sales system recently announced by the Consolidated Aircraft Corp., dealers will be compelled to take a minimum of three planes in order to secure the 25 per cent discount offered. The dealer must post a $500-per-plane deposit for these craft at the time dealership is granted. This money is returned as deliveries are made, and deposits are not required beyond the third plane.

R. W. Fulton, sales manager of Fleet Aircraft, Inc., Buffalo, announces that although the closed territory and distributorship policy has been eliminated, it is not the intent of the company to provide competition for several dealers in the same district unless representatives fail to make proper sales efforts. He also states that individual sales at dealer discounts will not be made by the factory.

The price of the recently reduced Kinner Fleet sport training planes is now $3,985. Kinner-powered Fleets equipped with Edo pontoons are listed at $4,995 and dealers are privileged to the same discount rates on that craft as apply to the other machines.

NYRBA Receives Fleetster

Aviation 2/15/1930

BUFFALO (N. Y.)—Performance tests are now taking place on the first of the Consolidated Fleetsters to be delivered to the New York, Rio & Buenos Aires Line, Inc. The craft was flown directly from the factory here to Miami where it was equipped with Edo pontoons.

WE CONGRATULATE YOU UPON A NOTEWORTHY ADDITION TO THE LIGHT ENGINE CLASS.

FLEET AIRCRAFT INC.

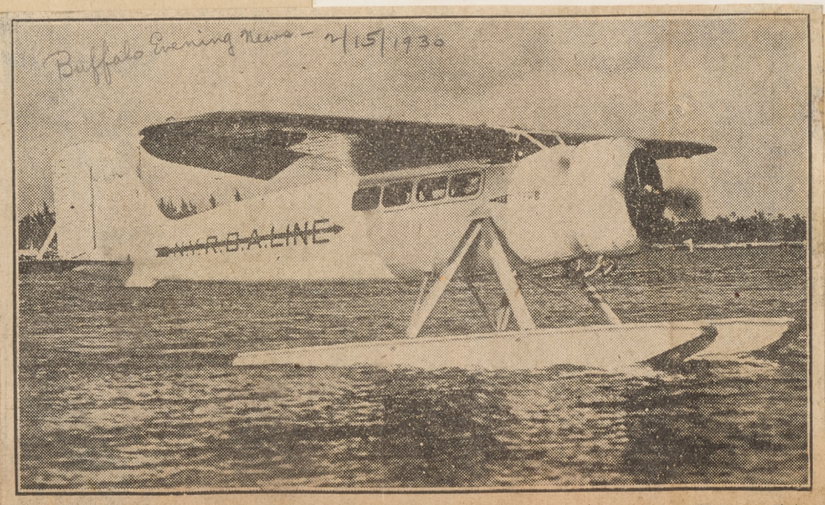
RESULTS OF TESTS

Throughout Fifty Hours on stand at Department of Commerce Testing Bureau, Washington, there was not a single forced stop, not even a spark plug was changed, valves were gasoline tight, H. P. was greater at end than at beginning of run.

Throughout One Hundred Hours of gruelling tests in the air, in warm as well as zero weather, not a single replacement; not a single repair other than two new spark plugs.

Has any other engine equaled the combined results of these two tests?

Buffalo Evening News – 2/15/1930



—Associated Press Photo.

One of the fastest planes yet built, the eight-passenger Fleetster, constructed in Buffalo by the Consolidated Aircraft corporation, completed speed tests at Miami, Fla., preparatory to inaugurating service between New York, Rio de Janeiro and Buenos Aires, an 8000-mile route which it will cover in seven days. The plane carries eight passengers and makes a speed of 190 miles an hour.

CABINS DECORATED IN TROPIC COLORS

An indication of the increasing luxury of air transport travel is shown in this interior of one of the de luxe cabins of America's giant twenty-passenger flying boat, the largest yet built in this country, for the New York, Rio and Buenos Aires service. The cabin decorations are carried out in color schemes characteristic of the countries over which the ship will fly. Cabins are nearly nine feet square with six-foot ceilings and are commodious enough to permit easy going about from one part of the cabin to another.

Fine Record Set By Fleet Planes

Trenton Times-Advertiser 3/2/30

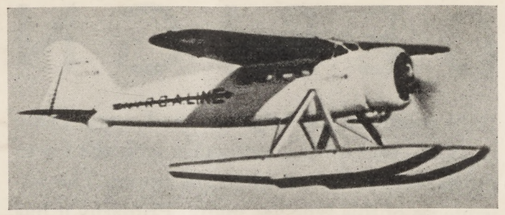
Training Squadron Covers 571,130 Miles With Only Three Slight Mishaps

The story of the record made by Training Squadron VN-7-D-11 at the Nava Air Station, San Diego, Cal., shows what can be done in aviation with good equipment and flying under proper conditions.

The record of 571,130 miles of flying in the year 1929 with only three minor accidents has been duplicated many times in the navy, army and many commercial schools and organizations.

The "NY" planes used were built by the Consolidated Aircraft Corp., of Buffalo, N. Y., of which Major R. H. Fleet is president. Johnston Incorporated is the Trenton representative for this concern, and displayed the new model Fleet sport plane last week at the Trenton Automobile Show.

Planes built by this company have been the standard training planes of the army and navy for the past six years. These planes have covered over 25,000,000 miles.



Consolidated Fleetster all-metal seaplane on the Florida-Chile 8000-mile route

NYRBA Connects Continents

New York, Rio & Buenos Aires Line, Inc., already operating extensively in South America, has started scheduled flying between New York and points in the Carribean, connecting with planes on its southern division. Mail concessions have been obtained from Haiti, Argentina, Brazil, Chile, Uruguay, and Venezuela. The company is planning to construct a network of 17 radio stations in 16 countries along its 11,000 miles of routes. Commodore flying boats, Sikorsky amphibions, and Consolidated Fleetster seaplanes are being used.

Fleetster Attains Speed of 190 Miles Per Hour

The Fleetster, newest and fastest product of the Consolidated Aircraft Corporation of Buffalo, which has attained a speed of more than 190 miles per hour in test flights, will be sent on a trans-continental tour of the country as soon as additional tests are completed, according to Lawrence D. Bell, general manager of the company.

Before taking off for Chicago, where the tour will start, the sesqui-plane will be given exhaustive tests by Leigh Wade, vice president, and Captain Homer Berry, chief test pilot of the Consolidated staff. From there it will be flown to St. Louis, the West Coast, back across the country to Florida and up the Eastern Coast line, finishing at New York City.

On flights made during the past week the Fleetster left the ground from a standing start in 12 seconds and claimed to a height of 10,000 feet in 12 minutes, a rate of climb higher than that of any army pursuit ship. During the coming week an effort will be made to determine the absolute ceiling of the ship.

While the plane was designed primarily to have a cruising speed of 180 and a top speed of 200 miles per hour it was impossible to know in advance if performances would come up to these figures. First flights proved it to be one of the fastest of its kind in the world, the tests exceeding expectations of the Consolidated officials.

The entire design of the Fleetster is predicted on a special monocoque construction developed and patented by Lawrence D. Bell. It is built of aluminum alloy the overall shape being perfectly streamlined and the exterior smooth with the exception of a moulding which borders each section of plate. The fuselage is practically circular in cross section.

The engine mount is constructed of aluminum alloy sheet the extruded members arranged in conical form tying the mounting ring directly to the outside fuselage shell. The mount serves as the rearward boundary for the N.A.C.A. cowl, the engine proper being mounted in rubber so that practically no vibration is transmitted to the cabin structure.

The N.A.C.A. cowling hood is built in three pieces and anchored to the structure so that the entire cowl may be removed in less than five minutes.

The seating arrangement consists of the regular pilot's seat and an auxiliary seat in the pilot's compartment. In the main cabin there are two seats facing each other, each accommodating three persons. The cabin is upholstered throughout. All of the cushions are down-filled, the individual seat cushions being removable.

An alternate arrangement of the cabin consists of six individual seats, three on each side of the isle, the door being moved aft of the rearmost seat.

The Fleetster wing is constructed of laminated plywood, built in one piece with internal braces. The tail services are constructed of aluminum alloy and covered with the same material. The fin is built integral with the fuselage, stabilizer and elevator braced to it by a single streamline tube. The stabilizer is adjustable in flight through a range of plus or minus three degrees.

The ship is powered with a series "B" Pratt and Whitney Hornet engine, 575 horsepower at 1,950 revolutions per minute.

The monocoque construction of the Fleetster was announced soon after the National Advisory Council of Aeronautics had developed the NACA cowling and is the only plane thus far built in which the cowling has been used to obtain one hundred percent efficiency. The new type cowling adds between 15 and 20 miles an hour to the speed of the plane.

Buffalo News-March 1, 1930

AIRPLANE FIRM HERE NETS $1.64 ON STOCK

Consolidated Corporation Reports Earnings of $952,000 on 579,000 Shares.

Net earnings of $952,000 are reported by Consolidated Aircraft corporation for the year ended Dec. 31, 1929. This amount is equal to $1.64 on the 579,000 shares outstanding at the end of the year.

Consolidated Aircraft balance sheet shows total current assets of $2,144,192 against current liabilities of $791,087.

R. H. Fleet, president, in his letter to stockholders says:

"Your company's balance sheet shows a liquid and healthy condition although cash has been somewhat reduced as a result of materials purchased for orders we are now executing. Net earnings show a reduction from previous year but this is not due in any measure to a decline in the company's operations or any impairment of the effectiveness of the management's policies.

"During 1929 your engineering department developed the 'Consolidated Commodore,' at present the only American-built transport flying boat.

"During the year your company acquired all the assets and business of the Thomas-Morse Aircraft corporation. We hold an initial contract from the government for approximately $1,000,000 worth of this division's product, which is the only all-metal fighting craft used by the Army.

"A third new product was evolved by Consolidated, the Fleetser. The fuselage of this ship is constructed by an entirely new method of metal unique to the Consolidated company. This machine is being built in limited quantities, six have been sold under contract, one of which has been delivered.

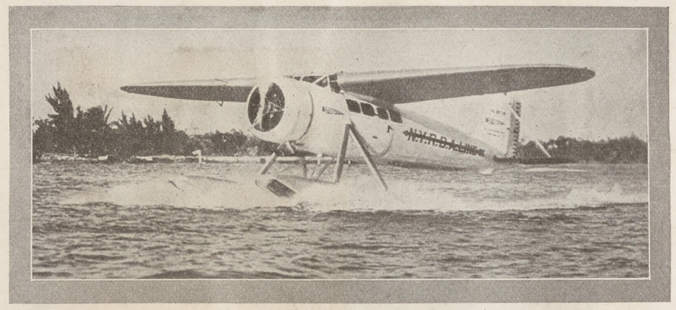
"Finally, your company developed through the Fleet Aircraft corporation the Fleet commercial training plane and, subsequently, acquired the Fleet company.

"Our 1929 engineering program was largely paid for out of current earnings and the results in dollars and cents of profit will not be apparent until the profit and loss account for 1930 and following years are made. Inventory excesses and over-expansion which has handicapped many units in the avfation industry have been avoided. On the other hand, it faces this year with a good volume of unfinished business."

N York Journal of Commerce 3/1/1930

C. I. T.-Aircraft Contract

A contract has been signed by the Consolidated Aircraft Corporation of Buffalo, N. Y., with the Commercial Investment Trust, Inc., of New York whereby the Consolidated Aircraft Corporation will act as the official organization for this manufacturer's dealers and distributors. The arrangement covers the financing of both wholesale and retail deferred payment sales throughout the United States and Canada. This plan also applies to time sales made direct by the manufacturer to large users, such as air line transport operators and schools.



High-speed Consolidated Fleetster used in the NYRBA mail service to South America

NYRBA Line to South America

FROM Santiago, Chile, on February 18th, a Ford tri-motored monoplane carrying the first consignment of northbound air mail over the lines of the New York, Rio and Buenos Aires Line departed on the first leg of the 8,000-mile trip. At Buenos Aires the mail was loaded into Consolidated Commodores, Lockheed Air Express monoplanes and all-metal Fleetsters for the seven-day trip to Miami, where Eastern Air Transport, Inc., completed the American end of the service.

There are three main divisions of the line's operation. For the present the company will begin its run at Miami, where the flying boats carry mail and express across the Caribbean and through the West Indies to Paramaribo, on the east coast of South America. The second division is from this point to Rio de Janeiro, Brazil, whence the third lap transports the cargo to Buenos Aires. Here the company's landplanes connect with their long-established trans-Andean service to Santiago, which city is reached after several hours' flight at extreme altitudes, often as high as 20,000 feet.

On each of the three over-water divisions from Miami to Buenos Aires, three classes of service are to be maintained. Fleetsters and Lockheeds operate through service for fast mail and express schedules, maintaining an average of 146 miles per hour. Consolidated Commodore 20-passenger seaplanes will carry both passengers and mail on through schedules between division points. In addition, a fleet of nine Sikorsky amphibions is maintained to care for local mail and passenger traffic between division points, with stops at important centers of population.

The establishment of the present mail service is a prelude to scheduled passenger operations, which will be inaugurated later in the year. The line opens a vast commercial, industrial and political territory to closer relationship with the United States, and reduces the time necessary for mail deliveries from fifteen days to seven, thus providing keen competition with the subsidized German and French airlines now operating on the South American continent. Until the establishment of the NYRBA Line it was much easier for Brazil and Argentine business men to communicate orders and receive small shipments from Europe than from the United States; the distance from New York to Buenos Aires being approximately the same as that from New York to Bombay, India. With the advent of seven-day air mail service, however, an added impetus to American trade in South America is expected.

NEW RATES HELP TRAFFIC

NY Telegram 3/3/1930

Aircraft Head Says Passengers Are Being Turned Away.

R. H. Fleet, president of Consolidated Aircraft Corp., declared today that the air transportation companies since the recent reduction in rates are actually turning away passengers and putting on extra schedule flights to take care of the overflow.

"The reduced fares of aviation transport companies to the exact rate charged by the railroads is filling to capacity the aeronautical equipment of established air transport companies throughout the entire country and has increased their business almost threefold in the number of passengers carried," said the executive. Mr. Fleet reported that more than twenty-five million miles have been flown in aircraft of his company by the government alone in the last six and one-half years, with only thirteen fatalities.

NEW SALES POLICY BEGUN BY FLEET AIRCRAFT, INC.

A new sales policy under which each dealer will be obligated to take a minimum of three planes to obtain dealer discounts of 25% is announced by R. W. Fulton. Sales Manager of Fleet Aircraft, Inc., of Buffalo.

"All of our distributors' contracts have expired," Mr. Fulton says in announcing the new policy, "and will not be renewed as such. We have eliminated closed territories and are now offering non-exclusive dealerships in limited areas through the entire country. All dealers are required to post a $500 deposit per plane for a minimum of three planes at the time dealership is granted. These deposits are returnable as and when deliveries are taken, $500 per ship. Deposits are not required beyond the third ship."

"While we do not intend to appoint competitive dealers, we reserve the right to do so if proper sales efforts and results are not being obtained, but the Fleet dealership is so attractive that few changes will be needed. Under the open territory plan, if the proper sales effort is not being made by the local dealer he will find other Fleet dealers are making Fleet sales in his territory."

Individual sales at dealer discounts will not be made by the factory. An organization that cannot accept three planes cannot qualify for dealer discounts."

The sales price of the Kinner Fleet sport plane was recently cut from $4985 to $3985. The Kinner Fleet equipped on Edo Pontoons lists at $4995 and is subject to the same terms and discounts.

Aero Digest March 1930

THE "Fleetster", eight-passenger monoplane constructed by the Consolidated Aircraft Corporation, is to undergo further speed and altitude tests at the Buffalo Municipal Airport. The Consolidated Corporation recently returned this craft to the airport after replacing the Pratt and Whitney Hornet engine with a Wasp of 425 horsepower for testing purposes.

THE Consolidated Aircraft Corporation of Buffalo, N. Y., recently received an order for spare parts from the Navy Department involving a purchase price of $39,000, according to an announcement of officials of the company. The order included $10,150 worth of spare parts for NY-2 planes at the Naval Air Station, Hampton Roads, Va. The remainder of the parts included in the order will be sent to the Naval Air Station at Pensacola, Fla.

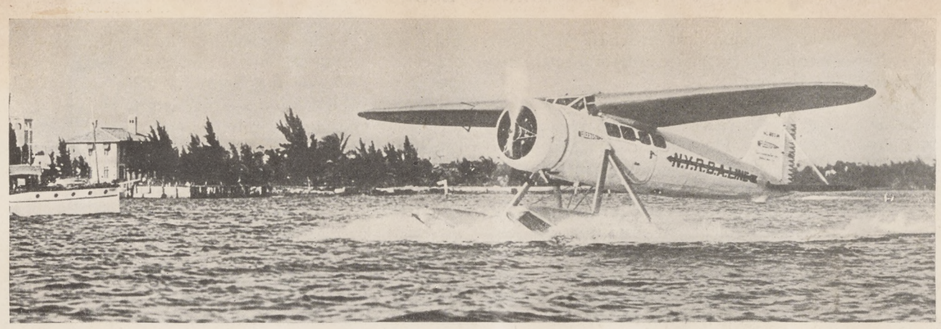
Aero Digest March 1930

BUFFALO

[A. SHEPHERD]

CONSTRUCTION of a Canadian assembly plant at Bridgeburg, Ontario, by the Consolidated Aircraft Corporation of Buffalo, is to begin at an early date, according to a statement of Consolidated officials. A building to cost about $25,000 is planned to care for assembly, storage, shops and offices on the site on Gilmore Road. Steel superstructure, corrugated steel walls and roof, and cement floors will be incorporated in the structure.

AIRWAY AGE MARCH 1930



The Transport Operators Must Be Insured

Airway Age - March 1930

THE CONSOLIDATED AIRCRAFT Corporation, New York, announces that during 1929 it sold 405 transport and training planes, nearly twice as many as in 1928, and has unfulfilled orders for 1930 totalling more than $2,500,000. The company earned $1.50 a share, after deducting development expense of four new products.

FLEET AIRCRAFT, INC., Buffalo, N. Y., has adopted a new sales policy whereby each dealer will be obligated to take a minimum of three planes to obtain dealer discounts of 25 per cent. All closed territories have been eliminated and non-exclusive dealerships in limited areas throughout the entire country have been offered. All dealers are required to post a $500 deposit per plane for a minimum of three planes at the time dealership is granted. These deposits are returnable as and when deliveries are taken, $500 per ship. Deposits are not required beyond the third ship. The company does not intend to appoint competitive dealers, but reserves the right to do so if proper sales efforts and results are not being obtained. The sales price of the Kinner-Fleet sport plane was recently cut from $4,985 to $3,985

CONSOLIDATED AIRCRAFT ON FULL-TIME BASIS

Orders now on hand will consume the entire production of Consolidated Aircraft corporation until mid-summer, Maj. R. H. Fleet, president, reports. The six units of the company at Buffalo, are working on a full-time basis, with some departments on a 24-hour, seven-day schedule, he states.

"Through organization of Consolidated's Canadian subsidiary, Fleet Aircraft of Canada, Ltd., we will be better able to meet the heavy foreign demand with the opening of the Canadian plants at Ft. Erie, Ontario on May 1," he said.

aero Digest march 1930

Consolidated Aircraft Corporation Reports Sales for 1929 and 1930

SALES of airplanes during 1929 by the Consolidated Aircraft Corporation of Buffalo, N. Y., increased approximately one hundred per cent over sales in 1928, according to a report recently issued by the company. During 1929, the Consolidated company sold 405 training and transport planes, which was over twice as many planes sold during the previous period of twelve months. The company has unfilled orders for 1930 totaling more than $2,500,000.

During 1929 the company sold 245 Fleet training planes, and orders from the United States Government and foreign governments for Consolidated Husky training planes totaled 155 in addition to orders for spare parts. Construction of the first Commodore flying boat was completed on October 1, 1929, and four of these planes have been delivered to the New York, Rio and Buenos Aires Line for use in air transport service.

The present production schedule of the Consolidated company includes the manufacture of ten additional Commodore flying boats, six Fleetsters, Government orders for Husky training planes, and an order totaling $1,000,000 for Thomas-Morse all-metal fighting planes. New planes which will be placed on the market by the Consolidated company during 1930 will include the Fleetster and the all-metal plane.

F. W. FULTON, sales manager of Fleet Aircraft, Inc., of Buffalo, N. Y., recently announced a new sales policy which has been adopted by the company. Dealers for Fleet Aircraft, Inc., will be required to take a minimum of three planes to obtain a dealer's discount of twenty-five per cent. All dealers will be required to post a $500 deposit on each plane, these deposits being returnable when deliveries are taken. Deposits will not be required after the third ship is delivered to the dealer.

Closed distributors' territories have been eliminated by the Fleet company and non-exclusive dealerships have been established. Competitive dealers will not be appointed but the company reserves the right to do so if a dealer in a given territory does not obtain satisfactory sales results. All of the Fleet company's contracts with distributors have expired and will be renewed under the terms of the new plan.

FLEET AIRCRAFT, LTD., BUILDS AT FT. ERIE

Buffalo News 3/22/1930

Subsidiary of Consolidated Company of Buffalo Enters Canadian Field.

The Fleet Aircraft of Canada, Ltd., a subsidiary of the Consolidated Aircraft corporation, Buffalo, has been organized under Canadian laws to manufacture and sell Consolidated planes in Canada.

Construction of a plant has already been started in Ft. Erie, Ont., and production of the "Fleet," a two-place training plane, is expected to be started at the rate of two planes a day by May 1.

"While the new company will be a subsidiary of Consolidated, both Canadian and American capital is represented in Fleet Aircraft," Maj. R. H. Fleet, president of Consolidated said. "It will manufacture under contract from the Buffalo company and will buy certain parts from it."

The main building of the plant will be a one-story structure 120 by 60 feet, and a smaller building for heating and coal storage will be 25 by 30 feet. It will include a modern "dope room," for applying the preparation used on airplane wings, and machinery for all phases of airplane manufacture.

At first only the Fleet plane will be manufactured. While this was originally an army training plane, it is also adaptable for civilian training and sport flying. Later, other planes made by Consolidated Aircraft will be manufactured there.

Haskelite helps provide long life in the "Fleetster," fast commercial transport of the Consolidated Aircraft Corp.

PLYWOOD HASKELITE PLYMETL

LONG LIFE—

It is no longer unusual to produce planes that fly. Even special speed or other striking characteristics are discounted by operators unless the plane is able to stand up for long periods in use—and sometimes abuse.

The selection of Haskelite for all plywood applications is an example of designing for long life. The advantages of this blood albumin glued plywood are particularly important when used as in the "Fleetster" for wing covering.

"Individual sales at dealer discounts will not be made by the factory. An organization that cannot accept three planes cannot qualify for dealer discounts."

The sales price of the Kinner Fleet sport plane was recently cut from $4985 to $3985. The Kinner Fleet equipped on Edo Pontoons lists at $4995 and is subject to the same terms and discounts.

Buffalo ▶ **Air Travel Grows**

Niagara Area - March 1930

Major R. H. Fleet, president of the Consolidated Aircraft Corporation, sees one of the biggest years of the aeronautics industry directly ahead. Since reduction of fares in recent months the air transportation companies have been turning away passengers and putting on extra schedule flights to take care of the overflow, he says, and in addition the foreign demand for American planes is greater now than ever before. "The reduced fares of aviation transport companies to the exact rate charged by the railroads is filling to capacity the aeronautical equipment of established air transport companies throughout the country and has increased their business almost threefold in the number of passengers carried," he says. "Our own company is busier than it ever has been and the demand from foreign countries is increasing by leaps and bounds. We are shipping more than $100,000 worth of aircraft to South America each month."

Buffalo ▶ **Buffalo Lags Behind**

Buffalo Journal of Commerce.

Grave danger that Buffalo will be left behind in the march of aeronautical progress is seen by Lawrence D. Bell, vice-president and general manager of the Consolidated Aircraft Corporation, in the city's failure to establish a modern marine airport. Speaking before the Aero Club, he said that the strategic location of the city on the main route of all seaplane lines on the Great Lakes and from the east coast makes it imperative that such a base be built and fostered to the maximum. "The railroad is a thing of the past so far as high class passenger carrying is concerned," he declared. "If aviation had preceded the railroad by 25 years it is safe to say there would have been no transcontinental rail lines."

CANADIAN AIR REVIEW MARCH 1930

The first of the new Consolidated Fleetsters to be placed in commercial service is now undergoing performance tests as a seaplane at Miami, Florida.

Delivered last week to the New York, Rio, Buenos Aires Line, the ship was flown direct from the Consolidated factory at Buffalo to Miami where it was equipped with twin Edo pontoons. Seaplane tests made thus far have exceeded expectations and demonstrate conclusively the speed of the plane as well as its practicability as a passenger and mail carrier.

Performance figures on the Hornet series "B" Fleetster recently completed at Buffalo show a high speed of 175 M.P.H. with a landing speed of 59 miles. With a service ceiling of 20,000 feet the climb at ground of the ship is 1,500 feet per minute and the climb in 10 minutes 12,000 feet.

The Fleetster weighs 3,160 pounds empty and has a useful load of 2,000 pounds.

Southern Aviation MARCH 15, 1930.

Through Service Starts on New York-Rio Line

FIRST through service over an 8000 mile airplane transport system linking together 16 nations and colonies of the Americas was inaugurated between Miami, Rio de Janeiro, Buenos Aires and Santiago by New York, Rio and Buenos Aires Line, Inc., February 18.

On that day planes left from Santiago, Chile, and from Miami, Florida, 8000 miles apart by this route, cutting travel time to eight days between the United States and Chile, seven days to Buenos Aires, six days to Rio de Janeiro and two days to the northern tip of the South American continent. Weekly service will be operated regularly over this route.

This service, according to W. F. Reynolds, vice president, climaxes two years of pioneering work preparatory to through travel over a great trunk line reaching from Chile over the Andes to Buenos Aires, thence northward to the West Indies through Uruguay, Brazil, The Guineas and Venezuela and over the Spanish Main to Florida. Plans call for later extension northward to New York to provide fast, direct service between the major industrial centers of both continents.

Schedule calls for 21,198 miles of weekly flying. At 14 principal cities complete passenger facilities, equipment for handling mail and express, and overhaul and maintenance stations are being installed. Repair shops in which complete planes and engines can be made over will be located in Miami, Para, Rio de Janeiro and Buenos Aires.

Four giant Commodore seaplanes built by the Consolidated Aircraft Corporation are in use over the line in express service and through mail and passenger service. Originally designed to carry 32 passengers, the first Commodore commercial flying boat was rearranged to carry 20 or more, with roomy accommodations in addition for mail, cargo and freight. The plane has a lounge room, buffet, dressing room and complete toilet facilities. Cabins are larger than pullman compartments and have six-foot head room, wide aisles and full visioned windows.

Aeronautical World March 1930

New Speed Seaplane, For South American Mail Run, Makes 190 M.P.H.

A new all-metal seaplane, designed especially for fast through mail and express service between this country, Rio de Janeiro and Buenos Aires, has successfully completed test flights, making a speed of 190 miles per hour.

On twin pontoons, for service over the company's 7500 mile coastal route from Florida to Brazil and Argentina, the plane averaged 184 m.p.h. through the first series of tests and traveled six miles per hour faster on the second series. Powered by a Pratt & Whitney "Hornet" motor, developing 575 horse power, the plane can carry 1000 pounds pay load, passengers or mail, in addition to pilot. The craft was built by Consolidated Aircraft Corp. of Buffalo, especially for the international air mail service. Five additional seaplanes of this type are being added to the NYRBA air fleet, which will number 35 planes for the North-South America service.

NEW AERIAL POSTMAN

George Cobb, pilot of the New York-Buenos Aires Line, and the first shipment of airmail consigned to South America

The TEXACO ORDER BOOK *for* MARCH, 1930

Through the courtesy of the U. S. Army Air Corps, Langley Field, Va.

Tank Truck Operator H. E. Thomas and his charge under the 100-foot wing spread of the new flying boat "New York" which will see service in the New York-Rio-Buenos Aires Line.

Texaco Takes "New York" Aloft

WHEN the giant flying boat "New York" first took to the air recently at Langley Field, Virginia, Texaco Aviation Gasoline and Texaco Airplane Oil No. 4 were used. The ship, capable of carrying 22 passengers and 2 pilots will be put into service by the New York-Rio-Buenos Aires Line.

Due to the open water during winter months on Chesapeake Bay the manufacturers of the "New York," the Consolidated Air Craft Corporation, Buffalo, New York, assembled it and other similar flying boats at Langley Field. These new creations of aviation transportation are each powered by two 575 H.P. Pratt-Whitney motors, have a wing spread of 100 ft. and are 75 ft. from stem to stern.

Aviation Salesman W. M. Styker was responsible for Texaco being used in the initial flight.

Aero Corp. of California Renews Fleet Dealership

Contracts have been signed by the Aero Corporation of California for the renewal of its dealership franchise on Consolidated Fleet planes for the year of 1930.

The renewal contracts which were signed by Lawrence Bell, general manager of the Consolidated Company, and Paul E. Richter, Jr., vice president of the Aero Corporation, was accompanied by an order from the latter company for three new Fleet training planes powered with Kinner engines.

Since securing the original franchise during the latter part of 1929, Aero Corporation of California has delivered five Fleet training planes to the Standard Flying Schools at Los Angeles.

Navy Places Parts Order

Aeronautical World March 1930

Orders totalling $27,500 have been received by the Consolidated Aircraft Corporation of Buffalo from the United States Navy Air Corps for NY spare parts to be sent to the naval stations at Pensacola, Fla., and San Diego, Calif.

Delivery will be made within 90 days.

Gordon Mounce has left for Detroit for the purpose of taking delivery of a Fleetster, which he will attempt to fly non-stop from Detroit to Glendale, California. Prairie Flyer April 1930

Fleet Aircraft of Canada Organized at Fort Erie, Ontario

Capt. W. J. Sanderson, former Instructor of London Flying Club, in charge of Canadian sales and demonstrations of Fleet aeroplanes —Specifications and Performance Data of this machine.

Capt. W. J. Sanderson with a Fleet aeroplane.

FLEET AIRCRAFT OF CANADA, Ltd., has been organized recently with a Dominion charter in Canada, and a contract has been let for the construction of a Canadian plant at Fort Erie, Ontario. Foundations have already been laid and practically all of the steel work is at the site ready for raising. This new addition to Ontario's industries will have an entirely modern factory with complete facilities for airplane manufacture. It is to be constructed of brick and steel and follows present practice in daylight type of construction. The factory will be ready for occupancy and production about May 1 and will immediately start producing the Fleet training and sport biplane. This plane has been on the American market for more than one year.

The Fleet will be manufactured in Canada under a Canadian airworthiness certificate, both as a land and as a seaplane. Complete data on both types follow at the end of this article. For the time being, the production facilities will be devoted solely to the manufacture of the Fleet and the company anticipates that the Canadian demand will be great enough to consume the entire output for several months.

For the past nine years Consolidated Aircraft Corporation of Buffalo, New York, and its predecessor company, Dayton-Wright Airplane Company, has specialized in the design and construction of training aircraft, and during practically that entire time has dominated the American training plane market, both military and civil, after many competitions held by the United States Army and Navy. For the past six years the United States Army Air Corps and Naval Air Service have been using Consolidated training planes practically exclusively. Consolidated has produced more than 1,000 training planes for the United States and they have amassed a grand total of over twenty-five million air miles at approximately 150 different stations scattered all over the United States. This tremendous service experience has served as an unprecedented proving ground for the development of this type, and the company points proudly to the fact that there has never been a fire in a Consolidated-built training airplane—either on the ground, in the air or in a crash—and to the fact that in seven years of use by the United States a total of thirteen persons only have been killed in these aircraft, whereas more than 7,000 men have received flying training in them.

W. J. Sanderson, of London, Ontario, one of Canada's well-known pilots and an official of Fleet Aircraft of Canada, Ltd., has been demonstrating in Canada the Fleet landplane equipped with wheels or skis, and also as a seaplane.

The following is a brief résumé of the specifications and performance data:

Landplane		*Seaplane*
110 m.p.h.	High Speed	101 m.p.h.
95 m.p.h.	Cruising speed	85 m.p.h.
45 m.p.h.	Landing speed	47 m.p.h.
730 f.p.m.	Rate of climb (at ground)	584 f.p.m.
14,700 ft.	Service ceiling	12,500 ft.
1,023 lbs.	Weight empty	1,183 lbs.
552 lbs.	Useful load (normal)	543 lbs.
1,575 lbs.	Gross weight (normal)	1,726 lbs.
24 gals. (normal)	Fuel capacity (50 gals. with extra tank)	24 gals. (normal)
4.25 gals.	Oil capacity	4.25 gals.
Kinner K-5	Engine	Kinner K-5
Normal—4 hrs.	Endurance at cruising speed (maximum—7.5 hrs.)	Normal—4 hrs.
28 ft.	Wing span	28 ft.
20 ft. 9 in.	Length overall	20 ft. 9 in.

Fleet to Open Plant in Ontario

Aviation - 4/5/1930.

BUFFALO (N. Y.)—Fleet Aircraft Co., Ltd., will shortly open a plant at Fort Erie, Ontario, for the manufacture of aircraft and parts.

FLEET PLANT BEGINS PRODUCTION ON MAY 1

Buffalo News 4/22/30

Model 2 Sport Planes to Be Made in Ft. Erie.

Production will be started May 1 by the recently organized Fleet Aircraft of Canada, Ltd., in its new plant at Ft. Erie, Ont., company officials announced Tuesday morning.

For the first year the plant will be used exclusively for the manufacture of the Fleet Model 2 sport plane for both land and water use. W. J. Sanderson, an official of the company, is at present on a sales and demonstration tour covering most of southern Canada.

"The Fleet sport plane of the new plant will be manufactured under a Canadian airworthiness certificate, the Canadian company being an entirely separate organization from the Fleet and Consolidated companies of the United States," Mr. Sanderson said.

Of brick and steel construction, the Ft. Erie plant is designed on the new daylight type of factory building and the latest developments in machinery have been installed to facilitate the output.

C. I. T. TOPICS APRIL 1930

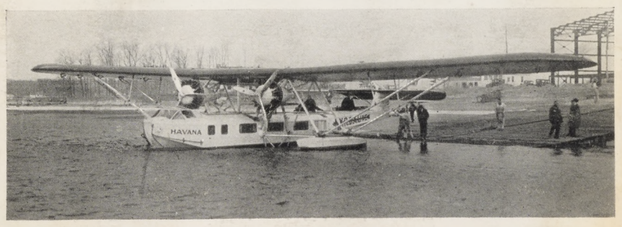
C. I. T. Secures Another Important Aviation Contract

LAST MONTH the Aviation Department of the Industrial Division secured its second important contract for financing time sales of aircraft—with the Consolidated Aircraft Corporation of Buffalo, N. Y., manufacturers of the well known "Commodore" Flying Boat and of the "Fleet Trainer". Both of these types are shown in the accompanying photographs.

According to T. T. Hildebrandt who negotiated the contract, this company is one of the largest independent manufacturers in the industry. It was formed in 1923 as an outgrowth of the Dayton-Wright Company and has its factories at Buffalo. Among its present contracts is one for $1,500,000 covering 15 "Commodore" type flying boats for the South American Air Mail and Passenger Service between New York and Buenos Aires.

Under this Plan, C. I. T. will act as the official financing organization for this manufacturer's dealers and distributors on both wholesale and retail deferred payment sales throughout the United States and Canada. The Plan also applies to time sales made direct by the manufacturer to large users, such as air line transport operators and schools.

C. I. T. also has a contract with the Detroit Aircraft Corporation of Detroit, Mich., manufacturers of the Lockheed-Vega, the Ryan planes and the Eastman Flying Boat and Eastman Amphibian.



FLEET

Aviation 4/5/1930

THREE MODELS CONSTITUTE the line offered by Consolidated Aircraft Co., Buffalo, N. Y., for 1930. The Fleet two-passenger training plane, a development of the Husky training planes made by the same company for the Army and Navy, is offered in a new model with either Kinner or Warner engine, priced at $3,985 and $4,985. With Edo pontoons, it costs $1,010 more.

The Fleetster all-metal monoplane, designed to carry six passengers with mail or freight at a high speed of 175 m.p.h., will be put into actual production. Six models are being built on pontoons for NYRBA line. With land type undercarriage and Hornet Series B engine, the plane sells for $27,500. The Consolidated Co. will also continue production of the Commodore dual-engined twenty-passenger flying boat, fourteen of which have been ordered by NYRBA line. This plane also carries Hornet power, and is listed at $125,000.

Navy Orders Cyclones, Fleets

Aviation - 4/5/1930

WASHINGTON (D. C.)—Two orders let by the Navy Department for aircraft and engines have gone to the Consolidated Aircraft Corp., Buffalo, N. Y.; and Wright Aeronautical Corp., Paterson, N. J. Six N2Y-1 Consolidated Fleet planes, costing $35,337.06, will be used at the Pensacola Naval Air Station for training purposes. Wright Aeronautical is to furnish 72 Wright Cyclones, with the horsepower raised from 525 to 575, for a contract price of $527,940.90.

NEW FLIGHT RECORD IS SET

Buffalo News 4/7/1930 140 2/15

Wheatley Makes Buffalo-Detroit Hop in 95 Minutes.

William B. Wheatley, chief test pilot for the Consolidated Aircraft corporation, at the controls of a Fleetster monoplane, Saturday established an all-time speed record for a Buffalo to Detroit flight. Maintaining an average speed of 180 miles an hour, he sped over the 285-mile run in 95 minutes.

The Fleetster will be on exhibition this week in the All-American Aircraft show, which opened in Detroit Saturday. Other Consolidated exhibits are a Comomdore seaplane and a Fleet training plane. Wheatley's ship seats eight passengers.

Aerodigest - April 1930

R. W. FULTON has been appointed general sales manager of the Consolidated Aircraft Corporation of Buffalo, with headquarters located at the Consolidated factory. Mr. Fulton was formerly sales manager of the Colonial Flying Service.

Airways Age - April 1930

CONSOLIDATED AIRCRAFT Corporation, Buffalo, N. Y., is to co-operate with Commercial Investment Trust, Inc., New York, for the financing of sales for distributors and dealers, both for retail and wholesale in the United States and Canada.

Western Flying - April 1930

Two new Consolidated O-17 training planes have been received at Lowry field, Denver, Colo., for the use of the 120th Observation Squadron of the Colorado National Guard. Lieuts. Victor Beau and William Boyd, regular Army instructors for the squadron, flew two Douglas planes back to Ohio in exchange. One of the new planes was received at Wright field and the other at St. Louis.

Aviation 4/12/1930

Navy and Army Order Fleets

BUFFALO (N. Y.)—Consolidated Aircraft Corp. has received Army and Navy Air Corps orders totalling 21 planes for approximately $200,000, states Lawrence D. Bell, general manager of Consolidated. Fifteen Kinner-powered Fleet Training craft, with additional spare parts, call for June delivery to the Army at Brooks Field, San Antonio, Tex., while one 575 hp. Hornet Fleetster will be sent to Wright Field, Dayton, Ohio, May 1, for Army test purposes. The Navy has ordered six Fleets with spare parts for April delivery at the Pensacola (Fla.) Naval Air Station.

Fleet Aircraft of Canada, Ltd., Establishes Factory at Fort Erie, Ont.

The first of the Consolidated "Fleetsters" to be placed in service on the New York Rio Buenos Aires line. This type of machine will also be manufactured in Canada by the Fleet Aircraft of Canada Limited if the demand warrants the installation of the necessary manufacturing equipment.

Fleet Aircraft of Canada, Ltd., has been organized recently with a Dominion charter, and a contract has been let for the construction of a Canadian plant at Fort Erie, Ontario. Foundations have already been laid and practically all of the steel work is at the site ready for raising. This new addition to Ontario's industries will have an entirely modern factory with complete facilities for airplane manufacture. It is to be constructed of brick and steel and follows present practice in daylight type of construction. The factory will be ready for occupancy and production about May 1st and will immediately start producing the famous FLEET training and sport biplane. This is the plane which has been on the American market for more than one year, and which assumed a position of leadership in that market in 1929. At present it is easily dominating the American market in its class due to the excellent reputation established last year when more than 200 of them were sold and put into hard daily use by more than 50 training schools and by numerous private individuals scattered all over the United States.

The FLEET will be manufactured in Canada under Canadian Airworthiness Certificate, both as a land and as a seaplane. Complete data on both types follow at the end of this article. For the time being the production facilities will be devoted solely to the manufacture of the FLEET and it is anticipated that the Canadian demand for this fine plane, which has already been so capably demonstrated throughout eastern Canada, will be great enough to consume the entire output for several months.

The reason for the great popularity of the FLEET is readily understood when one is familiar with the following facts concerning its background, conception and development. For the past 9 years Consolidated Aircraft Corporation of Buffalo, New York, and its predecessor company, Dayton-Wright Airplane Company, has specialized in the design and construction of training aircraft, and during practically that entire time has dominated the American training plane market, both military and civil, through sheer merit after many competitions held by the United States Army and Navy. For the past six years the United States Army Air Corps and Naval Air Service have been using Consolidated training planes to the practical exclusion of all others. Consolidated has produced more than 1,000 training planes for the United States, and they have amassed a grand total of over twenty five million air miles at approximately 150 different stations scattered all over the United States. This tremendous service experience has served as an unprecedented proving ground for the development of this type, and the Company points proudly to the fact that there has never been a fire in a Consolidated-built training airplane—either on the ground, in the air or in a crash—and to the fact that in seven years of daily use by the United States a total of thirteen persons only have been killed in these aircraft whereas more than 7,000 men have received flying training in them—far and away the greatest record for safety in the world.

Mr. W. J. Sanderson, of London, Ontario, one of Canada's well-known pilots and an official of Fleet Aircraft of Canada, Ltd., has been demonstrating in Canada the FLEET landplane equipped with wheels or skis, and also as a seaplane. These demonstrations have aroused such a wave of enthusiasm for this exclusive training and sport airplane that Consolidated has completed arrangements for the exclusive manufacture of the "Fleet" in Canada, for the sale there and in other countries which give favorable tariff concessions to Canadian made articles.

The following is a brief resume of the specifications and performance data:

Landplane		*Seaplane*
110 m.p.h.	High Speed	101 m.p.h.
95 m.p.h.	Cruising speed	85 m.p.h
45 m.p.h.	Landing speed	47 m.p.h.
730 f.p.m.	Rate of Climb (at ground)	584 f.p.m.
14,700 ft.	Service ceiling	12,500 ft.
1023 lbs.	Weight empty	1183 lbs.
552 lbs.	Useful load (normal)	543 lbs.
1575 lbs.	Gross weight (normal)	1726 lbs.
24 gals. (normal) (50 gals. with extra tank)	Fuel capacity	24 gals. (normal) (50 gals with extra tank)
4.25 gals.	Oil capacity	4.25 gals.
Kinner K-5	Engine	Kinner K-5
Normal—4 hrs. (maximum—7.5 hrs.)	Endurance at cruising speed	Normal—4 hrs. (maximum—7.5 hrs.)
28 ft.	Wing span	28 ft.
20 ft. 9 in.	Length overall	20 ft. 9 in.

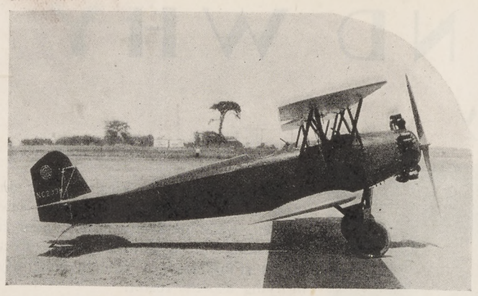
KINNER REPORTS NAVY ORDERS

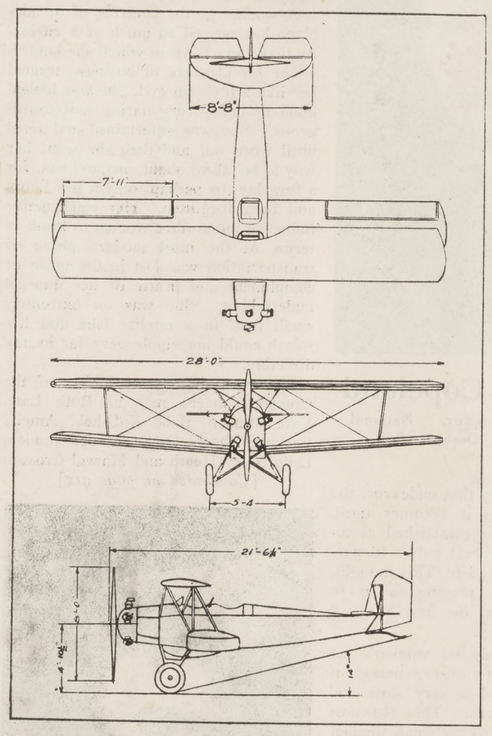
The Kinner Airplane & Motor Corp. has just been informed that Fleet Aircraft Corp., of Buffalo, N. Y., has received an order from the United States Army for fifteen Kinner powered Fleet training planes and fourteen extra Kinner engines, together with many items of engine and airplane spares and engine tools. In view of the fact that the Army has given this equipment a thorough nine months test and has found it entirely satisfactory, this order is considered of much importance.

The Navy, who has also been testing this equipment for nearly a year, has just placed an order with Fleet Aircraft for six Kinner powered Fleets with extra engine spares and tools.

In addition to the above, the Kinner Company has received an order direct from the Navy for six engines and a large number of spare parts.

CURRENT MODELS





FLEET

THE Fleet, made at Buffalo, is a popular plane for sport and training purposes. Each Fleet represents the culmination of eight years of engineering effort. It was formerly known and flown as the "Husky Junior," the little brother of the Consolidated "Husky" which has been the standard training plane of the United States Army and Navy for five years. The Fleet is named in honor of Major R. H. Fleet, founder of the Consolidated Aircraft Corporation. It is a two place, dual control biplane with both wings of equal span and chord. It is claimed to be rugged, efficient and economically operated. A ready responsiveness to the controls, and a perfectly balanced construction, according to the manufacturer, provides a machine that can be stunted and maneuvered with ease.

Specifications

Fleet
Approved Type Certificate No. 131

Wing span	28 ft. 0 in.
Wing chord	3 ft. 9 in.
Length overall	21 ft. 6⅛ in.
Weight empty	1010 lbs.
Useful load	565 lbs.
Gross weight	1575 lbs.
Fuel capacity	24 gals.
Oil capacity	3 gals.
Endurance at cruising speed	4 hrs.
Motor	Kinner K-5, 100 h.p.
Price	$3,985

Performances

High speed	115 m.p.h.
Cruising speed	95 m.p.h.
Landing speed	37 m.p.h.
Rate of climb	730 f.p.m.

New York Youth Makes Record

GLENDALE (CALIF.)—When Frank Goldsborough, a 19-year-old Jackson Heights (N. Y.) youth landed in a Kinner-powered Fleet at the Grand Central Air Terminal, 12:40 p.m. Pacific Standard Time, May 4, he had reduced the former junior trans-continental record from 48 hr. flying time (made by Richard James, New York), to 34 hr. 3 min. He left the Westfield (N. J.) Airport on April 28, 7:40 a.m., and made the journey in easy stages. Bad weather, however, delayed the youth several times. Though his plane was slightly damaged while taking to the air near El Paso, Tex., it was landed safely at his next stopping point, where repairs were made. Goldsborough, who holds a private license, is the son of the late Bryce Goldsborough, lost in the ill-fated flight of the "Dawn."

Aviation - May 3, 1930

Consolidated Plans Fast Line

BUFFALO (N. Y.)—Negotiations are being carried out by Consolidated Aircraft Corp. for the establishment of a nation-wide system of long distance, high speed passenger transport lines using the Fleetster, it has been reported by Lawrence D. Bell, vice-president and general manager of the company. "It is probable such a route will be established this summer between New York and Chicago via Buffalo," Mr. Bell asserted.

The National Aeronautic Review May 1930

Hunts Eagles by Plane

EL PASO, TEXAS—Using a Fleet plane to "beat the birds at their own game," a Texas flier and an expert marksman last week annihilated a flock of eagles which for a year or more had menaced sheep in the El Paso district.

The eagles, some of them with a wing spread of nine feet, had evidently selected the sheep ranches near El Paso as a choice spot for their predatory activities. Swooping down from altitudes of 5,000 feet and more, the birds carried off $2,000 worth of sheep in a single season.

Buffalo News - May 11, 1930

FIRST COMMODORE FLYING BOAT OF SEASON LAUNCHED

The first Consolidated Commodore flying boat to be launched this season took the air from the Niagara river Thursday. It is the ninth such ship to be built by the Consolidated Aircraft corporation for delivery to the New York, Rio and Buenos Aires lines. It will be flown to New York and will be placed in service over the company's coastwise run in South America.

"We would have launched it much sooner had Buffalo been equipped with a marine airport," Maj Reuben H. Fleet, president of the manufacturing concern, said in announcing the launching. "We are uder a terrific handicap here. We must launch our flying boats in the Niagara or spend $5000 to ship them to the Atlantic seaboard. Also, this lack prevents us from making competitive bids for navy business."

New York Mirror, 5/15/1930

(NEWS photo)

JUST A LITTLE SPIN.—Without saying why, Col. Charles A. Lindbergh took a brief flight in this Fleetster monoplane over Roosevelt field, L. I., yesterday.

N.Y. Mirror 5/15/30

Lindy Up in Test; Yancey Hops Off For 30,000 Miles

Two notable aerial events took place yesterday at Roosevelt Field, Long Island, one being a short test hop in a new type plane by Col. Charles A. Lindbergh; the other the start of a 30,000 miles aerial cruise of Central and South America by the cabin monoplane Pilot.

The Pilot, a Stinson cabin ship, took off yesterday with Isadore Goldberg, president of the Pilot Radio & Tube Co., of Brooklyn; Zeh Bouck, radio operator, and Lewis A. Yancey as navigator. Goldberg planned to leave the plane at Washington for a visit with President Hoover.

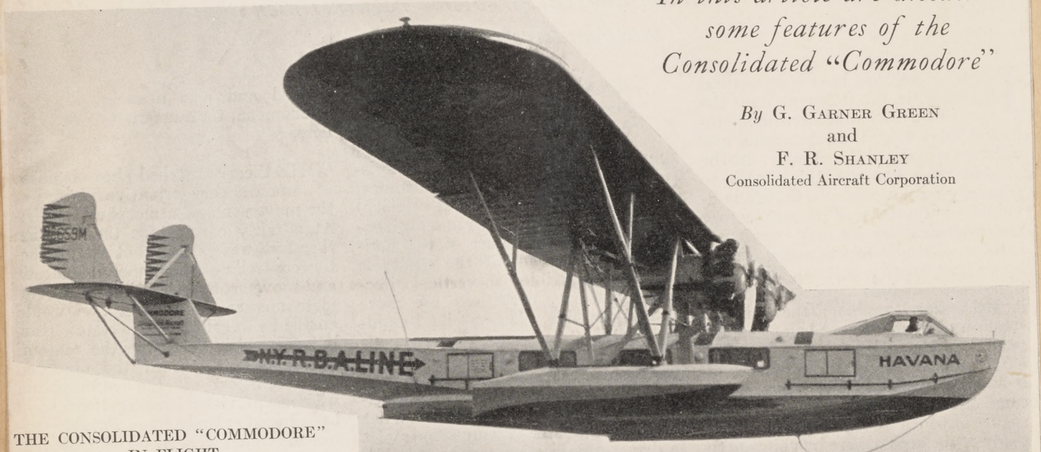
At Buenos Aires the Pilot plans to make a broadcast from the air on an international hook-up that will be heard in New York.

Colonel Lindbergh took the air yesterday in a Fleetster cabin monoplane, somewhat similar to the Lockheed in which he made his Coast-to-Coast hop with Mrs. Lindbergh. The ship is powered with a 525 horsepower Hornet engine. He brought the plane to earth again at 12:30 without incident and left in his car with R. H. Fleet of the Consolidated Aircraft Corp.

The Construction of an All-Metal Flying-Boat

In this article are discussed some features of the Consolidated "Commodore"

By G. Garner Green
and
F. R. Shanley
Consolidated Aircraft Corporation



THE CONSOLIDATED "COMMODORE" IN FLIGHT

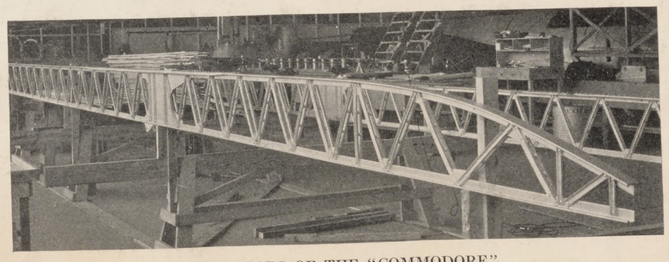
IN a flying boat of this type it is impossible to consider the structure as a whole: the hull is entirely separate from the wing and it represents a totally different problem in design. However, there are several interesting features to be noted in connection with the general design. The first of these is the all-metal construction, which is used for all of the structure excepting the covering of the wing and control surfaces, which is of fabric. Practically all of the structural material is duralumin, either in sheet or extruded form. Chrome-molybdenum steel is used for most of the important fittings, for parts subjected to vibration, and for some of the highly stressed struts. Heat treatment is used on both duralumin and steel parts in order to utilize the maximum strength of these materials.

The hull itself is 58 feet, 6¼ inches in length. At stations about one-half and three-quarters of the distance back from the bow, the bottom is broken by steps; the front step is the conventional type, consisting of an upward offset in the bottom lines of about four inches; the rear step is formed by curving in the side plating below the chine until the sides meet at the step. The maximum beam of the hull is 101 inches; the greatest depth from deck line to keel is 82½ inches. Over the pilot's cockpit a small cabin is built up to form the windshield and to enclose the pilot's compartment.

THE hull structure must serve two purposes: it must act as a sort of monocoque fuselage and must also serve as a boat structure. In the first case the forces due to the weight of the hull and its contents must be carried through the various members into the wing struts, from which comes the supporting force. Since these struts are attached at bulkheads 3 and 4, the whole structure can be considered as a sort of beam supported at these points and loaded at the various bulkheads. Under these conditions, the loads are carried into the keel members by means of the floor structure and from there into the bulkheads. The longitudinal stiffeners, in addition to taking their share of the tension and compression loads induced by the bending moment on the hull, serve to keep the skin from buckling or failing under the shear stresses imposed on it. They are themselves held in place and strengthened by the belt frames, which are not directly attached to the skin at any point.

In riding heavy seas, conditions are to be encountered in which the hull is supported by the wave crests, either at the center or near the two ends. These floating conditions are used in the analysis for ship hulls, but the "Commodore" is the first commercial flying boat in which the hull design has included a detailed analysis of these conditions. This analysis was first made by Mr. Roy A. Miller for the "XPY-1" flying boat, the Navy patrol plane which was the forerunner of the "Commodore."

The construction of the floats resembles that of the hull in many respects. They are made with two watertight bulkheads, to which the attachment fittings are riveted. Beltframes are used to support the longitudinal members. Vertical and diagonal members on the center line form a truss having the full depth of the float. Handholes in the deck plating are provided with removable watertight covers. Each of the three watertight compartments can be drained by means of a plug screwed in at the lowest point on the bottom.



WING SPARS OF THE "COMMODORE"
The web system used is of the Warren truss type.

(*Continued on page 158*)

The Construction of an All-Metal Flying-Boat

(*Continued from page 136*)

THE "Commodore" wing, which is of normal two-spar design, is braced with Warren type trusses in the planes of the front and rear spars. The structure is braced against unbalanced loads by means of tie-rods extending from the hull center-line fitting to the center-section end fittings. Crossed tie rods, in fore-and-aft planes brace the outboard floats against loads in the drag direction.

The wing is made in three panels, an 18-foot center section and two outer panels, each 41 feet in length, making a span of 100 feet from tip to tip. The chord is constant at 138 inches, there is no sweep back, and the outer panels have 2 degrees dihedral. With the exception of the diagonal drag bracing, all the main structure is of duralumin.

The spar design was developed as a result of a static test on an outer panel front spar. From this test, design methods were developed which could be applied to other spars of similar construction; that is, reliable methods were determined for computing the actual and allowable stresses. The compressive strength of each type of web member was also determined by static test. In order to duplicate as nearly as possible the actual working conditions, each test specimen was riveted between two short lengths of bulb tee section just as it would be in the actual spar.

In the center section, the presence of gasoline tanks which occupy most of the space between spars, makes the use of the usual strut-and-wire-drag bracing impracticable. A metal covering of sufficient strength and rigidity to carry the drag shears was therefore designed for the upper surface of that portion of the wing, between spars only. It consists of a corrugated duralumin sheet having the corrugations parallel to the spars, with a smooth sheet of the same material riveted to the outer surface. Additional stiffness was provided by a number of extruded duralumin angles running normal to the spars. The lower spar flanges are given lateral support by four longitudinal members which act as supporting beams for the gas tanks. The metal covering also serves as a walk-way over the center section.

The "Commodore" ribs are of the truss type and are made up as a unit, *i.e.*, the cap strips are continuous over both front and rear spars. Both the cap strips and the trussing are formed from a special channel section having the outstanding legs flanged in. This section, which is drawn from .020 duralumin strip, combines the advantages of comparative cheapness with good structural efficiency. It is also adaptable to a simple type of joint made with standardized duralumin forgings.

G. Garner Green and F. R. Shanley are two of the junior members of the Consolidated Aircraft engineering staff. Mr. Green is a graduate of the Aeronautics Department at Stanford University; Mr. Shanley was graduated from Penn State as a Mechanical Engineer. They have worked on the design and structural analysis of the "Commodore" throughout its development, under the supervision of Mr. I. M. Laddon, the designer.

THE control surfaces, like the wing panels, are of fabric-covered, duralumin construction. The aileron spars are of the truss type with plane angle chord members and light channel web members. Torsional strength and rigidity is provided by a box-like structure of duralumin sheet, suitably stiffened with bulkheads. This box structure is shaped to give the aileron the desired nose contour. A structure of this type is very convenient for the Frise type aileron used on the "Commodore." The ribs consist of formed, channel section cap-strips and zee-section vertical web members.

The design of the stabilizer, elevator and rudder, which are externally braced, is essentially the same. The front and rear elevator spars are of the truss type, built up of extruded sections. The torsion members of both the elevator and the rudders are box sections constructed of duralumin sheet. The ribs are similar to those used in the ailerons.

The fabric-covered, metal-structure type of construction used in the "Commodore" wings and control surfaces has several distinct advantages over all-metal construction, particularly as applied to externally braced structures. In such designs, a stiff covering is not usually required as a means of obtaining torsional strength and rigidity so that unless the metal covering can be made to resist some of the bending moment, as it is not, in most cases, it is just so much excess baggage. The stresses due to drag loads can be handled much more efficiently by the usual tie-rod drag bracing. In nearly every case, the fabric-covered structure can be made lighter than the corresponding metal-covered job. Then, the fabric-covered wing can usually be built more easily and cheaply. Metal-covered wings nearly always entail an excessive amount of riveting, some of which is sure to be difficult, laborious and expensive. Another important advantage of fabric-covered metal wings over the all-metal type is the greater ease of inspection inherent in the former type. When the fabric is replaced, as it should be at certain intervals, or after a crack-up, the structure can be given a thorough examination for minor failures that could not be observed from the outside, deterioration of the protective coating, and corrosion. With the usual type of metal-covered wing such an inspection is difficult or impossible. This feature should be seriously considered by aircraft operators, who are primarily concerned with the safety of their passengers and the durability of their airplanes.

Frank Goldsborough, 19-year-old world's champion Junior pilot, dropped in at the Consolidated airport, Military road, Friday after a flight from New York. The boy aviator was greeted by R. W. Fulton, manager of the airport.

BUFFALO EVENING NEWS:

JUNE 6, 1930

FLEET AIRCRAFT PLANT IS NEARING COMPLETION

Construction of the new Fleet Aircraft company of Canada plant in Gilmore road, Fort Erie, has been virtually completed and work has been commenced on four Fleet training planes, the first to be turned out by the new concern, which is a subsidiary of the Consolidated Aircraft corporation, 2050 Elmwood avenue, Buffalo.

A force of 25 men, some from the Buffalo plant, is at work and this number will be increased as business warrants, according to William J. Sanderson, president of the company and general manager of the plant.

32-PASSENGER FLYING BOAT TO BE LAUNCHED

Buffalo News 6/7/1930

Notables Invited to Attend Special Event Tuesday.

When the cream and scarlet hull of the new 32-passenger Commodore flying boat, recently built in the Consolidated Aircraft corporation plant, 2050 Elmwood avenue, is lowered into the waters of the Niagara river Tuesday, the largest craft of its kind ever constructed in America will have been launched.

Col. Charles A. Lindbergh and other notables of aeronautics have been invited to be present at the ceremony by Maj. Reuben H. Fleet, president of the Consolidated company. William P. Stout, William B. Mayo and Capt. F. T. Courtney of the Ford-Stout Motor company are among those expected to attend.

The new Commodore has been built to carry an unprecedented useful load and to fly with full load on either of its two motors. The craft is for delivery to the New York, Rio & Buenos Aires Line, Inc., and will be placed in service in international runs in Latin and South America in competition with new large planes being developed in France and Germany.

The exact time of the launching and christening ceremony has not been decided.

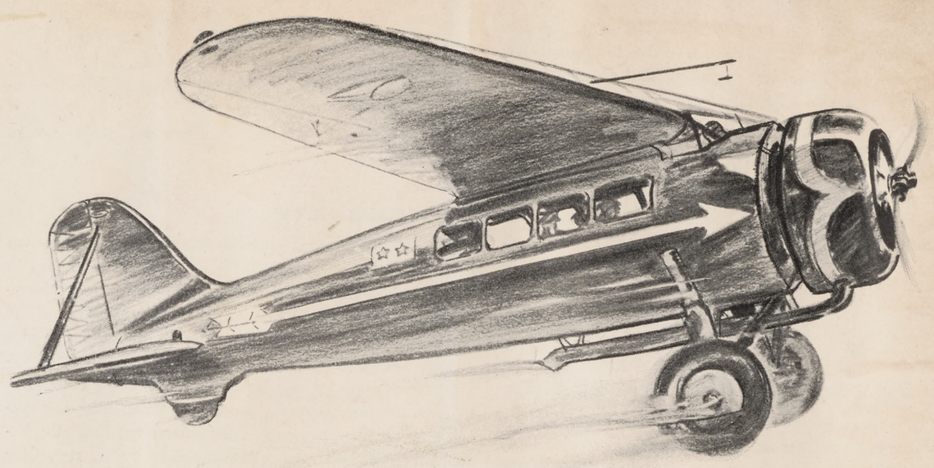
Consolidated Fleetster of the New York-Buenos Aires Line.

MAY, 1930 **Price, 25c**

The National Aeronautic Review,
May, 1930.



CLAYTON KNIGHT

J.E. Fechet
Maj Gen'l AC
Chief of U.S.

THE FLAGSHIP of the Flying Fleet, this trim Fleetster was the plane used by Major General J. E. Fechet, Chief of the Army Air Corps. It is sketched here as it appeared above the Army air maneuvers at Sacramento. The artist is Clayton Knight, whose personal story of the demonstration appears in this number.

Canadian Air Review - May 1930

Production will be started May 1, by the recently organized Fleet Aircraft of Canada, Ltd., in its new plant at Fort Erie, Ont., according to company officials.

The Canadian company is an entirely separate organization from the Fleet and Consolidated companies of the United States, and the Fleet sport plane of the new plant will be manufactured under a Canadian Airworthiness Certificate. The company has been organized with a Dominion charter in Canada and is financed by Canadian as well as American capital.

The new plant is constructed of brick and steel and follows present practice in the daylight type of construction. All factory machinery will be of the newest type of construction systematically installed to facilitate the output.

For the first year the plant will be used exclusively for the manufacture of the Fleet Model 2 sport plane for both land and water use.

W. J. Sanderson, an official of the new company, is at present on a sales and demonstration tour covering most of southern Canada.

Although the Fleet has been on the American market only thirteen months it has assumed a position of leadership among planes of its type. During the past year more than 200 were sold and placed in daily use by training schools and individuals over the country.

Airway Age - June 1930

PRODUCTION was started May 1 at the new plant of Fleet Aircraft of Canada, Ltd., Fort Erie, Ontario. Model 2 sport planes are to be made exclusively for the first year.

Buffalo News - 6/12/1930

GIANT FLYING CRAFT TO TAKE AIR HERE

32-Passenger Air Liner to Rise from River Wednesday.

In the presence of many notables of the aviation world, the largest flying boat ever constructed in America, with a capacity of 32 passengers, will be launched Wednesday in the Niagara river. It is the latest type Commodore and will be used by the New York, Rio and Buenos Aires Line, Inc., on Central and South American runs. Delivery will be made soon by the Consolidated Aircraft corporation, 2050 Elmwood avenue, builders of the craft.

Although Col. Charles A. Lindbergh was invited to be present by Maj. Reuben H. Fleet, president of the company, it is still doubtful as to whether or not he will be able to come. Railway and aviation officials from Canada and Ford-Stout executives are expected. Among the latter will be William P. Stout, designer of the Ford all-metal airplane, William B. Mayor and Capt. F. T. Courtney.

A definite time for launching of the 32-passenger air liner has not been set, but the ceremony will take place during the afternoon. Demonstration flights will be made Thursday.

SEAPLANE LAUNCHING PLANNED LATE TODAY

Buffalo News - 6/11/1930

Last Adjustments Made on 30-Passenger Craft.

Last minute adjustments delayed the launching of the first of the new 30-passenger Commodores, the largest seaplane to be placed in service on any air line in the world, until late afternoon, it was announced Wednesday by Lawrence J. Bell, general manager of the Consolidated Aircraft corporation, builders of the craft.

The new ship exceeds in size any seaplane thus far produced by either Germany, France or England and gives the United States first place in operation of super seaplanes in South American service. Its launching follows two years of experimental work by the Consolidated engineers. Although foreign designers have been working for almost three years to perfect a plane of this type, they have not placed anything comparable in service, it is declared.

It is a development of the present 22-passenger Commodore now in use on the New York, Rio and Buenos Aires Line, Inc., and has been constructed to compete for foreign markets and international trade. Following the launching, demonstrations of the plane will be made Thursday, after which it will be delivered to the NYRBA line.

The new ship differs in its accommodations from the present Commodore in that passengers will enter it from the front. The salon-de-luxe seating six, is forward, with three regular eight-passenger compartments behind it. Two day beds are part of the equipment. The ship has two Pratt & Whitney Hornet motors.

Million Dollar Plane Order Is Received by Buffalo Firm

Buffalo Evening News — June 16, 1930

Consolidated Aircraft Corporation Will Build 71 Army Observation Airplanes for U. S. Government.

The Consolidated Aircraft corporation, 2050 Elmwood avenue, has received a repeat order from the United States government for 71 army observation airplanes at a cost of more than $1,000,000 through a wholly-owned subsidiary, the Thomas-Mrse Aircraft corporation, it was announced Monday.

The company is now working on a similar order for 71 Thomas-Morse observation planes, and with the present contract, it was announced that the United States army has standardized on this type of observation plane.

The new order, with spare parts, comes to $1,018,126. Deliveries on the first order are now being made at the rate of 20 airplanes a month, and will be completed in August or September, from which time the new contract will occupy this division of the plant until the end of the year.

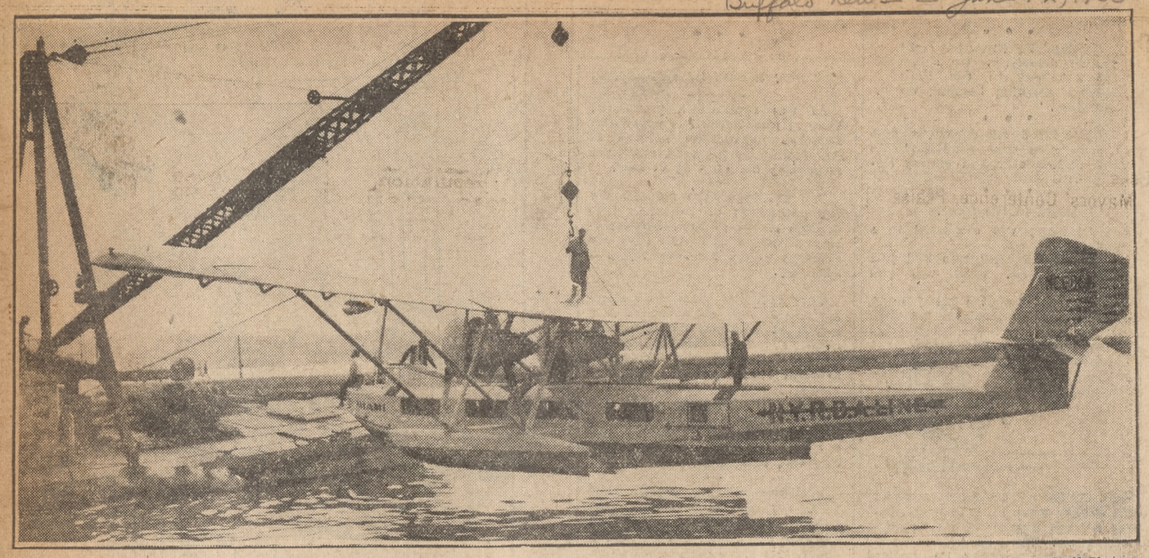
The planes are made under patents owned by Thomsa-Morse Aircraft, which was purchased by Consolidated Aircraft late in 1929. Of all-metal construction, the planes are of the semi-monocoque type originated by this company.

They will be powered by 425-horsepower Wasp motors, which the government will purchase from the Pratt & Whitney Aircraft company of Hartford, Conn.

Employment at the Consolidated Aircraft plant is now running at about 850 men, or considerably higher than at this time a year ago, although it is lower than the peak of about 1200 men reached during November and December, 1929.

— Launch Largest Plane Here

Buffalo News — June 12, 1930



—Evening News Staff Photo.

The Miami, largest flying boat ever constructed in the United States and latest addition to the New York, Rio and Buenos Aires Line, Inc., fleet, was launched from the arm of a giant derrick scow in the Niagara river at the foot of Austin street, Wednesday evening. The great 33-passenger craft made a brief flight and was anchored for the night. It was built by the Consolidated Aircraft corporation of Buffalo.

Nyrba and Seaboard Arrange Air-Rail Service

Aviation 6/7/30

NEW YORK (N.Y.)—Air-rail passenger service between this city and Buenos Aires, with arrangements for transfer of passengers from connecting lines serving the principal cities in the United States. For the present, NYRBA line will P. MacCracken, Jr., chairman of NYRBA line. The main feature of the new service is a reduction of 1 hr. 45 min. in the scheduled time of the New York-Florida Limited on the Seaboard Air Line Railway, so that it makes connections with NYRBA planes at Miami. Passengers will leave here at 6:40 p.m. Tuesdays, arriving in Miami at 8:30 Thursday mornings, and will be transferred immediately by motor bus to planes at Coconut Grove. The total time required to reach Rio de Janeiro will be eight days, and Buenos Aires may be reached in one day more. Connections will also be made with branch lines to Chile and Bolivia.

Co-ordinated passenger service has also been arranged with T.A.T.-Maddux Lines, Pennsylvania Railroad, Louisville & Nashville Railroad, Richmond, Fredericksburg & Potomac Railroad, and other lines. Through tickets to any point in the West Indies or South America will be sold by all these agencies, and northbound passengers may also arrange to buy tickets through to any of the principal cities in the United States. For the present, NYRBA line will continue to operate on a weekly schedule. In anticipation of increased traffic, two more Commodore flying boats have just been put in service, bringing the total number to nine, and five more are ordered.

REMOVING TRADE BARRIERS
TO
LATIN AMERICA'S BILLION DOLLAR MARKETS

VIA NYRBA'S GREAT SEAGOING AIRLINERS

PROVIDING the fastest and most comfortable way anywhere South, Nyrba's great seagoing airliners, operating over the world's longest single airline, save weeks of tedious travel time . . . reach Rio de Janeiro in 7 days and Buenos Aires in 8 days from the United States.

Rapid, direct passenger and express service is in operation to and from all parts of the United States and Canada, the West Indies and South America, in conjunction with the T. A. T.-Maddux Air Lines, the vast network of the Pennsylvania Railroad, the Seaboard Air Line Railway, and connecting and associated railroads. Train-to-plane direct transfer at Miami, (from whence Nyrba Airliners speed Southward), eliminates all delay.

For the first time in the history of our trade with Latin America, her most distant capitals are brought as near to us by Nyrba as Florida is to Oregon by rail—6½ days from Buenos Aires—5½ days from Rio to the United States. Exporters' representatives can now cover, via Nyrba, the entire Latin American market in 75 days . . . with 50 days local residence . . . as compared to 234 days required by existing lines of surface travel. In addition, Nyrba's local agents will cooperate in arranging itineraries and appointments in advance.

The West Indies and the East Coast region of South America, served only by Nyrba Air Lines, represent 75% of the population and 72% of the wealth of the billion dollar markets known to exporters as South America

AIR MAIL FROM SOUTH AMERICA
Providing fastest air mail service to the United States from Buenos Aires, Montevideo, Santos, Sao Paulo, Rio de Janeiro and all principal East Coast cities, Nyrba service saves days and weeks for important business correspondence. To keep in closer contact with your Latin American markets, speed orders and increase sales—instruct your South American agents to expedite their mail, orders, reports via Nyrba Air Mail.

They also expedite customs clearances and air express deliveries.

Exporters are urged to use Nyrba Air Express, which is provided on the fast air mail schedules, for the rapid delivery of samples, parts, and the many urgent articles commonly shipped by express at home but which have heretofore required weeks in transit to South America.

Nyrba's $2,500,000 fleet includes seagoing airliners on the through route, and an auxiliary fleet for passengers, mail and express between cities that are intermediate, or tributary to the through route. Nyrba airliners are the finest transport planes ever designed, and combine the utmost in travel speed, comfort and convenience. Flying low, in daytime only, they afford a bird's-eye view of the entire route. Always over a landing field assures safety. On your next trip South, travel via Nyrba. Expedite orders by air mail from South America. Speed up sales by Air Express.

PASSENGER SERVICE—TRADE EXTENSION TOURS
For full information apply to any principal office of Nyrba Air Lines; Pennsylvania Railroad, T. A. T.-Maddux Air Lines, Seaboard Air Line Railway and associated railroads.

Largest U. S.-Built Flying Boat Launched From Niagara River

Buffalo News June 12, 1930

Miami, 33-Passenger Seaplane for New York, Rio Service, Undergoing Exhaustive Tests Today.

Just at dusk Wednesday evening the largest flying boat ever built in the United States roared over the waters of the Niagara river and rose on its maiden flight. It was the Miami, 33-passenger seaplane, designed for Central and South American service with the New York, Rio and Buenos Aires Line, Inc., and manufactured at the Consolidated Aircraft corporation plant, 2050 Elmwood avenue.

The Miami is the tenth Commodore-type seaplane to be delivered to the NYRBA line. The others are in regular service along the coast of South America and between Florida and Cuba.

The launching of the flagship, the Miami, took place shortly before 8 o'clock in the river at the foot of Austin street. This giant craft carries ten more passengers than any of her predecessors.

Exhaustive flight tests were being made Thursday by William B. Wheatley, chief test pilot for the company, who lifted the sky liner into the air for the first time Wednesday.

Mechanics worked on the ship until the last minute before the launching. It taxied at an angle across the river and out of a smother of spray rose into the air after a run of only 20 seconds.

Tragedy was narrowly averted as the leviathan took the air. A tiny motorboat stalled beneath the prow of the scow which started to steam downstream after lowering the seaplane into the water. Not until it was within a few feet did the owner's frantic efforts to crank the engine bear fruit. He sped away just in time.

The interior of the newest Commodore is the latest word in transportation vehicle decoration. The forward compartment seats six passengers and is equipped with two day beds. Behind this are three eight-passenger compartments, furnished luxuriously. There is a buffet, radio room and wash room. The ship carries a crew of five.

High speed of this new craft, powered with two Pratt & Whitney 575 horsepower Hornet engines with NACA cowling, will be 145 miles an hour. Cruising speed is about 110 and the ship lands at 55 or 60 miles.

Come Here for Army Plane

Buffalo News 6/19/1930

Maj. Gen. James E. Fechet, left, and Capt. Ira Eaker, pilot on the endurance plane Question Mark, photographed just before hopping off from the Consolidated Airport yesterday afternoon for Washington.

ARMY AIR CHIEF FLIES HERE TO ACCEPT PLANE

Returns almost immediately to Washington in ship built in Buffalo

Maj. Gen. James E. Fechet, chief of the United States army air corps, accompanied by Capt. Ira Eaker, flew to Buffalo yesterday afternoon, from Washington, to accept delivery of a passenger plane, built by the Consolidated Aircraft Corporation for the air corps. The two officers arrived at the Consolidated airport at 4 p. m. and after a short inspection of the Consolidated plant, hopped off for Washington in the new plane at 5.10 p. m.

The new plane has accommodation for seven passengers and a pilot. It will be for the personal use of Maj. Gen. Fechet. Its first service will be to carry Trubee Davidson, assistant secretary of war, to the dedication of Randolph field, San Antonio, Tex., at the end of this week, Gen. Fechet said.

A similar plane, for the use of Mr. Davidson, nominal head of army aeronautics, is under construction and will be delivered to the war department around July 1st, Ray Whitman, assistant general manager of Consolidated, announced yesterday.

FLEET

Uses

HEYWOOD STARTER

This beautiful de luxe Fleet selected by and delivered to the Hon. David S. Ingalls, Assistant Secretary of the U. S. Navy for Aeronautics is, like other Fleets, equipped with the famous Heywood Starter.

A long list of prominent private plane owners as well as leading aeroplane manufacturers select the Heywood Starter because of its ease of operation, its consistent dependability under all conditions and because of the great convenience afforded in starting from the pilot's seat.

The injection fuel principle—light weight—few moving parts—are some of the features of this most effective Starter.

Write for complete information.

SWIFT TRIP OF TREATY ACROSS U. S. COSTS LIFE

Army flier, escort for Japanese pact, crashes in blizzard

Mitchel Field, Oct. 16 (AP)—Carrying documents signifying Japan's ratification of the London naval treaty, Lieut. I. E. Woodring landed here tonight after a transcontinental journey by air from Victoria, B. C.

Lieut. Woodring arrived in a plane piloted by Lieut. Stanley Olmstead of Mitchel field, due to dangerous weather over the Alleghanies, the official messenger forsook at Cleveland the army pursuit plane in which he made most of the trip and transferred to the safer "Fleetster" ship piloted by Lieut. Olmstead.

The documents will be placed aboard the liner Leviathan, which sails Saturday for Southampton. The swift trip across country cost the life of one man, Lieut. William W. Caldwell, piloting an escort plane, who crashed in a blizzard near Lookout, Wyo., yesterday.

Crushed and broken in the wreckage of his plane, Caldwell's body was found today on a hilltop near Lockout in the rugged country, 70 miles west of here. It was apparent his plane had plunged to the ground at terrific speed during weather characterized by veteran mail fliers as "zero-zero"—no ceiling and no visibility.

Caldwell's flying companion, Lieut. Irving A. Woodring, whose plane bore the document of Japanese ratification of the London naval treaty, made his way through the storm and continued on his mission to New York from Victoria, B. C.

Army officers from Fort Francis E. Warren claimed the body of the dead airman.

Lieut. Woodring also was lost in the swirling snowstorm that cost his companion's life, but was able after two forced landings to make his way here. Bearing the valuable document, Woodring took off for the East early today.

The wreckage of Caldwell's plane was discovered by Ray W. Meskimen, air mail pilot, who sighted it from the air and reported to officials here. John Cable and Pat Gossett, air mail pilots, landed a searching plane a few feet from Caldwell's wrecked ship. They said the ground was level and a safe landing could have been made if there had been visibility.

A pump station operator about a mile and a half from the scene of Caldwell's crash timed the tragedy at about 2.20 p. m. yesterday.

Die Rationalisierung des Flugzeugbaues muß ebenso wie in anderen Industriezweigen die Verminderung der Verluste bei der Erzeugung herbeiführen. Die Ursachen dieser Verluste, in Amerika treffend mit „industrieller Vergeudung“ bezeichnet, müssen erkannt sein, ehe man an die Rationalisierung gehen kann. Nach den Ausführungen des Vortragenden lassen sich die Verluste drei großen Gruppen zuordnen: Verluste durch Maßnahmen der Auftraggeber, durch Eigenarten der Konstruktion und durch Eigenarten der Fertigungsstätten. Für den Flugzeugbau gibt es Arbeit erst nach langen Verhandlungen, dann aber mit sehr kurz bemessenen Lieferfristen, so daß etwa während 3 bis 4 Monaten mit Hochdruck geschafft werden muß. Dann leeren sich die Werkstätten wieder für Wochen und Monate. Das Wirtschaftsjahr des Flugzeugbaues besteht aus einer Aneinanderreihung von Zeiten scheinbarer Hochkonjunktur und wirtschaftlicher Depression. Die Sorge der Werkleiter gilt in viel höherem Maße als der Erledigung der Aufträge zuträglich ist, den Maßnahmen zur Ueberbrückung arbeitsarmer Zeiten. Die dadurch den Werken entstehenden Verluste müssen die Auftraggeber letzten Endes in Form von hohen Preisen bezahlen. Eine bessere Verteilung der Aufträge über das Arbeitsjahr liegt daher im Interesse der Auftraggeber, die natürlich auch durch Zufälle in ihrer Beweglichkeit behindert sind. Eine andere Ursache der Unwirtschaftlichkeit ist der zu häufige Bau von neuen Mustern. Auf drei bis vier Flugzeuge kommt durchschnittlich eine Neukonstruktion. Eine Zeit von 10 bis 18 Monaten zwischen Beginn der Verhandlungen und Lieferung eines Musterflugzeuges ist keine Seltenheit. Verzögernd und verlustbringend wirken sich veränderliche Entschlüsse des Auftraggebers während der Konstruktion, bei Beginn des Baues oder gar während desselben aus. Und zwar in einem höheren Maße, als in den Kreisen der Auftraggeber im allgemeinen angenommen wird. Da erfahrungsgemäß für den Preis eines Musterflugzeuges einschließlich der Konstruktionskosten 2 bis 3 Nachbauflugzeuge herzustellen sind, liegt in der Beschränkung des Baues neuer Muster eines der wirksamsten Mittel der Rationalisierung.

Aerodynamisch und statisch hoch entwickelte Flugzeuge erweisen sich meistens teuer in der Herstellung. Daraus darf man aber nicht folgern, daß eine Verbilligung der Herstellung zwangsläufig zu nicht tragbaren Verlusten an Flugeigenschaften führen muß. Bei einer relativ geringen Erhöhung des Flugwerkgewichts lassen sich durch Vermeidung teuerer Einzelheiten und Montage wesentliche Ersparnisse an Baukosten erzielen. Verwendung vieler gleicher Teile, Verminderung der Werkstoffarten und Halbzeugabmessungen, Verminderung der Maßgenauigkeit und Oberflächenbearbeitung usw. sind Möglichkeiten der Rationalisierung bei der Herstellung der Einzelteile. Vorrichtungen verbilligen den Zusammenbau. — Zum Schluß sprach der Vortragende über Grenzen und Zweckmäßigkeit der Rationalisierung und führte aus, daß ganz allgemein eine Rationalisierung, die zur Verminderung des Durchschnittseinkommen der Arbeiter und Angestellten führt, niemals eine wirtschaftliche Gesundung der Gemeinschaft bringen wird. Sie ist auch dort zwecklos, wo nicht das ganze Werk einer Rationalisierung unterzogen wird, wo den leitenden Persönlichkeiten die Initiative fehlt und nicht die Sicherheit besteht, daß die Neuordnung der Dinge im Werke erhalten bleibt. Der Vortragende schloß mit den Worten Hoovers: „Während wir allgemein glauben, daß große Fortschritte in der Lebenshaltung durch umwälzende Erfindungen herbeigeführt werden, findet man eine weit größere Ursache für solche Fortschritte in der ständigen Ausmerzung von Vergeudungen in unserer Wirtschaft“.

(Fortsetzung folgt).

NEUE FLUGZEUGBAUTEN

Consolidated Fleetster Type 17 und Type 20.

Die Auswertung der vom National Advisory Committee for Aeronautics in Amerika konstruierten und erprobten Verschalung für Sternmotore hat in Amerika zu neuartigen Rumpfkonstruktionen geführt, welche sowohl bei Verkehrsmaschinen, als auch bei Sportflugzeugen Eingang fanden. Diese Verschalung (kurz NACA-Verschalung genannt) besteht aus einem über den ganzen Sternmotor gezogenen Hohlring aus Aluminiumblech, durch welchen die Kühlungsluft um die Propellernabe zu den Zylindern eintritt und zwischen dem Rumpf und dem auf Stützen montierten Ringmantel wirbelfrei entlang des Rumpfes abströmt. Durch Anwendung der NACA-Verschalung wurde

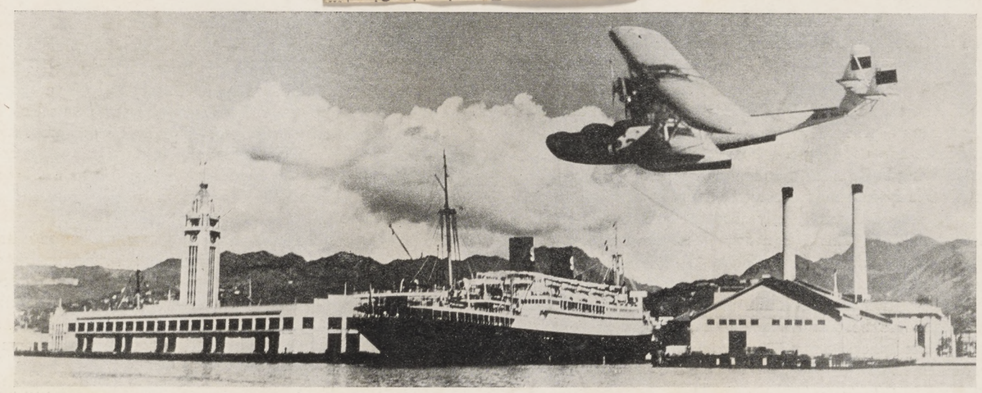
Prospective Broadcasts Give Unusual Significance to September Show

The radio, not so long ago regarded as merely a medium of amusement, has come to take its place with the telephone and the motor car as virtually a necessity of modern life, for without it one finds difficulty in keeping abreast not only with a rich variety of delightful entertainment but also with much that is distinctly worthwhile in modern culture and in national, international and world events. This present-day trend gives especial significance to the eighth annual Radio Show, opening on Monday, September 26th and continuing until the following Saturday, and occupying the entire ninth floor of the Mount Royal Hotel, with entrance through the eighth floor.

Here will be assembled in attractive guise the very latest inventions and the most artistic models of an industry which in its short history has made unprecedented strides, and in which almost daily advances are being shown. Never before has investment in a radio been so justified, from the two standpoints of perfection of the product and its usefulness in permitting its possessor to follow the momentous happenings of the coming year. The closing weeks of the [illegible]



PEARL HARBOR LOOKED GOOD TO THE NAVY FLYERS

THE SIX NAVY CONSOLIDATED PATROL FLYING BOATS, EACH PROPELLED BY TWO WRIGHT *Cyclone* ENGINES, COMPLETED THE FIRST SUCCESSFUL SEAPLANE FLIGHT FROM SAN FRANCISCO TO HONOLULU AND ALSO THE LONGEST MASS FORMATION FLIGHT IN AVIATION HISTORY—2,414.8 MILES

In Formation to Honolulu

LIEUT. COMDR. L. D. WEBB, U.S.N.

ALL HONOLULU roared and screeched with the din of welcome at noon on January eleventh as six giant Navy seaplanes, under the command of Lieut. Comdr. Knefler McGinnis, loomed out of the northeast, thundered past the frowning battlements of Diamond Head, then over the glittering sands of Waikiki to dip in salute to the city and glide to a landing in the peacefully placid waters of Pearl Harbor. Their last contact with the earth was in San Francisco and 24 hours and 45 minutes of tough flying lay behind them, all of it in military formation. The occasion was the transfer of Patrol Squadron Ten from San Diego to its new base at Pearl Harbor. Just that and nothing more! Its accomplishment was a triumph of precision and organization, and resulted not only in the first successful seaplane flight to Honolulu but in the longest mass formation flight in aviation history.

The flight really began months ago in Norfolk, Va., where the squadron turned in its old type airplanes and was equipped with P2Y1 long-range flying boats, built for the Navy by the Consolidated Aircraft Corporation, of Buffalo, N. Y. After receiving the new airplanes and getting rid of all the bugs

Commander of Patrol Squadron Ten

usually found in newly built equipment, the squadron flew to Panama, thence up the west coast to San Diego. There they flew for a while with the fleet.

On January 9th preparations for the Honolulu flight were complete and the Squadron took off for San Francisco, there to refuel and await orders to proceed. In the lead plane with the squadron commander flew Admiral David F. Sellers, Commander in Chief of the U. S. Fleet. He made the flight to San Francisco to ascertain for himself the capabilities of the new long-range flying boats.

At San Francisco the airplanes were fueled and provisioned. Engines and propellers were given a final inspection, every detail of equipment was tested and made ready for the big adventure. On the morning of January 10th weather conditions along the route appeared to be favorable and a takeoff was ordered at noon. Here was the real problem of the flight, namely, to get the heavily loaded seaplanes into the air. There was no wind to help the takeoff and the waters of Paradise Cove glistened like a mirror in the bright sunlight. A beautiful sight and grand conditions for everything except the immediate task in hand.

THERE WAS NO WIND, but the Navy had prepared for that eventuality and proceeded to make an artificial gale to help the big airplanes into the air. Ahead of each plane two smaller flying boats taxied at high speed on the surface of the water in an attempt to blow them off. It was a slow process but it worked, and after a delay of about two hours the squadron swung into formation and headed out through the Golden Gate on its way to Honolulu.

Its destination was relatively a pinpoint in all that broad expanse of sea which is the Pacific Ocean. Moreover, the pin-point was 2,414.8 miles away and the distance had never before been flown by a seaplane. To assist the airplanes in the event of trouble and furnish radio bearings when needed, six ships were stationed along the route at intervals of from 300 to 400 miles. These ships, in the order of their positions from San Francisco, were the *Sandpiper, Schenck, Breese, Whippoorwill, Wright* and *Pelican*. None of these ships was needed for rescue work but they served to aid the flight with radio bearings and to keep an anxiously waiting world informed of the progress of the flight which hour after hour went forward with clocklike regularity.

LEAVING THE GOLDEN GATE at 2:25 P.M. in clear weather, the squadron set its course for the first station ship, the *Sandpiper*. At first the skies were clear but in a little while small tufts of low-flying clouds appeared. This boded ill for the long night hop ahead, and so it proved to be. At 5:52 P.M. the squadron passed over the *Sandpiper,* 300 miles at sea. Darkness came at 6:30 P.M. and at 7 o'clock the squadron ran into fog. The flyers dived to the surface of the sea hoping for clearer atmosphere there, but it was just as thick down there, so they climbed back to their cruising altitude and started flying blind.

By 7:30 P.M. the fog was a solid bank and the squadron opened out into sections for greater safety. For a time the airplanes were invisible to each other and became separated in the swirling mists. All continued on their assigned course, however, and kept in contact by radio. Fog continued and the pilots were forced to fly for long periods by instruments alone, depending upon the mechanical brain in the gyro directional instruments to tell them when their planes were flying straight and level. An occasional glimpse of the stars would make them think that the fog was now behind them, but in a moment or two it would come in as thick as ever.

At 8:30 P.M. the destroyer *Schenck* radioed to the squadron "You are bearing 61 degrees true from me do you desire searchlight?" McGinnis replied, "Turn on searchlight and train in northeast sector we are flying in fog." At 9:15 P.M. the squadron passed over and sighted the *Schenck,* then continued on its way through the mists. The fog continued until about 2:30 A.M., but the pilots and their well-trained crews were equal to the task and continued on, boring through the darkness, checking their radio bearings and watching for the next station vessel, the destroyer *Breese*. For a time plane number 10-P-5, piloted by Lieut. Jack Perry, was separated from the squadron and to the rest of the outfit he was "lost." However, in a short time he regained his position and radioed that he had rejoined the squadron.

THE FOG BEGAN TO DISSIPATE at 2:22 A.M. and the squadron picked up the searchlight of the *Breese* about 1,000 miles from the Golden Gate. At 2:35 A.M. the *Breese* was behind them and the pilots were flying easier in the clearing weather. From then on the picking up, passing and reporting of the various station vessels became a routine affair. Each contact was made as expected, the squadron never was out of position nor off its course, and the listening world marveled at the consistent regularity of its position reports.

At 4:55 A.M. the squadron passed over the *Whippoorwill*. At 6:45 A.M. the moon broke through the clouds and helped the outfit with an horizon, giving the pilots a well deserved break on their final downhill stretch. Daylight finally came after the long fifteen-hour night, made longer than usual because of the squadron's progress westward and owing to the interminable seven hours during which the pilots flew blind through fog.

A light tail wind aided the planes as they raced the last 600 miles down the path of the northeast trades. The sun shone at intervals and the squadron roared on, success within its grasp. While still more than 300 miles out, Lieutenant Commander McGinnis sent a message that thrilled the thousands waiting at the landing place:

> Request permission to land and moor at assigned berths

said he; the first Naval Commander in history to move a full squadron to a distant overseas base and carry out the flight as a routine movement of naval craft, even to the departure, position and arrival reports in customary service phraseology.

The sky around the island had turned to a splotchy gray and low clouds hung on the horizon when the squadron hove into sight northeast of the city. A great shout went up from the waiting thousands where Navy and Army men rubbed elbows with civilians. Honolulu had made it a holiday; and what a holiday it proved to be when the tired and sleepless crews of the six planes at last stepped again on solid earth. Honolulu took these thirty men to its heart with customary Hawaiian hospitality, but all they really wanted was a chance to sleep.

THE INSTANT MCGINNIS STEPPED ASHORE he encountered a microphone. On the other end of that device a breathless world waited to hear what he had to say. Probably no others so anxiously and proudly as the loved ones whose men had ridden the airplanes throughout the long night. In a moment the deep voice of McGinnis was heard.

"We are glad to be here in Hawaii," he said. "We are glad that the long trip is over. It was a good flight, but we ran into heavy clouds last night, despite favorable weather reports. The cloud banks continued until early this morning. On behalf of my command I accept your Aloha greeting. I know they all want to thank you in person for their hearty welcome."

Then he tried to back away from the microphone but the crowd would not let him go, so back to it he went to introduce each member of his own crew.

A proud Skipper, proud of his command!

A roar of laughter greeted Lieut. Hank McRoberts, pilot of 10-P-2, when he answered the cheering of the crowd by shouting: "I want sleep! I'll never go to anybody's home! Who's got a bed in the crowd?"

Pressed for more information, McGinnis said: "We could have gone on to Midway if necessary as we have about eight hours' gas left. There was enough fuel aboard for a 36-hour flight. To me it was just another long all-night hop. We made several all-night hops around San Diego and up the coast of Mexico."

Finally when the shouting and handshaking had subsided, the crews of the six big seaplanes were escorted to their new quarters for a light meal and some heavy sleep. Out in the harbor their

eine 10 bis 15 perzentige Steigerung der Fluggeschwindigkeit durch Verminderung des Motorluftwiderstandes erzielt. Nach den bereits vor Jahren durch die Lockheed Aircraft Corp. in Los Angeles versuchsweise ausgeführten Bauten mit der NACA-Verschalung, wurde dieselbe nunmehr auch bei vielen anderen amerikanischen Flugzeugfirmen eingeführt, von denen wir zwei typische Vertreter herausgreifen wollen.

Die Consolidated Aircraft Corp. in Buffalo, N. Y., die sich bisher fast ausschließlich dem Bau von Schulflugzeugen für die amerikanische Armee und Marine gewidmet hatte, wendet sich nun auch dem Bau von Verkehrsflugzeugen zu und hat ihre Typen 17 und 20 vor kurzem herausgebracht. Konstruktiv sind beide Typen gleich und stellen einen freitragenden Hochdecker mit Metallrumpf und Holzflügel dar. Die Type 17 ist eine reine Verkehrsmaschine, deren trapezoidale, dickprofilierte Tragfläche direkt auf dem Rumpf aufsitzt und den kabinenartig verschalten Pilotensitz vor dem Anblasrand des Flügel untergebracht hat. Der Rumpf ist ein stromlinienförmiger Metall-Monocoque und hat von der Motorverschalung bis zum äußersten rückwärtigen Ende kreisrunden Querschnitt. Er ist aus drei Hauptspanten, an welchen der Tragflügel und das Fahrgestell befestigt sind, zwei weiteren Hauptspanten im Schwanz und einer Anzahl von leichteren Zwischenspanten aufgebaut. An diese Hauptspanten ist die tragende Außenhaut aus Aluminiumblech angenietet, welche überdies gegen lokale Spannungen durch angenietete Längsversteifungen verstärkt ist. Die leichten Zwischenringspanten sind nicht an die Außenhaut, sondern durch Beschläge an den Versteifungen angenietet. Die Außenhaut ist doppelt gewellt und trägt dadurch noch wesentlich zur Versteifung bei. In der Rumpfnase ist auf einem Motorbock aus Aluminiumrollblech und Stahlrohren der Pratt-&-Whitney-Hornet-Motor zu 575 PS aufmontiert. Dahinter liegt der zweiplätzige
tenraum mit Doppelsteuer und die sechspl

RAIL EXECUTIVES FLY HERE FROM U.S.

Flight From Buffalo Undertaken to Test Out Fleetster Machine

THORNTON IS SURPRISE

Deny Presence Here Has Anything to Do With His Resignation—Merely a Coincidence

Flying from Buffalo to St. Hubert Airport to test out the performance of the new Fleetster airplane, four officials of the Pennsylvania Railroad, the president of the H. H. Robertson Company, of Pittsburgh, Pa., and Major R. H. Fleet, president of the Consolidated Aircraft Corporation, of Buffalo, N.Y., remained over night in Montreal, and will return to the American city today, planning to leave St. Hubert Airport about noon.

Interviewed at the Ritz-Carlton Hotel last night, the Pennsylvania officials denied that their flight to Montreal had any connection whatsoever with the future plans of Sir Henry Thornton. J. F. Deasy, vice-president of the central region of the Pennsylvania system, stated that it was merely a coincidence that he and other railway officials should visit Montreal on the day that Sir Henry's resignation as head of the Canadian National Railways was announced.

"The news was a complete surprise to me," he declared, "and I was greatly shocked to pick up a newspaper and read the official announcement soon after our arrival at St. Hubert Airport this morning. Only a month ago I understood that Sir Henry was to remain as president of your National system for at least two or three more years. We have always had great faith in Sir Henry's ability as a railroader."

Mr. Deasy and the other railroad officials explained that their company is a large stockholder in the Transcontinental and Western Air Corporation, operators of Los Angeles-New York air passenger line, and that as this concern contemplated the improvement of its equipment by the purchase of more up-to-date planes, the flight from Montreal to Buffalo was made as a trial test run.

The 370-mile journey from Buffalo to St. Hubert was flown in two hours and 23 minutes and had proved so satisfactory that seven Fleetster 9-passenger planes, having a cruising speed of 150 miles per hour, will be ordered immediately and placed on the coast-to-coast air route within the next month in place of machines being used now having a cruising speed of 116 miles per hour, Mr. Deasy stated.

30 CENTS PER MILE.

Major R. H. Fleet, president of the airplane company, said that these single motor machines are safer and more economical than tri-motor planes and cost about forty per cent. less to build. They may be operated for only 30 cents per mile which compares with 70 cents to $1.40 per mile for a tri-motor. He believes that this will ultimately mean the end of government air subsidies as such a low operation cost will allow air lines to make a profit while providing the public with a safe and comparatively cheap form of transportation.

No Royal Canadian Air Force pilots have lost their lives since the Canadian Government purchased 20 Fleet standard biplanes for training at Trenton, Ont., Major Fleet added, stating that the Canadian factory is situated at Fort Erie, with Jack Saunderson, as president of the Canadian branch.

Harold H. Robertson, president of the H. H. Robertson Company, of Pittsburgh, declared that he had accompanied the party to Montreal to exhibit samples of hangar and shed material manufactured by his firm which has branches at Sarnia, Ont., and Elesmere Port, on the Manchester ship canal, in England. Born in Saint John, N.B., Mr. Robertson was employed by Drummond, McCall and Company, Ltd., and Canada Iron Foundries, of this city, before moving to Pittsburgh to form his own firm. Twenty-one years ago a special asbestos-coated steel, manufactured by this firm, was used in the construction of piers 18, 19, 24 and 25, of the local harbor. The material for the Akron hangar, the largest in the world, and for the Canadian Copper Refineries, at Montreal East, the Noranda, International Nickel, and Consolidated Mining and Smelting plants, was also supplied by this firm.

Those arriving at St. Hubert Airport in the Fleetster machine were: J. F. Deasy, vice-president, central region, Pennsylvania Railroad, with offices at Pittsburgh; R. M. Flocker, general passenger traffic manager of the railroad, also of Pittsburgh; F. D. Davis, general superintendent of Buffalo; Harold H. Robertson, president of the H. H. Robertson Company, of Pittsburgh; Major R. H. Fleet, president of the Consolidated Aircraft Corporation, of Buffalo; and Captain William B. Wheatley, chief test pilot, who was at the controls on the flight to Montreal. The party was met here by Col. Charles D. Young, vice-president in charge of purchases for the Pennsylvania Railroad system, who came to Montreal by train.

DEDICATE NEW PLANT SUNDAY

ARMY FLYERS TO BASE AT MARCH FIELD

PLANS ANNOUNCED BY NINTH CORPS AREA COMMANDER

By FRANK HAVEN

San Diego will become primarily a Navy capital after November 1. This fact adds substantially to the claim that San Diego is truly "The Air Capital of the West."

On that date the Navy gains exclusive possession of the entire area on North Island, with the Army Air Corps evacuating Rockwell Field for March Field at Riverside.

The Sunnyvale air base will be the home of the Army's 19th Airship Squadron now stationed at Langley Field Va., Major General Paul B. Malone, Ninth Corps Area commander, announced today in San Francisco.

The 19th Bombardment Group, GHQ, now at Rockwell Field, had been expected to be sent to the Sunnyvale base, received by the Army in a "swap" for the Army's portion of North Island.

The 19th Bombardment Group will go to March Field at Riverside, Rockwell Field officers said. Part of the station complement will go to Sunnyvale. Whether the Rockwell Aid Depot with its $30,000,000 in equipment will go to Sunnyvale or March Field has not been announced officially.

The Army is scheduled to move the 16th bombardment squadron off the island by October 25. It is said this group will be transferred

(Continued on Page Five)

Adm. King Sees Great Future For Naval Air Base

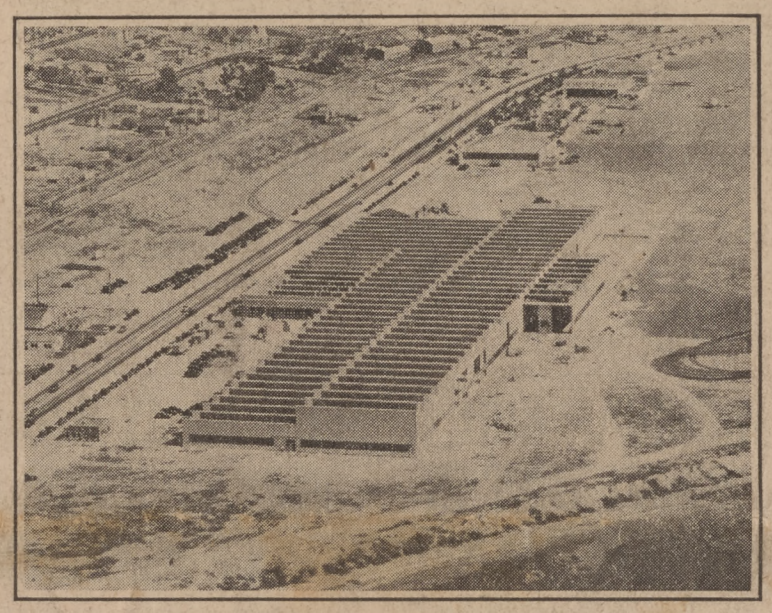
Admiral Ernest J. King, chief of the Navy's Bureau of Aeronautics and former commander of the aircraft carrier Lexington, on a recent visit to this city predicted that San Diego would soon become the greatest air base in the world.

Admiral King, arriving for a week's inspection and tour of Naval Air units, considered the problems of expansion and development of the Navy's new territory on North Island.

After a conference with Vice Adm. Henry V. Butler, commander of the aircraft battle force, and Rear Adm. W T. Tarrant, commandant of the 11th Naval District, he made the statement that the San Diego Base would undoubtedly become the greatest of all air units.

The Admiral devoted part of his stay here in discussing plans for the new field. The completed plans will be presented to Congress for approval and the necessary money appropriations to carry out the great enterprise.

New Million Dollar Plant



Huge, newly completed factory of the Consolidated Aircraft Corporation on Lindbergh Field, now employing 800 men in the manufacture of Army and Naval aircraft for the United States Government

—Photo by H. A. Erickson, "The Flying Photographer"

GROWTH IN AIR TRAVEL CITED IN HUGE 'GAS' ORDER

3,600,000 Gallons of Aviation Gasoline to United Air

Three million six hundred thousand gallons of aviation gasoline ordered by the United Air Lines is news; when it's ordered from a California company it's better news, and to aviators and Californians it's the best news in a long time. It means prosperity and that another heretofore struggling industry has flown into the big time class.

The signing of this contract between United Air Lines and the California Standard Oil company shows new evidence of the importance of aviation in the transportation business and also proves that Americans are becoming more and more "air minded."

Pilots and their ground crews are given credit for the growing popularity of air travel by the United Air Line officials at the airport in Oakland.

One and one-quarter million miles in 7000 hours scheduled flying time is the record of Grover Tyler, who started flying for United in September, 1926. He discussed recently about the "good old days," when flying was in its infancy, with C. B. Hollar, driver of a new stream-lined Standard Oil Co. tank truck. Hollar has been in Standard employ for 25 years.

These two had some interesting stories about aviation in the early days and a mutual respect for the part each has played in aviation's development.

LUXURY LINERS ESTABLISH HIGH SAFETY RECORD

Coursing diverse air routes in North and South America and Europe that call for operations ranging from extreme cold to extreme heat often undergone in a 12-hour period, the Douglas Luxury Liners, manufactured by the Douglas Aircraft Co., Inc., Santa Monica, are delivering a performance to world transport operators surpassing anything heretofore experienced according to figures compiled for first seven months of 1935.

At the present time there are 108

Impressive Ceremony To Mark Inaugural of Huge Lindbergh Field Factory

110 Planes Called For In $9,000,000 U. S. Agreement; First Plane Assembled; 800 Now Employed on Contracts

World famous men and women fliers, aircraft company officials from all over the United States and hundreds of visitors tomorrow will witness formal opening of the new $1,000,000 airplane plant of Consolidated Aircraft Corp., at Lindbergh Field.

Although the plant is now running full blast with 800 men at work, formal dedication has been held off until tomorrow in order that it might coincide with the California Pacific International Exposition's observance of Aviation Day which is expected to draw thousands of visitors to San Diego.

The dedication ceremonies will be conducted with cooperation of the San Diego Chamber of Commerce aviation committee which has been working for about five years on a campaign to bring Consolidated as well as other aircraft manufacturers here.

Officials of the company and visiting celebrities will be entertained at a noon chamber of commerce luncheon at the San Diego hotel. Following this the celebration will be continued at Lindbergh Field with a spectacular air show being staged by Ryan School of Aeronautics.

One of the major features of the day will be the finish at Lindbergh Field of the women fliers' handicap air derby from Grand Central Airport, Glendale, to here. The derby will be participated in by some of the nation's most famous girl fliers as part of the Exposition Aviation Day celebration. Included among them are expected to be Ruth Chatterton, noted film and screen star, and Ruth Elder.

Dedication of Consolidated's plant, said to be the most modern aircraft factory in the United States, will mark, according to Chamber of Commerce officials, the greatest single step forward in San Diego's amazing growth as an aviation center since the inauguration of Lindbergh Field seven years ago.

Major R. H. Fleet, president of Consolidated, says that the first new combat planes being constructed for the army air corps has been assembled and awaits only installation of the engine.

Fifty of these swift fighting planes are being built at a cost of about $2,500,000. In addition the company has contract for 60 ocean patrol boats for the navy to be built under a $6,500,000 contract. The company must deliver the entire 110 planes within 20 months.

To complete these the company estimates that, in addition to the 800 men now working, 1500 must be employed by March 1, 1936, and 2500 by September.

Non-Stop Record Broken By New Giant Seaplane

Completing the trip from San Francisco to San Diego in three hours and forty minutes, the Navy's new seaplane, XP3Y-1, commanded by Lieut. Cmdr. Knefler McGinnis, was brought down on the waters of San Diego harbor Wednesday evening, October 16, at sundown.

The giant new type airplane set a world's non-stop record from Panama to Alameda, Tuesday, when it completed the 3300-mile flight in 34 hours and 45 minutes. This flight is believed to have shattered the mark made by Mario Stoffani, Italy, who this year guided an Isotte-Franschini plane 3063.16 statute miles.

The XP3Y-1, a forerunner of type to be built, was consulted by the Consolidated Aircraft Corporation in its Buffalo plant prior to the removal of the factory to San Diego. Major Reuben H. Fleet, head of Consolidated, expressed himself as highly pleased with the manner in which the plane came through.

The flying boat which has twin motors with retractable wing pontoons, possesses several unique features, one of which is a whale-like elevated tail constructed in such manner as to avoid damage in lighting on rough water. The body being built below the wing, enables a navigator to make observations from an open cockpit.

Those aboard with Commander McGinnis were: Lieut. J. K. Aberill, second in command; Thomas P. Wilkinson, navy pilot; Charles S. Bolka, chief machinist; A. E. J. Dionne and E. V. Sizer, radiomen.

The plane will remain at the naval air station for about 15 days, when it will be turned back to the Consolidated plant for re-checking and final adjustments.

New Flying Hotel Amazes News Writers on Trial Jaunt

By THE FLYING REPORTER
(Special to The Air News)

SAN FRANCISCO, Oct. 18.—"For Rent—Attractive one-room-and-bath apartments aboard flying hotel in transpacific service."

Sounds fantastic? Well, maybe it is, but I have just signed such a lease for three months and, in fact, recently made a trial trip in my new "home" from Baltimore to Washington, D. C., and return.

The flying hotel in question is the "New China" clipper plane built by the Glen H. Martin company for Pan American's transpacific service. On our trial flight it carried 38 passengers, mostly newspaper men and a crew of five.

First of Three

This is the first of three such planes being built by the Martin company and this one is expected to be over the Pacific for test flights within a few weeks. Two others are scheduled to be out of the factory by then. Although no definite announcement has been made Pan-American plans to start regular scheduled flights to China and return some time next spring.

The new clipper is the largest flying boat in the world as shown by the following description:

Capacity: 48 passengers, plus other cargo.

Wingspread: 130 feet; length 90 feet.

Engines: Four "Twin Wasps," each 800 H. P.

Weight: Empty, 25,000 pounds; loaded, 51,000 pounds.

Speed, cruising: 150 M. H. P.

Speed, landing: 65 M. H. P.

Service Ceiling, 18,000 feet. Ceiling on one motor, 6000 feet.

Seats Large and Roomy

The plane has four large passenger compartments, each of which is decorated in a different color. Three of these compartments seat eight passengers each. The seats are deep and roomy. There are 18 berths, longer than a Pullman berth, just as wide, just as high and much softer.

When we began our trial flight aerial stevedores rowed out in boats and untied the lines, warped the ship around in the river and we were off.

The clipper gained speed swiftly on the surface of the water and, without knowing the exact moment we left the water, we were in the air. It was impossible to realize we were flying without looking out the windows. We made the 50 miles to Washington in 20 minutes and the return trip in 20 minutes. As we came in to land there was a sound like the ripping of a piece of canvas cloth, not a jolt but more like sitting down in a soft chair, and we were back from where we started.

Steady As Liner

The trip was mode around 400 feet most of the time. The ship was as steady as an ocean liner and most of us were up and walking around during the flight. We were all newspaper and aviation people who had done a lot of flying but, just the same, we were full of "ohs" and "ahs."

In the pilots' compartment are seats for two pilots and just behind and a little above them sits the radio operator where he can hand them messages without leaving his seat. Back of him is what is called the flight deck where two mechanics are on duty during all flights.

HOWARD HUGHES TAKES OVER HANGAR, OFFICES AT UNION AIR TERMINAL

Complete with an elaborate suite of offices, an entire hangar was taken over at Union Air Terminal recently by Howard Hughes, film producer and sportsman flier, for continued devolpment of his sensational low-wing speedster which the week before had startled the aeronautical world by establishing a new internatonal land plane record.

Immediate repairs to the speed plane began in preparation for Hughes' announced assault on the coast-to-coast air record of 10 hours and 2 minutes now held by Col. Roscoe Turner.

The plane was structurally undamaged and escaped like Hughes himself, virtually unscathed from the spectacular landing in which the noted sportsman, with consummate airmanship, set it down with landing gear retracted on a Santa Ana beet field at conclusion of his speed dash.

New World Record For Land Planes Set By Hughes

Howard Hughes, Los Angeles aviation enthusiast, established a new world's speed record for land planes at Santa Ana, Calif., on September 13th, making seven runs, each ranging from 339.12 miles per hour to 355.38 miles per hour.

The former official world's mark for land planes was held by France and was established on the basis of 314.319 miles per hour.

Hughes was allowed the average of his four best runs, two each way, over a measured course and under the observation of the following N. A. A. officials: Willam J. Enyart, who was in charge; Joe Nikrent and Harold Hitchman, local officers of N. A. A., who were also assisted by a staff of techniccians from the California Institute of Technology.

This map shows area which is to be filled in at North Island by huge dredge now making rapid progress on project. Reproduction, courtesy San Diego Sun.

TWA AIR LINES TO EMPLOY 60 YOUNG WOMEN

Transcontinental & Western Air is now engaged in the selection of 60 attractive young women to act as hostesses aboard ships of this service. The innovation will become effective just as soon as it is possible to complete arrangements.

In commenting on this new service, Jack Frye, president of TWA, said: "This additional service for our passengers is expected to cost annually in the neighborhood of $180,000, but is done with the idea of maintaining the high standards set by our company."

A special training school will be established at the company's headquarters in Kansas City, where the girls will be instructed in all features of air travel as well as in operating details of the company's ships, also in geography, in order to become familiar with the scenery and historical features along the route.

The search is being conducted in the 24 cities served by the airline, including San Diego.

However, girls, there are a few qualifications which are: You must be between 21 and 26 years of age, not over 5 feet 4 inches in height and by a graduate nurse.

24-Hour Service To Europe Visioned By Sea Plane Designer

America today, be in Europe 24 hours later, is the prediction of Igor Sikorsky of the changes in air transportation to take place in the next three years. Sikorsky, world-famous designer of giant airships, on a visit to the base of the Pan-American Clipper of his own design, made fabulous statements about "aviation's tomorrow."

He believes that in the present generation, remote corners of the earth will be closely linked by international air lines. The 24-hour service to Europe by air, he believes will be further reduced to 16 hours in the next ten years, with 40-ton clippers droning a steady, commercial passenger route between the "old" and "new" worlds.

Sikorsky, technically, is most interested in providing comfort for air travelers and increasing at all times the carrying capacity of his ships.

MICHIGAN GIRL PROFICIENT IN CHUTE PACKING

Kathleen Rowe, 18-year-old girl from Michigan, is proudly exhibiting a new Department of Commerce license to prove she is the only woman parachute packer in Michigan and one of the three in the United States.

Living near the Detroit City airport with her parnets, Kathleen became interested in planes. From planes it was a natural step to becoming interested in 'chutes and now she is most proficient in packing the great silken canopies into tiny bags.

Under direction of Stanley Prescott, packer at the Detroilt airport, Kathleen gained such skill that United States Air Commerce Inspector M. J. Perrin granted her a test She passed and Kathleen now has her packer's license.

PARACHUTE SAFETY DISCUSSED HERE AT RECENT CLUB MEET

Members of the Hammer club were informed by H. E. Anderson, licensed parachute rigger, department of commerce, that parachutes will now operate with 100 per cent efficiency in time of emergency if the rip cord ring is pulled.

Anderson related a number of incidents in which the lives of fliers had been saved by the use of parachutes and said he believed in a very short time it would be compulsory for all air travelers, commercial as well as governmental, to use a parachute. He also gave the history of parachutes, the various types, how they were used, and how they were packed. Mr. Anderson says that he has yet to see a person fly through the air safely in time of emergency without a parachute. He also declares that a parachute is the best insurance in the world.

As guests of honor at the Hammer club luncheon were Robert Flack, city manager, and Maj. J. H. Van Fleet, instructor of army reserves in this district. Councilman Bruce Stannard acted as chairman of the meeting.

SEEK ARMY AID IN SEARCH FOR HUGE AIRLINER

In the hope of locating the Standard Oil Company's airliner and the body of co-Pilot G. A. Lenz, supposed to be imprisoned in the wreckage at the bottom of Great Salt Lake, an appeal was made yesterday to officers at Rockwell Field to aid in the search and to take aerial pictures.

Bodies of two of the three men aboard the plane when it crashed a week ago—Pilot Robert S. Allen and Mechanic George O Anderson—have been recovered from the lake, according to reports. Boats continue to comb the waters and ground parties are searching Stansbury island near which the bodies were found.

Seattle's Flying Mayor Makes Air Trip To San Diego

Flying is the best means of transportation for busy people. This fact was demonstrated a short time ago when Mayor Charles L. Smith and Mrs. Smith of Seattle arrived at Lindbergh Field in their private plane for a conference with President Roosevelt during his recent visit to San Diego.

Seattle's flying mayor enjoyed an aerial sightseeing tour over Point Loma and the Exposition. Both Mayor and Mrs. Smith are pilots and recently flew their own plane from Seattle to Kansas City, St. Louis and return.

For the flight here Mayor Smith flew a Rearwin cabin plane. In Seattle he has been flying a Ryan ST manufactured at Lindbergh Field by T. Claud Ryan. Mayor Smith is contemplating the purchase of a Ryan Sport Trainer for his own use.

GIANT AIRLINE SYSTEM EXPANDS

Pan American Air Clipper Extends Aviation Empire

SAN FRANCISCO, Oct. 18.—Crew of the Pan-American Airway's giant clipper was resting at Guam today following last week's completion of another 6500-mile trip from its home base at Alameda, Calif.

The ship landed at Guam October 13, ending the last leg of the flight from Wake Island in 10 hours 11 minutes, considerably under schedule. The distance is 1500 miles. The 19-ton flying boat, the first ever to penetrate as far across the Pacific ocean as Guam, was aided most of the way by brisk tail wind. Approximately 12 hours had been scheduled for the flight.

Hops to Honolulu

The big air liner left Alameda October 5 carrying a crew of seven and a load of souvenir mail on the 2400-miles overnight hop to Honolulu. The crew set the Clipper down there October 6 after an elapsed flying time of 17 hours 5 minutes.

On October 10 the ship left Honolulu and nine hours later alighted gracefully on the lagoon of a tiny atoll represented on maps as Midway Island, a distance of 1323 miles.

Resumes Flight

After laying over there one day the westward survey flight was resumed, hopping off for the 1191-mile jump to Wake Islands, where it landed in about nine hours.

This last point is the farthest west an ariplane has ever flown from the east.

From Wake Islands the plane pushed America's commercial aviation empire 1500 miles farther in its speedy flight to Guam.

Leaves Through Fog

A fresh wind whipped across San Francisco bay as the twenty-ton "Clipper Ship" skimmed through the water and rose easily into the air after a run of less than twenty seconds. A heavy curtain of fog rolled through the Golden Gate and extended out to sea for thirty miles but the Clipper was "on top" in a few minutes and headed on the Great Circle Course for Pearl Harbor, 2410 miles away.

The project for this third flight which would take the Clipper nearly 11,000 miles before returning to the Alameda base, called for meteorological research, completion of certain engineering studies and coordination of Pan American's mid-ocean air bases in preparation for the forthcoming scheduled air transport service to link America and the Far East. Coordinating celestial navigation with radio compass bearings, Pan America's directional radio stations at Alameda, Honolulu, Midway and Wake were on guard during the entire flight as the Clipper winged westward.

With the best weather so far encountered on the Pacific crossing, the Pan American Clipper, cruising at 11,000 feet for the most part, and aided by favorable winds for a major share of the course, came into a landing at Pearl Harbor, 17 hours, 12 minutes out of San Francisco Bay.

Three Days in Honolulu

Three days were spent at the Honolulu base. Here a cargo of three tons was put aboard the Clipper—consisting of base supplies, clothes and mail for personnel and additional food for the stations at Midway and Wake, including a large supply of tomatoes, lettuce, tropical fruits and other perishable foodstuffs that cannot easily be preserved with artificial refrigeration on the distant island.

By dawn on August 13, the Pan American Clipper was on its way again flying at four thousand feet into an early morning cloud world. Ahead lay the chain of islands of the Hiwaiian group with lonely Midway at the extreme tip of the chain, 1300 miles to the north and west. In the late afternoon, coming suddenly out of a cloud, the blue and green shoals of Pearl Hermes Reef appeared dead ahead, a perfect check on the course. Eight hours and thirty minutes and then Midway rising out of the sea. Circling the island twice, the Clipper came to a landing on the waters of the lagoon, eight hours and fifty minutes after leaving Pearl Harbor.

Blaze Trail to Wake

During the three days spent at Midway, detailed studies were made of the channels in the lagoon and other aspects of the base. After hours, the crew were entertained at fishing parties, movies and special dinners. Baggage, mail and express, including a case of canary birds to be released at Wake Island for breeding and stocking the bird sanctuary there, were placed aboard the Clpiper before dawn on the morning of August 16 and the big bird took off just as the sun appeared in the east The Clipper averaged a speed of 155 miles per hour for the 1250 miles to Wake Island, flying at a level of 8000 feet. In an hour they had crossed the international date line, where today became tomorrow (August 17), and in eight hours, three minutes from Midway, settled into the marked channel at Wake Island, where they were eagerly received by the crew of this tiny base.

Start 5000 Mile Return

Completing the long series of flight tests as final preparation at Wake Island for the opening of the service to the Orient, the Pan American Clipper began its 5000-mile flight back across the Pacific ocean to California on August 21. The crew of the Clipper and all members of the station personnel were up before dawn. The crew's baggage, voluminous construction reports and mail sent by members of the station were quickly put aboard the Clipper while the engines were being warmed. Circling the island twice as a parting salute, the Clipper set off on her course in a cloud-studded sky. Weather conditions were moderately good for the first section of the journey to the Midway Islands base, 1242 miles away and the Clipper arrived back in Midway in seven hours and 46 minutes.

After putting in a busy day, the morning of which was spent in further channel entrance tests and the afternoon in a fishing trip, tennis tournament and golf match. the Clipper crew continued their homeward course departing early Thursday, August 22, for Honolulu. The Clipper's time from Midway was ten hours and five minutes, the same to the minute that it required on the same leg of its first return trip from this Pacific atoll.

Flying the 2400 miles from Honolulu in 17 hours and 26 minutes Pan America's Clipper landed at Alameda, August 28, at 10:55 a. m., to complete the first round-trip to Wake Island, nearly 5000 miles away.

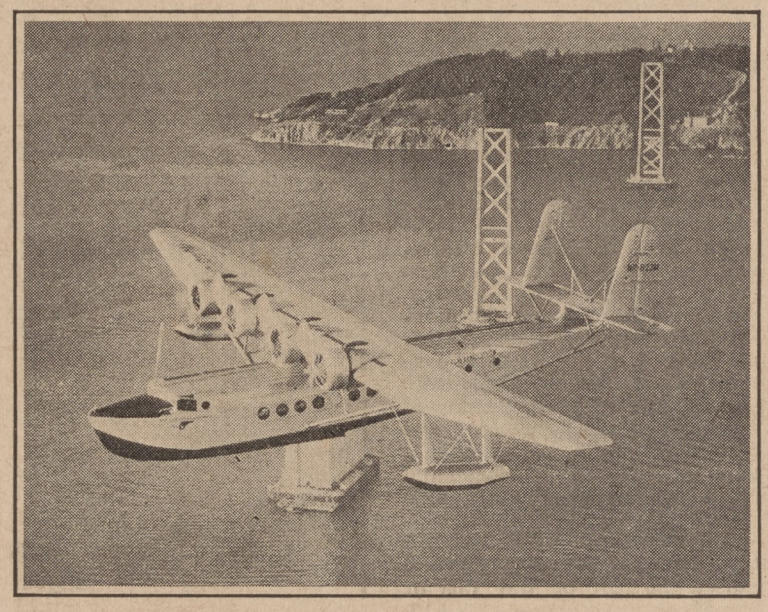
The flight took the great Clipper on another of its exploratory journeys preparatory to establishment of a commercial airline to the Orient.

Pangborn Flight Will Start Here

San Diego has been chosen by Clyde Pangborn, famous for the first transpacific non-stop flight, as the starting point for a projected round-the-world non-stop flight next summer, with five refuelings.

Pangborn said he will follow a southern route, leaving here in his new "Flying Wing" plane and refueling over New York City, Rome, Allahabad, Manila and Honolulu.

GIANT PAN AMERICAN AIR CLIPPER



—Copyright, 1935, Clyde Sutherland, Oakland.

Pan American Clipper passing over San Francisco Bay Bridge on initial flight to Honolulu. This giant airliner recently completed its fourth successful transpacific flight and is now at Guam, 6500 miles from its base at Alameda, Calif.

AVIATION HELD TWICE AS SAFE AS MOTORING

Passengers in a commercial air liner are approximately twice as safe as in a private automobile, according to a recent statement of the San Diego Chamber of Commerce aviation department in pointing out that commercial aviation should not be condemned because of the recent tragic deaths of Will Rogers and Wiley Post.

"Post and Rogers were flying in a strange land, in a desolate area without landing fields," said a statement issued by the department.

Weather a Factor

"They were not equipped with 'two-way' radio and therefore had no accurate weather reports. They had no servicing facilities along the route and there was no opportunity to give the engine of their plane the care which commercial air lines give their equipment constantly.

"Will Rogers had flown approximately 300,000 miles in recent years on regular scheduled transport planes, without any accident whatsoever.

'Safer Than Autos'

"During the first seven months of 1935, commercial air transport lines in the United States flew 190,000,000 passenger miles with only nine persons fatally injured. In other words, a passenger in a commercial air liner is approximately twice as safe as in a private automobile.

"United Air Lines, during July, flew 1,505,266 miles, completed 99.9 per cent of its schedules on time.

"Western Air Express has flown its San Diego-Los Angeles-Salt Lake City route for 12 years without having injured a single passenger.

Death Spectacular

"If Will Rogers and Wiley Post had been killed in an automobile accident, the people would not stop riding in automobiles; if they had died in a train wreck or a steamship wreck, the next train or the next boat would have carried full loads of passengers; there is no reason to regard travel in scheduled air transports as different from travel on other accepted transportation systems."

ROGERS' WIDOW GIVEN AWARD TO LATE HUMORIST

St. Louis.—The late Will Rogers, America's great humorist and flying enthusiast, was honored here recently by a posthumous presentation of the "Spirit of St. Louis" award.

The medal was awarded by the aeronautics division of the American Society of Mechanical Engineers as a tribute to Rogers for his efforts in building up public confidence in flying.

This is the third such award since its establishment in 1929.

Following ceremonies of the presentation, Major James Doolittle, aviator and friend of the humorist flew the gold medallion to Santa Monica, Calif., and presented it to Mrs. Rogers, the widow.

The presentation here was made to Major Doolittle, who accepted it on behalf of Mrs. Rogers, at a banquet of the A. S. M. E. by President Ralph E. Flanders. In tendering the award, Flanders characterized Rogers as "a man admired, respected and loved by more millions than any other personality of our time."

Guggenheim Funds For Experiments In Rocket Flights

Funds from the Guggenheim Foundation will continue to further high altitude rocket experiments in New Mexico, was the assurance given Dr. Robert H. Goddard, Roswell scientist, who has been working under a money grant from the Daniel and Florence Guggenheim Foundation since September, 1934.

The announcement was made by Harry F. Guggenheim, president and Col. Charles A. Lindbergh, board of control members, after paying a surprise visit to the mysterious laboratory and lonely steel tower where Dr. Goddard has carried on the experiments.

The scientist, in conference with his distinguished guests, reported success in the automatic stabilization of rockets in the vertical flights and estimated the projectiles would travel at a speed of 700 miles per hour.

Future financial support assured, Dr. Goddard prophesies fiery missels soaring miles into the ether bearing recording instruments farther into the stratosphere than has ever been carried before. Heretofore his experiments have been limited to only a few thousand feet.

San Diegans Fete 'Air Daughter' On Victory In Derby

San Diego recently paid tribute to Grace Prescott, local girl who blazed her way to new glories in the sky by winning the Ruth Chatterton air derby.

Mrs. Prescott, who is the wife of Clarence L. Prescott, transport flier, was the guest of the Silver Gate Business Girls' club at a dinner in Park Manor hotel. Later she was honored guest at a Chamber of Commerce luncheon at Lindbergh Field and a dinner at a downtown dine and dance cafe frequented by San Diego socialites.

Mrs. Prescott is the daughter of C. C. Rhodes, deputy city auditor, and her sister is the wife of Lieut. Sanchez, Navy aviator.

Coast Air Line Schedules Cut

New air schedules of 9 hours and 25 minutes between San Diego and Seattle are being carried out successfully by United Air Lines, according to officials of the company.

The new schedules, which went into effect September 30, provides two daylight trips starting from Seattle at 3 a. m. and 3:15 p. m. and one night trip starting from the northern city at 9:15 p. m. Elapsed time from Seatte to Portland is one hour; Sacramento 4 hours 45 minutes, Oakland 5 hours, San Frascisco 5 hours 25 minutes.

Lindbergh Field

Just seven years and two months ago marked the birth of Lindbergh Field and the beginning of San Diego's meteoric rise and development from a vision in the brains of a few courageous and civic-spirited souls to its present proud estate as truly "The Air Capital of the West," a title amply sustained by the fact that today San Diego, in proportion to population, is the largest aviation center in the United States.

On August 18, 1928, Lieut. Frank Seifert, then a San Diego city councilman, and Harry Clark, former mayor, went aloft in a small biplane, circled the city several times and came down to a perfect landing. That flight and landing was the first aviation activity on San Diego's municipal airport.

At a meeting last week of the aviation committee of the San Diego Chamber of Commerce, held at Lindbergh Field, Lieut. Seifert told the writer:

"The ship I flew on that day was A Fleet PT-3 and was manufactured in Buffalo, N. Y., by the Consolidated Aircraft Corporation. The Fleet Trainers were dandy little planes, but so contrasting to the naval aircraft to be manufactured on Lindbergh Field in the same concern's $1,000,000 plant."

Seifert, who might well be called the "Father of Lindbergh Field" not only made the first larding there, but was the councilman who sponsored and fought for the council's action in making the municipal airport possible. Following formal dedication of Lindbergh Field, Seifert continued his efforts in behalf of it by visiting many of the large aircraft factories throughout the country to acquaint them with the possibilities of the airport and San Diego as an aviation center.

At that time, seven years ago, only 25 acres of the field was ready for use. Two or three small, unpretentious buildings were the only indication that the place might be an airport.

Today, San Diego boasts one of the finest and busiest airports in the entire United States. The ramshackle buildings have given way to a magnificent administration building, which houses offices of the Ryan School of Aeronautics, the United States Weather Buerau and officies of customs officials who inspect planes from Mexico. Also at Lindbergh Field are Airtech Flying Service, Ltd., and the huge hangar of United Air Lines and Western Air Express, whose giant passenger planes operate with clock-like precision to Seattle and Salt Lake City.

Seifert, who today, is local district manager for General Petroleum, not only made the first landing at Lindbergh Field, but also participated with Captain Lowell Smith and Lieuts. John P. Richter and Virgil Hine in making the first refueling flight over San Diego.

And now, seven years later, all San Diego is celebrating the greatest single step forward made at Lindbergh Field since its modest inception. That step is the formal opening and dedication of Consolidated Aircraft's magnificient new plant which marks a new era of growth in the industrial and aviation development of San Diego.

This momentous event is the outgrowth of almost five years, active campaigning on the part of the chamber of commerce and other civic interests concerned with the future of the city as an airport. Ever since the citizens of San Diego voted an investment of $625,000 in Lindbergh Field, aircraft manufacturers have taken keen interest in the growth and development of this section. The field combines three of the outstanding essentials for the making of a great airport; namely, safety, utility and accessibility. Few, if any, airports in the United States are as safe from an operating standpoint as Lindbergh Field. Its utility as both a land plane airport and a seaplane base is made possible by the fact that it is contiguous to a very splendid basing for seaplanes in the northeastern section of the San Diego Bay. Its accessibility is proven by the fact that it is less than five minutes from downtown San Diego and also is contiguous to other transportation facilities which play an important part in the life of a modern city.

PROCLAMATION

WHEREAS, San Diego is the Airway and of the San Diego-Salt Lake City-Chicago airway, and

WHEREAS, San Diego is recognized as the birthplace of major aviation development and is recognized as one of the most important commercial and military aviation centers of America and

WHEREAS, Air transportation has become one of the vitally important factors in modern business and the many features of this new mode of transportation should be made known to the general public, and

WHEREAS, The United States Bureau of Air Commerce has initiated a national celebration of America's progress in air navigation during the period, October 14 to 21

NOW THEREFORE, I, Percy J. Benbough, Mayor of the City of San Diego, State of California, do hereby designate and proclaim the week beginning October 14, 1935, to be "Air Navigation Week", and I urge municipal officials, civic and commercial organizations, school authorities and educational leaders, and the press to call attention to the air transportation achievements already accomplished, to set forth the advantages which may accrue as the result of continued development in this field and to encourage the study of ways and means by which aerial transportation may contribute more effectively to the social and economic progress of the human race.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the City of San Diego to be affixed this 12th day of October, 1935.

(Signed)
PERCY J. BENBOUGH,
Mayor of the City of San Diego, California.

LATE AIR NEWS

If a WPA project is approved in Washington, the 514th Observation Squadron will have a new hangar on Lindbergh Field on land turned over to them by the Harbor Department.

Telegraphic advices that WPA funds to the amount of $553,619 have been made available for dredging an area off Lindbergh Field were received Thursday. The project will create a large seaplane landing and take-off area and enlarge the area of the municipal airport by about 100 acres.

The navy's new flying patrol boat, which recently made a 3700-mile non-stop flight from Panama to Alameda, is merely the forerunner of a vast fleet of such ocean spanning air cruisers soon to join the high seas flying force of the United States fleet, it was said officially at Los Angeles harbor yesterday.

The statement was made by Rear Adm. Ernest J. King, chief of the navy bureau of aeronautics, after a conference aboard the flagship Pennsylvania with Adm. Joseph M. Reeves, commander in chief.

Admiral King said 60 duplicates of the record-breaking "XP3Y-1" are to be built immmediately by the Consolidated Aircraft Corp.

Dedication Ceremonies Consolidated Aircraft Corporation Lindbergh Field

Sunday, October 20, 1935

9:00-2:00 p. m.—Open house at Consolidated Aircraft Factory. (Public invited to inspect interior of the plant).
11:30 a. m.—Finish of Los Angeles-San Diego Air Race.
12:00 noon—Luncheon in Pompeian Room, Hotel San Diego in honor of Consolidated Aircraft Corporation officials.
2:15 p. m.—Party returns to Lindbergh Field for dedication ceremonies.
2:30 p. m.—Appreciation on behalf of city by Mayor Benbough.
2:40 p. m.—Introduction of famous fliers—by T. C. Macaulay.
3:00 p. m.—Dedication speech—By Major R. H. Fleet and introduction of company officials.
3:15-4:30 p. m.—Open house at factory.
4:00 p. m.—Official party leaves for Exposition grounds.
4:15 p. m.—President Frank G. Belcher of the Exposition to meet party at west gate and escort to Plaza del Pacifico.
5:00 p. m.—Major R. H. Fleet to be guest of honor at "Retreat" ceremony by 30th U. S. Infantry at Plaza del Pacifico.
6:00 p. m.—Dinner, Cafe of the World, at the Exposition.

Orchids To Everyone From 'Your' Air News

I wish to express my sincere thanks to the many advertisers whose messages appear in this, the inaugural issue of the Southwestern Air News; to the advertising representatives who have worked hard and faithfully and to everyone who has extended best wishes for the success of your new aviation newspaper.

THE EDITOR-PUBLISHER.

Weather Bureau Inspector Extends Public Welcome

The Bureau of Air Commerce has designated the week of October 14 to 21 as Air Navigation Week, the purpose being to acquaint the public with air navigation aids, such as, radio beams, weather broadcasting and their teletypewriter service.

The air navigation office is located at Lindbergh Field on the second floor of the Administration building, and the public is invited to inspect the facilities located at this point.

M. P. Hanscom was recently appointed inspector at the Lindbergh Field office.

MANY THANKS, MR. BOMAR

San Diego Chamber of Commerce
Organized 1870
San Diego, California

October 16, 1935.

Mr. Weldon M. McKinney, Editor
Southwestern Air News
San Diego, Calif.

Dear Sir:

Your announcement of the publication of the first edition of "Southwestern Air News" on October 19 has elicited much comment from the members of our Aviation Committee... We are all looking forward to the first issue of this new newspaper devoted to aviation activities in this area.

We wish for you the greatest possible success in your undertaking.

Very truly yours,

SAN DIEGO CHAMBER OF COMMERCE
T. F. Bomar, Manager
Aviation Department

San Diego—THE EXPOSITION CITY—1935

Local Will Rogers Memorial Handled By Aircraft Head

The Will Rogers memorial fund in San Diego will be handled by Major Reuben H. Fleet, president of the Consolidated Aircraft Corporation, by appointment to a nationwide committee, headed by Vice-President John Garner.

Major Fleet is to be one of the 225 prominent citizens of the United States who are taking part in this movement. The form of the memorial has not yet been decided but will conform to the ideals of simplicity of Will Rogers, according to Jesse H. Jones, chairman of the Reconstruction Finance Corporation and treasurer of the fund.

"Every dime contributed will go into the memorial fund and a committee will plan a system of memorials," is the word of Vice-President Garner

IMPORTANT SUBJECTS DISCUSSED AT RECENT LINDBERGH FIELD MEET

Enlargement of the municipal airport in order to create additional room for other aircraft firms contemplating a move to San Diego was one of the principal discussions at a meeting of the aviation committee of the chamber of commerce held at Lindbergh Field Thursday, October 11

Plans for observance of Aviation Week, October 14-21 and for the dedication of Consolidated Aircraft Corporation's new plant on October 20, were also discussed by the committee.

Chairman Jack Hicklin appointed members to speak over the radio and at luncheon clubs during aviation week.

Everyone present received quite a "kick" when one of the members inadvertently referred to the Consolidated Aircraft plant as the "Consolidated Hangar."

Those present at the meeting were: Messrs. Thomas F. Bomar, aviation department manager, chamber of commerce; Jack Hicklin, chairman; D. G. Fleet, Arnet Speer, L. C. Hanscom, C. A. Van Dusen, A. Carpenter, Phil Sharp, T. Claude Ryan, C. R. Guern, C. B. Wohler, William Van Dusen, A. W. Pohl, R. W. Booth, Howard Morin, Hazel Kelly, Douglas Kelly, Ralph F. Yambert, Earl Prudden, C. M. Urbach, Frank W. Seifert, L. W. Nelson, A. W. Miller, Weldon M. McKinney, Lt. Cmdr. E. F. Stone, Lt. Cmdr. Schaefer, Captain L. C. Hurd, and Captain Cannon.

VOL I. SAN DIEGO, CALIFORNIA, SATURDAY, OCTOBER 19, 1935 NUMBER 1

DEDICATE NEW PLANT SUNDAY

ARMY FLYERS TO BASE AT MARCH FIELD

PLANS ANNOUNCED BY NINTH CORPS AREA COMMANDER

By FRANK HAVEN

San Diego will become primarily a Navy capital after November 1. This fact adds substantially to the claim that San Diego is truly "The Air Capital of the West."

On that date the Navy gains exclusive possession of the entire area on North Island, with the Army Air Corps evacuating Rockwell Field for March Field at Riverside.

The Sunnyvale air base will be the home of the Army's 19th Airship Squadron now stationed at Langley Field Va., Major General Paul B. Malone, Ninth Corps Area commander, announced today in San Francisco.

The 19th Bombardment Group, GHQ, now at Rockwell Field, had been expected to be sent to the Sunnyvale base, received by the Army in a "swap" for the Army's portion of North Island.

The 19th Bombardment Group will go to March Field at Riverside, Rockwell Field officers said. Part of the station complement will go to Sunnyvale. Whether the Rockwell Aid Depot with its $30,000,000 in equipment will go to Sunnyvale or March Field has not been announced officially.

The Army is scheduled to move the 16th bombardment squadron off the island by October 25. It is said this group will be transferred

(Continued on Page Five)

Adm. King Sees Great Future For Naval Air Base

Admiral Ernest J. King, chief of the Navy's Bureau of Aeronautics and former commander of the aircraft carrier Lexington, on a recent visit to this city predicted that San Diego would soon become the greatest air base in the world.

Admiral King, arriving for a week's inspection and tour of Naval Air units, considered the problems of expansion and development of the Navy's new territory on North Island.

After a conference with Vice Adm. Henry V. Butler, commander of the aircraft battle force, and Rear Adm. W. T. Tarrant, commandant of the 11th Naval District, he made the statement that the San Diego Base would undoubtedly become the greatest of all air units.

The Admiral devoted part of his stay here in discussing plans for the new field. The completed plans will be presented to Congress for approval and the necessary money appropriations to carry out the great enterprise.

New Million Dollar Plant

—Photo by H. A. Erickson, "The Flying Photographer"

GROWTH IN AIR TRAVEL CITED IN HUGE 'GAS' ORDER

3,600,000 Gallons of Aviation Gasoline to United Air

Three million six hundred thousand gallons of aviation gasoline ordered by the United Air Lines is news; when it's ordered from a California company it's better news, and to aviators and Californians it's the best news in a long time. It means prosperity and that another heretofore struggling industry has flown into the big time class.

The signing of this contract between United Air Lines and the California Standard Oil company shows new evidence of the importance of aviation in the transportation business and also proves that Americans are becoming more and more "air minded."

Pilots and their ground crews are given credit for the growing popularity of air travel by the United Air Line officials at the airport in Oakland.

One and one-quarter million miles in 7000 hours scheduled flying time is the record of Grover Tyler, who started flying for United in September, 1926. He discussed recently about the "good old days," when flying was in its infancy, with C. B. Hollar, driver of a new stream-lined Standard Oil Co. tank truck. Hollar has been in Standard employ for 25 years.

These two had some interesting stories about aviation in the early days and a mutual respect for the part each has played in aviation's development.

Impressive Ceremony To Mark Inaugural of Huge Lindbergh Field Factory

110 Planes Called For In $9,000,000 U. S. Agreement; First Plane Assembled; 800 Now Employed on Contracts

World famous men and women fliers, aircraft company officials from all over the United States and hundreds of visitors tomorrow will witness formal opening of the new $1,000,000 airplane plant of Consolidated Aircraft Corp., at Lindbergh Field.

Although the plant is now running full blast with 800 men at work, formal dedication has been held off until tomorrow in order that it might coincide with the California Pacific International Exposition's observance of Aviation Day which is expected to draw thousands of visitors to San Diego.

The dedication ceremonies will be conducted with cooperation of the San Diego Chamber of Commerce aviation committee which has been working for about five years on a campaign to bring Consolidated as well as other aircraft manufacturers here.

Officials of the company and visiting celebrities will be entertained at a noon chamber of commerce luncheon at the San Diego hotel. Following this the celebration will be continued at Lindbergh Field with a spectacular air show being staged by Ryan School of Aeronautics.

One of the major features of the day will be the finish at Lindbergh Field of the women fliers' handicap air derby from Grand Central Airport, Glendale, to here. The derby will be participated in by some of the nation's most famous girl fliers as part of the Exposition Aviation Day celebration. Included among them are expected to be Ruth Chatterton, noted film and screen star, and Ruth Elder.

Dedication of Consolidated's plant, said to be the most modern aircraft factory in the United States, will mark, according to Chamber of Commerce officials, the greatest single step forward in San Diego's amazing growth as an aviation center since the inauguration of Lindbergh Field seven years ago.

Major R. H. Fleet, president of Consolidated, says that the first new combat planes being constructed for the army air corps has been assembled and awaits only installation of the engine.

Fifty of these swift fighting planes are being built at a cost of about $2,500,000. In addition the company has contract for 60 ocean patrol boats for the navy to be built under a $6,500,000 contract. The company must deliver the entire 110 planes within 20 months.

To complete these the company estimates that, in addition to the 800 men now working, 1500 must be employed by March 1, 1936, and 2500 by September.

Non-Stop Record Broken By New Giant Seaplane

Completing the trip from San Francisco to San Diego in three hours and forty minutes, the Navy's new seaplane, XP3Y-1, commanded by Lieut. Cmdr. Knefler McGinnis, was brought down on the waters of San Diego harbor Wednesday evening, October 16, at sundown.

The giant new type airplane set a world's non-stop record from Panama to Alameda, Tuesday, when it completed the 3300-mile flight in 34 hours and 45 minutes. This flight is believed to have shattered the mark made by Mario Stoffani, Italy, who this year guided an Isotte-Franschini plane 3063.16 statute miles.

The XP3Y-1, a forerunner of type to be built, was consulted by the Consolidated Aircraft Corporation in its Buffalo plant prior to the removal of the factory to San Diego. Major Reuben H. Fleet, head of Consolidated, expressed himself as highly pleased with the manner in which the plane came through.

The flying boat which has twin motors with retractable wing pontoons, possesses several unique features, one of which is a whale-like elevated tail constructed in such manner as to avoid damage in lighting on rough water. The body being built below the wing, enables a navigator to make observations from an open cockpit.

Those aboard with Commander McGinnis were: Lieut. J. K. Aberill, second in command; Thomas P. Wilkinson, navy pilot; Charles S. Bolka, chief machinist; A. E. J. Dionne and E. V. Sizer, radiomen.

The plane will remain at the naval air station for about 15 days when it will be turned back to the Consolidated plant for re-checking and final adjustments.

New Flying Hotel Amazes News Writers on Trial Jaunt

By THE FLYING REPORTER
(Special to The Air News)

SAN FRANCISCO, Oct. 18.—"For Rent—Attractive one-room-and-bath apartments aboard flying hotel in transpacific service."

Sounds fantastic? Well, maybe it is, but I have just signed such a lease for three months and, in fact, recently made a trial trip in my new "home" from Baltimore to Washington, D. C., and return.

The flying hotel in question is the "New China" clipper plane built by the Glen H. Martin company for Pan American's transpacific service. On our trial flight it carried 38 passengers, mostly newspaper men and a crew of five.

First of Three

This is the first of three such planes being built by the Martin company and this one is expected to be over the Pacific for test flights within a few weeks. Two others are scheduled to be out of the factory by then. Although no definite announcement has been made Pan-American plans to start regular scheduled flights to China and return some time next spring.

The new clipper is the largest flying boat in the world as shown by the following description:

Capacity: 48 passengers, plus other cargo.

Wingspread: 130 feet; length 90 feet.

Engines: Four "Twin Wasps," each 800 H. P.

Weight: Empty, 25,000 pounds; loaded, 51,000 pounds.

Speed, cruising: 150 M. H. P.

Speed, landing: 65 M. H. P.

Service Ceiling, 18,000 feet. Ceiling on one motor, 6000 feet.

Seats Large and Roomy

The plane has four large passenger compartments, each of which is decorated in a different color. Three of these compartments seat eight passengers each. The seats are deep and roomy. There are 18 berths, longer than a Pullman berth, just as wide, just as high and much softer.

When we began our trial flight aerial stevedores rowed out in boats and untied the lines, warped the ship around in the river and we were off.

The clipper gained speed swiftly on the surface of the water and, without knowing the exact moment we left the water, we were in the air. It was impossible to realize we were flying without looking out the windows. We made the 50 miles to Washington in 20 minutes and the return trip in 20 minutes. As we came in to land there was a sound like the ripping of a piece of canvas cloth, not a jolt but more like sitting down in a soft chair, and we were back from where we started.

Steady As Liner

The trip was mode around 400 feet most of the time. The ship was as steady as an ocean liner and most of us were up and walking around during the flight. We were all newspaper and aviation people who had done a lot of flying but, just the same, we were full of "ohs" and "ahs."

In the pilots' compartment are seats for two pilots and just behind and a little above them sits the radio operator where he can hand them messages without leaving his seat. Back of him is what is called the flight deck where two mechanics are on duty during all flights.

HOWARD HUGHES TAKES OVER HANGAR, OFFICES AT UNION AIR TERMINAL

Complete with an elaborate suite of offices, an entire hangar was taken over at Union Air Terminal recently by Howard Hughes, film producer and sportsman flier, for continued devolpment of his sensational low-wing speedster which the week before had startled the aeronautical world by establishing a new internatonal land plane record.

Immediate repairs to the speed plane began in preparation for Hughes' announced assault on the coast-to-coast air record of 10 hours and 2 minutes now held by Col. Roscoe Turner.

The plane was structurally undamaged and escaped like Hughes himself, virtually unscathed from the spectacular landing in which the noted sportsman, with consummate airmanship, set it down with landing gear retracted on a Santa Ana beet field at conclusion of his speed dash.

New World Record For Land Planes Set By Hughes

Howard Hughes, Los Angeles aviation enthusiast, established a new world's speed record for land planes at Santa Ana, Calif., on September 13th, making seven runs, each ranging from 339.12 miles per hour to 355.38 miles per hour.

The former official world's mark for land planes was held by France and was established on the basis of 314.319 miles per hour.

Hughes was allowed the average of his four best runs, two each way, over a measured course and under the observation of the following N. A. A. officials: Willam J. Enyart, who was in charge; Joe Nikrent and Harold Hitchman, local officers of N. A. A., who were also assisted by a staff of techniccians from the California Institute of Technology.

TWA AIR LINES TO EMPLOY 60 YOUNG WOMEN

Transcontinental & Western Air is now engaged in the selection of 60 attractive young women to act as hostesses aboard ships of this service. The innovation will become effective just as soon as it is possible to complete arrangements.

In commenting on this new service, Jack Frye, president of TWA, said: "This additional service for our passengers is expected to cost annually in the neighborhood of $180,000, but is done with the idea of maintaining the high standards set by our company."

A special training school will be established at the company's headquarters in Kansas City, where the girls will be instructed in all features of air travel as well as in operating details of the company's ships, also in geography, in order to become familiar with the scenery and historical features along the route.

The search is being conducted in the 24 cities served by the airline, including San Diego.

However, girls, there are a few qualifications which are: You must be between 21 and 26 years of age, not over 5 feet 4 inches in height and by a graduate nurse.

24-Hour Service To Europe Visioned By Sea Plane Designer

America today, be in Europe 24 hours later, is the prediction of Igor Sikorsky of the changes in air transportation to take place in the next three years. Sikorsky, world-famous designer of giant airships, on a visit to the base of the Pan-American Clipper of his own design, made fabulous statements about "aviation's tomorrow."

He believes that in the present generation, remote corners of the earth will be closely linked by international air lines. The 24-hour service to Europe by air, he believes will be further reduced to 16 hours in the next ten years, with 40-ton clippers droning a steady, commercial passenger route between the "old" and "new" worlds.

Sikorsky, technically, is most interested in providing comfort for air travelers and increasing at all times the carrying capacity of his ships.

MICHIGAN GIRL PROFICIENT IN CHUTE PACKING

Kathleen Rowe, 18-year-old girl from Michigan, is proudly exhibiting a new Department of Commerce license to prove she is the only woman parachute packer in Michigan and one of the three in the United States.

Living near the Detroit City airport with her parnets, Kathleen became interested in planes. From planes it was a natural step to becoming interested in 'chutes and now she is most proficient in packing the great silken canopies into tiny bags.

Under direction of Stanley Prescott, packer at the Detroilt airport, Kathleen gained such skill that United States Air Commerce Inspector M. J. Perrin granted her a test She passed and Kathleen now has her packer's license.

PARACHUTE SAFETY DISCUSSED HERE AT RECENT CLUB MEET

Members of the Hammer club were informed by H. E. Anderson, licensed parachute rigger, department of commerce, that parachutes will now operate with 100 per cent efficiency in time of emergency if the rip cord ring is pulled.

Anderson related a number of incidents in which the lives of fliers had been saved by the use of parachutes and said he believed in a very short time it would be compulsory for all air travelers, commercial as well as governmental, to use a parachute. He also gave the history of parachutes, the various types, how they were used, and how they were packed. Mr. Anderson says that he has yet to see a person fly through the air safely in time of emergency without a parachute. He also declares that a parachute is the best insurance in the world.

As guests of honor at the Hammer club luncheon were Robert Flack, city manager, and Maj. J. H. Van Fleet, instructor of army reserves in this district. Councilman Bruce Stannard acted as chairman of the meeting.

SEEK ARMY AID IN SEARCH FOR HUGE AIRLINER

In the hope of locating the Standard Oil Company's airliner and the body of co-Pilot G. A. Lenz, supposed to be imprisoned in the wreckage at the bottom of Great Salt Lake, an appeal was made yesterday to officers at Rockwell Field to aid in the search and to take aerial pictures.

Bodies of two of the three men aboard the plane when it crashed a week ago—Pilot Robert S. Allen and Mechanic George O Anderson—have been recovered from the lake, according to reports. Boats continue to comb the waters and ground parties are searching Stansbury island near which the bodies were found.

Seattle's Flying Mayor Makes Air Trip To San Diego

Flying is the best means of transportation for busy people. This fact was demonstrated a short time ago when Mayor Charles L. Smith and Mrs. Smith of Seattle arrived at Lindbergh Field in their private plane for a conference with President Roosevelt during his recent visit to San Diego.

Seattle's flying mayor enjoyed an aerial sightseeing tour over Point Loma and the Exposition. Both Mayor and Mrs. Smith are pilots and recently flew their own plane from Seattle to Kansas City, St. Louis and return.

For the flight here Mayor Smith flew a Rearwin cabin plane. In Seattle he has been flying a Ryan ST manufactured at Lindbergh Field by T. Claud Ryan. Mayor Smith is contemplating the purchase of a Ryan Sport Trainer for his own use.

GIANT AIRLINE SYSTEM EXPANDS

Pan American Air Clipper Extends Aviation Empire

SAN FRANCISCO, Oct. 18.—Crew of the Pan-American Airway's giant clipper was resting at Guam today following last week's completion of another 6500-mile trip from its home base at Alameda, Calif.

The ship landed at Guam October 13, ending the last leg of the flight from Wake Island in 10 hours 11 minutes, considerably under schedule. The distance is 1500 miles. The 19-ton flying boat, the first ever to penetrate as far across the Pacific ocean as Guam, was aided most of the way by brisk tail wind. Approximately 12 hours had been scheduled for the flight.

Hops to Honolulu

The big air liner left Alameda October 5 carrying a crew of seven and a load of souvenir mail on the 2400-miles overnight hop to Honolulu. The crew set the Clipper down there October 6 after an elapsed flying time of 17 hours 5 minutes.

On October 10 the ship left Honolulu and nine hours later alighted gracefully on the lagoon of a tiny atoll represented on maps as Midway Island, a distance of 1323 miles.

Resumes Flight

After laying over there one day the westward survey flight was resumed, hopping off for the 1191-mile jump to Wake Islands, where it landed in about nine hours.

This last point is the farthest west an ariplane has ever flown from the east.

From Wake Islands the plane pushed America's commercial aviation empire 1500 miles farther in its speedy flight to Guam.

Leaves Through Fog

A fresh wind whipped across San Francisco bay as the twenty-ton "Clipper Ship" skimmed through the water and rose easily into the air after a run of less than twenty seconds. A heavy curtain of fog rolled through the Golden Gate and extended out to sea for thirty miles but the Clipper was "on top" in a few minutes and headed on the Great Circle Course for Pearl Harbor, 2410 miles away.

The project for this third flight which would take the Clipper nearly 11,000 miles before returning to the Alameda base, called for meteorological research, completion of certain engineering studies and coordination of Pan American's mid-ocean air bases in preparation for the forthcoming scheduled air transport service to link America and the Far East. Coordinating celestial navigation with radio compass bearings, Pan America's directional radio stations at Alameda, Honolulu, Midway and Wake were on guard during the entire flight as the Clipper winged westward.

With the best weather so far encountered on the Pacific crossing, the Pan American Clipper, cruising at 11,000 feet for the most part, and aided by favorable winds for a major share of the course, came into a landing at Pearl Harbor, 17 hours, 12 minutes out of San Francisco Bay.

Three Days in Honolulu

Three days were spent at the Honolulu base. Here a cargo of three tons was put aboard the Clipper—consisting of base supplies, clothes and mail for personnel and additional food for the stations at Midway and Wake, including a large supply of tomatoes, lettuce, tropical fruits and other perishable foodstuffs that cannot easily be preserved with artificial refrigeration on the distant island.

By dawn on August 13, the Pan American Clipper was on its way again flying at four thousand feet into an early morning cloud world. Ahead lay the chain of islands of the Hiwaiian group with lonely Midway at the extreme tip of the chain, 1300 miles to the north and west. In the late afternoon, coming suddenly out of a cloud, the blue and green shoals of Pearl Hermes Reef appeared dead ahead, a perfect check on the course. Eight hours and thirty minutes and then Midway rising out of the sea. Circling the island twice, the Clipper came to a landing on the waters of the lagoon, eight hours and fifty minutes after leaving Pearl Harbor.

Blaze Trail to Wake

During the three days spent at Midway, detailed studies were made of the channels in the lagoon and other aspects of the base. After hours, the crew were entertained at fishing parties, movies and special dinners. Baggage, mail and express, including a case of canary birds to be released at Wake Island for breeding and stocking the bird sanctuary there, were placed aboard the Clpiper before dawn on the morning of August 16 and the big bird took off just as the sun appeared in the east The Clipper averaged a speed of 155 miles per hour for the 1250 miles to Wake Island, flying at a level of 8000 feet. In an hour they had crossed the international date line, where today became tomorrow (August 17), and in eight hours, three minutes from Midway, settled into the marked channel at Wake Island, where they were eagerly received by the crew of this tiny base.

Start 5000 Mile Return

Completing the long series of flight tests as final preparation at Wake Island for the opening of the service to the Orient, the Pan American Clipper began its 5000-mile flight back across the Pacific ocean to California on August 21. The crew of the Clipper and all members of the station personnel were up before dawn. The crew's baggage, voluminous construction reports and mail sent by members of the station were quickly put aboard the Clipper while the engines were being warmed. Circling the island twice as a parting salute, the Clipper set off on her course in a cloud-studded sky. Weather conditions were moderately good for the first section of the journey to the Midway Islands base, 1242 miles away and the Clipper arrived back in Midway in seven hours and 46 minutes.

After putting in a busy day, the morning of which was spent in further channel entrance tests and the afternoon in a fishing trip, tennis tournament and golf match. the Clipper crew continued their homeward course departing early Thursday, August 22, for Honolulu. The Clipper's time from Midway was ten hours and five minutes, the same to the minute that it required on the same leg of its first return trip from this Pacific atoll.

Flying the 2400 miles from Honolulu in 17 hours and 26 minutes Pan America's Clipper landed at Alameda, August 28, at 10:55 a. m., to complete the first round-trip to Wake Island, nearly 5000 miles away.

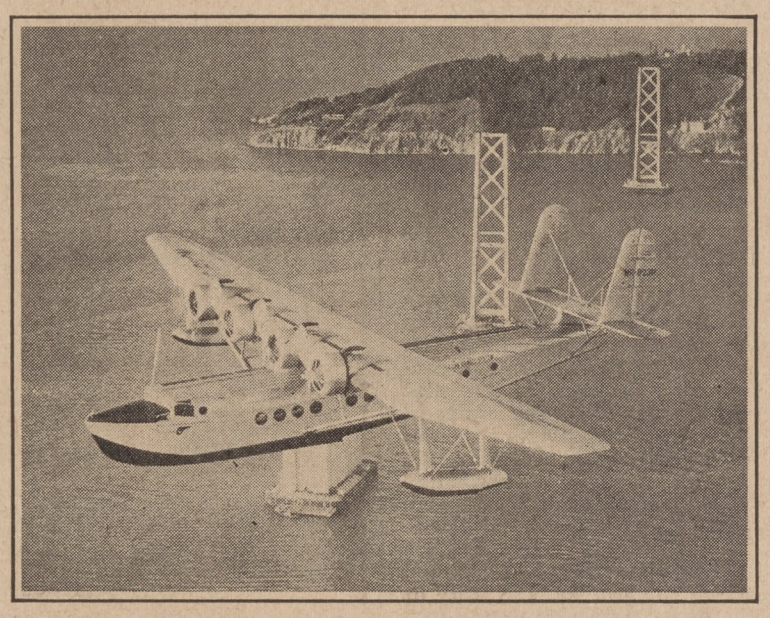
The flight took the great Clipper on another of its exploratory journeys preparatory to establishment of a commercial airline to the Orient.

Pangborn Flight Will Start Here

San Diego has been chosen by Clyde Pangborn, famous for the first transpacific non-stop flight, as the starting point for a projected round-the-world non-stop flight next summer, with five refuelings.

Pangborn said he will follow a southern route, leaving here in his new "Flying Wing" plane and refueling over New York City, Rome, Allahabad, Manila and Honolulu.

GIANT PAN AMERICAN AIR CLIPPER



—Copyright, 1935, Clyde Sutherland, Oakland.

Pan American Clipper passing over San Francisco Bay Bridge on initial flight to Honolulu. This giant airliner recently completed its fourth successful transpacific flight and is now at Guam, 6500 miles from its base at Alameda, Calif.

AVIATION HELD TWICE AS SAFE AS MOTORING

Passengers in a commercial air liner are approximately twice as safe as in a private automobile, according to a recent statement of the San Diego Chamber of Commerce aviation department in pointing out that commercial aviation should not be condemned because of the recent tragic deaths of Will Rogers and Wiley Post.

"Post and Rogers were flying in a strange land, in a desolate area without landing fields," said a statement issued by the department.

Weather a Factor

"They were not equipped with 'two-way' radio and therefore had no accurate weather reports. They had no servicing facilities along the route and there was no opportunity to give the engine of their plane the care which commercial air lines give their equipment constantly.

"Will Rogers had flown approximately 300,000 miles in recent years on regular scheduled transport planes, without any accident whatsoever.

'Safer Than Autos'

"During the first seven months of 1935, commercial air transport lines in the United States flew 190,000,000 passenger miles with only nine persons fatally injured. In other words, a passenger in a commercial air liner is approximately twice as safe as in a private automobile.

"United Air Lines, during July, flew 1,505,266 miles, completed 99.9 per cent of its schedules on time.

"Western Air Express has flown its San Diego-Los Angeles-Salt Lake City route for 12 years without having injured a single passenger.

Death Spectacular

"If Will Rogers and Wiley Post had been killed in an automobile accident, the people would not stop riding in automobiles; if they had died in a train wreck or a steamship wreck, the next train or the next boat would have carried full loads of passengers; there is no reason to regard travel in scheduled air transports as different from travel on other accepted transportation systems."

ROGERS' WIDOW GIVEN AWARD TO LATE HUMORIST

St. Louis.—The late Will Rogers, America's great humorist and flying enthusiast, was honored here recently by a posthumous presentation of the "Spirit of St. Louis" award.

The medal was awarded by the aeronautics division of the American Society of Mechanical Engineers as a tribute to Rogers for his efforts in building up public confidence in flying.

This is the third such award since its establishment in 1929.

Following ceremonies of the presentation, Major James Doolittle, aviator and friend of the humorist flew the gold medallion to Santa Monica, Calif., and presented it to Mrs. Rogers, the widow.

The presentation here was made to Major Doolittle, who accepted it on behalf of Mrs. Rogers, at a banquet of the A. S. M. E. by President Ralph E. Flanders. In tendering the award, Flanders characterized Rogers as "a man admired, respected and loved by more millions than any other personality of our time."

Guggenheim Funds For Experiments In Rocket Flights

Funds from the Guggenheim Foundation will continue to further high altitude rocket experiments in New Mexico, was the assurance given Dr. Robert H. Goddard, Roswell scientist, who has been working under a money grant from the Daniel and Florence Guggenheim Foundation since September, 1934.

The announcement was made by Harry F. Guggenheim, president and Col. Charles A. Lindbergh, board of control members, after paying a surprise visit to the mysterious laboratory and lonely steel tower where Dr. Goddard has carried on the experiments.

The scientist, in conference with his distinguished guests, reported success in the automatic stabilization of rockets in the vertical flights and estimated the projectiles would travel at a speed of 700 miles per hour.

Future financial support assured, Dr. Goddard prophesies fiery missels soaring miles into the ether bearing recording instruments farther into the stratosphere than has ever been carried before. Heretofore his experiments have been limited to only a few thousand feet.

San Diegans Fete 'Air Daughter' On Victory In Derby

San Diego recently paid tribute to Grace Prescott, local girl who blazed her way to new glories in the sky by winning the Ruth Chatterton air derby.

Mrs. Prescott, who is the wife of Clarence L. Prescott, transport flier, was the guest of the Silver Gate Business Girls' club at a dinner in Park Manor hotel. Later she was honored guest at a Chamber of Commerce luncheon at Lindbergh Field and a dinner at a downtown dine and dance cafe frequented by San Diego socialites.

Mrs. Prescott is the daughter of C. C. Rhodes, deputy city auditor, and her sister is the wife of Lieut. Sanchez, Navy aviator.

Coast Air Line Schedules Cut

New air schedules of 9 hours and 25 minutes between San Diego and Seattle are being carried out successfully by United Air Lines, according to officials of the company.

The new schedules, which went into effect September 30, provides two daylight trips starting from Seattle at 3 a. m. and 3:15 p. m. and one night trip starting from the northern city at 9:15 p. m. Elapsed time from Seatte to Portland is one hour; Sacramento 4 hours 45 minutes, Oakland 5 hours, San Frascisco 5 hours 25 minutes.

Lindbergh Field

Just seven years and two months ago marked the birth of Lindbergh Field and the beginning of San Diego's meteoric rise and development from a vision in the brains of a few courageous and civic-spirited souls to its present proud estate as truly "The Air Capital of the West," a title amply sustained by the fact that today San Diego, in proportion to population, is the largest aviation center in the United States.

On August 18, 1928, Lieut. Frank Seifert, then a San Diego city councilman, and Harry Clark, former mayor, went aloft in a small biplane, circled the city several times and came down to a perfect landing. That flight and landing was the first aviation activity on San Diego's municipal airport.

At a meeting last week of the aviation committee of the San Diego Chamber of Commerce, held at Lindbergh Field, Lieut. Seifert told the writer:

"The ship I flew on that day was A Fleet PT-3 and was manufactured in Buffalo, N. Y., by the Consolidated Aircraft Corporation. The Fleet Trainers were dandy little planes, but so contrasting to the naval aircraft to be manufactured on Lindbergh Field in the same concern's $1,000,000 plant."

Seifert, who might well be called the "Father of Lindbergh Field" not only made the first larding there, but was the councilman who sponsored and fought for the council's action in making the municipal airport possible. Following formal dedication of Lindbergh Field, Seifert continued his efforts in behalf of it by visiting many of the large aircraft factories throughout the country to acquaint them with the possibilities of the airport and San Diego as an aviation center.

At that time, seven years ago, only 25 acres of the field was ready for use. Two or three small, unpretentious buildings were the only indication that the place might be an airport.

Today, San Diego boasts one of the finest and busiest airports in the entire United States. The ramshackle buildings have given way to a magnificent administration building, which houses offices of the Ryan School of Aeronautics, the United States Weather Buerau and officies of customs officials who inspect planes from Mexico. Also at Lindbergh Field are Airtech Flying Service, Ltd., and the huge hangar of United Air Lines and Western Air Express, whose giant passenger planes operate with clock-like precision to Seattle and Salt Lake City.

Seifert, who today, is local district manager for General Petroleum, not only made the first landing at Lindbergh Field, but also participated with Captain Lowell Smith and Lieuts. John P. Richter and Virgil Hine in making the first refueling flight over San Diego.

And now, seven years later, all San Diego is celebrating the greatest single step forward made at Lindbergh Field since its modest inception. That step is the formal opening and dedication of Consolidated Aircraft's magnificient new plant which marks a new era of growth in the industrial and aviation development of San Diego.

This momentous event is the outgrowth of almost five years, active campaigning on the part of the chamber of commerce and other civic interests concerned with the future of the city as an airport. Ever since the citizens of San Diego voted an investment of $625,000 in Lindbergh Field, aircraft manufacturers have taken keen interest in the growth and development of this section. The field combines three of the outstanding essentials for the making of a great airport; namely, safety, utility and accessibility. Few, if any, airports in the United States are as safe from an operating standpoint as Lindbergh Field. Its utility as both a land plane airport and a seaplane base is made possible by the fact that it is contiguous to a very splendid basing for seaplanes in the northeastern section of the San Diego Bay. Its accessibility is proven by the fact that it is less than five minutes from downtown San Diego and also is contiguous to other transportation facilities which play an important part in the life of a modern city.

PROCLAMATION

WHEREAS, San Diego is the Airway and of the San Diego-Salt Lake City-Chicago airway, and

WHEREAS, San Diego is recognized as the birthplace of major aviation development and is recognized as one of the most important commercial and military aviation centers of America and

WHEREAS, Air transportation has become one of the vitally important factors in modern business and the many features of this new mode of transportation should be made known to the general public, and

WHEREAS, The United States Bureau of Air Commerce has initiated a national celebration of America's progress in air navigation during the period, October 14 to 21

NOW THEREFORE, I, Percy J. Benbough, Mayor of the City of San Diego, State of California, do hereby designate and proclaim the week beginning October 14, 1935, to be "Air Navigation Week", and I urge municipal officials, civic and commercial organizations, school authorities and educational leaders, and the press to call attention to the air transportation achievements already accomplished, to set forth the advantages which may accrue as the result of continued development in this field and to encourage the study of ways and means by which aerial transportation may contribute more effectively to the social and economic progress of the human race.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the City of San Diego to be affixed this 12th day of October, 1935.

(Signed)
PERCY J. BENBOUGH,
Mayor of the City of San Diego, California.

LATE AIR NEWS

If a WPA project is approved in Washington, the 514th Observation Squadron will have a new hangar on Lindbergh Field on land turned over to them by the Harbor Department.

Telegraphic advices that WPA funds to the amount of $553,619 have been made available for dredging an area off Lindbergh Field were received Thursday. The project will create a large seaplane landing and take-off area and enlarge the area of the municipal airport by about 100 acres.

The navy's new flying patrol boat, which recently made a 3700-mile non-stop flight from Panama to Alameda, is merely the forerunner of a vast fleet of such ocean spanning air cruisers soon to join the high seas flying force of the United States fleet, it was said officially at Los Angeles harbor yesterday.

The statement was made by Rear Adm. Ernest J. King, chief of the navy bureau of aeronautics, after a conference aboard the flagship Pennsylvania with Adm. Joseph M. Reeves, commander in chief.

Admiral King said 60 duplicates of the record-breaking "XP3Y-1" are to be built immmediately by the Consolidated Aircraft Corp.

Dedication Ceremonies Consolidated Aircraft Corporation Lindbergh Field

Sunday, October 20, 1935

9:00-2:00 p. m.—Open house at Consolidated Aircraft Factory. (Public invited to inspect interior of the plant).
11:30 a. m.—Finish of Los Angeles-San Diego Air Race.
12:00 noon—Luncheon in Pompeian Room, Hotel San Diego in honor of Consolidated Aircraft Corporation officials.
2:15 p. m.—Party returns to Lindbergh Field for dedication ceremonies.
2:30 p. m.—Appreciation on behalf of city by Mayor Benbough.
2:40 p. m.—Introduction of famous fliers—by T. C. Macaulay.
3:00 p. m.—Dedication speech—By Major R. H. Fleet and introduction of company officials.
3:15-4:30 p. m.—Open house at factory.
4:00 p. m.—Official party leaves for Exposition grounds.
4:15 p. m.—President Frank G. Belcher of the Exposition to meet party at west gate and escort to Plaza del Pacifico.
5:00 p. m.—Major R. H. Fleet to be guest of honor at "Retreat" ceremony by 30th U. S. Infantry at Plaza del Pacifico.
6:00 p. m.—Dinner, Cafe of the World, at the Exposition.

Orchids To Everyone From 'Your' Air News

I wish to express my sincere thanks to the many advertisers whose messages appear in this, the inaugural issue of the Southwestern Air News; to the advertising representatives who have worked hard and faithfully and to everyone who has extended best wishes for the success of your new aviation newspaper.

THE EDITOR-PUBLISHER.

Weather Bureau Inspector Extends Public Welcome

The Bureau of Air Commerce has designated the week of October 14 to 21 as Air Navigation Week, the purpose being to acquaint the public with air navigation aids, such as, radio beams, weather broadcasting and their teletypewriter service.

The air navigation office is located at Lindbergh Field on the second floor of the Administration building, and the public is invited to inspect the facilities located at this point.

M. P. Hanscom was recently appointed inspector at the Lindbergh Field office.

San Diego, California

October 16, 1935.

Mr. Weldon M. McKinney, Editor
Southwestern Air News
San Diego, Calif.

Dear Sir:

Your announcement of the publication of the first edition of "Southwestern Air News" on October 19 has elicited much comment from the members of our Aviation Committee... We are all looking forward to the first issue of this new newspaper devoted to aviation activities in this area.

We wish for you the greatest possible success in your undertaking.

Very truly yours,

SAN DIEGO CHAMBER OF COMMERCE
T. F. Bomar, Manager
Aviation Department

Local Will Rogers Memorial Handled By Aircraft Head

The Will Rogers memorial fund in San Diego will be handled by Major Reuben H. Fleet, president of the Consolidated Aircraft Corporation, by appointment to a nationwide committee, headed by Vice-President John Garner.

Major Fleet is to be one of the 225 prominent citizens of the United States who are taking part in this movement. The form of the memorial has not yet been decided but will conform to the ideals of simplicity of Will Rogers, according to Jesse H. Jones, chairman of the Reconstruction Finance Corporation and treasurer of the fund.

"Every dime contributed will go into the memorial fund and a committee will plan a system of memorials," is the word of Vice-President Garner

IMPORTANT SUBJECTS DISCUSSED AT RECENT LINDBERGH FIELD MEET

Enlargement of the municipal airport in order to create additional room for other aircraft firms contemplating a move to San Diego was one of the principal discussions at a meeting of the aviation committee of the chamber of commerce held at Lindbergh Field Thursday, October 11

Plans for observance of Aviation Week, October 14-21 and for the dedication of Consolidated Aircraft Corporation's new plant on October 20, were also discussed by the committee.

Chairman Jack Hicklin appointed members to speak over the radio and at luncheon clubs during aviation week.

Everyone present received quite a "kick" when one of the members inadvertently referred to the Consolidated Aircraft plant as the "Consolidated Hangar."

Those present at the meeting were: Messrs. Thomas F. Bomar, aviation department manager, chamber of commerce; Jack Hicklin, chairman; D. G. Fleet, Arnet Speer, L. C. Hanscom, C. A. Van Dusen, A. Carpenter, Phil Sharp, T. Claude Ryan, C. R. Guern, C. B. Wohler, William Van Dusen, A. W. Pohl, R. W. Booth, Howard Morin, Hazel Kelly, Douglas Kelly, Ralph F. Yambert, Earl Prudden, C. M. Urbach, Frank W. Seifert, L. W. Nelson, A. W. Miller, Weldon M. McKinney, Lt. Cmdr. E. F. Stone, Lt. Cmdr. Schaefer, Captain L. C. Hurd, and Captain Cannon.

PLANS ANNOUNCED BY NINTH CORPS

(Continued from Page One)

to March Field. Removal of the Rockwell Field air depot will take nearly a year, as no facilities for it, as yet, have been constructed.

With the Navy altogether in possession of the Island, basing here one of the two transport carriers, Yorktown and Enterprise is certain and an expenditure of nearly $4,000,000 in improvements is expected.

Exclusive use of Rockwell Field by the Navy and removal of the Army to March Field has been announced as a "deal" between the two service branches by Secretary of War George Dern.

Secretary Dern declared the exchange was part of General Douglas MacArthur's program for concentrating the strength of the national defense.

The Army plans to make March Field its principal aviation base on vale its principal aviation base on the coast and one of the strongest in the nation, according to Secretary Dern. Sunnyvale has been operated with only a skeleton force since the dirigible Macon crashed in the Pacific last spring. Naval planes have made it their base during their summer maneuvers.

The move will affect 300 civilian workers, 30 officers and 542 Army men, according to Col. Jacob Wuest, commander Rockwell Field air depot.

Involved in the transfer will be more than $30,000,000 worth of materials and equipment in the storage depot, the 19th Bombardment group with its complement of 40 planes, and considerable field and flying equipment. Lieut. Col. Howard C. Davidson commands the 19th Bombardment group.

Transfer of supplies, equipment and material from the storage depot will take months, Captain Harold Brand, press relations officer, said.

The transfer concludes a controversy of 15 years over Rockwell Field. The North Island base has been found too small to accommodate both military branches. With removal of the Army, the Navy will spend nearly $4,000,000 for construction of hangars at the west end of the island, it is believed. The island now covers 1340 acres.

In addition Navy authorities here believe the swap assures the basing in San Diego of the two new plane carriers, Yorktown and Enterprise which are under construction and will be commissioned in 1937. Their arrival will supplement the Navy base by 740 planes.

Removal of the Army air forces was not unexpected, according to Major T. C. Macaulay, manager of the chamber of commerce. Several years ago, the problem first arose and the chamber endeavored to find a solution, he said. "Loss of the army units will be very much felt," he said.

Chamber officials pointed out that they offered the Army industrial lands near Chula Vista where citizens voted $100,000 as a gift if the Army would move there. However, military officials made it clear that it was North Island or nothing," and that if they moved it would mean giving up their air station here. Land also was offered on Camp Kearney mesa, but was unacceptable to Army authorities

A "truce" in the "battle of North Island" was agreed on by the Army and Navy officials last year, pending a solution for the difficulty. It was stressed that congestion of airlanes and not lack of space on the island itself was the principal reason more room was needed. Dredging operations to add 500 acres to North Island still would not solve the problem.

There was some talk of the fleet air base moving to Sunnyvale, so San Diego stood the chance of losing one unit or the other. As it is, the addition of two more carriers to the fleet will compensate for the loss of the Army units, it is believed.

Representative Burnham, commenting on the transfer of Rockwell Field, said that North Island now probably will be made "the greatest naval air base in the world."

"The men in charge of our national defenses know better how to allocate their bases than the layman and, because it is in the interest of national defense, I shall not oppose the transfer," Representative Burnham said.

READ THE AIR NEWS.

LINER SET HIGH RECORD

(Continued from Page One)

Douglas Luxury Liners in service throughout the world. Fifty-eight are doing their daily and nightly work of transporting passengers, mail and goods across America for TWA, Inc., and American Airlines. A fleet of them is at work along the Atlantic coast on Eastern Air Lines, bringing the entire south to the back door of New York and Chicago. Another fleet is engaged in shrinking South America in travel time for Pan American Airways.

Efficiency Increased.

For the first six months of 1935 there were 25 airlines in the United States flying 350 airplanes Of the 29,017,520 miles scheduled to be flown, the air companies completed 26,259,665 miles.. Douglas Luxury Liners of TWA, American Airlines and Eastern Air Lines flew 7,284,437 miles of this total, or 27.7 per cent, and in so doing increased the efficiency of this operation in six months as much as 35 per cent for one air line and 20 per cent for another.

The whole-hearted response by the public is clearly illustrated in the two blue-ribbon flights of TWA, the First Sky Chief and the Second Sky Chief. They are referred to in the press of the country as the "Celebrity Specials," because there is not a day but some American or foreign personage of outstanding importance is a passenger. Bookings in Los Angeles and New York must be made days in advance to insure travel.

15,000 Miles Daily

American Airlines, flying more route miles than any other United States air transport company, began to equip its system with Douglas transports a few weeks before the first of the year. At present they are operating Douglas Luxury Liners 15,020 miles a day, 9012 miles in the daytime and 6008 miles at night. Popularity of the silver-winged Luxury Liner on this route is shown in a total of 39,000 passengers transported solely in these planes since December. During July, American Airlines report the Douglas planes on the southern division operated on an efficiency of 100 per cent.

Foreign airlines were not long in recognizing the high quality of the Douglas plane and there have been delivered 34 Luxury Liners to KLM, (Royal Dutch Air Lines), Avio Linee Italiane S, "Swissair" Schweizerische Luftverkehrs Gesellschaft AG, Deutsche Lufthansa Aktiengesellschaft, Lineas Aereas Postales Espanolas, Japan Air Transport, Chino National and others. Douglas Aircraft officials announce that all operators have reported on the excellence of the equipment in overcoming sectional problems formerly unsolvable with previous equipment.

San Diego will retain its Army Air Corps officers' flying reserve unit. High officials of the Ninth Corps Area have approved transfer of equipment and personnel of the 514th Observation Spuadron, U. S. A. Air Corps Reserve, from Rockwell Field to Lindbergh Field, Lieut. William Van Dusen was notified Thursday.

IT MAY INTEREST YOU TO KNOW . . .

The youngest pilot in France, and perhaps the entire world, is 16-year-old Mlle. Elida Bierlein, daughter of the president of Metz Aero club, Paris. The air ministry recently granted her a license.

Instruction in blind take-offs and S. A. T. R. 90-day rechecks are being given T. W. A. pilots in a Ford tri-motor by "Bill" Coyle, chief pilot of the western division, at their Grand Central air terminal base in Glendale, Calif. The plane, which was discarded when the use of faster equipment was inaugurated, has been kept in excellent shape as a reserve plane and is ideal for instrument flying training, according to Coyle.

Air travelers at Union Air Terminal, Burbank, Calif., averaged 236 daily for the month of August.

The figures for this month, estimating only revenue passengers, was 7372, or a daily average of 236 air passengers, in and out.

With 5081 and 2291 revenue passengers, respectively, both United Air Lines and Western Air Express broke all company records. A total of 675 United transports took off and landed during the month, while the Western Aix Express total was 371.

H. Hawley Bowlus and B. F. Mahoney, designers and builders of the famous "Spirit of St. Louis," are now engaged in the construction and sale of stream-lined auto trailers in San Fernando, Calif.

At midnight, September 3, aircraft of the Transcontinenta & Western Air, Inc., had flown the great total of 25,050,710 miles, or the equivalent of 1000 times around the earth at the equator.

T. W. A. was organized on October 1, 1930. It began operating October 15, 1930. The company began the transportation of air mail under contract with the post office department October 25, 1930.

T. W. A., Inc., is the outgrowth, on the western terminus of the line, of the old Maddux Air Lines, and was also at one time affiliated with Western Air Express, and is therefore one of the early services enjoyed out of Los Angeles.

Lindbergh Field, Municipal Airport, has enjoyed for some time the distinction of having the highest rating by the United States department of commerce. At the request of the aviation department, chamber of commerce, a large billboard was recently erected by Port Director Joe Brennan at the north end of the airport bearing this information.

Laura Ingalls had her heart set on establishing a new transcontinental non-stop record for women. On September 13 She was successful in achieving this ambition when she flew between Union Air Terminal, Burbank, Calif., and Floyd Bennett Field in New York City in 13 hours, 34 minutes and 5 seconds. This flight bettered the two year-old record set by Amelia Earhart Putnam by 3 hours 33 minutes and 5 seconds. Miss Ingalls missed the non-stop record for men by only 7 minutes and 5 seconds.

A transport plane lands or takes off at Union Air Terminal on the average of every half hour during an 18-hour period each day, according to Fred Denslow, president and general manager of the port.

The war department in Washington announced September 26 the award of a contract to the Douglas Aircraft company, Santa Monica, Calif., for the purchase of 18 transport planes, to cost $1,235,500.

Dr. S. Albert Reed, 81, inventor of the first all-metal airplane propeller, died at his home in New York October 1. His duralumin propellor, designed in 1921, was used on the famous transatlantic flight in 1927 by Col. Charles A. Lindbergh.

Sir Charles Kingford -Smith, internationally renowned aviator, who has flown across more oceans than any contemporary flier, will make his final bid for air fame in October when he will fly from London to Melbourne in an attempt to break the record established last year in the MacRobertson international air race.

He will fly in the same Lockheed Altair which carried him across the Pacific in October, 1934, and which has broken nearly every air record in Australia. The Lockheed is a single-motor commercial plane and will be out to lower a mark set by the specially-built twin-engine racing plane.

Clyde Pangborn, noted distance flier, announced in Oakland on September 24 that he would shortly attempt a non-stop flight around the world. Eddie Robbins will go along as co-pilot.

Lieut. Commander Herbert V. Wiley, survivor of the ill-fated Akron and Macon, Navy dirigibles, was married in Los Angeles September 21 to Mrs. Charlotte Weeden, formerly of Sacramento. Wiley was in command of the Macon when it crashed in the Atlantic some time ago.

HOW'S THIS ONE FOR SIZE?

TOMMY SAPORITO AND HIS PLANE

YOUTHFUL S. D. AIR FAN SEES TEST VALUE IN MODEL PLANE

The leader of a flying squadron should have the biggest and best plane of the outfit, Tommy Saporito, 15-year old captain of the Scripps-Howard Junior aviators in the University Heights district, insists.

And to prove that he isn't fooling about having a plane that is a plane, Tommy laboriously hauls out a model ship from a hangar that has a six-foot wing spread, is five feet long and can fly through the use of elastic bands.

Tommy has been working on the plane for nearly six months and just has it completed. It's wing coverings are from cotton material meticulously placed on strips of wood obtained in the school carpenter shop.

Highly hopeful of some day becoming an aviation pilot or mechanic, Tommy has a novel plan for the future of the plane. With the aid of a neighbor he intends putting a one-pound motor into the ship and trying it out from a hill nearby.

It'll wreck the plane, Tommy says, but it'll prove the practicability of such model planes with motors attached, in the future.

Young Saporito, besides being an aviation "nut," is also a crack golfer and once figured in the news as a Scout lifesaver. He is the son of Mr. and Mrs. Tom Saporito, 2015 Meade avenue.

AVIATION SHORTS

Observance of Air Navigation Week will be climaxed here tomorrow by celebration of Aviation Day at the California-Pacific International Exposition and dedication of the new Consolidated Aircraft Corporation's new $1,000,000 plant at Lindbergh Field. San Diego entered into the celebration by official proclamation by Mayor P. S Benbough of Air Navigation Week.

The new world glider records were claimed this week by a Soviet airman and aviatrix, according to dispatches from Koktable, The Crimea, U. S. S. R. Pilot Lyzitsen remained aloft 38 hours, 40 minutes, beating by half an hour the record set just a few days before by Pilot Sukhomlinoff. Maria Razenskaya claimed a women's record of 15 hours, 39 minutes.

The first parachute was invented by Andre Jacques Garnarin while he was planning a way to escape from prison and drop himself over a wall. Later he made the first successful descent from a balloon in 1797.

Another air tragedy was laid to high tension power wires when a light bi-plane crashed into an 88,000-volt line at Indio, Calif. Pilot R. F Stergill was killed. Failing to gain enough altitude, his craft struck the wires and was dashed to the ground.

Salt Lake City—Additional evidences of the wrecking of the lost Standard Oil Company of California air liner was made public here with the finding and

(Continued on Page Seven)

Air Traffic Gain Forces Expansion By Local Air Lines

Sharp increases in air traffic in and out of San Diego have resulted in opening of joint uptown offices by the Western Air Express and United Air Lines according to announcements by heads of the two companies.

The offices are in the lobby of the U S. Grant hotel at the Third avenue entrance. An attendant is on duty during office hours.

"The uptown offices are in addition to offices at Lindbergh Field," said George Cussens, general traffic manager for Western Air. "The additional joint office was necessitated by a sharp increase in air traffic.' '

United Air Lines Sets High Record

United Air Lines' west coast division hung up almost a 100 per cent record during August when it flew all but 822 miles of a scheduled 360,537 miles between here and Seattle, linking all cities between the Mexican and Canadian borders.

The Seattle-Salt Lake City division made a 100 per cent record and the Pacific Coast-Chicago-New York division scored a combined average of 99.9 per cent, including the same high percentage of performance on its overnight coast-to-coast flights.

COL. ROSCOE TURNER ASKS FINANCIAL AID ROUND WORLD FLIGHT

"I'll fly around the world for you," is not a theme song that Col. Roscoe Turner is singing, but would voice his plea for financial backing for a projected flight around the world at the equatorial line.

Col. Turner, Los Angeles speed flier, pilot of many daring flying feats, says he has a new kind of plane, one combining speed, endurance and safety, in mind for the trip around the imaginary belt encircling the earth exactly between the poles.

We suggest that Col. Turner, like Columbus, plead his cause with the queen of some foreign country providing no one comes through with the necessary funds

San Diego Youth Wins Air Wings At Army School

Another son of San Diego earned his air wings last week when he was graduated from the U. S. Army air corps advanced flying school at Kelly Field, San Antonio, Texas, according to reports received here.

He is Second Lieut. George B. Dany, son of Major George Dany, U. S.. Army retired, and Mrs. Dany, 4201 Euclid avenue. He is expected here soon for a visit with his parents.

Lieut. Dany is a graduate of San Diego high school and State college. He was graduated last June from West Point and will become a military pilot after leaving Kelly Field.

Pacific Air Pageant Will Be Held At Long Beach Nov. 10-11

Long Beach, Oct. 19—Official announcement has just been made of the Women's Championship Air Races and Pacific Air Pageant to be held here Nov. 10-11, under the official sanction of the National Aeronautic Association of Washington, D. C.

Sponsored by the Junior Chamber of Commerce of Long Beach in collaboration with the Los Angeles Junior Chamber organization, this contest is to determine the champion woman aviator of the United States. There are to be four main contests, one transcontinental speed dash and three women's closed course races.

The transcontinental dash will start from Floyd Bennett Field, New York, and end in front of the grandstand at the Long Beach airport. There will be one stop at Amarillo, Texas, because of the shorter days and weather hazards.

This is to be a race for the faster flying time between the Atlantic and Pacific points. It is a free-for-all competition for all types of airplanes and there will be no handicaps. Qualifying speed is to be 160 miles an hour.

A carefully worked out system of merits to be divided between the four race events will be used to determine the champion woman flier. The chief event, however, is the transcontinental dash.

Gladys O'Donnell, one of America's greatest women aviators, was recently toasted at a banquet here, attended by 250 celebrities of the flying world and the backers of the new air classic, as the initiator of the idea.

Sanctioned by the National Aeronautic Association of Washington, D. C., this new contest is predicted to become an annual event of national and international importance.

This city has been and is the home of many noted fliers and has a notable aviation history dating back to the pioneer days of the industry. Through the Junior Chamber of Commerce, enthusiastic cooperation of the principal interests of Long Beach and Los Angeles are being given in backing this pioneer event among the air classics of the country.

Full cooperation of the military and municipal authorities, as well as of all the private organizations interested in aviation has been given. Representatives of these interests will be active participants in the two-day fiesta.

Gladys O'Donnell, who is acting as managing director, will not compete, but has received the assurance of the leading women fliers of the country of their participation and support Many well known figures of Hollywood who are also aviation enthusiasts will take part in the event.

The management of the races and pageant is in the hands of Orville Kuster, well known director of air races and aviation shows. He is best known here for his activities at the National Air Races in 1933 and for his work at the air races in Cleveland.

WOMEN FLYERS SCHEDULED IN VISIT SUNDAY

Gladys O'Donnell, winner of 25 aviation events in the last five years, will leave Grand Central Airport in Glendale Sunday en route to Lindbergh Field and the California-Pacific Exposition as a feature of Aviation day and dedication of the Consolidated Aircraft Corporation's new plant.

Nine other women fliers will accompany her on the flight, including Ethel Sheehy, Bessie Owen, Grace Cooper, Betty Furmin, La Verne Woolfram, Evelyn Hudson, Hilda Jarmuth, Katherine Cheung and Bernice Huerrera.

The Ryan School of Aeronautics will stage an air show here and leaders of aviation throughout the country will be present to participate in ceremonies.

The women pilots will compete for the Shell trophy cup and other honors and will participate in several programs at the Exposition designed to recognize aviation's outstanding position.

The race will start at 10 a. m. from Glendale and end at Lindbergh Field. At the Exposition seven aviation firms have arranged for special exhibits.

NEW MODEL LOCKHEED TRANSPORT ANNOUNCED

Upon the delivery of the first of five Lockheed airliners to Eastern Air Lines division of North American Aviation, Inc., Lockheed Aircraft Corporation announced the development of a new twin-engine Electra transport, which has been granted Approved Type Certificate No 125 by the Bureau of Air Commerce. The trim new transports will be added to the "Great Silver Fleet" of Eastern Air Lines for service on the company's extensive air mail and passenger system in the eastern states. from Newark to New Orleans and from Chicago to Miami.

First American transport plane to be powered with new Wright Whirlwind model 975E3 engine with dynamic balancer, the twin-engine Lockheed is recognized as the fastest multi-engine airliner in the world. Top speed is aproximately 210 miles per hour. The new Lockheed will carry 10 passengers in comfortable chairs, two pilots and 500 pounds of cargo. With its new engines this Electra will have a gross load of 10,000 pounds as compared with a gross load of 9750 pounds of their most popular previous model.

Innovations in the new model include the installation of de-icer equipment in the leading edges of the wing and on each stabilizer. Landing lights are also in the leading edge rather than in the nose of the fuselage.

Hamilton Standard adjustable pitch propellers are driven by the two whirlwinds which develop 440 horsepower each at 2200 rpm at sea level.

AVIATION SHORTS

(Continued from Page Six)

identification of two seat cushions from the plane. They were discovered on the beach at Stansbury Island, five miles north of where bodies of two of the plane's crew were located last week.

Nearing the end of his vacation, President Roosevelt last week made his first direct contact with the outside world when a Navy plane from Bahia Honda, Panama, brought his mail to the Houston.

The Houston and her escort,, the Portland, are en route to Perlas Islands in Panama Bay, after a three-day stay at Cocos Island. After leaving there the presidential ship will steam through the canal and head for home.

And now air traffic is getting so thick that we have parachute collisions. Two chute jumpers from an airport near Moscow bumped in mid-air and descended safely to the ground.

Pilot Osadtchy leaped from a ship and hurtled toward the earth, unable to open his chute. The chute of Pilot Oganesov became tangled when the two men crashed into each other. Oganesov succeeded in untangling his chute and carried his fellow airman to earth.

March Field, Riverside—Lieut. William A. Thatcher, Jr., 24, saved his life here by bailing out of his plane after learning by radio from another plane that his landing gear was damaged. Thatcher circled over the airport and radioed the field here for orders. He was advised to fly over a nearby dry lake and use his own judgment He did and landed safe. The plane crashed and burned.

Chicago—Branding charges that the United Air Lines had discharged competent mechanics and replaced them with untrained men as ridiculous, W. A. Patterson, United president, in a statement here, hit back at John Fitzpatrick, head of the Chicago Federation of Labor, who had declared that labor troubles might have been involved in the recent crash of a United air liner at Cheyenne, Wyo., in which 12 persons were killed.

"United Air Lines had had no labor controversy anywhere in its entire system," Patterson said.

Two machinists' mates aboard the coast guard patrol boat Calypso were flown to shore in a coast guard plane after word had been received they suffered injuries sustained in course of duty. They are Alfred J. Baker and Michael W. Keller. Baker was reported to have an infected leg and Keller infected face cuts. The pilot of the coast guard plane was Radioman C. H. Allen. He met the Calypso about 60 miles out at sea

Los Angeles—Caroming off a billboard as it glided to earth with a dead motor, an airplane crashed, severely injuring Geo. Schwamm, 33, movie stunt flier. With him was Wayne Fields, 32, who was slightly cut and bruised.

Select Temporary Bases For Pacific

SAN FRANCISCO—A temporary lease on Alameda Airport, located in San Francisco bay, was ratified here by the Alameda city council, establishing the bay area as one of the points from which Pan American's experimental trans-Pacific air transport operations will be conducted.

Confirming reports that other air terminal sites were being studied on the coast for this service, J T. Trippe, president of the Pan-American Airways system, said that in addition to the San Francisco area, other points on the California coast were also to be used during the experimental period.

"Through the courtesy of the Navy Department Pan-American Airways has arranged for temporary use of a section of the naval air station at San Diego," Mr. Trippe said. Questioned as to whether or not flights would be made from Los Angeles, Mr. Trippe said that it was not certain whether harbor improvements could be completed in time for these flights.

"On invitation from Mayor Frank M. Shaw of Los Angeles our engineers have submitted to the mayor's office an outline of requirements which would be necessary to accommodate trans-ocean type flying boats at Los Angeles."

Consolidated Officials

Officers, directors and technical staff of the Consolidated Aircraft Corporation who are now busily engaged in their various duties at the new plant. They are, left to right:
R. S. Madison, secretary-treasurer; Lt. Comdr. D. M. Carpenter, ingineer; R. A. Miller, chief of structures; H. A. Sutton, assistant chief engineer; R. E. Oversmith, chief of production; J. L. Kelley, factory superintendent; George Newman, jr., assistant factory superintendent; C. T. Leigh, vice president and material supervisor; C. A. Van Dusen, vice president and works manager; Capt. L. C. Hurd, inspector of army aircrafts; E. F. Neff, personnel supervisor; B. W. Sheahan, chief of drafting; and D. G. Fleet, assistant to the manager.

Famous Flier To Attempt Assault On Record Marks

Col. Art Goebel, famous pilot who made aviation history in 1927-1929, announced his plans recently for an attempted come-back. Absent from speed flying records for several years, Col. Goebel says he has plans practically completed for an assault on two trans-continental air records in a few weeks.

Flying a special built low-wing Lockheed plane, Col. Goebel will first attempt to smash the east-west mark. Taking the air again after a short rest on the coast, Colonel Goebel will make an attempt to lower the record of ten hours, two minutes, fifty-one seconds made by Col. Roscoe Turner on the eastward crossing. He stated he intends to make both flights at an altitude of over 15,000 feet or as high as he can go without the aid of oxygen.

On this high altitude flight he says he will use the recently developed high-octane polymerized fuel used by Howard Hughes when he made a flight between San Francisco and Honolulu which was record breaking. The next year he broke the west to east record—the one he is again aiming at, when he flew across the continent in 18 hours. This record was broken two years later. Goebel says his secret ambition is to make a non-stop flight around the world. He believes that with proper equipment this feat can eventually be accomplished.

AIR CORPS HANGAR AT LINDBERGH FIELD HAS LOCAL PWA APPROVAL

An Army Air Corps reserve hangar at Lindbergh Field has been approved by George White, director of the local PWA office and the suggestion forwarded to San Francisco PWA headquarters

Requested by the Harbor department, the hangar will be 60x100 feet in size and will cost approximately $17,739. Employment will be given to 71 persons during its erection.

Need for the new hangar has arisen since the present reserve hangar at North Island must be given over to the navy.

USE THE AIR MAIL.

Ryan School Adds Building For S. D. College Air Class

The T. C Ryan School of Aeronautics has added a 50x100-foot extension to its building at Lindbergh Field to accommodate the ground school classes from San Diego State College. Arrangements have been made whereby State College students desiring to study aeronautics receive instruction at the Ryan school and in the Ryan shops. These students will spend one-half day at Lindbergh Field and one-half day in their regular classes at State College.

EFFORTS TO OBTAIN AIR MAIL AFTERNOON DEPARTURE IS DENIED

The Aviation Committee has been advised by Alvin Adams, president of Western Air Express, that negotiations with the Post Office Department for permission to carry mail on the 3 p. m. departure from San Diego to Salt Lake City have been successful. The second assistant postmaster general in charge of the department will not permit payment for this service. It is hoped that the necessary funds for this additional service may be obtained when Congress reconvenes.

Nonstop Coastwise Flights Just Training Trip To Navy

By FRANK HAVEN

Non-stop flights similar to the one recently completed by Patrol squadron seven at North Island from San Diego to Seattle and back are routine matters with patrol fliers, Lieut. Cmdr. Price, commander of the flight says.

Similar flights by other patrol squadrons are planned in the future.

"The flight to Seattle was just a routine training trip for the officers," Lieut. Cmdr. Price says "The six planes in the squadron took 11½ hours to fly to Seattle and 10½ hours to come back.

"We never made a stop anywhere. Last Saturday morning we took off from Seattle but had to turn back because of weather conditions, making the only incident of the jaunt worth mentioning."

Lieut. Cmdr Price said that the Navy air field at Seattle had excellent facilities but was small as compared to the fields in this sector.

The patrol planes, or "flying boats," had to maintain high altitudes during the entire trip. Lieut. Cmdr. Price is wing commander and is attached to the USS Wright which came into port for a stay until Oct. 23 yesterday.

Squadron commander is Lieut. Cmdr. Rutledge Irvine and others on the non-stop flight were Lieuts. Talbot, Fort, Heath, Parr, Duerfeldt and Tague.

are you interested in aviation? are you air minded?

Do you want to keep abreast of all present and future developments in the aviation industry? an industry, which today, virtually in its infancy, faces probably a greater future and a greater expansion and growth than any other single industry in the world. An industry which in the present century in all likelihood will change the map of the world both commercially and politically. An industry which already has made you a next door neighbor with New York, London, Paris and the Orient. An industry, further, in which your city not only is inextricably bound but with which it undoubtedly will travel to greater and greater heights of growth and expansion.

Then you will want to read every forthcoming issue of the SOUTHWESTERN AIR NEWS.

In this, our inaugural issue, we greet you and present ourselves for your approval.

Future issues will cover every phase of the aviation personalities and, in short, everything of interest to air-minded people.

PLANS ANNOUNCED BY NINTH CORPS

(Continued from Page One)

to March Field. Removal of the Rockwell Field air depot will take nearly a year, as no facilities for it, as yet, have been constructed.

With the Navy altogether in possession of the Island, basing here one of the two transport carriers, Yorktown and Enterprise is certain and an expenditure of nearly $4,000,000 in improvements is expected.

Exclusive use of Rockwell Field by the Navy and removal of the Army to March Field has been announced as a "deal" between the two service branches by Secretary of War George Dern.

Secretary Dern declared the exchange was part of General Douglas MacArthur's program for concentrating the strength of the national defense.

The Army plans to make March Field its principal aviation base on vale its principal aviation base on the coast and one of the strongest in the nation, according to Secretary Dern. Sunnyvale has been operated with only a skeleton force since the dirigible Macon crashed in the Pacific last spring. Naval planes have made it their base during their summer maneuvers.

The move will affect 300 civilian workers, 30 officers and 542 Army men, according to Col. Jacob Wuest, commander Rockwell Field air depot.

Involved in the transfer will be more than $30,000,000 worth of materials and equipment in the storage depot, the 19th Bombardment group with its complement of 40 planes, and considerable field and flying equipment. Lieut. Col. Howard C. Davidson commands the 19th Bombardment group.

Transfer of supplies, equipment and material from the storage depot will take months, Captain Harold Brand, press relations officer, said.

The transfer concludes a controversy of 15 years over Rockwell Field. The North Island base has been found too small to accommodate both military branches. With removal of the Army, the Navy will spend nearly $4,000,000 for construction of hangars at the west end of the island, it is believed. The island now covers 1340 acres.

In addition Navy authorities here believe the swap assures the basing in San Diego of the two new plane carriers, Yorktown and Enterprise which are under construction and will be commissioned in 1937. Their arrival will supplement the Navy base by 740 planes.

Removal of the Army air forces was not unexpected, according to Major T. C. Macaulay, manager of the chamber of commerce. Several years ago, the problem first arose and the chamber endeavored to find a solution, he said. "Loss of the army units will be very much felt," he said.

Chamber officials pointed out that they offered the Army industrial lands near Chula Vista where citizens voted $100,000 as a gift if the Army would move there. However, military officials made it clear that it was North Island or nothing," and that if they moved it would mean giving up their air station here. Land also was offered on Camp Kearney mesa, but was unacceptable to Army authorities

A "truce" in the "battle of North Island" was agreed on by the Army and Navy officials last year, pending a solution for the difficulty. It was stressed that congestion of airlanes and not lack of space on the island itself was the principal reason more room was needed. Dredging operations to add 500 acres to North Island still would not solve the problem.

There was some talk of the fleet air base moving to Sunnyvale, so San Diego stood the chance of losing one unit or the other. As it is, the addition of two more carriers to the fleet will compensate for the loss of the Army units, it is believed.

Representative Burnham, commenting on the transfer of Rockwell Field, said that North Island now probably will be made "the greatest naval air base in the world."

"The men in charge of our national defenses know better how to allocate their bases than the layman and, because it is in the interest of national defense, I shall not oppose the transfer," Representative Burnham said.

READ THE AIR NEWS.

LINER SET HIGH RECORD

(Continued from Page One)

Douglas Luxury Liners in service throughout the world. Fifty-eight are doing their daily and nightly work of transporting passengers, mail and goods across America for TWA, Inc., and American Airlines. A fleet of them is at work along the Atlantic coast on Eastern Air Lines, bringing the entire south to the back door of New York and Chicago. Another fleet is engaged in shrinking South America in travel time for Pan American Airways.

Efficiency Increased.

For the first six months of 1935 there were 25 airlines in the United States flying 350 airplanes Of the 29,017,520 miles scheduled to be flown, the air companies completed 26,259,665 miles.. Douglas Luxury Liners of TWA, American Airlines and Eastern Air Lines flew 7,284,437 miles of this total, or 27.7 per cent, and in so doing increased the efficiency of this operation in six months as much as 35 per cent for one air line and 20 per cent for another.

The whole-hearted response by the public is clearly illustrated in the two blue-ribbon flights of TWA, the First Sky Chief and the Second Sky Chief. They are referred to in the press of the country as the "Celebrity Specials," because there is not a day but some American or foreign personage of outstanding importance is a passenger. Bookings in Los Angeles and New York must be made days in advance to insure travel.

15,000 Miles Daily

American Airlines, flying more route miles than any other United States air transport company, began to equip its system with Douglas transports a few weeks before the first of the year. At present they are operating Douglas Luxury Liners 15,020 miles a day, 9012 miles in the daytime and 6008 miles at night. Popularity of the silver-winged Luxury Liner on this route is shown in a total of 39,000 passengers transported solely in these planes since December. During July, American Airlines report the Douglas planes on the southern division operated on an efficiency of 100 per cent.

Foreign airlines were not long in recognizing the high quality of the Douglas plane and there have been delivered 34 Luxury Liners to KLM, (Royal Dutch Air Lines), Avio Linee Italiane S, "Swissair" Schweizerische Luftverkehrs Gesellschaft AG, Deutsche Lufthansa Aktiengesellschaft, Lineas Aereas Postales Espanolas, Japan Air Transport, Chino National and others. Douglas Aircraft officials announce that all operators have reported on the excellence of the equipment in overcoming sectional problems formerly unsolvable with previous equipment.

San Diego will retain its Army Air Corps officers' flying reserve unit. High officials of the Ninth Corps Area have approved transfer of equipment and personnel of the 514th Observation Spuadron, U. S. A. Air Corps Reserve, from Rockwell Field to Lindbergh Field, Lieut. William Van Dusen was notified Thursday.

IT MAY INTEREST YOU TO KNOW . . .

The youngest pilot in France, and perhaps the entire world, is 16-year-old Mlle. Elida Bierlein, daughter of the president of Metz Aero club, Paris. The air ministry recently granted her a license.

Instruction in blind take-offs and S. A. T. R. 90-day rechecks are being given T. W. A. pilots in a Ford tri-motor by "Bill" Coyle, chief pilot of the western division, at their Grand Central air terminal base in Glendale, Calif. The plane, which was discarded when the use of faster equipment was inaugurated, has been kept in excellent shape as a reserve plane and is ideal for instrument flying training, according to Coyle.

Air travelers at Union Air Terminal, Burbank, Calif., averaged 236 daily for the month of August.

The figures for this month, estimating only revenue passengers, was 7372, or a daily average of 236 air passengers, in and out.

With 5081 and 2291 revenue passengers, respectively, both United Air Lines and Western Air Express broke all company records. A total of 675 United transports took off and landed during the month, while the Western Aix Express total was 371.

H. Hawley Bowlus and B. F. Mahoney, designers and builders of the famous "Spirit of St. Louis," are now engaged in the construction and sale of stream-lined auto trailers in San Fernando, Calif.

At midnight, September 3, aircraft of the Transcontinenta & Western Air, Inc., had flown the great total of 25,050,710 miles, or the equivalent of 1000 times around the earth at the equator.

T. W. A. was organized on October 1, 1930. It began operating October 15, 1930. The company began the transportation of air mail under contract with the post office department October 25, 1930.

T. W. A., Inc., is the outgrowth, on the western terminus of the line, of the old Maddux Air Lines, and was also at one time affiliated with Western Air Express, and is therefore one of the early services enjoyed out of Los Angeles.

Lindbergh Field, Municipal Airport, has enjoyed for some time the distinction of having the highest rating by the United States department of commerce. At the request of the aviation department, chamber of commerce, a large billboard was recently erected by Port Director Joe Brennan at the north end of the airport bearing this information.

Laura Ingalls had her heart set on establishing a new transcontinental non-stop record for women. On September 13 She was successful in achieving this ambition when she flew between Union Air Terminal, Burbank, Calif., and Floyd Bennett Field in New York City in 13 hours, 34 minutes and 5 seconds. This flight bettered the two year-old record set by Amelia Earhart Putnam by 3 hours 33 minutes and 5 seconds. Miss Ingalls missed the non-stop record for men by only 7 minutes and 5 seconds.

A transport plane lands or takes off at Union Air Terminal on the average of every half hour during an 18-hour period each day, according to Fred Denslow, president and general manager of the port.

The war department in Washington announced September 26 the award of a contract to the Douglas Aircraft company, Santa Monica, Calif., for the purchase of 18 transport planes, to cost $1,235,500.

Dr. S. Albert Reed, 81, inventor of the first all-metal airplane propeller, died at his home in New York October 1. His duralumin propellor, designed in 1921, was used on the famous transatlantic flight in 1927 by Col. Charles A. Lindbergh.

Sir Charles Kingford -Smith, internationally renowned aviator, who has flown across more oceans than any contemporary flier, will make his final bid for air fame in October when he will fly from London to Melbourne in an attempt to break the record established last year in the MacRobertson international air race.

He will fly in the same Lockheed Altair which carried him across the Pacific in October, 1934, and which has broken nearly every air record in Australia. The Lockheed is a single-motor commercial plane and will be out to lower a mark set by the specially-built twin-engine racing plane.

Clyde Pangborn, noted distance flier, announced in Oakland on September 24 that he would shortly attempt a non-stop flight around the world. Eddie Robbins will go along as co-pilot.

Lieut. Commander Herbert V. Wiley, survivor of the ill-fated Akron and Macon, Navy dirigibles, was married in Los Angeles September 21 to Mrs. Charlotte Weeden, formerly of Sacramento. Wiley was in command of the Macon when it crashed in the Atlantic some time ago.

HOW'S THIS ONE FOR SIZE?

TOMMY SAPORITO AND HIS PLANE

YOUTHFUL S. D. AIR FAN SEES TEST VALUE IN MODEL PLANE

The leader of a flying squadron should have the biggest and best plane of the outfit, Tommy Saporito, 15-year old captain of the Scripps-Howard Junior aviators in the University Heights district, insists.

And to prove that he isn't fooling about having a plane that is a plane, Tommy laboriously hauls out a model ship from a hangar that has a six-foot wing spread, is five feet long and can fly through the use of elastic bands.

Tommy has been working on the plane for nearly six months and just has it completed. It's wing coverings are from cotton material meticulously placed on strips of wood obtained in the school carpenter shop.

Highly hopeful of some day becoming an aviation pilot or mechanic, Tommy has a novel plan for the future of the plane. With the aid of a neighbor he intends putting a one-pound motor into the ship and trying it out from a hill nearby.

It'll wreck the plane, Tommy says, but it'll prove the practicability of such model planes with motors attached, in the future.

Young Saporito, besides being an aviation "nut," is also a crack golfer and once figured in the news as a Scout lifesaver. He is the son of Mr. and Mrs. Tom Saporito, 2015 Meade avenue.

AVIATION SHORTS

Observance of Air Navigation Week will be climaxed here tomorrow by celebration of Aviation Day at the California-Pacific International Exposition and dedication of the new Consolidated Aircraft Corporation's new $1,000,000 plant at Lindbergh Field. San Diego entered into the celebration by official proclamation by Mayor P. S Benbough of Air Navigation Week.

The new world glider records were claimed this week by a Soviet airman and aviatrix, according to dispatches from Koktable, The Crimea, U. S. S. R. Pilot Lyzitsen remained aloft 38 hours, 40 minutes, beating by half an hour the record set just a few days before by Pilot Sukhomlinoff. Maria Razenskaya claimed a women's record of 15 hours, 39 minutes.

The first parachute was invented by Andre Jacques Garnarin while he was planning a way to escape from prison and drop himself over a wall. Later he made the first successful descent from a balloon in 1797.

Another air tragedy was laid to high tension power wires when a light bi-plane crashed into an 88,000-volt line at Indio, Calif. Pilot R. F Stergill was killed. Failing to gain enough altitude, his craft struck the wires and was dashed to the ground.

Salt Lake City—Additional evidences of the wrecking of the lost Standard Oil Company of California air liner was made public here with the finding and

(Continued on Page Seven)

Air Traffic Gain Forces Expansion By Local Air Lines

Sharp increases in air traffic in and out of San Diego have resulted in opening of joint uptown offices by the Western Air Express and United Air Lines according to announcements by heads of the two companies.

The offices are in the lobby of the U S. Grant hotel at the Third avenue entrance. An attendant is on duty during office hours.

"The uptown offices are in addition to offices at Lindbergh Field," said George Cussens, general traffic manager for Western Air. "The additional joint office was necessitated by a sharp increase in air traffic.' '

United Air Lines Sets High Record

United Air Lines' west coast division hung up almost a 100 per cent record during August when it flew all but 822 miles of a scheduled 360,537 miles between here and Seattle, linking all cities between the Mexican and Canadian borders.

The Seattle-Salt Lake City division made a 100 per cent record and the Pacific Coast-Chicago-New York division scored a combined average of 99.9 per cent, including the same high percentage of performance on its overnight coast-to-coast flights.

COL. ROSCOE TURNER ASKS FINANCIAL AID ROUND WORLD FLIGHT

"I'll fly around the world for you," is not a theme song that Col. Roscoe Turner is singing, but would voice his plea for financial backing for a projected flight around the world at the equatorial line.

Col. Turner, Los Angeles speed flier, pilot of many daring flying feats, says he has a new kind of plane, one combining speed, endurance and safety, in mind for the trip around the imaginary belt encircling the earth exactly between the poles.

We suggest that Col. Turner, like Columbus, plead his cause with the queen of some foreign country providing no one comes through with the necessary funds

San Diego Youth Wins Air Wings At Army School

Another son of San Diego earned his air wings last week when he was graduated from the U. S. Army air corps advanced flying school at Kelly Field, San Antonio, Texas, according to reports received here.

He is Second Lieut. George B. Dany, son of Major George Dany, U. S.. Army retired, and Mrs. Dany, 4201 Euclid avenue. He is expected here soon for a visit with his parents.

Lieut. Dany is a graduate of San Diego high school and State college. He was graduated last June from West Point and will become a military pilot after leaving Kelly Field.

Pacific Air Pageant Will Be Held At Long Beach Nov. 10-11

Long Beach, Oct. 19—Official announcement has just been made of the Women's Championship Air Races and Pacific Air Pageant to be held here Nov. 10-11, under the official sanction of the National Aeronautic Association of Washington, D. C.

Sponsored by the Junior Chamber of Commerce of Long Beach in collaboration with the Los Angeles Junior Chamber organization, this contest is to determine the champion woman aviator of the United States. There are to be four main contests, one transcontinental speed dash and three women's closed course races.

The transcontinental dash will start from Floyd Bennett Field, New York, and end in front of the grandstand at the Long Beach airport. There will be one stop at Amarillo, Texas, because of the shorter days and weather hazards.

This is to be a race for the faster flying time between the Atlantic and Pacific points. It is a free-for-all competition for all types of airplanes and there will be no handicaps. Qualifying speed is to be 160 miles an hour.

A carefully worked out system of merits to be divided between the four race events will be used to determine the champion woman flier. The chief event, however, is the transcontinental dash.

Gladys O'Donnell, one of America's greatest women aviators, was recently toasted at a banquet here, attended by 250 celebrities of the flying world and the backers of the new air classic, as the initiator of the idea.

Sanctioned by the National Aeronautic Association of Washington, D. C., this new contest is predicted to become an annual event of national and international importance.

This city has been and is the home of many noted fliers and has a notable aviation history dating back to the pioneer days of the industry. Through the Junior Chamber of Commerce, enthusiastic cooperation of the principal interests of Long Beach and Los Angeles are being given in backing this pioneer event among the air classics of the country.

Full cooperation of the military and municipal authorities, as well as of all the private organizations interested in aviation has been given. Representatives of these interests will be active participants in the two-day fiesta.

Gladys O'Donnell, who is acting as managing director, will not compete, but has received the assurance of the leading women fliers of the country of their participation and support Many well known figures of Hollywood who are also aviation enthusiasts will take part in the event.

The management of the races and pageant is in the hands of Orville Kuster, well known director of air races and aviation shows. He is best known here for his activities at the National Air Races in 1933 and for his work at the air races in Cleveland.

WOMEN FLYERS SCHEDULED IN VISIT SUNDAY

Gladys O'Donnell, winner of 25 aviation events in the last five years, will leave Grand Central Airport in Glendale Sunday en route to Lindbergh Field and the California-Pacific Exposition as a feature of Aviation day and dedication of the Consolidated Aircraft Corporation's new plant.

Nine other women fliers will accompany her on the flight, including Ethel Sheehy, Bessie Owen, Grace Cooper, Betty Furmin, La Verne Woolfram, Evelyn Hudson, Hilda Jarmuth, Katherine Cheung and Bernice Huerrera.

The Ryan School of Aeronautics will stage an air show here and leaders of aviation throughout the country will be present to participate in ceremonies.

The women pilots will compete for the Shell trophy cup and other honors and will participate in several programs at the Exposition designed to recognize aviation's outstanding position.

The race will start at 10 a. m. from Glendale and end at Lindbergh Field. At the Exposition seven aviation firms have arranged for special exhibits.

NEW MODEL LOCKHEED TRANSPORT ANNOUNCED

Upon the delivery of the first of five Lockheed airliners to Eastern Air Lines division of North American Aviation, Inc., Lockheed Aircraft Corporation announced the development of a new twin-engine Electra transport, which has been granted Approved Type Certificate No 125 by the Bureau of Air Commerce. The trim new transports will be added to the "Great Silver Fleet" of Eastern Air Lines for service on the company's extensive air mail and passenger system in the eastern states, from Newark to New Orleans and from Chicago to Miami.

First American transport plane to be powered with new Wright Whirlwind model 975E3 engine with dynamic balancer, the twin-engine Lockheed is recognized as the fastest multi-engine airliner in the world. Top speed is aproximately 210 miles per hour. The new Lockheed will carry 10 passengers in comfortable chairs, two pilots and 500 pounds of cargo. With its new engines this Electra will have a gross load of 10,000 pounds as compared with a gross load of 9750 pounds of their most popular previous model.

Innovations in the new model include the installation of de-icer equipment in the leading edges of the wing and on each stabilizer. Landing lights are also in the leading edge rather than in the nose of the fuselage.

Hamilton Standard adjustable pitch propellers are driven by the two whirlwinds which develop 440 horsepower each at 2200 rpm at sea level.

AVIATION SHORTS

(Continued from Page Six)

identification of two seat cushions from the plane. They were discovered on the beach at Stansbury Island, five miles north of where bodies of two of the plane's crew were located last week.

Nearing the end of his vacation, President Roosevelt last week made his first direct contact with the outside world when a Navy plane from Bahia Honda, Panama, brought his mail to the Houston.

The Houston and her escort,, the Portland, are en route to Perlas Islands in Panama Bay, after a three-day stay at Cocos Island. After leaving there the presidential ship will steam through the canal and head for home.

And now air traffic is getting so thick that we have parachute collisions. Two chute jumpers from an airport near Moscow bumped in mid-air and descended safely to the ground.

Pilot Osadtchy leaped from a ship and hurtled toward the earth, unable to open his chute. The chute of Pilot Oganesov became tangled when the two men crashed into each other. Oganesov succeeded in untangling his chute and carried his fellow airman to earth.

March Field, Riverside—Lieut. William A. Thatcher, Jr., 24, saved his life here by bailing out of his plane after learning by radio from another plane that his landing gear was damaged. Thatcher circled over the airport and radioed the field here for orders. He was advised to fly over a nearby dry lake and use his own judgment He did and landed safe. The plane crashed and burned.

Chicago—Branding charges that the United Air Lines had discharged competent mechanics and replaced them with untrained men as ridiculous, W. A. Patterson, United president, in a statement here, hit back at John Fitzpatrick, head of the Chicago Federation of Labor, who had declared that labor troubles might have been involved in the recent crash of a United air liner at Cheyenne, Wyo., in which 12 persons were killed.

"United Air Lines had had no labor controversy anywhere in its entire system," Patterson said.

Two machinists' mates aboard the coast guard patrol boat Calypso were flown to shore in a coast guard plane after word had been received they suffered injuries sustained in course of duty. They are Alfred J. Baker and Michael W. Keller. Baker was reported to have an infected leg and Keller infected face cuts. The pilot of the coast guard plane was Radioman C. H. Allen. He met the Calypso about 60 miles out at sea

Los Angeles—Caroming off a billboard as it glided to earth with a dead motor, an airplane crashed, severely injuring Geo. Schwamm, 33, movie stunt flier. With him was Wayne Fields, 32, who was slightly cut and bruised.

Select Temporary Bases For Pacific

SAN FRANCISCO—A temporary lease on Alameda Airport, located in San Francisco bay, was ratified here by the Alameda city council, establishing the bay area as one of the points from which Pan American's experimental trans-Pacific air transport operations will be conducted.

Confirming reports that other air terminal sites were being studied on the coast for this service, J T. Trippe, president of the Pan-American Airways system, said that in addition to the San Francisco area, other points on the California coast were also to be used during the experimental period.

"Through the courtesy of the Navy Department Pan-American Airways has arranged for temporary use of a section of the naval air station at San Diego," Mr. Trippe said. Questioned as to whether or not flights would be made from Los Angeles, Mr. Trippe said that it was not certain whether harbor improvements could be completed in time for these flights.

"On invitation from Mayor Frank M. Shaw of Los Angeles our engineers have submitted to the mayor's office an outline of requirements which would be necessary to accommodate trans-ocean type flying boats at Los Angeles."

Consolidated Officials

Officers, directors and technical staff of the Consolidated Aircraft Corporation who are now busily engaged in their various duties at the new plant. They are, left to right:
R. S. Madison, secretary-treasurer; Lt. Comdr. D. M. Carpenter, ingineer; R. A. Miller, chief of structures; H. A. Sutton, assistant chief engineer; R. E. Oversmith, chief of production; J. L. Kelley, factory superintendent; George Newman, jr., assistant factory superintendent; C. T. Leigh, vice president and material supervisor; C. A. Van Dusen, vice president and works manager; Capt. L. C. Hurd, inspector of army aircrafts; E. F. Neff, personnel supervisor; B. W. Sheahan, chief of drafting; and D. G. Fleet, assistant to the manager.

Famous Flier To Attempt Assault On Record Marks

Col. Art Goebel, famous pilot who made aviation history in 1927-1929, announced his plans recently for an attempted come-back. Absent from speed flying records for several years, Col. Goebel says he has plans practically completed for an assault on two trans-continental air records in a few weeks.

Flying a special built low-wing Lockheed plane, Col. Goebel will first attempt to smash the east-west mark. Taking the air again after a short rest on the coast, Colonel Goebel will make an attempt to lower the record of ten hours, two minutes, fifty-one seconds made by Col. Roscoe Turner on the eastward crossing. He stated he intends to make both flights at an altitude of over 15,000 feet or as high as he can go without the aid of oxygen.

On this high altitude flight he says he will use the recently developed high-octane polymerized fuel used by Howard Hughes when he made a flight between San Francisco and Honolulu which was record breaking. The next year he broke the west to east record—the one he is again aiming at, when he flew across the continent in 18 hours. This record was broken two years later. Goebel says his secret ambition is to make a non-stop flight around the world. He believes that with proper equipment this feat can eventually be accomplished.

AIR CORPS HANGAR AT LINDBERGH FIELD HAS LOCAL PWA APPROVAL

An Army Air Corps reserve hangar at Lindbergh Field has been approved by George White, director of the local PWA office and the suggestion forwarded to San Francisco PWA headquarters

Requested by the Harbor department, the hangar will be 60x100 feet in size and will cost approximately $17,739. Employment will be given to 71 persons during its erection.

Need for the new hangar has arisen since the present reserve hangar at North Island must be given over to the navy.

USE THE AIR MAIL.

Ryan School Adds Building For S. D. College Air Class

The T. C Ryan School of Aeronautics has added a 50x100-foot extension to its building at Lindbergh Field to accommodate the ground school classes from San Diego State College. Arrangements have been made whereby State College students desiring to study aeronautics receive instruction at the Ryan school and in the Ryan shops. These students will spend one-half day at Lindbergh Field and one-half day in their regular classes at State College.

EFFORTS TO OBTAIN AIR MAIL AFTERNOON DEPARTURE IS DENIED

The Aviation Committee has been advised by Alvin Adams, president of Western Air Express, that negotiations with the Post Office Department for permission to carry mail on the 3 p. m. departure from San Diego to Salt Lake City have been successful. The second assistant postmaster general in charge of the department will not permit payment for this service. It is hoped that the necessary funds for this additional service may be obtained when Congress reconvenes.

Nonstop Coastwise Flights Just Training Trip To Navy

By FRANK HAVEN

Non-stop flights similar to the one recently completed by Patrol squadron seven at North Island from San Diego to Seattle and back are routine matters with patrol fliers, Lieut. Cmdr. Price, commander of the flight says.

Similar flights by other patrol squadrons are planned in the future.

"The flight to Seattle was just a routine training trip for the officers," Lieut. Cmdr. Price says "The six planes in the squadron took 11½ hours to fly to Seattle and 10½ hours to come back.

"We never made a stop anywhere. Last Saturday morning we took off from Seattle but had to turn back because of weather conditions, making the only incident of the jaunt worth mentioning."

Lieut. Cmdr Price said that the Navy air field at Seattle had excellent facilities but was small as compared to the fields in this sector.

The patrol planes, or "flying boats," had to maintain high altitudes during the entire trip. Lieut. Cmdr. Price is wing commander and is attached to the USS Wright which came into port for a stay until Oct. 23 yesterday.

Squadron commander is Lieut. Cmdr. Rutledge Irvine and others on the non-stop flight were Lieuts. Talbot, Fort, Heath, Parr, Duerfeldt and Tague.

are you interested in aviation? are you air minded?

Do you want to keep abreast of all present and future developments in the aviation industry? an industry, which today, virtually in its infancy, faces probably a greater future and a greater expansion and growth than any other single industry in the world. An industry which in the present century in all likelihood will change the map of the world both commercially and politically. An industry which already has made you a next door neighbor with New York, London, Paris and the Orient. An industry, further, in which your city not only is inextricably bound but with which it undoubtedly will travel to greater and greater heights of growth and expansion.

Then you will want to read every forthcoming issue of the SOUTHWESTERN AIR NEWS.

In this, our inaugural issue, we greet you and present ourselves for your approval.

Future issues will cover every phase of the aviation personalities and, in short, everything of interest to air-minded people.

S. D. WELCOMES CONSOLIDATED AIRCRAFT

LINDBERGH FIELD'S SUPERB RATING, LOCATION ON BAY, BROUGHT FACTORY TO S. D.

Proximity To Center Of City, Size Of Airport And Waterway To Test Seaplanes, Caused Final Decision For Consolidated Shift

Lindbergh Field, its A-1 rating as an airport, its nearness to the center of the city, and its proximity to water that could be used the year around for testing seaplanes—explains almost in whole the presence today of the Consolidated Aircraft Corporation in San Diego.

Had it not been for the ideally situated airport, the seven-year fight waged to bring the nation's fourth largest airplane building concern to this city would have ended in defeat for San Diego and welcome victory for some other Pacific coast port.

Spacious Field

It was the spacious local airport that attracted Major Rueben H. Fleet and directors of the airplane concern when they decided to transfer the factory from Buffalo, N. Y., to the Pacific coast.

This transfer was decided upon because 90 per cent of the company's output was being shipped to the Pacific coast, most of it to the Naval Air Station. Since it cost around $2000 to crate and ship each plane, this fact alone almost forced the change several years ago.

Test Seaplanes

But another reason for the desired transfer was the frozen condition of Lake Erie about five months of the year, when the company wished to test seaplanes constructed for the Navy Department and assigned to San Diego. During the winter months, the firm was forced to ship each plane to Baltimore, along with a complement of men, to test the planes.

When the firm made known the fact that it was going to shift operations, nearly every city of any size on the Pacific coast offered it sites, but San Diego, through Lindbergh Field, and much preliminary ground work, won out.

This preliminary work forms an interesting and thrilling background to the acquisition of the city's largest single industry—and dates back almost to the World War.

During the war, Fleet was flying planes at Rockwell Field. One of his flying mates was T. C. Macaulay who is now Maj. T. C. Macaulay of the Chamber of Commerce.

Fair Enough by WESTBROOK PEGLER

NEW YORK, Oct. 19.—Your correspondent is sailing for Europe today and very glad indeed to escape the Roosevelt dictatorship, which will not let a man raise as many potatoes as he wants to. Your correspondent does not want to raise any potatoes, but the right to raise them without limit is part of the sacred heritage of Valley Forge; so it is a great relief to be going away. The principle of freedom is what counts.

PEGLER

Possibly your correspondent will decide never to come back but to take citizenship in some free country on the other side—Italy, for example, or Germany or Russia.

There have been many letters in the mail from time to time advertising the joys and privileges of citizenship in the free countries. Fascist friends have insisted that Italy under Mussolini is a fairer land than the U. S. A. under Roosevelt, and the prospect seems worth investigating.

But first your correspondent intends to make sure whether the free countries permit certain liberties which still remain to the

(Turn to Page B3, Col. 1)

Carpenter, inspector of naval aircraft; I. M. Laddon, vice president and Chief engineer; R. A. Miller, chief of Structures; H. A. Sutton, assistant chief engineer; R. E. Oversmith, chief of production; J. L. Kelley, factory superintendent; George Newman, Jr., assistant factory superintendent; C. T. Leigh, vice president and material supervisor; C. A. Van Dusen, vice president and works manager; Capt. L. C. Hurd, inspector of army aircraft; E. F. Neff, personnel supervisor; B. W. Sheahan, chief of drafting; D. G. Fleet, assistant to the manager.

GENL. M'DOUGAL LAUDS CONCERN

By BRIG. GENL. DOUGLAS C. McDOUGAL
Commandant, Marine Corps Base

Officers and men of the Marine Corps Base are more than glad to welcome Consolidated Aircraft to San Diego. We are glad to have the company as "next door" neighbor.

Officers in Marine Aviation often have told me of the splendid planes Consolidated turns out and from reports from all branches of the service, it is a well known fact that Consolidated planes usually pass every requirement.

Because of their high standing in aviation circles, because of the vast number of aeronautical experts the company has at its command, I think they are a valuable addition to San Diego business and commercial life.

A newcomer myself to this city, I hope that the executives of the company find San Diego as much to their liking as I have.

Like the rest of San Diego, we welcome you Consolidated!

MAIN BUILDING ALL OF STEEL

The main building of the Consolidated Aircraft corporation is of all-steel construction and like so many modern factories is of sawtooth construction to permot the maximum amount of light to reach the assembly floors. It is an imposing structure with its front stretching 900 feet along Pacific-blvd. Its 250,000 square feet of floor space is covered with modern machinery, stock rooms and work benches.

MATERIAL IS ROUTED ON EFFICIENT PLAN

L. B. Norman, architect for the Consolidated Aircraft building, said that in laying out the structure, every consideration was given to the routing of material from raw stock to finished product. Materials come in on the spur track at the south end of the plant and are unloaded and stored in the main stock room at the southwest corner of the factory. From there, they travel north through the center bays for fabrication and thence back south through the high bay for partial and final assembly. The finished airplane rolls out of the doors at the south end of the factory and onto the flying field.

PRICES $5000 to $150,000

Prices on planes manufactured by Consolidated range from $5000 to $150,000. Most of the planes are for Government services.

Consolidated Opening Starts At 9 o'Clock Tomorrow Morning

9 a. m. to 2 p. m.—Public inspection of the Consolidated factory.

11:30 a. m.—Finish of the Los Angeles-San Diego air race at Lindbergh Field.

Noon—Luncheon in Pompeiian room, San Diego Hotel, in honor of officials of the Consolidated plant.

2:15 p. m.—Dedication ceremonies including talks by Mayor Percy J. Benbough and Major R. H. Fleet, president of Consolidated, and introduction of famous visiting airmen by Major T. C. Macaulay, executive secretary of the Chamber of Commerce and a pioneer flier.

2:35 p. m.—Exhibition flight over Consolidated plant by the 514th Observation Squadron, Air Corps Reserves, Capt. J. A. Moore and Lieuts. William Van Dusen and Robert Hutton flying Consolidated built planes.

3:15 to 4 p. m.—Open house at factory.

4:15 p. m.—Official party met at Exposition grounds by President Frank G. Belcher and escorted to Plaza del Pacificio where Major Fleet will be honor guest at the retreat ceremony of the provisional company of the 30th Infantry.

6 p. m.—Dinner at the Cafe of the World.

SIDE GLANCES . . . By George Clark

"Won't you put Patrick in the newsreel so his grandparents in Dublin can see him?"

ADM. TARRANT IN WELCOME

By REAR ADMIRAL TARRANT, Commandant, 11th Naval District

The coming of the Consolidated aircraft factory to San Diego means to the Navy a broader and closer contact with an old friend. Its personnel and products are widely and favorably known to naval aviation. Probably the majority of the Navy pilots of today received their flight training in Consolidated planes and few, if any, of them are without intimate flying acquaintance with its output. The record formation flight from Hampton Roads to the Canal Zone and the even more brilliant flight from San Francisco to Honolulu are examples of Consolidated efficiency and dependability.

In locating its new factory here, where most of the Navy's flying is done, Consolidated makes possible the maximum blending of theory with practice and observation, test, criticism and suggestion by the largest group of naval aviators in the world.

A large field of Navy trained aviation mechanics, now in civil life, is available to continue its skill to the Navy's benefit.

The Navy congratulates those citizens of San Diego whose efforts to draw Consolidated here have been successful, and hopes for continued success to Consolidated in its new home.

MANY CONTRACTS LOOM FOR FACTORY

Contracts for future euipment for the United States Army and Navy lie in the hands of Consolidated Aircraft corporation. Principal among them are the following:

Consolidated XB2Y-1 experimental dive bomber which recently was delivered to the Navy and thus far has passed all of its required tests.

The Consolidated P-30 two-seater fighter for the Army, the high performing military fighter. It has been accepted by the Air Corps and 50 of these models are now under construction in the new San Diego plant.

The A-11 attack plane, an important type of craft in demand by the Army.

BIG SHIP ON DISPLAY

The new Navy "mystery" plane, XP-3Y-1, which recently flew from Panama to San Francisco in record time, will be on display tomorrow at the Consolidated Aircraft field.

HALF MILLION DOLLAR BUILDING TO BE DEDICATED TOMORROW BY FIRM HEADS, AVIATION LEADERS

New Industrial Empire Rises On Waterfront; Airplane Factory Destined To Make Community Capital Of Aeronautics In United States

San Diego's greatest industrial unit will be opened formally tomorrow.

It is the Consolidated Aircraft Corp. factory on Lindbergh Field, a $400,000 structure in which $9,000,000 in Navy and Army airplanes are being built.

Eight hundred persons are at work in the huge plant, most of them San Diegans. Soon, there will be 2500 workers, bringing new payrolls and new prosperity to the city.

San Diegans will get their first glimpse of the interior of the rambling factory at 9 a. m. tomorrow, when the doors are opened for public inspection.

The official dedication ceremonies will commence at 2:15 p. m. Participating will be Mayor Percy J. Benbough, Maj. R. H. Fleet, president of the Consolidated firm, visiting famous airmen, and Maj. T. C. Macaulay, executive manager of the Chamber of Commerce, himself a trail blazer in aviation.

'Cpaably Managed'

Dun and Bradstreet, Inc., says of the company:

"A capably managed and well established corporation evidencing steady and consistent progress, and adequately financed for requirements."

That, in brief, tells the story of the Consolidated Aircraft Corp. It is not an experiment in San Diego.

It moved to San Diego for reasons peculiar to the city—nearness to the great Naval Air Station, the world's largest air base; perfect climate for flying conditions; availability to water while being situated on an A-1 airport, one of the finest in America.

The company moved to San Diego because the Chamber of Commerce, over a long period of time, convinced the firm of San Diego's advantages for an aircraft construction company.

Two Huge Contracts

Abandoning its old plant in Buffalo, N. Y., the company picked up its machinery and moved its crack engineers and technicians into the new plant on Lindbergh Field, on land made available by the Harbor Department.

They brought with them a tremendous, assured payroll. In the pockets of the officials were contracts calling for the completion of $3,000,000 in Army planes, and a brand new contract for constructing 60 giant patrol seaplanes at a cost of $6,000,000.

It was a going, prosperous concern when it left Buffalo; in San Diego, it is even more so.

The plant itself has floor space

(Turn to Page 4B, Col. 3)

Girl Fliers Due Sunday In Air Race

Foremost women fliers of the Pacific Coast will take off from Grand Central Airport in Glendale tomorrow morning for a race to San Diego, which will be one of the major attractions of Consolidated Aircraft dedication and Aviation day.

MRS. PRESCOTT

The girl pilots are scheduled to finish their race at 11:30 a. m. Entries slated to don their goggles and flying suits are Grace Prescott of Coronado, Gladys O'Donnell, Ethel Sheehy, Bessie Owen, Grace Cooper, Betty Furmin, LaVerne Woolfram, Evelyn Hudson, Hilda Jarmuth, Katherine Cheung and Bernice Huerrera.

Awards, including a giant trophy for the winner, will be presented in the Ford Music Bowl at the Exposition tomorrow afternoon at 3.

The favorite today was Mrs. Prescott who recently captured the Los Angeles-to-Cleveland derby against men fliers.

"Miss Grand Central," representing the Glendale air terminal, will fly here tomorrow also. She is Miss Marion Hargrave, aviation enthusiast and flier.

MODERN EXTERIOR ON MAIN OFFICE

The main office of Consolidated's factory has a modernistic exterior and is in reality a part of the main building. It can easily be converted into manufacturing space by removing various partitions. Future expansion may make this necessary in which event a separate office building will be constructed, officials declared.

FOR ARMY AND NAVY

Approximately $6,000,000 in contracts for the Navy and $3,000,000 for the Army air services are held by Consolidated.

S. D.'S HISTORY SINCE 1910 JOINED TO AVIATION'S GROWTH, 42 WORLD MARKS SET HERE

By WILLIAM VAN DUSEN
(Lieutenant, Army Air Corps Reserve)

The history of San Diego since 1910 is almost the history of aviation.

San Diego has been the scene of more than 42 world's records in aviation. These records include altitude, distance, duration and speed flights made by Army, Navy and civilian fliers.

Lincoln Beachey

One of the earliest aviation history-making flights was made in 1913 by Lincoln Beachey. Beachey, a civilian flier, made the first "loop the loop" ever attempted. Open mouthed San Diegans saw Beachey do the impossible and flip his plane over in the air. A short time later, while he was demonstrating the dare-devil loop over San Francisco, his plane spun out of control and plunged into the bay. Beachey died.

I was an instructor in flying at Rockwell Field when Maj. T. C. Macaulay, who is now executive manager of the Chamber of Commerce, landed at the field, setting a new trans-continental flight record from Florida to San Diego.

Record Till 1931

This record stood until 1931, I believe it was, when Brock and Schlee smashed it to smithereens. Maj. Macaulay had made the flight, however, in an old "DH" plane and he had to stop every 400 miles to refuel.

Brock and Schlee landed, refueled, and were off again on the return flight. They ran into a fog in Florida and made a forced landing in a field. The plane was wrecked against a fence.

That was but one of the many

Turn to Page 8-A, Col. 6.

MACREADY AND KELLY LANDED IN SAN DIEGO ON FIRST PLANE HOP FROM COAST TO COAST

By FRANK MACOMBER

Aeronautical history was made in San Diego May 3, 1923, when the world turned its eyes toward two intrepid army fliers, Lieuts. John A. Macready and Oakley Kelly as they brought their giant monoplane, T-2, down on Rockwell Field in the first flight between the Atlantic Coast to the Pacific.

The two grease-besmeared airmen, grinning from ear to ear though almost deaf from the constant roar of their motor, came to earth here exactly 26 hours, 50 minutes and 48 and 2-5 seconds after their plane had soared above Curtiss Field, New York.

Thousands of eager, thrilled San Diegans lined Rockwell Field as the giant monoplane roared over the field. This was a new thrill in a still infant undertaking. Kelly and Macready had made their first attempt on Nov. 3, 1922, starting from San Diego and traveling to Fort Benjamin Harrison near Indianapolis before being forced down by engine trouble. At

(Turn to Page B1, Col. 1)

MERE PHONE CALL STARTS MOVE OF BIG AIRCRAFT FIRM TO S. D.: KLICKA MAKES INITIAL CONTACT

Stop In Buffalo, Chance Conversation With Maj. Fleet Results In Bringing Consolidated Here

Government air contracts totaling $9,500,000—and more to come.
A huge new aircraft factory at Lindbergh field—and more to come.
Millions in new construction and payrolls—and more to come.

That's the "boom" started in San Diego by a mere telephone call which resulted in the removal of the Consolidated Aircraft Corp. factory from Buffalo, New York, to Lindbergh Field.

The phone call was put through by Emil Klicka, member of the harbor Commission and vice president of the Bank of America, on May 29, 1933. Mr. Klicka, who was traveling in the east at the time, knew that Los Angeles and Long Beach were making rosy offers in an effort to get the plant, while Buffalo was putting up a stiff fight to hold its huge factory. Oakland and Seattle also were being considered in the search for a new site.

Phone President

"I stopped in a gas station in Buffalo and phoned Maj. H. H. Fleet, president of Consolidated, and asked him how negotiations were progressing," Mr. Klicka said. "He told me I was about the luckiest man in the world that day as the board of directors was meeting right then to vote on moving west."

Mr. Klicka headed for that office in a hurry. Greeted by Maj. Fleet, he sat down in the president's place at the table and talked San Diego for one solid hour.

Although San Diego had been waging a long campaign to win the factory, no arrangement had been made to send a representative to the meeting. Los Angeles and Long Beach agents had been on the ground for a week. But Mr. Klicka—who was on his vacation—happened along at the right time and San Diego got the factory.

Factory Rises

Today a new, modern, all-steel factory providing employment for 1500 men rises on the north end of Lindbergh field.

"San Diego soon will cease to be known as the Air Capital of the West," declared Mr. Klicka. 'It is becoming the Air Capital of the United States!

"The Consolidated plant will attract other aircraft factories. San Diego's all-year-round flying weather was a major factor in bringing Consolidated here and it will be important to other plants.

"Consolidated itself has $9,500,000 worth of Government contracts—with more to come. The business revival begun by the Exposition will live on with the expansion in aircraft which started with the arrival of Consolidated. It is only the beginning!"

New Units Designed

Already, Consolidated's architects are designing new units and before long the plant is expected to be employing 4500 men in three shifts.

Consolidated first became interested in San Diego in 1928. Major Fleet had been stationed at Rockwell Field with the Army Air Corps in 1917 and was familiar with this area. So when Tom Bomar of the Chamber of Commerce business development committee met Major Fleet at the air races in Los Angeles, he urged him to move his plant to San Diego.

Several months later, Major Fleet returned to the coast and made an offer of $1,000,000 for the then new Lindbergh Field as a factory and training school site.

Again In 1931

He again came to San Diego in 1931. The all-year climate and the savings in freight on consignments of planes to the Navy—one of Consolidated's principal customers—were strong attractions. A year later, Major Fleet and Lawrence Bell, vice president, made another visit and opened negotiations with the Harbor Commission.

Then followed the fateful phone call made by Mr. Klicka. A month later, the commission received $1000 for the first year's rental on 25 acres of land on the northerly end of the municipal airport. A few months ago the acreage on the 50-year-lease was raised to 33 with the rental increased to $1400.

Late in May of this year, Consolidated put $190 on the line for a $300,000 building permit . . . and today land that once sprouted rank marsh grass has been converted into a thriving, miniature city.

Loan Granted

A hitch in plans nearly arose when Consolidated applied for an R.F.C. loan to finance the move to the coast. The limit on such loans was $100,000 and the firm needed $500,000. Congressman George Burnham went to bat for San Diego—and the increase was granted.

Others who were instrumental in the successful campaign were Major T. C. Macaulay, of the Chamber of Commerce, Judge Frank Dunn of the district attorney's office, Port Director Joe Brennan, members of the Harbor Commission and of the Chamber of Commerce Board of Directors.

KELLY EXPERT IN WOOD QUALITIES

James L. Kelly, factory superintendent of Consolidated began his career in the lumber business as assistant to the manager of a lumber mill at Fassett, Quebec, Canada.

He later became propeller lumber inspector for the French government, also advising in the purchasing of the lumber.

Mr. Kelly joined the U. S. Army Air Corps in an inspection capacity in 1917 and remained with the service until he accepted the position of a superintendent with the aircraft corporation.

EMIL KLICKA

MILITARY EXPERTS INSPECT ALL WORK

Both Army and Navy engineering experts are on the job every minute at the new Consolidated Aircraft plant at Lindbergh Field.

Not a piece of machinery is designed or installed under the company's big Government contracts without the watchful eye of the inspectors having passed over it.

Capt. L. C. Hurd, of the Army Air Corps, was selected to inspect construction of planes for his branch of the service, and Lt. Comdr. Donald Carpenter holds the same position for the Navy.

Capt. Hurd will have a staff of 12 men working under him. The Navy is expected to have at least an equal number of technicians.

CITY MANAGER FLACK HAILS NEW CONCERN

By ROBERT W. FLACK
City Manager

It is a distinct honor and privilege to have this opportunity of representing the administrative departments of the city of San Diego in welcoming the Consolidated Aircraft corporation to San Diego.

The many benefits that will inure to this city and its inhabitants are obvious. This scientific industrial development will fit into the general plan for the future development of this city and particularly its waterfront more than any other industry. The nature of the manufacture of airplanes will in no way mar the natural beauty of the city. The distinct personnel required will necessarily be a distinct addition to the community.

Having been engaged in aviation some years ago, I am particularly happy as a newcomer to join with the rest of the community in being grateful for the location in this city of this particular industry.

The corporation is assured that each branch of the city government will co-operate in every way to aid in effecting the pleasant and successful operation of this enterprise. All city employes convey their best wishes to the Consolidated Aircraft corporation.

DRAFTSMEN CHIEF

Designer with the Consolidated Aircraft Corporation since 1928, B. W. Sheahan is chief of draftsmen for the new plant here.

Mr. Sheahan began his career with the American Ball Bearing Co., Cleveland, O., after two years of study in the Air Service Engineering School, at which time he took courses in aerodynamics and airplane design.

BROAD TRAINING FOR VAN DUSEN

Charles A. Van Dusen, prior to entering the aircraft industry, had a broad training in general manufacturing.

From 1914 to 1934 Mr. Van Dusen, now vice president and works manager of the Consolidated Aircraft Corporation, was connected with the Glenn L. Martin Co.

STOVE SALES CLIMB

Increase in the sale of heating stoves, has been noticeable since San Diego's population has been boosted by more than 100 homemakers, employed by the Consolidated Aircraft Corporation, according to Fred Greenwell, head of the stove and heating appliance department of the Hammond Furniture Company, featuring a complete line of heating appliances.

STORAGE FIRM AIDS IN GREETING STAFF

Hauling the furniture of employes of the Consolidated Aircraft Co. who have located here was a big job, C. C. Temple, manager of the Bekins Van & Storage Co. said today.

"It has been our great pleasure to assist in welcoming these new arrivals," he said. "Many who did not bring their furniture have purchased furnishings from our new and second hand departments. We have enjoyed these contacts. They are all fine people to deal with, and the Consolidated Aircraft Co. should be congratulated for bringing them here."

MOVED IN 1924

The Consolidated plant was moved from Greenwich, R. I. to Buffalo, N. Y.

Air Factory Results In Wide Business Impetus, Says C. Of C. Executive

BOMAR FIGURES SHOW HOW S. D. TRADE GAINS

Payroll Of Consolidated Firm Boon To Merchants Of City

When the whistle blows at the Consolidated Aircraft factory these crisp fall doys, approximately 1500 men go to work. Around each spreads a ripple of business activity for San Diego, not unlike the ripple when a stone is thrown into a still pond.

Each man put to work means more money spent in local stores, and the aggregate will possibly result in the opening of several new small businesses.

More Employed

Each dollar spent in the stores will mean the possible employment of more clerks and salesmen. More goods passing over the counter will result in increased wholesale trade. The ripples will be felt far away.

On a comparative basis, the Consolidated factory soon will be for the largest single industrial plant in the city.

Today, the city's five fish canneries comprise its biggest industry. Consolidated's employes will equal in number those in all five canneries at the outset and will far outstrip them by the first of next March, it is anticipated by Chamber of Commerce officials.

2500 On Job

Consolidated is expected to have 2,500 men on the job by the middle of next year.

On the basis of figures in the last census, Tom Bomar, of the Chamber of Commerce, has compiled a scale by which to judge the economic importance of the arrival of new business in San Diego. Bomar divided the total population by the number of various kinds of stores in the city, obtaining in that manner, the average number of persons each type of store serves.

Bomar's figures indicate that the average grocery store in this city feeds 322 persons. If all of the 4,500 were to be served by new stores on this basis, 12 new groceries would be needed.

Gas Stations

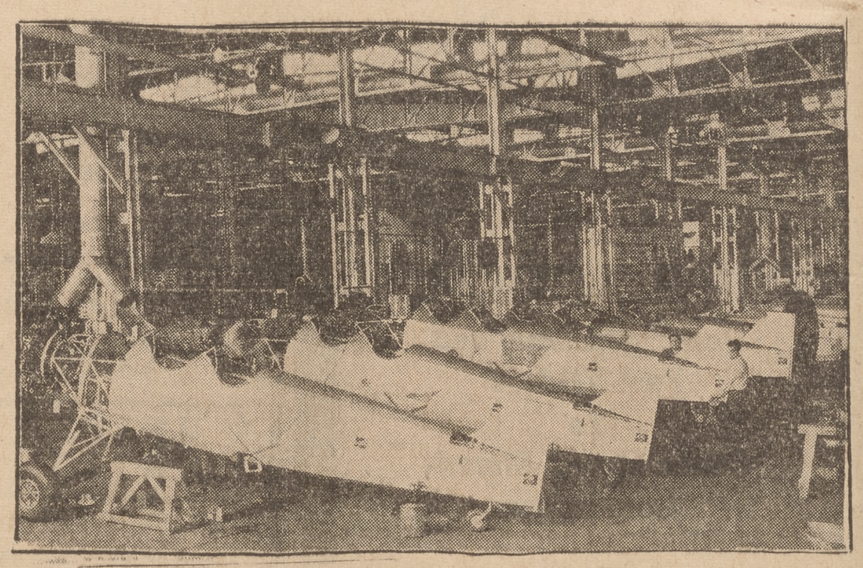
Gas stations serve an average of 578 persons, which would call for about eight new stations; drug stores serve 1475 persons; restaurants, 728 persons; and shoe stores 4,630.

There are approximately 52 employes in retail stores per 1000 customers, on the average. If the employes were to be increased accordingly, there would be about 200 given jobs by the "ripple" of the factory's employment.

However, the Chamber of Commerce offers these figures only as the basis to picture what the coming of the air plant will mean to the community.

Actually, the payroll will find its way into the stores of established merchants, for the most part.

Primary Training Plane Fuslages



Here are a group of Primary Training ships fuselages (PT-11C) under construction at Consolidated.

Housing Problem For New S. D. Residents Solved By Assistance From Local C. of C.

Finding housing facilities for the 200 families which the Consolidated Aircraft Company brought here was nearly as difficult a problem as building the big factory itself.

Due to the low number of vacancies, the Exposition and the return of the Fleet at about the same time, the task of finding homes for the worker's families required the best efforts of the company, the Chamber of Commerce and the San Diego Realty Board.

The aircraft firm brought about 200 "key" men of their plant here from Buffalo. Many of them drove west in their autos at the company's expense.

Questionnaires were sent to the head of each of these families asking them what type of accomodations they preferred. The replies were interesting. Besides the number of rooms and the price specified, the general location desired also was asked. Here are some of the answers:

"Must be within one to four blocks of plant."

"Desire home near Presbyterian Church."

"Near restaurant if possible."

"Want home on outskirts of city."

"Near Catholic School and Church."

"Desire fenced in yard."

The Chamber of Commerce turned the replies over to the Realty Board and each rental agent of the Board was assigned five or six families for which he was to be held responsible.

In turn, the names of the agents then were sent to the families which they are to care for and the families were instructed to contact their agents immediately on arrival.

D. W. Campbell, of the Chamber, in charge of the emergency housing facilities prepared for Exposition visitors, has 2000 available rooms on his lists. It is proposed to place some of the families in these rooms temporarily on arrival.

"It will give the housewives an opportunity to get out and look for homes after they have rested up from their trips," said Campbell.

Each family will also be provided with a map of the city showing in red the location of the factory so that in locating a home they will not be misled as to its proximity to the plant.

SCHOOL OFFERS PLANE COURSE

Looking forward to the day when aircraft construction will be the largest industry in San Diego, the city school system today had under way a new vocational course in aircraft work at San Diego Junior College.

The course was arranged by Superintendent Will Crawford. There are now 20 enrolled.

Half Day At Ryan's

The students spend half of the day at the Ryan School of Aeronautics for their "laboratory" work, and the remainder of the day at the Junior College which is conducted in connection with the San Diego State Teachers College.

"The Ryan school has advised us that there is a shortage of trained workers in this field at the present time," said Crawford, "we feel we are well justified in opening the course with the Consolidated Aircraft Factory coming here. The demand for graduates of the Ryan school is found at the Boeing plant in Seattle and others on the coast."

Good Opportunity

Crawford estimated that the turnover at the Consolidated Factory will be above 100 per year. So, he said, there should be good opportunity for trained workers.

Crawford said it will be possible to utilize most of the $11,000 contained in the Junior College special budget for the purpose of the aircraft course.

30-Word Notice Brings Good News

Containing less than 30 words, the following notice received by local city and county departments marked one of the greatest steps forward in San Diego's industrial development:

"This corporation is closing down its Buffalo plant Aug. 16 and moving to San Diego, Calif., opening there Sept. 3.

"Please change or address on your file, in accordance with the above.

"CONSOLIDATED AIRCRAFT CORPORATION."

FOUR MONTHS TO BUILD

Completion of the Consolidated Aircraft plant took approximately four months, according to B. O. Larsen, general contractor for the new building. Fifty men were employed full time during the construction work.

Larsen also was contractor for the hangar at North Island, a building project similar to Consolidated structure.

ORDERS UNFILLED

At the present time the Consolidated plant in San Diego has nine million dollars worth of orders unfilled.

SALES TO CHINA

The Republic of China bought 115 training type planes from Consolidated known as the Fleet trainer.

S. D. AIRCRAFT INDUSTRY IN NEW ADVANCE

Consolidated Establishment Definitely Marks 'New Era'

By MAJ. T. C. MACAULAY
Executive Manager, Chamber of Commerce

San Diego's aircraft industrial development—making good the city's slogan of "Air Capitol of the West"—is on its way.

Dedication of the new plant of the Consolidated Aircraft Corp., scheduled to take place tomorrow, at Lindbergh Field, marks a new era in the growth and development of an industrial San Diego.

1500 Needed

This corporation has more than $9,000,000 worth of business on its books at the present time, and it has indicated that in order to get out these large Army and Navy orders, it will be necessary to employ 1500 men by Jan. 1, 1936, and 2500 men by March 1, 1936.

Ever since the citizens of San Diego, under the leadership of the Chamber of Commerce, voted an investment of $625,000 in Lindbergh Field, aircraft manufacturing interests have taken a very keen interest in the growth and development of this section. The field combines three of the outstanding major features that go to the making of an ideal airport, namely: safety, utility and accessibility. Very few airports in the United States are as safe from the operating end as is Lindbergh Field; its utility as both a land plane airport and a seaplane base is made possible through the fact that it is contiguous to a very splendid basing for seaplanes in the northeasterly portion of San Diego bay.

In Easy Reach

Its accessibility is demonstrated by the fact that it is less than five minutes from down town San Diego, and this air terminal is practically contiguous to the other transportation facilities which play such an important part in the life of a modern city.

These favorable factors were called to the attention of the Consolidated Aircraft Company in particular almost constantly during the past five years.

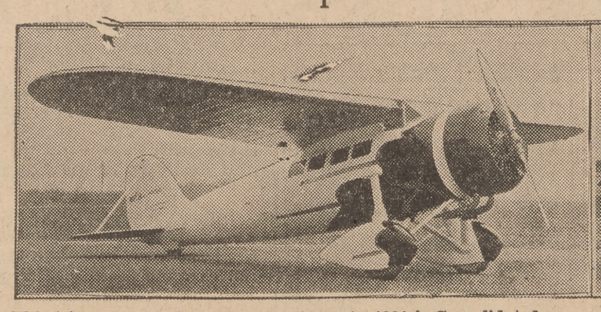
At the present time they are carrying on a national advertising campaign in aeronautical publications, in which they depict "An aerial preview of Consolidated Aircraft Corporation's new factory on Lindbergh Field at San Diego, California, where air, land, rail and water compine to afford the ideal location to aircraft production.

Modern Plant

Consisting of the most modern airplane plant in the world, 240,000 square feet of floor space, Consolidated dedicates its new facilities to the continuous development and production of aircraft which will assure our Nation's power in the Air.

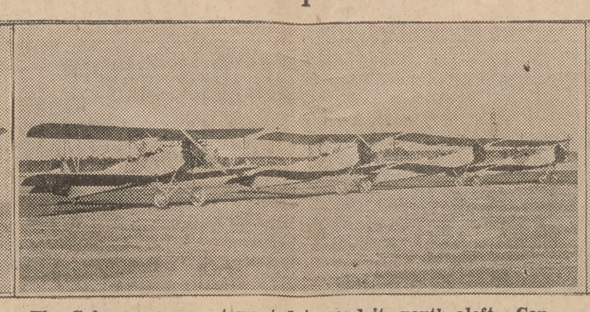
Citizens of this community alive as never before to the advantages derived from great manufacturing enterprises of this nature, and with the cooperation of the Harbor Commisssion, the San Diego California Club, and other agencies in a nation-wide campaign to call to the attention of the aircraft manufacturers of the country the advantages possessed by San Diego, its future growth as an aircraft manufacturing city should be assured.

De Luxe Ship For Civilians



This trim, racy Fleetster model designed in 1931 is Consolidated Aircraft Corporation's offering to the business man or sportsman who finds a plane convenient and enjoyable.

In Tropical Service



The Cuban government wanted to send its youth aloft. Consolidated Aircraft Corporation received the contract to build these training ships, designed specially for that purpose.

Latest For Army Fledglings

Here is a late Consolidated word on what the properly trained Army cadet uses in the advanced flying school at Kelly Field, Tex., Uncle Sam's military university of the air.

Put your trust in Lowry's GLASSES and . . . Lowry will trust you! Eyes examined . . . glasses made to fit. Cash or Credit. Business credit terms extended to San Diego men, women and children.

SUN WANT ADS PULL

SPORTING GOODS CONCERN ACTIVE

During many years of sports promotion in San Diego the Stanley Andrews Co. has gained a wide knowledge of just what is necessary to successfully carry out a program of both general and competitive sports, its officials pointed out today.

The organization has surrounded itself with men in every department well equipped to handle all angles of the sports equipment division.

In March of this year, the company moved into its new store at 1144, Third-av and is now recognized as one of the leading exclusive sportings goods establishments on the coast. Incorporated in the new building is a meeting place for local athletic and sports organizations.

Stanley Andrews today extended a welcome to officials and employes of the Consolidated Aircraft Corporation to visit the firm to talk hunting, fishing, boating or for information pertaining to all sports in San Diego county.

NAVY HAS VETERAN INSPECTING PLANES

Inspector of Naval planes for the Consolidated Aircraft Corporation, Lieut. Comdr. D. M. Carpenter has been in the United States service since 1916, when he graduated from the Naval Academy.

His first contact with the Consolidated Aircraft Corporation was in connection with production of NY training planese. Since that time Lieut. Comdr. Carpenter has been in constant contact with the aircraft firm.

ALL-METAL PLANE DESIGNER ON JOB

To I. M. Laddon, chief engineer of the Consolidated Aircraft Corporation, goes the distinction of having designed the first all-metal type plane constructed in the United States.

Mr. Laddon, who graduated from McGill University in 1915 with a bachelor of science degree in engineering, was aeronautical engineer, at McCook Field, Dayton, Ohio, from 1917 to 1927, during which time he perfected his all-metal model.

TEST PILOT GAINED SKILL WITH ARMY

A job few laymen would relish, yet one that holds a high fascination for certain skilled men with nerves of silk—

That's the job held by William B. Wheatley, chief test pilot of Consolidated Aircraft Corporation. Wheatley won his wings in the Army Air Corps flying school. He has had years of experience in structure and design of automobiles and airplanes. He flew airmail, has tested power plants for Pratt & Whitney, makers of the famous airplane engines, and tested many makes of planes during his dangerous career.

He became test pilot for Consolidated in 1929.

PICKLED PIG TAILS POPULAR

KITCHENER, Ont.—A new use for pigs' tails has been found by Kitchener citizens. They roast or pickle them and take them to picnics. The demand was so great this summer that packing houses had trouble in filling all orders.

SEIFERT FLEW FIRST PLANE AT LINDBERGH

Frank Seifert, now an oil company official, boasts the distinction of having landed the first airplane on Lindbergh Field.

"It was August 18, 1928," Seifert declared. "I was piloting a P-T-3, and Harry Clark, then mayor, was my lone passenger."

Coincidentally, the plane Seifert piloted in inaugurating Lindbergh Field was a Consolidated Aircraft plane, the same type which will be build by the new company here.

Aviation Comes Down To Earth

An Aditorial
By ROY HEGG
Executive Vice-Pres., San Diego Building & Loan Assn., 336 Bdwy., Loan - Headquarters.

San Diego's population has more than quadrupled since the Wright Brothers flew their "strange-contraption" at Kitty Hawk in 1910—just 25 years after the founding of San Diego's half-century old San Diego Building & Loan Association.

Aviation has passed through two decades of experimental development and stands today on the threshold of industrial solidarity . . . flying has become safe, swift and efficient and the aircraft industry has "come down to earth" both figuratively and literally . . . with the establishment of the Consolidated Aircraft plant on Lindbergh Field, San Diego has become the nation's aviation capital in fact as well as phrase.

Regardless of the revolutionizing changes through which the aircraft industry will most certainly pass during the next few years, advantageously located, well equipped Lindbergh Field will be more and more in demand, not only for landing purposes, but for sales and manufacturing sites and other allied aircraft business, now that "Consolidated" has definitely established San Diego as the "Detroit" of aviation . . . Home-building will continue to flourish in San Diego—now that San Diego Building & Loan Association has definitely established 336 Broadway as headquarters for F.H.A. loans—the most liberal loans in history.

Congratulations and Best Wishes To Consolidated Aircraft Corporation

Consolidated Air Earnings Rise Rapidly On Stock Market

GOOD PROFIT POSITION FOR NEW S. D. FIRM

Figures Show Sales Totals Doubled; Unfilled Orders Ahead

By PAUL FOX
The Sun's Financial Editor

Consolidated Aircraft Corporation for the first half-year showed earnings per share of around 48 cents, or 48 times earnings on the same basis for the entire year 1934, when results approximated one cent per share.

Even after this excellent performance, the company entered the second half of the year 1935 in a better profit position than it commenced the year for its unfilled orders are 75 per cent greater than they were at the beginning of the year, according to a report released by Hope & Co.

Total Sales

Total sales in the first six months, amounting to $2,706,537, were almost 75 percent higher than total sales for the entire year 1934, the report said, while net income, after all charges including depreciation and taxes, amounting to $276,144, compared with only $7000 for the 12 months of 1934.

With the opening of the current year, Consolidated had $4,930,795 of unfilled orders on its books. During the first six months of the year it delivered approximately $2,760,500 under these orders.

Contracts Awarded

In early July, the company was awarded a contract to deliver 60 bi-motored airplanes and appurtenances at a total contract price of $6,506,000 excluding the costs of power plants and propellers.

CAPITAL STOCK	
Authorized	1,200,000 Shares
Outstanding (June 30, 1935)	574,000 Shares
Par value	$1.00
Dividend Rate	None
Approx. Current Market	16
Approx. Current Return	None
Price Range (N. Y. Curb)—	
1934	12¾-6½
1935 (to date)	16¼-7¾

Thus at the beginning of the second half of the current year, Consolidated had approximately $8,731,000 of unfilled orders on its books.

The margin of common profit was 0.5 per cent of sales in 1934, following deficits in the preceding two years. In the first six months of 1935, the margin of common profit was 10.2 per cent, which compares with a "normal" profit margin of about 10.0 per cent over the long-term historical period.

Current Assets

As of June 30, 1935, current assets, amounting to $1,584,166, compared with current liabilities of $164,351. Cash amounted to $545,524, while receivables totaled $580,832. Working capital of $1,419,815 compared with $1,072,097 at the 1934 year-end, when cash amounted to $203,421 and receivables to $146,374.

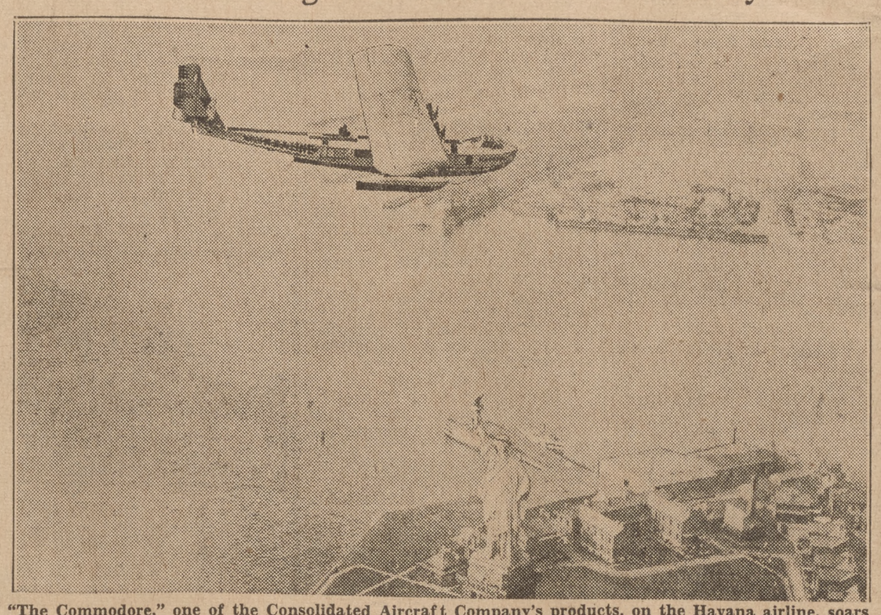
Capital of the company is composed of one class of stock only and does not embrace any funded or mortgage debt on plant, property or equipment.

Contractors

The company should be regarded more in the nature of a contractor than a manufacturer. As a general rule, its planes are built only on order, thereby eliminating any important inventory problem, while the fact that a major portion of its business is with the U. S. Government limits the risks involved in receivables.

On Oct. 8, the company was granted permission to list 579,000 shares of $1 par capital stock on the San Francisco Stock Exchange. Principal trading in the issue is done on the New York Curb Exchange.

Pilots Bidding Farewell To 'Miss Liberty'



"The Commodore," one of the Consolidated Aircraft Company's products, on the Havana airline, soars over the Statue of Liberty in New York harbor.

Mid-Air Refueling First Accomplished Here In '23

More than a decade ago a quartet of ambitious young Army pilots, stationed at Rockwell Field, decided there was no apparent reason why the refueling of airplanes in mid-air couldn't be accomplished.

When their superior officers were informed of the plan they nodded thoughtfully and applauded such an idea, at the same time appearing skeptical as to the success of such an effort.

In May of 1923 the four pilots, Lieut. Virgil Hine, Lieut. Frank W. Seifert, Lieut. John P. Richter and Capt. Lowell Smith, set to work on their new endeavor.

Ropes First

Using heavy ropes in place of hose in test flights, the four pilots, with Seifert and Hine in the refueling ship, tried various methods of refueling.

Their greatest difficulty at first was that of drawing the heavy rope back into the ship after refueling. In order to allow the hose to assume the proper angle for refueling it was of a necessity very heavy.

Finally a winch was devised which would efficiently hoist the heavy rope into the ship after the gas had been transferred.

The next step was to find out exactly how long it took to transfer the 200 gallons of gas.

Two Minutes

Emptying 200 gallons into the sea, the fliers discovered it took but two minutes to transfer gas with the hose on an approximate 45-degree angle.

Seifert, now a General Petroleum official here, smiled as he recalled their anxiety as they prepared late in June, 1923, to go aloft for the first official attempt at refueling.

"Hine and I were in the top plane," Seifert said. "We were surprised to find that with the hose it was little more difficult to refuel with the heavy hose than it was with the rope.

Forced Down

"We refueled six times successfully," Seifert said. "Richter and Smith, in their army DeHaviland, stayed aloft 24 hours before they were forced down on what is now Dutch Flats with a plugged gas line."

Meanwhile Capt. Oakley Hall and John MacReady stayed aloft 36 hours to establish a new world's record.

"Then in September, after the plane piloted by Richter and Smith had been repaired," Seifert said, "we made another attempt. This time we shattered the record of MacReady and Kelly by keeping aloft 37½ hours. We were getting pretty expert and were able to send the boys oil, food, newspapers,, telegrams and just about anything that wasn't unwieldly."

First Attempt

Thus ended the successful attempt of these enterprising young Army fliers, who saw the need for refueling in mid-air, both for commercial and amateur flying. Theirs was the first successful attempt made in the world.

The astounding progress made in this department of flying may be revealed by the fact that the present record, made recently by the Keys brothers in the Ol' Miss, is 653 hours, 47 minutes, or more than 27 days!

It was the intrepid quartet of Rockwell Field lads who led the way in 1923. Strangely, their methods have been little modified, although improvements have been made in the quality of the apparatus used.

MILLER IN CHARGE

Chief of structure of the Consolidated Aircraft Corporation, R. A. Miller accepted the position of structural engineer with the concern in 1927, after a varied career as an engineer and a member of the United States flying corps.

FOREIGN BUYERS

Foreign governments which have purchased planes from Consolidated include Spain, Portugal, North China, South China, Japan, Siam, Brazil, Peru, Chile, Argentina, Uruguay, Bolivia, Colombia, Ecuador, Venezuela, Mexico, Cuba, Haiti, Dominican Republic, Nicaragua, Guatemala, Salvador, Honduras, Costa Rica, Panama, Canada, Australia, New Zealand, Union of South Africa, Great Britain, Netherlands, Belgium, Norway, Sweden, Finland, Denmark, Germany, Italy, France, Switzerland, Yugoslavia, Rumania, Greece, Turkey, Russia, Egypt, Iraq, Persia, Afghanistan, Japan, Manchukuo, China, Philippines, Dutch East Indies, Siam, Portuguese East Africa, Liberia, Abyssinia.

C. A. C. PLANES AID TO SCHOOL

Doug Kelley of Airtech Flying Service, Ltd., today recalled that Consolidated Aircraft Corporation airplanes played an important part in the success of the flying school formerly operated here by Airtech.

Early in the history of the school Airtech purchased two carloads of Consolidated Kinner Fleets. This fine training equipment was the most important unit in Airtech's fleet of student planes at the time that the school became the first U. S. Department of Commerce approved transport flying school in the west.

A frew graduates of Airtech school who received their training in Consolidated Fleets at Airtech are: Peter Redpath, now with Transcontinental Western Air, C. G. MacKenzie with Western Air Express, and Fred Steves of Transcontinental Western Air.

Some of the local officers who passed the rigid Army Air Corps tests upon graduation from Airtech are: Lieut. W. A. Speer, Lieut. J. S. Wakefield, Lieut. Clinton Gaty and Lieut. C. H. Richards.

CAPT. HURD SERVES

San Diego is an old stamping ground for Capt. Leland C. Hurd, Army Air Corps representative assigned to inspect planes turned out for the Army by Consolidated Aircraft Corporation.

SUTTON FROM OREGON

Research engineering and flight testing for the Curtiss Aeroplane and Motor Co. from 1932 to August, 1935 gave Harry A. Sutton much of the experience needed to fill the position of assistant chief engineer of the Consolidated Aircraft Corporation, his present capacity.

3 S. D. FIRMS ARE CONTRACTORS

Contractors for various jobs on the Consolidated Aircraft factory included L. B. Norman, architect; Consolidated Steel Corp., construction; B. O. Larsen, general contractor; A. O. Reed, plumbing and heating; Capital Electric company, electrical contractor. The latter three are all of San Diego.

DON'T FORGET

That the tragedy of two autumn leaves explains much about life.

That the U. S. sends its men to work and its women to play, yet it is no paradise for women.

That success isn't always won through perspiration.

That good pictures die in our home, leaving a blank space on our walls.

U. S. NEWS IN EUROPE

London has several hundred U. S. drug stores.

Ford and General Motors Co. assemble millions of autos in Europe.

U. S. Oil companies, Standard, Sinclair and others operate many stations.

Pictures, tires, jazz bands, Coca Cola and U. S. bars all do big businesses in Europe.

EUROPE IN U. S.

Singer Sewing Machine Co., Pacific Borax and other big soap companies; rayon, cotton thread, etc., are examples of European enterprise in this country.

WAR MIXUPS

We are not in the League, but how do we keep out of the mess in case of war?

TIME OUR ENEMY

Girls, like cars, conceal their years with paint, but the lines tell the tale.

EYE GLASSES

No longer go with age. Fact is, age lines in the face are not only concealed but removed by the right glasses.

WRINKLES

Right glasses don't mean just a pair of fancy "Specks" to hide wrinkles.

Squint wrinkles are usually due to strained vision . . . strained vision sets you to worrying . . . more wrinkles. We know "wrinkles" that will cure yours and it isn't guesswork either.

BIFOCALS

Are the greatest offenders. Like married folks, you can't live with them or without them . . . that is, until now. And thereby hangs a tale.

SOMETHING NEW

And it IS new. A lens that is not a tell-tale of age . . . no lines, no head-bobbing, no blind spots . . . One single piece of glass with only one center. A lens that takes the place of two pairs . . . or a double sight lens and then some.

TESTIMONIALS

We could have hundreds written in the strongest possible praise for what these lenses are doing for the users. But, we are strictly professional.

PROFESSIONAL

All very well for the "Business Man" who sells you glasses as merchandise, or the Doc who fits them as a side-line, sending you to a factory-owned optical shop to fill his order.

TRIMMED

"Trimmed" in a fancy pair at a fancy price . . . where does the "rake-off" go? You should guess.

NEW LAWS

Put over by "we Optometrists" to prohibit price advertising, because it was considered unprofessional, made it unnecessary for the manufacturing jobber to worry. The "professionals" did the trick for him.

WHY WHOLESALE?

The manufacturing optician does give a liberal discount to the "trade," but you, as a consumer, don't get it, even though your prescription is paid for elsewhere. Is it a square deal?

WHY WE KNOCK . . . TALK

Most every oculist, optometrist and optician knows the truth of my story — some are with me, others not . . . and still others who are not awake or feel too helpless to fight the "ring."

PATENT GADGETS

Trade names, national advertising and state laws (supposed to protect the "Dear Public") have done more to keep decent glasses from a needy public than all else.

GOOD GLASSES

Should not be sold to you as merchandise. You should be willing to pay for honest professional service and, in turn, receive your glasses at a nominal cost.

OPTOMETRISTS

Do, as a rule, supply you with the glasses they fit to you. Often you are told how their fee and the cost of the glasses is divided, but not always.

UP TO YOU

If you buy glasses as you do shoes or hats, you are just plain foolish. Eyesight is a sacred trust and not yours to "peddle" as a bargain hunter. However, if you do so, don't blame the doctor for not doing his full duty by you if you won't let him.

OPTICAL SERVICE

Is our slogan. We, as an institution, are complete from raw glass to you, including the services of Optometrist, Optician and Oculist.

ONE PRICE

All of our service is on a one-price-to-all basis and has been for years. Our new lenses are exclusively our own and not obtainable elsewhere.

If you are in trouble don't think of $s first. We will help if you really need us, even though you haven't all the cash in hand. We don't charge you for consultation, and we won't sell you glasses as merchandise unless you bring your own prescription.

C. OF C. HEAD SEES FACTORY AS BIG MAGNET

Plant Will Draw Eyes Of Aviation World To San Diego, Says J. L. Fox

By JOHN LAWRENCE FOX
President San Diego Chamber of Commerce

Establishment of the huge factory of the Consolidated Aircraft Corporation at Lindbergh Field is undoubtedly the greatest single event in the industrial development of San Diego. This factory has already given San Diego national publicity of great value, and it will continue to focus the eyes of the aviation world on this community. Undoubtedly, the establishment of this plant at San Diego will ultimately result in the location of other aircraft manufacturing plants and auxiliary plants in San Diego, in fact, our problem now is to find available sites in the vicinity of Lindbergh Field for these plants.

Additional Homes

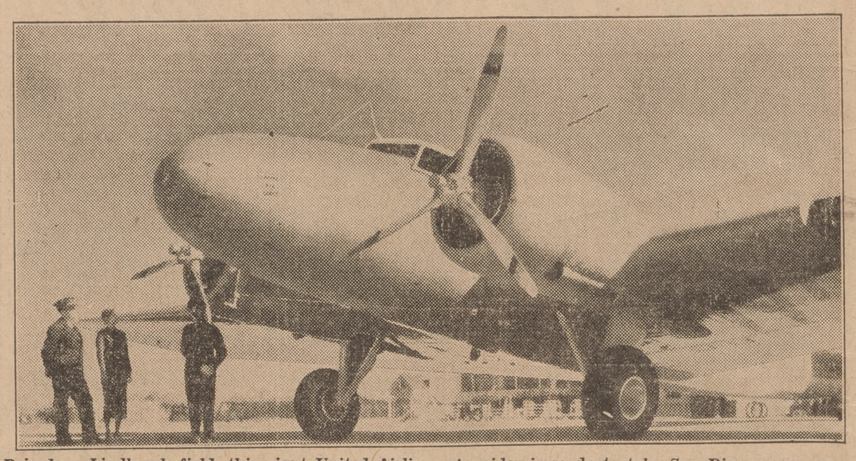
This Consolidated factory, with its employment of 2,500 men and its payroll of over $3,500,000 annually, will have a far reaching effect on the prosperity of this community. It means that additional homes must be built, that 7,500 new residents must be clothed and fed, etc., and that every business concern, and in fact every resident of San Diego, will benefit directly or indirectly from the establishment of this plant.

The San Diego Chamber of Commerce is very proud of its efforts to secure this factory for San Diego. The location of this plant here is the result of seven years of consistent and intelligent effort on the part of the Industrial Department of the Chamber of Commerce, with the able cooperation of the San Diego Harbor Commissioners, the City Council, City Attorney's office and others.

Voters' Wisdom

Primarily, however, the location of this factory at San Diego is a direct result of the wisdom of the voters of San Diego in establishing the Municipal Airport on the shores of San Diego bay. It was Lindbergh Field with its excellent facilities for land planes as well as sea planes and its proximity to rail and water shipping facilities that finally convinced officials of Consolidated Aircraft Corporation that this was the logical site for their plant. Therefore, every citizen of San Diego who voted in 1927 for the Lindbergh Field bond issue deserves to share in the credit for bringing this plant to our city.

Air Birds At The Modern Traveler's Service



Poised on Lindbergh field, this giant United Airlines sky rider is ready to take San Diego passengers on aerial tours undreamed of even by "magic carpet" story tellers.

United Air Lines With Southern Terminus Here, Keeps Pace In San Diego Progress

Keeping pace with the progress of aviation in San Diego is United Air Lines, which utilizes Lindberg Field as the southern terminus of its Pacific Coast routes extending to Vancouver, and as the western terminus of the coast-to-coast service operated by United and Western Air Express via the Salt Lake City gateway.

Expenditure of more than $1,000,000 has been made by United on an improvement and conversion program to secure 55 twin-engined Boeing transports capable of a high speed of 202 miles an hour and a cruising speed of 189 miles an hour on its coast-to-coast and San Diego-Seattle routes. It is said to be the largest single expenditure in the air transport field this year. The expenditure includes purchase of 130 supercharged 550 horsepower Wasp engines with Hamilton controllable pitch propellers. The geared engines with controllable pitch propellers instead of straight drive engines increases the cruising speed of United's fleet approximately 19 miles an hour. The planes are considerably quieter and have substantially improved single-engine performance, as they can climb, fully loaded, to 11,000 feet on only one of their two engines.

New Ticket Office

United and Western Air Express recently opened a joint ticket office in the lobby of the U. S. Grant hotel to provide the public with more convenient access to airline reservations and information.

United has flown more than 85,000,000 miles in regular scheduled operations—first air transport system to attain this figure. The record includes 23,000 coast-to-coast flights and 39,000,000 miles of night flying with mail, passengers, and express.

Back of the 85,000,000 miles is a story of aerial pioneering, according to Charles M. Urbach, San Diego Traffic Representative of United. On the company's coast-to-coast route were flown the first planes built in the United States exclusively for passengers and mail service; the first through multi-motored transcontinental passenger-cargo transports; the first flights with passengers at night over long distances on regular schedules, and the first coast-to-coast schedules of less than 19 hours.

Airway Busy Route

United's Pacific Coast airway has become the busiest north and south international route in the world. By flying 12,316 miles a day between Seattle and San Diego, United is registering more miles than on any other north-and-south route in the country. United is now flying one-fourth of all of its daily mileage on the Pacific Coast, its line linking practically every city of 100,000 population on this seaboard. This total of 375,000 miles a month is accumulated by flying three round-trips daily between Seattle and San Diego, nine inter-city flights between Los Angeles and Oakland-San Francisco, and four daily between Seattle and Portland.

Air mail, passengers and express are now being flown coast-to-coast on United's mid-Continent airway in exactly one-half the time required eight years ago when the Post Office Department retired from operation of the air mail and turned it over to Boeing and National Air Transport, predecessor companies of United Air Lines.

The original schedule with single-engined planes over the 2700-mile airway between California and New York was 32 hours. In 1930 the cross-country flight was cut to 29 hours 45 minutes. Every year since 1930 United has cut its time, the greatest slash being in 1933 when the three-mile-a-minute twin-engined Boeings cut seven hours from the coast-to-coast time.

SEVERAL SUBSIDIARIES

Subsidiaries of Fleet Aircraft, Inc., a commercial sales company; Fleet Aircraft of Canada, Limited; Frontier Enterprises, operating Consolidated Airport in Buffalo.

S. D.'S AIRPORT LURED FACTORY

Continued from Page 1-A

Los Angeles in 1928, some of Fleet's San Diego friends, Macaulay and Thomas Bomar, among others, broached the subject of transferring the Consolidated to San Diego. Major Fleet was "sold" on the idea and promised to "talk it up" among the rest of the directors, who made frequent visits to San Diego to look over the site.

In 1930, Fleet visited San Diego, inspected Lindbergh Field, then consisting of about 50 acres, and wanted to buy it on the spot for $1,000,000. But the airport was not for sale. Fleet then planned a military flying school adjacent to Mission Bay, but this plan also fell through.

Final Decision

The efforts expended by the Chamber of Commerce through Macaulay and Bomar, the Harbor Department, through Port Director Joe Brennan and other officials, and H. B. Daniels of the city attorney's office, through these years, bore fruit last year when the directors decided to change.

During the 11 years of building planes at Buffalo, the company constructed innumerable private planes, "graduated" into construction of transport ships and now specializes in military fighting machines, for which it has a $9,000,000 contract at the present time.

The company designed and constructed the famous "Commodore" ships first used by the Pan-American Airways for Havana and South America trips.

Navy Bombers

Its most recent "famous" ships have been the six Navy bombers that flew to Panama, to San Diego and then to Honolulu last year.

At its present factory site at Lindbergh Field, the company will turn out only military machines, bombers, seaplanes and the like.

As soon, however, as a suitable location near the factory now nearing construction, is found, a factory for manufacturing smaller planes, the "speedster" will also be brought to San Diego.

History Of San Diego Since 1910 Reveals 42 Air Records Set Here

Continued from Page 1-A

record breaking flights. The first aerial photographs were made over San Diego by Maj. H. A. Erickson in 1911. Maj. Macaulay also had the honor of making the first night flights in San Diego in 1913.

Non-Stop Hop

Riley T. Scott, in 1914, successfully conducted the first aerial bombing, and in 1923, McReady and Kelly completed the first non-stop trans-continental flight by landing in San Diego from New York.

Few persons remember it, but the first regular air passenger service in the United States was inaugurated between here and Los Angeles in 1923.

Probably the most famous of all flights was that of Charles Lindbergh, when he took off from the old Ryan field for St. Louis, New York and Paris.

Farewell Dinner

A few of us took an interest in Lindbergh when he first came here to have his plane built in the old Mahoney plant. He was given so little attention that I had to muster half the Chamber of Commerce staff to attend a farewell dinner, so we would have enough of a representation to make the dinner a success.

We asked him to make a speech. He got to his feet and said "There's nothing to talk about. I'll probably have something to tell you if I make the flight to Paris." That was all he would say.

The old Russell parachute company gave me a parachute to present Lindbergh for the flight. Lindy declined to accept it. He said: "I haven't room for it in my plane, and anyway, if I fall over the ocean, I won't need it."

And all of us remember that famous massed air flight over San Diego on Thanksgiving Day of 1918. The Army staged a massed flight that has never been attempted again.

212 Planes

A total of 212 planes were in the air, and they actually flew in one group over the city, and the wings of the planes, as seen from the ground, seemed to be almost locking together. Now, all massed flights are made in separate formations.

The worst part of the flight was in landing. The old "Jennies" we used wouldn't stay in the air for more than two hours, but all the planes were finally grounded without mishap.

Some of the other dozens of records set in San Diego include the first use of a radio in an airship, by Curtiss and Morin, in 1912; the first use of planes in locating schools of fish, in 1918; the first trans-continental squadron flight, in 1918; the first refueling flight by Smith and Richter, in 1923; the first non-stop flight from San Diego to Mexico City by Capt. Emilio Caranza of the Mexican army, in 1928.

San Diego also was the first city on the Pacific Coast to draft an air ordinance and the first city in the country to form a Municipal Board of Air Control.

LEIGH BACKED BY YEARS OF AERIAL WORK

Charles T. Leigh, vice president and material supervisor of the Consolidated Aircraft Corporation, has years of experience behind him which amply fit him for the position to which he has been appointed.

A bachelor of science in mechanical engineering at the Worcester Polytechnic Institute in 1911, Mr. Leigh worked on various mechanical and civil engineering jobs following his graduation until 1917, when he took over the position of chief engineer of the Raymond, Washington unit of the airplane spruce division.

Since that time Leigh has worked in various other capacities. He has been affiliated with the Consolidated Aircraft Corporation since 1932.

ARMY FLIERS MAKE HISTORY

Continued from Page 1-A

that time they set a new world's endurance non-stop flight record of 27 hours, 16 minutes, but fell far short of their New York goal.

Motor Humming

The big ship in 1923 roared in from the dim mountain fastness east of here, its motor humming sweetly. A perfect landing set the relieved crowd wild—and the flight, the first successful coast-to-coast effort, had been completed.

Seldom in the history of aviation have two birdmen received the ovation given Macready and Kelly when they brought their ship safely to earth. Lindbergh, when he made his historic trans-Atlantic hop to France three years later, received the acclaim of the world, but aviation had progressed swiftly in that period of three years. Kelly and Macready, however, were doing something unprecedented, just as Lindy's flight was the first and mightiest of its kind. They had made a mark to shoot at, and even people air-minded at the time were of the opinion it would be years, possibly a decade, before the record would be broken.

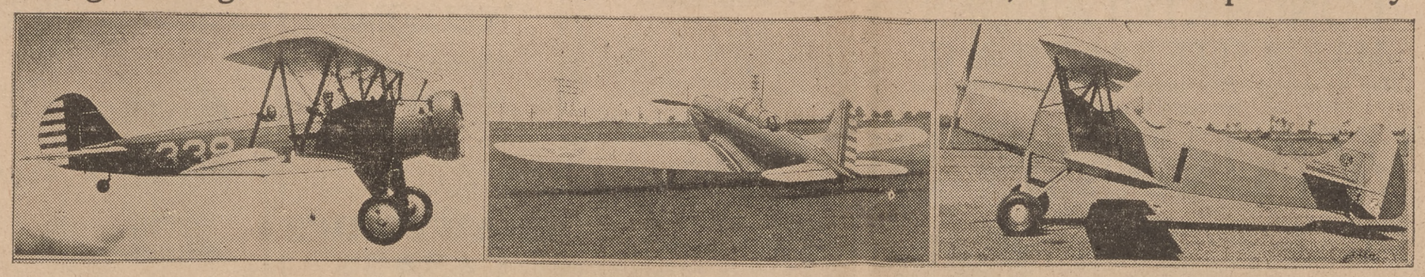
Amazing Progress

That aviation since that time has progressed amazingly is proven by Col. Roscoe Turner's epic flight from Floyd Bennett Field, New York, to Los Angeles Sept. 2, 1934.

Roscoe's trim plane hurtled him a distance of approximately 2,700 miles in the astounding time of 10 hours, two minutes and 51 seconds, an unheard of endurance speed heretofore. Turner, on this flight from coast to coast, averaged 248.129 miles per hour, while Kelly and Macready averaged less than 100 miles per hour for their flight!

Nevertheless, the Kelly-Macready flight from New York to San Diego will stand in the annals of aviation as an effort supreme. They were the first, and the leaders shall conquer.

'Sailing, Sailing, Over The . . Class, Real Class! . 'Madame, Your Airship Is Ready!'



High in the clouds are a pilot and his passenger in a Model al-C (Air Corps BT-7) model powered with a 300-horsepower Wasp, Jr. engine.

If your taste runs to low-winged monoplanes, try this one, also a product of Consolidated. It's model A-11, from a rear left view.

Built for speed and plenty of it is this model F-1-6 Fleet manufactured by Consolidated Aircraft. It has the marks of a real air patrician.

The WASHINGTON MERRY-GO-ROUND

By DREW PEARSON AND ROBERT S. ALLEN

Below is a continuation of the survey of political conditions in various parts of the United States.—The Editor.

ATLANTA, Oct. 19.—A state drama with a political setting and a national audience of considerable importance is being enacted here in Georgia.

The title of the drama might be: "Enough Rope."

For Eugene Talmadge, red-gallused, wild-haired governor of the state, is being given enough rope to hang himself.

It is a test, not only of the Roosevelt Administration in the President's adopted state, but also of Hueylongism. For, upon the shoulders of Gene Talmadge has fallen the mantle of the Louisiana dictator.

If Talmadge, by rabble-raising tactics in Georgia, can make himself a power in the South, then there is every chance for Huey Longs in the U. S. A.

The answer, to date, is that the Talmadge star rapidly is waning. As a second-rater he will be heard from for a long time. But as one who can carry the state on national issues or win any great following outside the state, Gene Talmadge is done.

◇ ◇ ◇

Reasons Three factors are behind this decline. One is the astute game played by Roosevelt politics of letting the Bad Boy strut the stage, brandishing all the weapons he could lay hands on, until the audience got tired and went home.

Another factor is a snub deftly administered by the Georgia congressional delegation, which recently returned from Washington to find Talmadge much weaker than they supposed.

So in making up the list of the elite who would sit on the platform for Roosevelt's "homecoming" to Georgia at Thanksgiving they left the governor off the list. The publicity given this snub had reverberating effects.

The final factor was Gov. Talmadge's intimation that he intended to call out the state militia to collect taxes.

This would be a resort to unadulterated dictatorship. But either Talmadge disliked the inconvenience of a special session of the legislature (the last legislature having adjourned without passing a tax bill) or else he wanted state funds at his disposal without strings attached. Or perhaps he wanted both.

Whatever his motives, the idea did not go down well in Georgia. It was too much a leaf out of the Huey Long note-book.

(Copyright, 1935, by United Features Syndicate, Inc.)

FILM FEATURES NEWCOMER

Three former Wampus Baby stars have tiny roles in "Coronado," while the feminine lead was handed to a girl, Betty Burgess, who had never before seen a movie camera.

HUNGARY BANS DUELS TO END 'HUN' STIGMA

BUDAPEST.—Twilight has fallen on the duelling gods of Hungary. Devotees of the age old ritual "swords or pistols for two and cognac and breakfast for one" are faced with certain decimation.

Sons of Huns whose fathers were sons of Huns, Hungarians have remained through centuries, at least with respect to duelling. But this is to be stopped, according to the minister of justice. In the future those who accept as well as those who challenge will be punished severely.

SHOOTS OWN PICTURES

Marlene Dietrich, co-starring with Gary Cooper in Paramount's "Desire," is an amateur photographer. She develops and prints snapshot negatives in a darkroom she has set up in her home.

LINDBERGH FILM SHOWN IN BOWL

"Flying the Lindbergh Trail," will be the title of a motion picture to be screened in the Ford Bowl at the Exposition tomorrow from 7 to 9 p. m., climaxing Aviation Day.

The picture will follow Col. Lindbergh on the air trail he blazed from Miami to Central and South America. It is an eight-reel sound film showing ground and aerial shots.

OLD-TIMER RETURNS

William Duncan, star of silent serials and at one time the highest salaried actor in films, returns to the screen after an absence of 11 years, with a featured role in Paramount's Zane Grey story, "Nevada."

Welcome . . .
Consolidated Aircraft Corp.
We recognize in your coming . . . and the construction of your up-to-date plant, an important forward step toward Progress—a term which perfectly describes the San Diego of today! Your chosen business stands first in the American—and world-wide—march to better knowledge! It seems fitting that San Diego's Lindbergh Field—which figured prominently in the birth of the American aviation business—should claim one of the industry's most important representatives!
We Appreciate This Opportunity to Invite You and Your Families—as San Diegans—to Visit Our Store!

ARMY, NAVY TO GET NEW AIR PRODUCTS

Factory Operates Behind Schedules; Nine Millions Cost Of Current Orders

Consolidated Aircraft is under government contract to construct for the Army and Navy a total of 110 fighting planes and giant seaplanes at an excess in cost of more than nine million dollars.

Finished Here

Ships which were started in the Buffalo plant are being finished here, while additional new craft are under construction, officials of the factory declared.

Included in the present production schedule are 80 twin-motored seaplanes for the Navy, all larger and of greater cruising radius than any heretofore delivered to the aircraft squadrons of the battle and scouting forces.

Fighters For Army

There also are 50 PB-2A two-seater single motored fighters for the Army under construction.

Additional orders will keep the factory far behind in its effort to supply demand for years to come, it was indicated.

NEW FACTORY COAST MODEL

Speed was the watchword during the construction of the Consolidated Aircraft Factory on Lindbergh Field.

San Diego's greatest industrial unit rose almost overnight—a sweeping mass of vertical and horizontal steel lines at first, then, as it took form, one of the most modern of manufacturing plants on the Pacific Coast.

Steel And Glass

The entire plant—covering 240,000 square feet of ground space—is mostly steel and glass, the front of the structure only being finished in stucco.

The roof of the structure is a series of "saw tooth monitors," or, in other words, a series of skylights. The glass in the roof equals in area about one-fourth to one-third of the floor space area.

Big Addition

Original plans called for a structure 900 feet long and 300 feet wide, but the plans were altered to include a 50 by 250-foot addition on the west side.

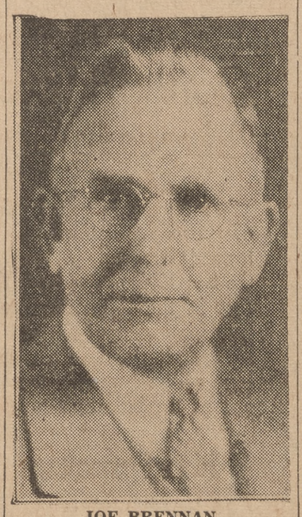
NEWMAN'S RISE RAPID IN FIRM

An assistant factory superintendent of a leading airplane company at the age of 27!

That is George J. Newman Jr., an English boy who came to this country and began to make good while young.

He has been with the Consolidated Aircraft Corporation since it began operations in Rhode Island in 1923. He worked up rapidly through all departments of manufacturing, at times being in charge of production for the Fleet types and the Army PT 11 and PT 12 training ships.

Moving Force



JOE BRENNAN

CITY FORTUNATE, SAYS BRENNAN

By J. W. BRENNAN
Port Director

With reference to the location of the Consolidated Aircraft Corporation in San Diego, there is no doubt in my mind that this class of industry is better fitted to operaet and carry on in San Diego than any other industry that I know of.

The fact that the city was fortunate enough in locating this company on Lindbergh Field certainly should clear up in the minds of any "doubting Thomases" the justification of the building of the airport. The fact that this company will, within the next six months, have something like 1500 people working for them, and within five years possibly 4000 or 5000 people certainly makes the investment in the field a good one for the benefit of the city as a whole.

Everybody knows that aviation is practically in its infancy and the manufacturing of planes will continue and increase year by year. Therefore, there is every reason to believe that the more industries, such as the Consolidated, that can be located on the field the better it will be for the city. Furthermore, the manufacturing of planes is a high class and clean industry and is right in line with the harbor plan which calls for the location of light industries in this section of the harbor.

NINE PLANE TYPES

Consolidated manufactures nine types of planes as well as manufacturing parts for them.

ALL TYPES OF PLANES BUILT BY S. D. FIRM

Flying Boats Costing Total Of $4,500,000 Made For Navy

The principal business of the Consolidated Aircraft Corp. is the design and manufacture of airplane parts for the Army and Navy, air line operators, private owners and foreign governments.

The principal types of aircraft manufactured are as follows:

Consolidated PT and Consolidated NY training airplanes used practically exclusively for primary training in the Army and Navy, of which 800 have been delivered.

ARMY GETS 171

The Consolidated PT-11 and Consolidated BT-7, primary and basic training airplanes respectively, specifically developed for the Army. Thirty-six of these planes have now completed successfully two years of service tests. Thomas-Morse 0-19 observation planes, of which 171 have been delivered to the Army Air Corps.

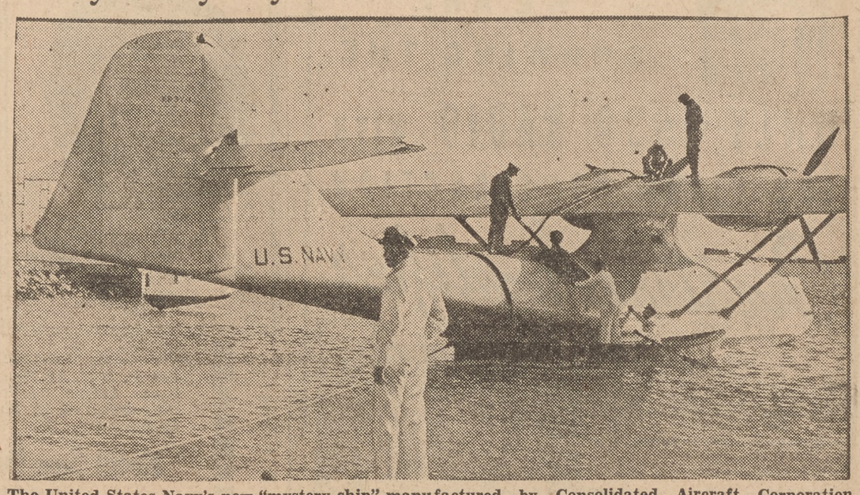
Consolidated Commodore flying boats, of which 14 were sold to the NYRBA line, later absorbed by the Pan-American Airways. All of these are still in operation by this transport company, one of the great air transportation systems, on South American commercial routes as far south as Buenos Aires. These planes, sold at $100,000 each, have flown more than 4,000,000 miles.

CRUISE 3,000 MILES

Consolidated P2Y-1 and Consolidated P2Y-2, two twin-motored patrol boats of which 47 have been built for the Navy at a cost of approximately $4,500,000. These flying boats have 1,250 horse power, weigh 24,000 pounds, a high speed of 130 miles per hour, and a cruising range of 3,000 miles.

Fleet trainer and sport plane. Over 500 of the Fleet combination military and commercial training and sport planes have been sold to commercial schools, the U. S. Government, foreign governments and private owners since 1928.

Navy's 'Mystery Plane' Lands For New Record



The United States Navy's new "mystery ship" manufactured by Consolidated Aircraft Corporation, shown after landing at Alameda, setting a new non-stop record for seaplanes. It will be on display at the Consolidated plant tomorrow.

Solar Firm Greets Air Concern With Enthusiasm

Ceremonies incidental to the dedication of Consolidated Aircraft Corporation's impressive new plant at Lindbergh Field are interesting to San Diegans not only because they mark another step in the building of San Diego's payrolls, but because the establishment here of Consolidated's factory marks an increased use of the products of one of this city's pioneer firms — Solar Aircraft Corp., Ltd.

Solar Aircraft was founded in 1927 to specialize in the making of airplane parts and accessories. Solar's principal product is a special type of exhaust manifold made of stainless steel embodying certain unique features.

"Our exhaust manifold has been subjected to the most trying tests the world over," stated E. T. Price, president. "As a result, this entirely San Diego product is placed on planes built by Consolidated, Chance-Vought, Douglas, Sikorsky, Boeing, Northrop and Lockheed.

"We congratulate Consolidated Aircraft Corp. on the opening of its fine new plant in San Diego and we are delighted thus to be in a position the better to serve them and the cause of safety in aviation."

APPLICATION FILED

Application for authority to operate in California was made to the Corporation Commissioner on July 6, 1935 by the Consolidated corporation.

The Buffalo plant of Consolidated was abandoned on Aug. 16, 1935 and the equipment and several hundred employes moved to San Diego.

SAN DIEGANS GIVEN WORK

Edward F. Neff, director of personnel for the Consolidated company, had charge of employing nearly 1000 workers in the first group now employed at the factory.

He opened offices in September and interviewed hundreds of prospective employes who went to work in addition to approximately 160 key men from the former Buffalo plant.

By this time next year, it is estimated Consolidated will be employing close to 2500 men and women.

All workers at the factory must be American citizens, and must pass a physical examination. Leading divisions of workmen include sheet metal workers, wing, fuselage, and final assemblers, tool makers and pattern makers.

NEW PLANES TO BE ENTIRELY OF METAL

There is a wood mill south of the main building of the Consolidated Aircraft factory where the lumber for patterns, jogs and fixtures is cut up. It is interesting to note that not one piece of wood goes into the structure of any of the 110 planes now in production. The modern plane is constructed entirely of steel.

CHURCH 200 YEARS OLD HAD ONLY 7 PASTORS

MERCERSBURG, Pa.—Rich in historical background, few churches in the United States can boast the interesting events of the quaint Presbyterian Church of Mercersburg, which stands under huge shade trees on a quiet side street of this mountain town.

The church, which celebrated its 200 years of consecutive activity late in July, has had only seven ministers, three of whom are living. One of these, the present pastor, the Rev. James Gray Rose, has been in charge for 43 years.

FLIGHT TO HONOLULU

It was a Consolidated flying boat that made the passage from San Francisco to Honolulu Jan. 10 and 11, 1934, covering 2408 miles in 25 hours.

WELCOME
TO
Consolidated Aircraft

Southern California is the heart of the aircraft manufacturing industry. The completion of the Consolidated Aircraft factory means greater employment opportunities than ever before for San Diego young men. To meet this increased demand for trained men, the Ryan School of Aeronautics has developed a new twelve month Master Mechanics' course which includes actual aircraft factory experience. This special Ryan system, endorsed by such leading aircraft manufacturers as Douglas, Northrup, Lockheed and Vultee, is now available for immediate enrollment. We are proud of the fact that many Ryan graduates are now listed among Consolidated's employees.

RYAN FLIGHT COURSES

which for years have been accepted by commercial and sportsmen pilots as standards of thoroughness are also available with or without mechanical instruction—Phone or write for further information.

Fair Enough by WESTBROOK PEGLER

Continued from Page 1-A

people at home even under Roosevelt.

◇ ◇ ◇

Radical Press

For one thing it will be necessary to know whether Mussolini or Hitler or Stalin would do anything to a foreigner, tourist or imigrant who attempted to establish a daily newspaper or weekly magazine published in a foreign language, to advocate the overthrow of the government and a change in its form. This is one of the minor liberties still existing in the strangling democracy under the potato tyrant of Hyde Park and Harvard. Many of our friends from the free countries who find so much to object to here do, after all, enjoy the right to print their principles and exhort their fellowmen in languages which are foreign to America. It is hardly comparable to the loss of the right to raise potatoes, but it is still a shred of the old liberty.

Another thing to be determined is whether a group of Americans in any of the free countries would be permitted to form Roosevelt clubs and hold drills of a semi-military character and indulge in rifle practice in the suburbs of Berlin. Our Nazi friends in the region of New York have been able to do these things under the tyrant Roosevelt.

◇ ◇ ◇

Alien Population

And then there would be the matter of public relief for jobless foreigners. There are said to be three million aliens in the United States on an illegal footing and about half that number of aliens are said to be drawing relief under the dictatorship. Do you suppose there would be some way of learning how many Americans have entered the free countries illegally in order to escape the potato dictator?

Well, there are still these few little doubts to be cleared up, but it is a relief to be getting away, anyway. Your correspondent's first act on the soil of France will be to buy a spade and plant some potatoes as a gesture of defiance to the dictator in Washington, D. C.

JUNIOR UNIT OF CHAMBER IN GREETINGS

New Era Marked By Institution, Says S. D. Publication

Hailing the dedication of the Consolidated Aircraft factory as marking a "new era in the growth and development of an industrial San Diego," the Junior Chamber of Commerce today declared the move which brought the factory here to be "the greatest single advancement ever made in the industrial development of the city."

Its official publication declared:

"Ever since the citizens of San Diego, under the leadership of the Chamber of Commerce, voted an investment of $625,000 in Lindbergh Field, aircraft manufacturing interests have taken a very keen interest in the growth and development of this section. The field combines three of the outstanding major features that go to the making of an ideal airport, namely: safety, utility and accessibility.

Field Is Safe

"Very few airports in the United States are as safe from the operating end as is Lindbergh Field; its utility as both a land plane airport and a seaplane base is made possible through the fact that it is contiguous to a very splendid basing for seaplanes in the northeasterly portion of San Diego Bay. Its accessibility is demonstrated by the fact that it is less than five minutes from down town San Diego, and this air terminal is practically contiguous to the other transportation facilities which play such an important part in the life of a modern city.

"These favorable factors were called to the attention of the Consolidated Aircraft Company in particular almost constantly during the past five years with the result that this great corporation finally moved lock, stock and barrel to San Diego. At the present time they are carying on a national advertising campaign in aeronautical publications, in which they depict 'an aerial preview of Consolidated Aircraft Corporation's new factory on Lindbergh Field at San Diego, California, where air, land, rail and water combine to afford the ideal location for aircraft production.'

World's Leading Plant

"Consisting of the most modern airplane plant in the world, 240,000 square feet of floor space, Consolidated dedicates its new facilities to the continuous development and production of aircraft which will assure our Nation's power in the air.

"This corporation has over $9,000,000 worth of business on its books at the present time and has indicated that in order to get out these large Army and Navy orders, it will be necessary to employ 1500 men by Jan. 1, 1936, and 2500 men by March 1, next.

"San Diego's aircraft industrial development, making good its slogan 'Air Capital of the West' is now on its way and with the citizens of this community alive as never before to the advantages derived from great manufacturing enterprises of this nature, and with the cooperation of the Harbor Commission, the San Diego California Club, and other agencies in a nationwide campaign to call to the attention of the aircraft manufacturers of the country the advantages possessed by San Diego, its future growth as an aircraft manufacturing city should be assured."

Inexpensive paper windows used in Chinese houses transmit ultra violet light effectively enough, tests indicate, so that they might be substituted for ultra violet glass in some tuberculosis clinics.

Major Fleet At Head Of Air Factory

Officials of the Consolidated Aircraft Corporation are the following:

REUBEN H. FLEET, president and general manager.

C. A. VAN DUSEN, vice-president and works superintendent.

O. M. LADDON, vice-president and chief engineer.

C. T. LEIGH, vice-president and material supervisor.

GEORGE NEWMAN Sr., vice-president.

RAYMOND S. MADISON, secretary-treasurer.

Directors are: the officers with the exception of George Newman Sr.; also Earle C. Hines, Preston Lockwood, George N. Pynchon Jr., F. D. Schnacke, David G. Fleet, J. M. Gwinn Jr. and George Newman Jr.

It is reported that hairless mice from Africa may be used in experiments designed to overcome baldness.

GIANT FACTORY ON DISPLAY

Continued from Page 1-A

of approximateely 240,000 square feet in two adjoining buildings of steel, corrugated iron, glass and stucco construction, by far the largest factory in the vicinity.

Its planes have been flown in every section of the world. In 1934 a Navy squadron of six flying boats, built by the Consolidated firm, set record non-stop flight, in mass formation, in an overnight cruise from San Francisco to Honolulu. The distance of 2408 statute miles was covered in approximately 25 hours.

Airplane Sets Record

Only three days ago, a giant new-design Consolidated patrol seaplane, built for the Navy, landed in San Diego after completing a flight from Norfolk, Va., via Panama Canal and San Francisco, in only three stops.

This seaplane is the first of the 60 to be built for the Navy at a cost of $90,000 each. These 60 will be the forerunners of a great armada of flying boats which will give the Navy a fighting force capable of striking swiftly at points of danger thousands of miles away.

Construction details of the planes are kept secret. On hand to inspect every piece of material that goes into the Government ships will be Naval and Army experts.

FROM STAGE TO RADIO

Earl Lee, NBC character actor heard on the Sunday special, holds the San Francisco record for long runs in theatrical engagements. Lee was featured as Cousin Henry in White Collars, for six months at the Capitol theater. Then followed an engagement in Henry Duffy's production of "The Best People," which ran at the Alcazar also for six months.

CONSOLIDATED EXECUTIVES

The taking up of your residence in San Diego brings to you many benefits. Not the least of these is the easy accessability of the San Diego Army & Navy Academy at Pacific Beach. The West's one outstanding Military Academy is a few miles from your home . . . a distinct opportunity for your boy. Let him take advantage of it.

SAN DIEGO ARMY & NAVY ACADEMY AND JUNIOR COLLEGE

"THE WEST POINT OF THE WEST"

WE ARE SHOWING THE ONLY 1936 RADIO WITH THE PIANO CONSTRUCTION

Overtone Amplifier

THERE'S no doubt about it—Zenith's new Overtone Amplifier, a new feature of the 1936 line—improves the tone and makes radio programs more enjoyable.

Zenith's Overtone Amplifier is just one of the many modern features of this new radio, now to be seen at San Diego Auto Electric's two convenient showrooms.

ZENITH 9554—

9 tubes. Tunes Americans and Foreign stations; police, amateur, aviation conversations, ships at sea. Tuning range of 5 wave bands on 3 simplified dial ranges. 12-inch Auditorium dynamic speaker. Black Magnavision dial, bands individually illuminated in colors; automatic band indication A-B-C; split second tuning; overtone amplifier.

ALL ABOUT DAVIDSON'S

Davidson Furniture Co. is almost an institution in San Diego. New arrivals to the city can hardly be expected to know that, however, so we're taking this opportunity to tell about Davidson's. Davidson's is justly famed for furniture bargains . . . both in new and used furniture. But furniture isn't all. There's new and used stoves, heaters, linoleum, rugs and a big juvenile department given over entirely to the youngster. New and used EVERYTHING, in fact, at all prices and in all styles, for your home. Davidson's is a friendly place . . . it's fun to shop there.

Skip through the items and prices listed below. You're bound to find something you need . . . and, possible, if you wanted to spend a bit more for an item or even less than the price mentioned, then Davidson's can probably manage that, too. Davidson's can manage just about **anything** when it comes to fixing up your home.

A FREE CARD TABLE

Welcoming Consolidated Aircraft employees to San Diego, Davidson Furniture Co. this week offers to all new customers a FREE CARD TABLE of sturdy construction and neat finish. A five dollar purchase is all that is needed to prove yourself a Davidson customer. Then the card table is yours. (Davidson reserves the right to withdraw this offer at any time without notice.) Come in and get your card table . . . it's a gift to YOU.

CITY WILL BE AIR CENTER, IS PROPHECY

Consolidated Plant Assures San Diego Of Aerial Future

The coming of a great, private airplane construction company to San Diego consolidates the city's position as the coming aviation center of the world. Its service flying units are superior to any base in the world.

Consolidated brings private industry, laying the ground work for future concerns to discover the advantages of San Diego and move here to make the greatest airplane city in the world.

Though still a factory, the Consolidated plant has been designed with an eye to distinctiveness. It is of all-steel construction, and like so many modern factories, is of saw-tooth design, to permit the maximum amount of light to reach the assembly floors.

It is an imposing structure with its front stretching 900 feet along Pacific-av. The main office, with its modernistic exterior, is in reality part of the main building, and easily can be converted into manufacturing space by removing the various partitions. Future expansion may make this necessary.

3 IMPORTANT TYPES

The Consolidated corporation is developing or has developed three types of planes used by service units. They are the high speed long range flying boat (Consolidated XP-3Y-1); high performing two-seater fighter (Consolidated P-30); attack airplane (Consolidated A-11).

Exposition Music

WEARS SPECIAL SHOES

Special shoes have to be made for Eleanor Whitney, clever dancer in Paramounts "Millions in the Air." Eleanor wears size 3-C.

CAST CHARLIE RUGGLES

Charlie Ruggles has the comedy role of Public Enemy No. 13 in Paramount's Bing Crosby-Ethel Merman filmusical, "Anything Goes."

COVALESKIE COMES BACK

SHAMOKIN, Pa.—Harry Covaleskie, dubbed "The Giant Killer" for his shut-out work against the New York Giants while pitching for the Phillies in the early 1900's, was defeated at the polls in the G.O.P. race for nomination as constable. A sufficient number of his Democratic friends, however, wrote his name on the ballots to give him that party's nomination for the position.

A Dream come True!

"For I dipt into the future,
Far as human eye could see,
Saw the Vision of the world
And all the wonder that would be;
Saw the heavens filled with commerce,
Argosies of magic sails,
Pilots of the purple twilight,
Dropping down with costly bales."
Alfred, Lord Tennyson, 1831

THE FULFILLMENT of this vision has brought to a reality the dream of San Diego—the Air Capital of the West.

We welcome Consolidated Aircraft Corporation—and we are proud that they, with other leading manufacturers and operators of aircraft, specify and use "Exhaust Manifolds by Solar."

RUTH NICHOLS INJURED IN PLANE CRASH

Roar Of Bombs Sends Ethiopians To Cover . . . Then Anti-Aircraft Batteries Open . . . Fear Gives Way To Calm Defiance

(Copyright, 1935, NEA Service Inc.)

The terror spread among Ethiopian troops by air raids is vividly portrayed in this picture rushed to America by plane and radio from the Ogaden front, 30 miles south of Harar. The roar of exploding bombs dropped by the swift bombing planes of the Italian army is enough to send the native troops scurrying from their trench (at left) to scatter themselves widely in the surrounding fields.

(Copyright, 1935, NEA Service Inc.)

While infantrymen scurry to safety, the Ethiopian anti-aircraft gunners battle Italian planes in this picture rushed to America by plane and radio from the Ogaden front by H. V. Drees, The Sun-NEA Service staff cameraman. Smoke spouts from the machine gun (left) which is fired from a pit. The gunner's crew lies flat on the ground and others (right) bring up ammunition.

RUTH NICHOLS, 5 OTHERS HURT AS PLANE CRASHES AND BURNS

Noted Woman Flier Is Given 'Even Chance' To Recover

By United Press

TROY, N. Y., Oct. 21.—Ruth Nichols, daring woman aviator and her pilot, Capt. Harry Hublitch, were burned critically today when their Condor plane crashed into a field near Troy Airport. They were taken to a Troy hospital for treatment, where it was said they had an even chance to recover.

The crash occurred during a take-off. The plane, forced down by a strong cross wind, struck a tree, then caught fire.

Four other persons aboard the plane, a 20-place ship, were burned and cut. They were:

William Holt, New York City; Raymond Hanes, Xenia, O.; Gladys and Nina Berkenheiser, sisters and hostess.

Tried Forced Landing

Hublitch, with 22 years of experience, attempted a forced landing after a cross wind struck the plane. The big ship swerved and crashed into a tree. Then it caromed into the field.

Workers ran to the plane and pulled out the passengers.

Miss Nichols and Hublitch were unconscious. They were carried to an automobile and taken to Troy Samaritan Hospital. The other injured were treated on the field by airport nurses and physicians.

Farmer Albert Turner, 68, said he was "resting" in bed when he heard a "terrific crash."

Fire Started Quickly

He ran outside and saw the big ship plunge into his tomato patch.

"The plane immediately burst into flames," he said. "I saw several people in the plane, then workers pulled them out."

Airport officials could offer no explanation of the cause of the crash. Witnesses said the plane took of, then attempted to clear the low hills surrounding the airport.

"Suddenly the plane began to lose altitude," one person said.

"It was noticeable from the ground that the pilot was attempting to land the plane."

Citizens Guaranteed 'Check' On Mattoon Settlements

Supervisors' Resolution Pledges Separate Action On Negotiations In Each District Under Proposed $2,600,000 Bond Issue

By MAGNER WHITE

EVERY condition governing the proposed wiping out of the $14,000,000 Mattoon tax white elephant with the proposed $2,600,000 settlement bond issue, to be voted on a week from tomorrow, Oct. 29, has been SET DOWN IN WRITING in the form of a valid county law.

This law, in the form of a resolution by the County Supervisors, is the voters' and taxpayers' guarantee that if they vote the bonds, a settlement will be undertaken under specified conditions. We have been reviewing these conditions in a study of the Supervisor's resolution. Almost invariably, any question raised by anyone in connection with the bond election is covered in the 16-page document.

Almost every paragraph is a

MAYOR CLOSES SHOW

CHICAGO, Oct. 21.—Mayor Edward Kelly today ordered "Tobacco Road," noted stage play by Erskine Caldwell and Jack Kirkland, which has run for nearly two years in New York, be closed as indecent and obscene. The mayor saw the play Saturday.

S. D. ASSURED CIVIC CENTER

San Diego's civic center will be built, and prevailing wages will be paid in construction.

This was the double promise given to San Diegans today.

"I'm definitely committed to the civic center. It will be built, despite what some malcontents may say," declared Frank Y. McLaughlin, state relief administrator, who was in San Diego over the weekend.

"Prevailing wage scales will be met in the construction," promised Ralph Jenney, chairman of the State Relief Commission, which convened at Hotel del Coronado

S. D.'S GRAND JURY MEETS

Horace Rhoades Appointed Chairman; Few Complaints Filed

The 1935 county grand jury of 17 men and two women was selected today and began its annual check on city adn county officers with apparently fewer complaints before it than in several years past.

HORACE RHOADES

The jury was drawn from 30 names in Superior Judge Lloyd E. Griffin's court at 10 a. m. Judge Griffin will "father" the jury as he did last year with accusations and indictments returnable in his court. John P. Holt, deputy district attorney, will act as legal adviser.

Judge Griffin appointed Horace E. Rhoades, president of the San Diego Club, chairman. The court said that the jury might recommend an alternate if Rhoades' business would not permit his accepting the position.

Holt Gives Opinion

Holt immediately went into conference with the jury and presented his written opinion on its duties and powers. He advised that the jury no longer had the power to conduct a general county audit unless some specific com-

18 San Diegans At TOARP Parley

Special to The Sun

CHICAGO, Oct. 21.—From approximately 90 Townsend clubs in San Diego, a delegation of 18 had already registered for the National Convenvention of Townsend Clubs today and others were expected.

Those registered today were: Mrs. Ione T. Cleaver, Mrs. Wella M. Anderson, Mr. and Mrs. Antone Fibiger, Mr. and Mrs. Edward Nevitt, M. G. Harris, the Rev. Louis Burger, Mrs. Dena Lund, J. H. Maus, Mrs. Sidney Scott, W. B. Frisbie, Mr. and Mrs. Frank Forrest, Dr. Henry S. Harriss, Mrs. P. E. Davis, Mrs. Orale Hess-Brown and Mrs. Cora McGuire.

POLICE MATRON SLAYS OFFICER

Two Held For Probe Of 'Mistake Killing'

By United Press

LOS ANGELES, Oct. 21.—A bizarre "mistake killing" in which a policewoman fatally wounded Radio Patrolman Owen D. Yancey with the revolver of another officer found hiding in the closet of her home was being investigated today.

Mrs. Jean Pierce, matron at the Lincoln Heights jail, and Officer Ernest L. Hice were held on suspicion of manslaughter as investigators checked the policewoman's story that she fired at Yancey, believing he was a prowler. The bullet plowed through his forehead, causing death later in a hospital.

Hice told detectives he accompanied Mrs. Pierce home early yesterday after she went off duty and had remained with her during the day. During the evening, he said, they heard voices outside the window and the policewoman, seizing his revolver, fired blindly through the window.

An hour later, two officers, who were investigating the shooting, found Hice cowering in the closet.

Police said Yancey and a fellow-officer who had been sent to Mrs. Pierce's home after neighbors reported hearing a woman's scream.

Yancey was married and had two children.

BUSTER KEATON ILL

HOLLYWOOD, Oct. 21.—Grave concern over the condition of Buster Keaton, "Dead-Pan" film comedian suffering from pnuemonia complicated by a nervous breakdown, was expressed by physicians today.

HELENA BEGINS QUAKE REPAIRS

Stricken City Studies New Plan For Reconstruction

By United Press

HELENA, Mont., Oct. 21.—State and national authorities conferred today on rehabilitation plans following the most devastating series of earthquakes in the history of Montana.

Minor tremors were felt at short intervals. The most severe shock felt since Friday night, when a severe disturbance caused damage upward of $2,000,000 and claimed two lives here, came late last night.

Earth movements, most of them barely perceptible, came on an average of 10 minutes apart all day Sunday. W. E. Maughan, meteorologist, said he recorded more than 260.

Sen. James E. Murray arrived yesterday to offer his support in securing government aid in rehabilitation.

In downtown Helena, streets were roped off in those areas considered dangerous in case of additional severe shocks. State highway patrolmen were on duty, warning pedestrians away from weakened structures.

Many residents of sections not severely affected by the shocks were returning to their homes. They abandoned them Friday night, many fleeing to the open

ETHIOPIA MOVES TO ATTACK ITALIANS

Well-Equipped Troops Leave Capital To Open Battle

By EDWARD W. BEATTIE
United Press Staff Correspondent
(Copyright, 1935, by United Press)

ADDIS ABABA, Oct. 21.—Evidence that the Ethiopian army is preparing to take the offensive against the Italian invaders multiplied today.

Several thousand troops of the imperial guard streamed out of the capital for the front, equipped with modern weapons.

Best Warriors Called

The emperor called in some of the best warriors in the country, including those led by former War Minister Iere Biru, who had been in disgrace for selling government arms for private profit. Biru's old offense was forgotten in this national crisis. He is known as one of the fiercest fighters in Ethiopia.

Meanwhile, disconcerting reports reached the capital from the south of outbreaks of old tribal feuds there. The withdrawal of the majority of Amharas from Ual-

(Turn to Page 2) Col. 8.

SHIPS MENACED BY HURRICANE

President's Vessel Safe As Tropical Gale Grows

By United Press

MIAMI, Fla., Oct. 21.—Vessels over a wide area were warned today to take precautions as a tropical storm, of hurricane force near its center, was located a short distance south of the island of Jamaica.

It appeared that the U. S. S. Houston, carrying President Roosevelt back to Washington, was well to the north of the disturbance and in no danger.

HAVANA, Oct. 21—The National Observatory today warned of hurricane danger in the middle and western portions of Cuba. Residents in the danger area were taking precautions.

ABOARD U. S. S. HOUSTON, Oct. 21.—President Roosevelt's vacation cruiser and her escort, the Portland, steamed northward into the Atlantic today, and was expected to reach Charleston, S. C., where the President will debark, Wednesday afternoon.

Townsend Hosts Arriving For Convention At Chicago

By JERRY LISKA
The Sun's Staff Correspondent

CHICAGO, Oct. 21.—Dr. F. E. Townsend, tall, gaunt Californian whose revolving pension plan has attracted hundreds of thousands of followers, will call his first national convention to order here Thursday.

The white-haired leader who deserted the practice of medicine to promote his $200-a-month plan, expects at least 3000 delegates to attend the four-day session.

"The number actually in attendance, however, may well run over 50,000," he said today.

Opening Thursday, the convention will be climaxed Sunday afternoon with a nation-wide broadcast over the "red" network of the NBC system, officers announced. Dr. Townsend's address, which in addition will be carried on a special wire to California, is expected to outline definitely the "big push" of the coming year.

It will be delivered from the international amphitheater here.

Mass meetings similar to that which will be held in the amphitheater here have been organized by all of the 5000 Townsend clubs throughout the nation, officers said, and have been scheduled to agree with the 3:30 p. m. (CST) broadcast from Chicago.

"Listening in" will be at least 5,000,000 members who were unable to attend the convention, ac-

(Turn to Page 2) Col. 4.

20 INJURED IN S. D. ACCIDENTS

Twenty persons were injured, but none fatally, in San Diego traffic accidents over the week-end.

Betty Harmes, 20, of 1864 Sunset-blvd, and Lavonne Berryhill, 19, of 1504 Fourth-av, Coronado, were rushed to Mercy Hospital after their car crashed into a light pole on Reynard-way near Redwood-st early Sunday morning. Miss Hermes suffered concussion of the brain. Police said the two girls were riding with Ensign L. H. Birthisel, 23, attached to the U. S. S. Gilmer.

A collision at Fifth-av and Date-st resulted in spinal injuries and a sprained back for Mrs. Lyda Rogers, 51, of 1866 Moore-st Sunday morning. She was taken to Mercy Hospital. The two cars were driven by Baldwin Rogers, 53, and William E. Biddle, of the U. S. S. Brookes.

Russia May Withdraw War Sanctions

SOVIETS FEAR 'CHEATING' IN LEAGUE RANKS

Italian Victory In Ethiopia Or Big War Is Forecast

By WILLIAM PHILIP SIMMS
Scripps-Howard Foreign Editor

WASHINGTON, Oct. 21—Events today were galloping toward a choice between a "League war" with Italy and a compromise allowing Mussolini a measure of victory in Ethiopia.

Added up, that is the meaning of the deluge of bewildering, and often conflicting, reports from across the Atlantic.

Action Too Late

Even if the penalties thus far adopted could be made 100 per cent effective, realists among League of Nations members are extremely doubtful if the blow would begin to tell on Italy in time to save Ethiopia.

It is clear, however, that few believe such sanctions can be made 100 per cent effective. Soviet Commissar Maxim Litvinoff has warned the League that Russia will watch results closely, and that if the sanctions are ineffective his country may reconsider its action.

Russia's Warning

Bluntly stated, if Russia sees "cheating" going on among any of the 50-odd members pledged to support sanctions, or if Germany, Austria or any other nation permits trade to continue with Italy, she reserves the right to do the same.

In this she would be following the precedent of Great Britain. In 1933, Britain embargoed arms to China and Japan. The ban was in effect exactly two weeks. The British government then frankly announced that as others were selling munitions she might as well get some of the money too.

German Support

Today, Germany ceased to be a member of the League. Austria did not fully support the sanctions. Italy will likely be able to buy everything she needs via Germany and Austria. At least she may buy all she has the money to pay for.

If the Duce wins his campaign in Africa before League sanctions destroy him the League must either admit defeat or call on the British fleet. The latter act would mean a European war.

HELENA BEGINS QUAKE REPAIRS

Continued From Page One)

country. Hotels, deserted Friday night and Saturday, reported the registration of a few guests.

Arthur C. Parsons, state fire marshal, ordered yesterday that there be no large assemblies in the dangerous areas of Helena. Beer halls and numerous places of assembly were closed.

Most business establishments in the restricted area were given permission to open today, but several remained closed. More than a score of buildings were condemned as unsafe. Oscar Baarman, city engineer, said the city hall was so badly damaged it would be razed.

400 Fed at Camp

Red Cross and other relief agencies cooperated in caring for refugees whose homes were destroyed. At the federal transient camp, the Red Cross and FERA were feeding more than 400 persons.

All schools were closed. Two school buildings were demolished and the others were damaged badly.

COUNTY PUT ON SPOT BY RELIEF

Return of the relief burden from Federal agencies to counties and the broadening of eligibility for old age pensions, have placed counties throughout the state between two powder kegs—the taxpayers and the relief cases—Mrs. Florence L. Turner, state director of social welfare, told the Board of Supervisors today.

Praises Supervisors

"There has been tremendous pressure on every county welfare department in this state," Mrs. Turner said. "I am glad to say that the department here has had splendid co-operation from its Board of Supervisors."

Shortly before Mrs. Turner appeared, the board granted a request of Julius Rainwater, welfare director, for 10 new employes he said were necessary to handle the flood of applications for relief under the new state pension law which lowers the age requirement from 70 to 65 years. The new employes will add $1075 to the salary ordinance.

'Chiseling' Cited

Mrs. Turner commented on a charge made last week by Dr. Frank Gigliotti, state board member, who claimed that several counties are "chiseling" in making up their old age budgets. Dr. Gigliotti declared that it was the intent of the law that the cash minimum to all applicants would be $20 and the maximum $35.

New Citizen Honored . . . Crowd Acclaims Fliers, Plane Builders . . . Factory Dedicated

Upper left photo shows Maj. Reuben Fleet, president of the Consolidated Aircraft Corporation, at the dedication of the big factory yesterday; center above, part of the vast crowd which attended the ceremonies with the big Navy "Mystery plane" built by Consolidated in the hangar in the rear; upper right, Maj. Fleet "in action" as he spoke at the San Diego hotel luncheon; lower left, Kneffler McGinnis, commander of the "mystery" plane on its record flight from Panama to San Francisco; center below, Glenn Martin, famous aviation pioneer, plane designer and manufacturer of the trans-Pacific "clipper" ships, and Col. David Wuest, commandant at Rockwell Field, and Maj. Fleet.

McLaughlin, Jenney Assure Civic Center For San Diego

Flack Comment Scored; Prevailing Wages Are Promised

Continued From Page One)

Saturday and yesterday.

These two assurances removed all doubts of whether the civic center would be constructed, and met the protests of labor against paying of "security" wages.

McLaughlin took City Manager Robert Flack to task for saying that "political pressure" would be needed to build the civic center.

"What does he mean, political pressure?" McLaughlin asked. "Who is he going to use the pressure on?

Jenney Is Lauded

"I'm definitely committed to the civic center. So is Mr. Jenney, and it is Mr. Jenney who should get full credit for the building."

"There will be no hitch in this project. It will go forward just as fast as the board of architects, appointed by the San Diego Architectural Society, for that purpose, can complete the plans. Actually, it will start before that, just as soon as the foundation plans are definitized. Under the project application as finally acted upon, this beautiful building will be built largely by contract and under prevailing wage scales; for which the community has Ralph Jenney to thank. In fact, it has Mr. Jenney to thank for the entire project. He conceived the idea of erecting this building as a relief project, and, after two months of hard, driving work, had the whole project on ice, before anyone here knew anything about it. I did everything I could, but my chief duty seems to have been to be present at the 'blessed event.'

'Co-Operation Splendid

"He says that he had the finest co-operation from the mayor, city officials, Board of Supervisors, local and Federal Works Progress officials and the Civic Center Committee.

"This county is entitled to that monument to its splendid civic spirit. I love San Diego and am proud of it.

"A prominent San Diego man asked me today if, under the project approval, the building could be built on any other site. That would be impossible, as the entire proceedings have been predicated upon the erection on city tidelands."

McLaughlin evidently was displeased at Manager Flack's statements upon his return from San Francisco, where he went to investigate the status of the civic center project.

'Pressure' Advocated

The manager returned saying that he felt San Diego would lose the civic center unless political pressure was used by San Diegans.

"Flack never saw me when he went to San Francisco," McLaughlin said. "I don't know who he saw. He might have talked with some of my assistants.

"The President has approved the project. I have the documentary evidence. Mr. Flack never asked to see that.

McLaughlin's Power

"Of course, as Flack said, more projects have been approved than there is money allocated. But the power to determine which projects are to go ahead remain with me.

"And I'm definitely committed to the civic center. It is the kind of thing San Diego wants and needs. It also is the kind of project that provides all types of skilled labor."

When Mr. McLaughlin told The Sun this weekend that he didn't see Mr. Flack the manager countered by saying:

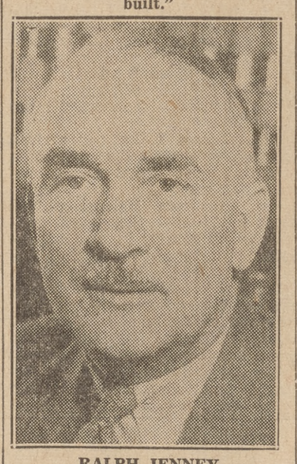
"Well, we saw his assistant and I got the impression from him that there was no chance for the civic center."

Mr. Rhodes then came to the rescue of Mr. Flack.

"We saw two men in Mr. McLaughlin's office and I am really responsible for the misunderstanding," said Rhodes.

"I am glad that Mr. McLaughlin has given us something to hope for. I'm sorry about it."

FRANK Y. McLAUGHLIN
" . . . the civic center will be built."



RALPH JENNEY
" . . . who should get full credit for the building?" — Mr. McLaughlin.

TOWNSEND CLUB GROUPS MEET

(Continued From Page One)

cording to official estimates.

Thursday's meeting will be devoted to organization, R. E. Clements, one-time Long Beach, Calif., real-estate man and now national secretary of the Townsend organization, said, climaxed by a selection of the convention chairman.

Friday is left open for routine business. Members of the "Townsend Legion," those who contribute one dollar a month toward support of the national convention, will meet in a banquet on Saturday. The convention will close with the mass meeting Sunday.

Although program plans will probably not be completed until the eve of the convention, both Dr. Townsend and Clements expect to devote most of the time to outlining a plan of campaign, both for the coming session of Congress and for the elections next year, it was indicated today.

Will Poll Candidates

Club units will continue to be organized on the basis of congressional districts, Dr. Townsend said, but early emphasis on the selection of congressional candidates is expected.

There will be no attempt at alliance with political parties, he said, but each candidate will be polled for a "yes" or "no" answer regarding his feelings on the Townsend plan.

Likewise there will be no mass affiliation with a presidential candidate, officers said, until it is definitely known how the candidates stand on the question.

Senator Borah of Idaho, mentioned prominently in the west as a possible Townsend candidate, has received NO consideration from the organization, officials said, and his attitude one way or the other has not been investigated.

Most From West

Immediate steps to flood Congress with petitions and letters will be the first move in the fall and winter campaign.

Seven special trains from the west coast, three of them from Los Angeles, were chartered for the convention, Clements said. The majority of delegrates, he said, are expected from the west coastal states, although Florida will provide one of the largest single delegations.

Bitter at the reception they have received at the hands of Chicago newspapers and at the coolness of the city administration, officers nevertheless were pleased with their selection of Chicago as the convention city.

San Diego Grand Jury In Session; Few Complaints Up

(Continued From Page One)

plaint is made to it. The general audit is now handled by the Board of Supervisors under the new charter.

'Secret Six' Quiet

Rumors that the "Secret Six" would be awaiting the grand jury's selection with a demand for an investigation of the police department failed to materialize as neither Ed Dudley, reputed investigator for the organization nor any of his known agents appeared.

The grand jury's first business session was set for 1 p. m. Wednesday.

It was learned that one of the first matters the jury would dig into was a complaint by Mrs. George Osborne, 4527 Marlborough-st, that county ofifcers had been negligent in handling of a mental case which resulted in the shooting of her husband on May 20. Mrs. Osborne said that the sheriff's office and probation department had examined a patient in their neighborhood five weeks before the man shot and seriously wounded her husband on the lawn of their home. She said that the officials had not taken proper care in confining the man who did the shooting.

The members of the new jury follows:

San Diego—Ralph Bach, Electric building; Clifford H. Baker, 334 W. Robinson-st; Edgar C. Bangs, 1408 Fourth-av; Donald C. Burnham, 2825 Locust-st; E. O. Busenberg, 1435 Granada-av; E. C. Fleet, 707 E-st; Laurence P. Hill, 1043 Sixth-av; A. E. Hodgman, 2917 Ft. Stockton-dr; Madie Jopling, 4151 Jackdaw-st; John T. Kaidel, 3430 Utah-st; Emil Klicka, 3506 28th-st; Raymond P. Low, Pacific Company, San Diego Trust & Savings building; Elizabeth S. McNeil, 1520 Monroe-st H. E. Hhoades, San Diego Club; Bruce Starke, 4294 Arguell-st.

Ramona—William Cannon.

Encinitas—Harvy Lamb.

Chula Vista—Percy L. Mathews, 310 Rosevelt-st; Herman O. Stevens, 210 G-st.

Foreman Rhoades announced the selection of committee as follows:

Roads—Bruce Stark, Harvey Lamb and Percy L. Matthews. County jail—Egbert C. Bangs, Lawrence P. Hill, and Ralph Bach. County garage—H. D. Stevens, Bruce Stark and E. C. Fleet. Resolutions committee—Donald Burnham, Ralph Bach and Bruce Stark.

Agricultural affairs—William Cannon, Harvey Lamb and John T. Kaidel. Audit committee—Lawrence P. Hill, Emil Klicka and Donald Burnham. Juvenile court—Mrs. Madie Jopling, Clifford Baker and Mrs. Elizabeth McNeil. Welfare—Mrs. Madie Jopling, Mrs. Elizabeth McNeil and E. O. Busenberg. County hospital—E. C. Fleet, A. E. Hodgeman and Egbert C. Bangs. Education—A. E. Hodgeman, Harvey Lamb and R. P. Low.

Mattoon Act—R. P. Low, Emil Klicka, and Donald Burnham.

S. D. HOLDS COUPLE IN JUVENILE OFFENSE

Accused of plying young school girls with liquor and driving one 15-year-old to Bell, in Los Angeles county, without consent of her parents, "David "Whities" McNeal, 19, was lodged in city jail today. His wife, Izetta May, 18, also was held after being returned from the northern city by Tom Frost, of the district attorney's office, and Det. Ed. Dieckmann.

Complaints have been issued by the district attorney charging McNeal with violation of the juvenile court law and grand theft. His wife also faces the former charge. McNeal is said have stolen a Ford coupe belonging to Beattie Armstrong.

LEADERS HAIL S. D. FACTORY AT DEDICATION

San Diego today jumped ahead on the fourth step of its development—industrialism.

The Consolidated Aircraft Corp. became an integral part of the city yesterday when its new $500,000 plant was dedicated at Lindbergh Field in the greatest ceremony of its kind ever conducted here.

More than 30,000 San Diegans participated in the program, the luncheon in Hotel San Diego, the public dedication ceremonies at the plant, and during the visiting hours at the factory itself.

"For 12 and one-half years we have striven for this day. It marks the culmination of a dream for a factory of our own in a city of our choice."

Maj. Fleet Speaks

These words the words of Maj. Reuben H. Fleet, president of the Consolidated Aircraft Corp., in his dedicatory speech at Lindbergh Field. He stood on a platform erected a few feet removed from the giant Consolidated Navy plane which recently set a new world's non-stop flight record for sea planes.

"Up to now," said Rufus Choate, president of the Board of Harbor Commissioners, in his talk at the luncheon, "San Diego had lacked one thing—industrialization.

"In the past, three men contributed most to San Diego's development. George Marston gave the city civic progress. John D. Spreckels poured his millions in the city for utility development. Bill Kettner brought us the Navy.

"Now we must add a fourth name to that list, that of Maj. Fleet.

"He has given industrialization to San Diego."

Leaders Present

All San Diego leaders joined in the day of celebrating. The city—its business, social and cultural life, was opened to the directors of the company and the skilled employes who came out from Buffalo when the plant moved to San Diego.

The Navy, Army, Marines, Coast Guard and the Army Air Corps reserve also pledged themselves in support of the great plant.

"The county, too, is ready to help in any way we can," declared Edgar Hastings, chairman of the Board of Supervisors, in a talk at the luncheon.

"You probably will need emergency landing fields. We will be available to help you. Why, we even burned the brush off Camp Kearny mesa for you!"

The Navy extended its welcome through Rear Adm. Ernest J. King, chief of the Navy's Bureau of Aeronautics, and Capt. John H. Towers, commander of the Naval Air Station.

LOIS ZACHARY TO APPEAR IN COURT

Lois Elaine Zachary, 18, charged with the murder of her father, Roy R. Zachary, former grand juryman, was to face preliminary hearing before Justice Phil Smith at 2 p. m. today.

Zachary was shot in his Encinitas home Sept. 18 and died Oct. 12 in Scripps Memorial hospital at La Jolla. Lois told investigators she shot because she feared Zachary was going to harm her and her mother. In a dying statement, the father pleaded to have Lois freed of blame, claiming he was responsible for the tragedy.

GREELY, POLAR EXPLORER, WAS S. D. RESIDENT

Pioneer San Diegans today recalled when Genl. Adolphus W. Greely, Arctic explorer who died at the age of 91 in Washington, D. C., yesterday, was one of them.

GENL. GREELY

The man who in 1881 became the first person to reach a latitude of 83 degrees, 24 minutes north, once maintained offices on the site now occupied by the First National bank.

"I went to work for him as office boy in 1873," reminisced A. W. Fenn, veteran compositor for The Sun. "As I remember, he built the first Government telegraph line from here to Ensenada." In 1867, Greely, an officer in charge of the Army Signal corps, had constructed the first line to the coast.

Later, with a man named Nesmith, Mr. Fenn said, Greely built for speculative purpose the four-story granite-front building on Fifth-av between E and F-sts.

The explorer was one of the original organizers of the National Geographic Society. On his expedition, which took him to within 498 miles of the north pole, Greely and his party of 25—only seven members of which returned—for three years saw no other human beings.

During that time, their ship crushed by the ice, the expedition was stranded and it was not until a third relief outfit had ventured into the Arctic wastes that they were located and rescued.

Greely held the Congressional Medal of Honor—which, however, was not voted him until Mar. 17 of this year.

ual by the governor of the district for war service has resulted in a flare-up between Silti and Marako tribesmen.

Chief Denies Desertion

After being out of communication with Ras Siyoum, commander of the defense forces in the north, for nearly a fortnight, the government today re-established telephonic contact.

Siyoum, now in the Makala region with Ras Kassa Sakihat, talked to the emperor. He denounced as vicious canards the Bazaar rumor that he had deserted with 80,000 men.

The Ethiopian high command is planning an attack on the Italians in the region west of the Webbe Shibeli river, according to reports which added that large quantities of ammunition and supplies were being concentrated near Darassa.

Huge Credit Provided

Prospects for an Ethiopian offensive against the invader appeared improved as it was rumored that a credit of 2,000,000 pounds ($9,820,000) for purchase of munitions was being arranged in England. Ethiopian funds for this purpose already are available in London and probably will be used at once now that the embargo against exports of arms to this country has been lifted.

SWING LAUDS FEDERAL HELP FOR DISTRICT

Irrigation Sector To Get Millions Through His Efforts

$13,298,500 Imperial refunding loan.
$1,950,000 for drainage fund.
$15,000,000 for All-American canal.

With "everything but the Capitol dome" in his knapsack, former Congressman Phil D. Swing returned from Washington, D. C., today with government pledges of millions of dollars for aid of the Imperial Valley Irrigation District, which he represents. The former congressman went to Washington last April, and returned home because of his mother's illness.

Phil D. Swing

Swing assisted in securing a Reconstruction Finance Corporation loan of $13,298,500 to refund the irrigation district's outstanding indebtedness of $15,000,000. This will reduce the district's bonded indebtedness by 25 per cent, and lower the interest from 5½ to 4 per cent. As part of the loan, the government agreed to advance $1,950,000 to complete the district's drainage system, Swing said.

The PWA also advanced $15,000,000 to continue work on the All-American canal—for participation in which San Diego has yet to sign a contract.

Time Extension Okeh

Swing voluntarily interested himself in San Diego's rights in the Colorado River and was assured by the Department of Interior, he announced, that the request of Mayor Benbough and the City Council for an extension of time on the city's proposed contract for All-American canal participation will be granted.

"Arizona and Upper Basin states are intensively preparing for a suit to be filed in the United States Supreme Court for an 'equitable' apportionment of waters of the Colorado among the seven basin states," Swing said. "Atty. Genl. U. S. Webb and State Engineer Hyatt have assured me they will promptly commence preliminary work necessary to protect California's interests."

The Southern California communities which have contracts with the government for Colorado River water will probably be named defendants in the suit, it was said. These include Metropolitan water district, San Diego, Palo Verde, Coachella, and Imperial."

Water Mixup Explained

"Arizona once before lost a suit because, the Supreme Court held, she had not been injured," Swing explained. "Water was still flowing in the Colorado river, and until she tried to get water and found none, her rights were not invaded.

"However, in 1934 Congress passed the declaratory judgment act, which permits the court to anticipate damages. Under this, Arizona is preparing to sue, asking that the future equitable use of the river water be determined.

"She will ask for 2,800,000, acre-feet, exclusive of waters of the Gila and other tributaries. Should she win, Arizona will get water for which California communities already have contracts."

Swing was to leave today for the valley to confer with irrigation district officials, after which he will go to San Bernardino to be with his mother, Mrs. Mary F. Swing. He will return to Washington later.

Mr. Swing is a member of the local law firm of Stearns, Luce, Forward, and Swing.

CIRCULATION MEN CONVENE

The men who have charge of delivering newspapers to your homes today convened in San Diego in the 17th annual conference of the California Circulation Managers' Association.

They are here from every county in California, representing large and small dailies and weeklies, with William Snell, president of the organization, presiding.

Today was Circulation Managers' day at the Exposition. The visitors and their wives enjoyed a tour of the fair grounds. A luncheon was held in Casa del Morro Rey for the ladies. Tomorrow the ladies will be guests of Capt. Oakley J. Hall of the Star and Crescent Boat Co., who is to take them on a trip around the bay. The association's annual dinner dance will be held tonight in the Plata Real of the U. S. Grant Hotel, where convention sessions are being held.

Speakers on the convention program include Dave Smith, first vice president of the international organization, and William J. Harrison of Los Angeles, first president of the association when it was formed in Coronado 17 years ago.

Beauty Flies Through The Air For Trophies

Left above, Bessie Owen of Santa Barbara, winner of the Aviation Day trophy in the women's air derby from Glendale to Lindbergh field. Right, above, LaVerne Wolfram of Glendale, one of the competitors, and below the girl pilots as they appeared in the Ford Bowl yesterday afternoon for the award of trophies.

Pegler Goes To Europe To 'Debunk' War For You

Westbrook Pegler is going to view the Ethiopian war-volcano from a ringside seat on the crater's edge and report its effect on the thousands of people who are paying the bill for the Pompeiian scene.

While he is bound for Europe Mr. Pegler's column will not appear in The Sun for two weeks.

When it resumes, American readers are going to learn what Mr. and Mrs. John European are thinking about it all, and what the effect on them has been and is likely to be. After all, Mr. Pegler thinks, they are the guinea pigs on whom the experiment is being tried.

PEGLER

An expert critic, the nationally known commentator will be much in the position of a dramatic critic reviewing a play. The reviewer's job is to gauge the effect of the play on the audience. The play in this case will be the Ethiopian war, the audience will be the rest of Europe—what it thinks and feels as the drama down in Africa unfolds. Stuffed shirts or gallery gods—diplomats and humble toilers—Mr. Pegler will try to turn them inside out.

He will debunk the progaganda of the type that led the United States directly into the World War, at least the part of the propaganda which untruthfully portrays the European public sentiment.

Visiting England, Mr. Pegler will know very shortly what the average British citizen thinks about it all. Should the British fleet be withdrawn from the Mediterranean? It costs money to keep fleets and hundreds of men away from home. Does the average citizen think Great Britain should stomp on the toe of the Italian "boot?" Or should Great Britain, in his opinion, keep hands off insofar as force is concerned. News reports carry official action, but does the public concur in the action?

He will go into Italy and interview some of the mothers of boys "over there" in sweltering Africa fighting for a "cause," And what is in the mind of the father as he downs his wine, spaghetti, meat balls and black bread and wonders how long it will be before he's down to the spaghetti alone. Is Mussolini a hero—or a maniac—to him?

Into France where public sentiment always is divided—until the Marsellaise drowns out caution. Are they—the people—with Italy or the League of Nations, and Great Britain? Which way would they want France to turn—if?

Into Germany, still recovering from the last war. And into Rumania to see what Queen Marie may be thinking about and her subjects talking about.

The famed columnist is well equipped to do the job at hand. Formerly well known as a sports writer, humorist, United Press correspondent and feature writer, Mr. Pegler's present column is carried by many of the nation's largest newspapers.

His rare ability to see through hokum, sense the true thoughts behind the aloof mask of the interviewed, and report the facts, will stand him in good stead on his latest assignment.

Watch The Sun for Westbrook Pegler's first article from Europe. You'll want to read and keep them all.

* * *

Bessie Owen, comely Santa Barbara girl flier, today held the Shell trophy, emblematic of the championship entry in the Glendale-to-San Diego women's air derby held as a feature of Aviation Day here yesterday.

In second place was Mrs. Grace Prescott of San Diego, while third honors went to Cecile Hamilton of Los Angeles.

The contest was a precision race wherein the pilots estimated their speed and calculated their time of arrival before taking off. Miss Owen figures it would take her 1 hour, 5 minutes and 7½ seconds to get here. She arrived 7½ minutes ahead of that time.

Mrs. Prescott erred only 45 seconds in her calculations and Miss Hamilton 59 seconds. Other women pilots who competed were Katherine Cheung, Adrienne Clark, Evelyn Hudson, Ethel Shee. Yolanda Spirito, Onita Thorley and LaVerne Wolfram. Mrs. Suzanne Williams was unable to compete because her husband was delayed in bringing her plane back from Texas. Engine trouble balked five others in Glendale.

In Borneo, a newly-married couple present each other a LOAF OF BREAD, as a token of good luck. They believe that bread signifies a happy life!

You get the most for your bread pennies in the bread that is ¼ (by weight) MILK and BUTTER - baked hours later and delivered fresh TWICE daily.

SONORA QUIET AS REBELS FLEE TO MOUNTAINS

By EDWARD J. HEILMAN
United Press Staff Correspondent

NOGALES, Sonora, Mexico, Oct. 21.—The future of Sonora's nascent revolution hung on the turn of events today.

Rebel bands were reportedly loping for safety of rugged mountains in the face of strong concentrations of Federal troops.

A report from Mexico City said Genl. Juan Zertuche had been relieved as military commander of the state.

Ramos Reported Out

The Nogales, Ariz., International said it was informed Gov. Ramon Ramos of Sonora had resigned in Mexico City.

Removal of Genl. Zertuche may indicate either a Federal policy of conciliation towards the rebels, or organization of a strong military move to crush rebel raider bands, observers said.

Official confirmation of Gov. Ramos' reported resignation would be accepted here as evidence of a conciliatory attitude on the part of the government.

Rebels have assertedly reiterated they are not fighting the Federal authority but Gov. Ramos, who they say is an adherent of Genl. Plutarco Elias Calles, former "strong man of Mexico," and the administration of agrarian laws, which they term unjust.

Should federal policy towards the uprisings prove one of stern military suppression, a long campaign of guerilla warfare would be inevitable, it was believed.

Federal Forces Ready

A regiment of Mexican Regulars reinforced by cavalry and a squadron of bombing planes, waits at Hermosillo for an order to take the field against the rebels, who have announced they will not cease fighting until Governor Ramos and "pro-Calles" presidentes (mayors) of important towns are removed.

According to press dispatches, Gen. Zertuche was relieved after a conference of Pres. Lazaro Cardenas with Gov. Ramos. It was reported the president indicated that Ramos was still holding office as governor.

The International predicted a provisional governor and presidentes and comisarios of towns in northern Sonora would be appointed within 48 hours.

Elias Next?

The newspapers said the gubernatorial post had been offered to Francisco Elias, former governor, but that he might refuse.

John Treanor, Prominent Business Man, Fall Victim

San Diego Rancher Crashes To Death From Barn Roof

Beneath a giant oak, a tree John Treanor called the most beautiful he had ever seen, the prominent San Diego and Los Angeles business man and ranch owner, was to be buried today at 3 p. m.

Mr. Treanor was killed early yesterday morning when he fell 25 feet to the ground from the roof of the barn on his ranch, 10 miles south of Warner's Hot Springs.

Close friends, the men and women John Treanor invited to his country home to enjoy a quiet weekend, remained today to mourn their host and pay him final tribute at simple services conducted by the Rev. W. Bertram Stevens, Episcopal bishop of Los Angeles.

News of Mr. Treanor's accidental death shocked the entire state. Prominent in Los Angeles and San Diego as a business and civic leader, his name was known throughout California.

The accident occurred while Mr. Treanor was working with John Gadde, foreman of the ranch, and Henry Wheeler, vice president of the California State Mutual Building and Loan Co. of Los Angeles. The trio arose early yesterday morning and went to the barn, where Mr. Treanor climbed on the roof to help repair it.

He reached out to break off a tree limb protruding over the roof and lost his balance, falling 25 feet to his instant death.

His head struck a pair of tree clippers. A bolt which held the clippers together punctured his skull.

First Believed Stunned

Mr. Gadde and Mr. Wheeler carried their friend to the ranch house on a cot, believing he had merely been stunned by the shock of the fall. But when Dr. George Fuller, attached to the Indian service, arrived on a call from Mrs. Treanor, he pronounced her husband dead.

Mrs. Treanor decided that no better final resting place than the rolling hills and valleys of the country Mr. Treanor loved so well could be found. She ordered his grave prepared beneath the mammoth oak and today the funeral services were to be read there. Claude Woolman of the Bradley-Woolman mortuary was in charge of arrangements. With Frank J. Dougherty, chief embalmer for the mortuary, he prepared the body yesterday.

Guests at Ranch

Besides Mr. Wheeler, guests at the ranch for the weekend were

JOHN TREANOR

Marshal Stimson, Los Angeles attorney, and his daughter, Eleanor, who is the wife of Thomas Treanor, a son of the dead man; Mr. and Mrs. Arthur Bent of Los Angeles.

Surviving Mr. Treanor besides his daughter Eleanor are his widow, Mrs. Bessie Treanor; a daughter, Mary; two sons, Thomas Coghill Treanor of Los Angeles, and John Stanley Treanor of Napa.

The deceased was president of the San Diego Water Co., from which the city bought on a 30-year-lease contract Lake Hodges dam, the Sutherland dam site, and water rights on the San Dieguleto river.

In addition, he was president of the Riverside Cement Co. of Los Angeles, director of the Union Bank & Trust Co., Security Title Insurance & Guarantee Co., the John M, C. Marble Co., and the American Capital Corporation.

A leader in civic as well as business activities, Mr. Treanor was a trustee for Pomona and Claremont colleges and was chairman for the Los Angeles Community Chest campaign this year. He acted as chairman of the citizens committee for the SERA until May of this year and was a director of the Southwest Museum in Los Angeles and active in Red Cross affairs.

Col. Ed Fletcher, state senator and a friend and business associate of Mr. Treanor in years past, expressed the thought of the late executive's San Diego friends when he said, "California has lost a splendid man, moreover a man who was one of the real developers of this state."

GERMANY QUITS LEAGUE; TEARS PACT TO PIECES

By PAUL KECSKEMETI
United Press Staff Correspondent

BERLIN, Oct. 21. — Germany, mystery nation of Europe, ceased today to be a member of the League of Nations and became a diplomatic free agent whose policy no one knows.

Adolf Hitler, with the nation behind him, has ripped the hated Versailles treaty to shreds.

Locarno Pact Holds

Now, with Germany out of the League which it always regarded with suspicion, it is bound only by the Locarno treaty in which Germany, Great Britain, France, Belgium and Italy promised to aid anyone of the five attacked by another signatory. Hitler has affirmed his loyalty to this treaty.

On a dramatic Saturday at Geneva, Oct. 14, 1933, Germany's delegation left the World Disarmament Conference in anger over alleged unfairness.

The official resignation, giving the necessary two year's notice took effect at midnight last night, according to the German computation, and at 11:30 a. m. today according to the League view.

Military Built Up

Germany's Versailles treaty army has become one of 600,000 men. Its air force—forbidden entirely—has become a powerful weapon. Its navy is becoming a potent force, including 12 submarines in operation and nine under construction. The treaty forbade Germany submarines.

All that has happened since Germany's resignation.

DESTROYERS HULL AND AYLWIN HERE

Two new destroyers, the U. S. S. Hull and the U. S. S. Aylwin, today had joined the Scouting Force.

The new 15,000-ton ships, radically different in appearance and construction from the older destroyers, arrived Saturday from the east coast, after their "shakedown" cruises.

Their addition to the fleet gives San Diego five of the big ships. The Farragut, Dewey and Worden have been at anchor here with the new 60th Division.

Comdr. Clarence Gulbransen commands the Aylwin and Comdr. R. S. Wentworth commands the Hull.

AN OPEN LETTER

The careful and thoughtful consideration of every property owner and taxpayer in San Diego, outside of the Mattoon Act Districts, is asked for the following summary of the reasons which have brought about the present effort to restore this distressed property to the tax rolls:

The financial and governmental stability of San Diego County is based primarily upon the ability of ALL property owners to share in the tax burden.

Unless this load is divided among ALL property owners four things happen:

First, the share of the paying property owner becomes too great.

Second, the number of delinquent taxpayers increases constantly as the load becomes heavier.

Third, the financial security of school districts, irrigation districts, the City of San Diego and the County of San Diego becomes endangered.

Fourth, because of increased tax charges the value of all property goes down, with the result that the paying property owner must carry not only an unjust tax load but properties which are steadily declining in value because of that load.

For these reasons the solvent and paying property owner OUTSIDE THE DISTRESSED MATTOON ACT DISTRICTS must restore the property in these distressed districts to the tax rolls.

After years of study and of unsuccessful attempts to effect a method of relief that will accomplish this result for the taxpayer outside the districts, the program of the Mattoon Settlement Campaign Committee, also known as the Abbey Plan, has won the unqualified approval of all responsible taxpayers and organizations interested in lower taxes as a reasonable and workable plan of relief for ALL taxpayers.

A vote for the bond issue of October 29 puts this plan into effect.

San Diego Clearing House Association

Joan Bennett Today's Film Contribution To Air Drama

Actress To Star In 'Merely Mary Ann' On KGB At 6; Helen Hayes To Be Heard At 9

By WILLIS WERNER
The Sun's Radio Editor

Joan Bennett's appearance on the air tonight spotlights the fact that there are so many film stars broadcasting nowadays that it is hardly necessary to go to the movies to enjoy their efforts.

The matter, indeed, is furrowing the brows of theater men, especially on Sundays when an exceptionally strong line-up of screen and radio talent holds forth on the transcontinentals, holding the fans to their loudspeakers.

The picturesque Variety, in its usual terse manner, comments: "Much picture trade concern again about the unusually strong Sunday night radio opposish. Cantor, Benny, Baker, Ford symph, Major Bowes, Leslie Howard are all on the air Sunday nights."

But as for Miss Bennett, the youngest member of the Bennett royal family of stage and screen will have her first chance at a full length radio drama as the star of "Merely Mary Ann" which goes on in the CBS Radio Theater at 6. (Dial KGB).

Then on NBC, another popular actress, Helen Hayes, bravely battles financial obstacles in "Money Trouble," chapter four of "The "The New Penny." Miss Hayes gets the best break as to time, her KFI release landing here at 9, while Joan Bennett must vie with the evening meal for attention.

SHAKESPEARE ON AIR

The National Broadcasting Company today announced a cycle of Shakespeare's plays dealing with the lives of the Kings of England, which will begin on the NBC-KPO network at 1:30 p. m., Nov. 7 and continue 10 weeks. The schedule lists "King John," "Richard II," "Henry IV," (in two parts), "Henry V," "Henry VI" (three parts),. "Richard III" and "Henry VIII."

TWO NEW ONES TONIGHT

Two new dramatic programs hit the air at the same moment tonight. On KFSD, it'll be the first of a series of transcribed dramas under the general title, "Radio Short Stories." The platters start to spin at 8:15.

If you go for Ozark drama, KFI will claim your attention at that time when Lum and Abner start their new in-person series which is to go on Monday, Tuesday, Wednesday and Friday hereafter. Chester Lauck is Lum and Abner is Norris Goff.

EINSTEIN ON AIR

At 4:15 p. m. tomorrow, Sen. Rush Holt of West Virginia is slathed to speak over NBC and possibly KFSD on "War—What For?" while at the same time on CBS Prof. Albert Einstein is due to talk. He is to use English. His topic is the relief fund for German non-Aryan exiles. KGB has it locally.

In anticipation of the event, the boys are reported to have bought themselves a stop-watch—a vital necessity on network programs where every announcement is timed not only by minutes but by seconds.

AIR SCHOOL LISTS COURSE

The American School of The Air began its sixth year on the Columbia network at 11:30 a. m. today. Miss Helen A. Johnson, broadcasting director, has arranged to offer the courses as follows:

Mondays, history for upper grades and high schools; Tuesdays, a new course, "Treasure Trails in Art" will be inaugurated by the Radio Art Guild and will alternate with literature, featuring the works of great poets; Wednesdays, geography for intermediate grades; Thursdays, primary and advanced lessons in music; Fridays, vocational guidance for upper grades and high schools, featuring new fields of endeavor and presented by means of dramatizations.

FAMILY PARTY

The 80 families of McGees listed in Chicago's telephone directory are to be represented during the broadcast of Fibber McGee and Molly on KFSD at 5 p. m. Invitations were sent to all of them in an attempt to find an amateur "McGee" to act as a stooge.

Short Wave

A consensus of reports is that good bets right now are W-10-XFH, 13.05 meg., in the gondola of the stratosphere balloon, heard around 1 p. m.; DJN, 9.45 meg. DJA, 9.56 meg. and DJB, 15.20 meg., Germany, between 5:30 and 8:30 in the morning; GSC., 9.58 and GSL, 6.11 meg., England, 3 to 5 p. m., and Radio Suva, 13.07 meg., 9:35 to 10:35 nightly.

The KDKA short-wave group is now testing with a new station, W8XKA on approximately 5 meters.

Army stations frequently can be heard testing around 6.5 meg. The other afternoon, March Field, Hamilton Field and an airplane were overheard carrying on a three-way conversation. The call at March Field was MF-3.

BEN-HUR COFFEE CO. Presents: Harry H. BALKIN

He's A Hit!

Gene Handsaker, San Diego boy and formerly member of The Sun editorial staff, this week was chosen to do the part of a radio announcer in the 20th Century-Fox production, "Snatched."

When studio officials sought someone to read two kidnap bulletins for scenes in the film, they recalled the clear voice of KFI's news broadcaster. The voice was that of young Handsaker, staff news announcer.

His parents, Rev. and Mrs. Handsaker, live at 3777 Herbert-st.

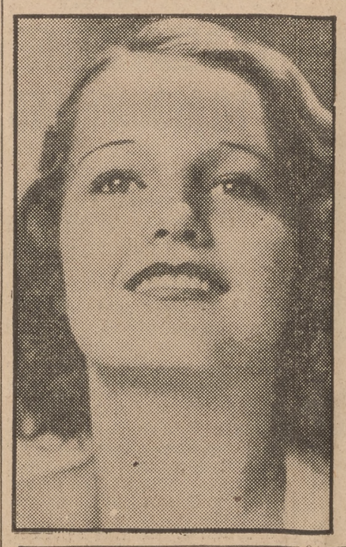
Heads Cast Of Famous Film



Rochelle Hudson heads the cast of the Fox talkie version of D. W. Griffith's famous picture, "Way Down East" which opens tomorrow at the California. The new production also has Henry Fonda and Slim Summerville in the cast. On the same program, Jimmie Dunn, who was a hit in "Bad Girl," now stars in "Bad Boy" by the same author, Vina Delmar. His leading lady this time is Dorothy Wilson.

Star Signals

By OCTAVINE

For persons who believe that human destiny is guided by the planets, the daily horoscope is outlined by a noted astrologer. In addition to information of general interest, it outlines information of special interest to persons born on the designated dates.

TOMORROW, OCT. 22

MOST favored ones tomorrow will be those who were born from Aug. 22 through Sept. 23.

General Indications Of The Day
For Everybody

Morning—Fair.
Afternoon—Good.
Evening—Serious.

You may make the dinner social but the remainder of the day looks unimportant.

Tuesday's Birthdate

You should be attracted to novelties.

Endeavor to attend to all financial matters for the year during October and November, 1935, for that period is the most favorable.

New love affairs may arise or you may experience emotional pleasure from March 14 through 17. Try to be cautious and conservative for you may experience argument or accident with someone from March 28 through April 2, 1936.

Readers desiring additional information regarding their horoscopes are invited to communicate with Octavine in care of this newspaper. Enclose a three-cent stamped, self-addressed envelope.

THEATER TAB

ADAMS—Becky Sharp and Silk Hat Kid.
AZTEC—Naughty Marietta and Silk Hat Kid.

SEVILLE—China Seas and Page Miss Glory.
SPRECKELS—Dr. Socrates and Storm Over the Andes.
SUPERBA—The Drunkard and Ollo.
VICTORY—Call of the Wild and Going Highbrow.

Traffic Law Violators To Face 'Mike'

Traffic violators are to be "given the air" in Police Judge Clarence Terry's court.

Arrangements are being made to broadcast sessions of the court daily, Terry said.

For an hour or more the whole procedure in the court will go on the air over KFSD, including the calling of the names of violators and the charges against them. Pleas, alibis and pronouncement of sentences will be heard by radio listeners.

"The plan has been tried out in some other cities and has been found amazingly successful in cutting down violations of the traffic ordinances and motor vehicle laws," Terry said. "To most people having their transgressions aired so that friends and relatives can listen in is much more effective punishment and hence a deterrent than the routine, perfunctory court hearing."

When the broadcasts will start has not yet been determined by the judge.

20 ACTS TO ENLIVEN S. D. GIRLS' HI-JINX

Twenty acts, headed by the "Three Shades of Brown," of radio fame, will make the 28th annual San Diego High School Girls' Hi-Jinx the most elaborate in history, it was announced today.

The Girls' Glee Club under direction of W. F. Reyer will be another feature attraction of the big show which is to be staged in Russ Auditorium Oct. 24 and 25. Performances will be at 8 p. m. with a matinee Thursday.

The football idea will be featured throughout the Hi-Jinx.

Only Wrote It

HOLLYWOOD, Oct. 21.—When Warner Bros. "Midsummer Night's Dream" was given its premiere here last week, practically everyone was there except Shakespeare.

The lobby was appropriately decorated and there was even a huge autograph book that will be sent to Stratford-on-Avon.

But a marble bust of the Bard which was to have presided over it all was not in evidence. Seems the studio launched a city-wide search but up to the time of the opening hadn't been able to dig up a likeness of Master Will.

Exposition Music

MONDAY, OCT. 21
4:00 P. M.

Organ Amphitheatre—Official Exposition Band, Julius Leib, director.
March, "Solid Men to the Front" (Sousa).
Overture, "Barber of Seville" (Rossini).

SMITH PENCILS CARTOON, THEN GOES TO DEATH

'The Gumps' Creator Crash Victim After Drawing 'Old Doc Yak'

By United Press

CHICAGO, Oct. 21.—Sidney Smith, 58, creator of "The Gumps," spelled out "Good Night" with the eyes, ears and whiskers of "Old Doc Yak," stepped into his automobile and drove down a highway to his death.

The light car collided with an automobile driven by Wendell Martin, Watseka, early Sunday, just south of the Wisconsin line, hurtled off the road, and crashed into a power pole. Smith was killed outright. His head was nearly severed. Martin's hip and jaw were fractured.

Drew Friend Sketch

Smith made the pencil sketch of "Old Doc Yak," a goat used in an earlier comic strip, for the proprietor of the Bubbling Over Tavern, where he stopped at 3:30 a. m. while en route to his 2200-acre farm near Shirland. It was his last drawing.

Funeral services will be held Wednesday at the Chicago residence. Surviving are his wife, Mrs. Kathryn Imogene Smith, and two children by former marriages, Mrs. Gladys Smith Luckow of Lauderdale Lake, Wis., and Robert Sidney Smith Jr., 25, Phoenix, Ariz.

The Tribune revealed that "The Gumps" cartoon was conceived in 1917 by J. M. Patterson, then active in directing the affairs of the paper. It has appeared daily since.

Had New Contract

Smith signed a new three-year contract with a two-year option with his syndicate Saturday night, and was planning a western vacation. He was to receive $150,000 a year. In 1922, he signed what was said to be the first $1,000,000 contract ever given a comic strip artist. It was for a 10-year period.

Born in Bloomington, Ill., Smith began his career as a cartoonist at the age of 18 on the Bloomington Sunday Eye in 1895. He worked for newspapers in Indianapolis, Philadelphia, Pittsburgh and Toledo before coming to Chicago.

Coroner C. H. Cook of McHenry county postponed an inquest until Oct. 30. There were no witnesses to the crash, which was discovered by a state highway policeman.

SON OF ROGERS WINS IN RODEO

By United Press

VICTORVILLE, Cal., Oct. 21.—Jimmy Rogers, eldest son of Will, late cowboy philosopher, held an amateur record for calf roping today, established in a non-professional rodeo dedicated to his father's memory.

Mrs. Betty Rogers, widow of the comedian, watched from the bleachers while her son lassoed and threw a 425-pound calf in 25 seconds. She hurried to the rodeo grownds unbeknownst to her son because she feared he might be hurt.

Jimmy escaped with a sprained thumb, but his luck was out when he tried it at bronc riding. A picher called Frank Scully, threw him in two seconds.

About 8000 persons, including many motion picture celebrities and friends of Rogers, saw the show.

SHORT 'CHUTE JUMP SAVES FLYER'S LIFE

CORNING, Cal., Oct. 21.—Julius Hudson, Sacramento aviator, saved his life yesterday by leaping in a parachute when only 500 feet above ground after his plane went into a tailspin at a height of 2000 feet during an air carnival here.

Hudson landed uninjured on the north edge of the airport. The plane crashed at the opposite end of the field and burst into glames. It was completely destroyed.

A large crowd attending the show believed Hudson's act was part of the stunt program until the crash was explained over the loudspeakers.

All cases of blindness resulting from "babies' sore eyes" are preventable by giving new-born babies a simple prophylatic treatment.

First Pictures Of Disastrous Helena Quake

Above, graphic evidence of the force of the most recent of many earthquakes in Helena, Mont., is shown in this picture of the wreckage of the National Biscuit Co. warehouse. The chimney fell through the building in an earlier temblor, and the most severe one Friday night completed the destruction. Damage throughout the city is now estimated at $2,500,000.

Ruined homes like the one pictured here dot the capital city of Montana following a series of earthquakes during the last two weeks. Two persons were killed and scores injured. Two families fled a few seconds before the wall of this duplex dwelling collapsed. Such scenes were common throughout the city.

The Mattoon Act Muddle

(Continued From Page One)

specific guarantee of how the Supervisors will proceed, what the districts will pay, how they will pay, what is anticipated in the way of general improvement of the county tax situation, and how the interest of all concerned — property owners, bondholders and average citizen—is to be protected.

◇ ◇ ◇

SEC. 14 of the resolution contains a most important guarantee. Setting out that "before any monies may actually be paid out in aid of any district or for the refunding or adjusting thereof, the Supervisors shall by SEPARATE RESOLUTION duly adopted, declare the public convenience and necessity demand that the general county interest will be served and promoted by the expenditure of such monies," this section concludes—and please mark these words:

"Such resolution shall SPECIFY IN DETAIL the amount to be contributed or expended for such district, the MANNER in which the same is to be used, a concise STATEMENT OF THE FACTS and circumstances showing the manner in which and THE REASON WHY the general county interest and welfare will be served and promoted by the expenditure to be made."

Do you realize the significance of this pledge? It means that each and every settlement within a district under the $2,600,000 bond issue will be a separate proceeding before the Supervisors—and this means that if ANY CITIZEN, for ANY REASON WHATSOEVER, feels the settlement being made is not to his best interest, HE WILL HAVE AN OPPORTUNITY TO PROTEST and to protect his interests.

◇ ◇ ◇

TO EMPHASIZE further, all this means that if you vote the $2,600,000 settlement bond issue to finance the wiping out of the $14,000,000 of bonds and coupons which are crushing 56 improvement districts to death, and which threaten the tax security of the entire county, you are not "railroading" yourself and your fellow citizen into anything. You are not "turning over $2,600,000 for the Supervisors to play with."

Every single settlement, in every district will be a separate negotiation and a separate proceeding. Citizens within a district, therefore, will have every opportunity, when the settlement program reaches them, to "have their say" on what's being done.

NEXT—Under the settlement plan, the districts do not "escape" any taxes they may be able to bear; they are merely relieved of impossible tax assessments.

'WOLF' VICTIM'S IDENTITY FIXED

By United Press

AUBURN, Cal., Oct. 21.—Identification of the red-haired youth admittedly slain several months ago by Earl Kimball, "Werewolf of Fulda Flat," as Virgil Robert Smith, 16, of Porterville, has been further substantiated, Sheriff Elmer Vum said today.

Clothing taken from the body and other articles of wearing apparel found in Kimball's cabin were identified as Smith's by Mrs. Essie Gibbs of Slough House, the boy's aunt. Leo Fontz, clerk in an Emigrant Gap store, said he believed a photograph of Smith to be that of the youth who had lived with Kimball at Fulda Flat.

Kimball, under sentence of death for the murder of James Kennett, retired Chicago contractor, is in Folsom prison pending outcome of a supreme court appeal.

VETS MUST PAY FEES FOR CARS

By United Press

SACRAMENTO, Oct. 21.—Exemption of veterans from the new state automobile tax which becomes effective Jan. 1, does not mean that veterans may discontinue paying the usual $3 automobile license fee, Department of Motor Vehicle officials pointed out today.

The $3 fee is not a tax and veterans never have been exempt from paying it. The new vehicle tax, however, will be levied in lieu of county and city property taxes on cars. It will amount to $1.75 per $100 valuation of the automobile, and will be in addition to the regular $3 license fee.

Attorney General U. S. Webb has ruled that veterans could apply their $1,000 property exemption privilege to their automobiles, if they desired, thereby escaping the new auto tax.

CLERK DROWNS IN SHAVER LAKE

By United Press

FRESNO, Cal., Oct. 21.—Search for the body of Cecil E. Jackson, 30, Orange Cove hardware store employe, drowned yesterday in Shaver Lake, continued today under the direction of deputy sheriffs.

Jackson was drowned when a rowboat from which he was fishing with two companions was overturned. The other two fishermen, Harry Kimes and Laurel Robbins, managed to swim ashore.

MASS SESSION OF TOWNSEND CLUBS SLATED

Townsend clubs in San Diego will join with those throughout the nation next Sunday in mass meetings. The local units will gather in Russ Auditorium at 1 p. m. on that day with Charles J. Creller, acting as master of ceremonies.

An effort is being made to secure Rep. John Steven McGroarty, author of the old age pension bill introduced in the last Congress to give the principal address.

Musical Program

Bonham Brothers' Boys Band, conducted by Jules F. Jacques, and the vocal sextette of Central Park Club 55, will furnish music.

A committee of club officers appointed to have charge of the meeting, is composed of Mrs. W. J. Anderson, Club 5, chairman; A. B. Beers, Club 7; A. M. Wright, Club 20; Charles J. Creller, Club 22; Mrs. Maud Stubbs, Club 31; Mrs. A. N. Downs, Bostonia, and James A. May, Coronado.

Other Committees

Other committees include:

Finance: Mrs. Maud Stubbs, Club 31, chairman; Mrs. C. D. Robinson, Club 19; Mrs. G. D. Stead, Club 26; Mrs. Mary Freeman, Club 31; Mrs. C. E. Duvall, Club 51; Mrs. Fanny Judy, Club 57; G. Frederick Clark, auditor.

Floral: Mrs. Nora Baker, Club 22, chairman; Mrs. Martha Merrill, Club 9; Mrs. Anna M. Elliott, Club 28.

Ushers will meet for instructions Wednesday night at 9 p. m. at 856 Eighth-av, following a meeting of officers.

'SWEETHEART' IS WINNER AT K. C.

By United Press

KANSAS CITY, Mo., Oct. 21.—Sweetheart on Parade, owned by Mrs. W. P. Roth, Redwood City, Cal., was the belle of the evening at the American Royal Livestock and Horse Show here last night, winning the fine harness event as she won the grand championship five-gaited horse events in 1931 and 1932.

The fine harness event was the feature of last night's program at the show. Second place went to Mrs. Chester C. Michael's Winganeck Day Dream of Kansas City and third to High Tide from the Carnation stables at Pomona, Cal.

The combination class for five-gaited saddle horses was captured by Montgomery Miss, ridden and driven by Jack Schneider, Jefferson City, Mo. Blue Bonnet, owned by E. A. Gibson, Independence, Mo., was second.

CALIFORNIA FARMERS TO BE POLLED ON AAA

By United Press

BERKELEY, Oct 21.—The University of California, College of Agriculture, arranged today for a secret ballot among California ranchers on the desirability of continuing hog birth control and corn limitation measures.

All corn and hog raisers, whether they have participated in the AAA program or not, are permitted to vote either by secret ballot at designated polling places or by mail on Oct. 26.

DIESEL COURSE TO START

At popular request a new course in Diesel engines will start this evening in Hoover Evening High, room 101, from 7 to 9 p.m. The instructor is Paul S. Schaubel who has attracted very large classes at San Diego and Sweetwater Evening High schools. The class will meet on Monday and Wednesday evenings each week.

Griffing Bancroft Jr. Has Family Fame To Maintain

This is the fifth of a series of articles on San Diegans whose ancestors were famous in national and international fields. The Sun is interested in learning the names of other San Diegans who may come under the same classification.

By FRANK MACOMBER

Gigantic is the task which faces Griffing Bancroft Jr. His task appears to lie in the fact that his father, Griffing Sr., is an author and lecturer and his grandfather, Hubert Howe Bancroft, was the famous historian.

News Hawk

Griffing, Jr., who lives with his parents at 2525 First-av, has been a newspaperman for the past five years, but his ambitions have not been stemmed at this point. During that five-year period he has studied law and has gathered one of the most complete private collections of bird embryology in the United States.

But his efforts must be Herculean indeed if he expects to duplicate the work done by his grandfather—the writing of more than 60 volumes of history which covered the early history of Central America, Mexico and Western United States.

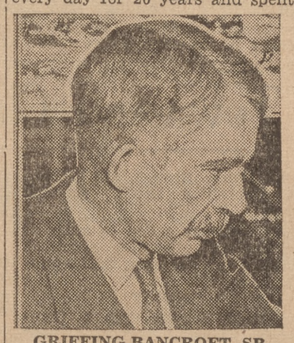
"I have no illusions about approaching my grandfather's mark," young Bancroft smiled. "He was a man who worked eight hours every day for 20 years and spent more than a million dollars gathering material for his works. It would be difficult enough putting in the eight hours daily. The last part is even more impossible."

GRIFFING BANCROFT, JR.

Hubert Howe Bancroft, born on an Ohio farm, came west in 1848 and lived in the heart of the mining districts during the Gold Rush. He worked in stores in San Francisco and Eureka, saving money until he bought a partnership in a bookstore in the former city.

The bookstore later became a thriving publishing house. Before he realized it he was a rich man.

Griffing Jr. already has a slight start on the career of his illustrious grandfather. He has written, in collaboration with Francis W. Hilton, a complete historical novel of a pre-Conquest Mexican emperor, based on a biographical incident in the life of Nezahualcoyotl, or "Fasting Coyote."



GRIFFING BANCROFT, SR.

PASADENAN'S HAT LONE CLUE IN GIRL KILLING

By United Press

LOUISVILLE, Ky., Oct. 21.—The broken body of a pretty young woman, about 22, lay unidentified in the morgue today while police hunted the slayer who dumped her on a road in an exclusive residential section.

A man's hat bearing the label of a Pasadena, Cal., hat shop was beside the body when it was discovered early Sunday.

A handkerchief found in her purse was embroidered with the name "Evelyn." A white gold ring with a small diamond was on the third finger of her left hand.

The girl had brown curly hair, light blue eyes and small features. She was about five feet tall and weighed 115 pounds. Nearly 100 persons viewed the body, but none was able to identify her.

5 P.M. is a test of how you FEEL

"How do I feel.... Swell!—why do you ask?"

IT is all so simple, too! That tired, run-down, exhausted feeling quite often is due to lack of a sufficiency of those precious red-blood-cells. Just build up these oxygen-carrying cells and the whole body takes on new life... food is really turned into energy and strength ...you can't help but feel and look better. S.S.S. Tonic restores deficient red-blood-cells... it also improves the appetite and digestion. It has been the nation's standby for over 100 years... and unless your case is exceptional it should help you, too. © S.S.S. Co.

Insist on S.S.S. Tonic in the blood-red cellophane-wrapped package. The big 20-oz. size is sufficient for two weeks' treatment... it's more economical.

S.S.S. TONIC Makes you feel like yourself again

LIGHT AN OLD GOLD for young ideas

Stimulating... BUT NEVER IRRITATING

S. D. ROOFING WORK SPEEDS UP IN S. D.

Asbestos Products Co. Busy With New Contracts

Roofing contracting business lately has picked up sharply according to Wm. Stiegerwald of the Asbestos Products Co.

Included in this firm's new contracts is the Anna C. Wetzell mansion on Rosecrans-st, where Alhambra tiles are being used. Walter Trepte is general contractor for this home, which is expected to be completed within the next three months, costing approximately $60,000.

Other new roofing contracts Asbestos Products Co. has under way are the Alfred D. La Motte home, 3557 Third-av, two apartment flats at First and Thorn, owned by Mrs. Alda Ferris, and the Hawley apartments at Fourth and Union-sts.

White Paint Scares Off Orient Trade

Charles H. Benton, president of the Benton Roof & Paint Co., 2136 Kettner-blvd, has assembled the following interesting "paint facts" for The Sun:

◇ ◇ ◇

In Mourning

The use of certain colors sometimes has unexpected results. One example: A large oil company with filling stations in China painted them white. The Chinese, however, did not come to buy. Probable reason: White is the color of mourning among the Chinese.

◇ ◇ ◇

Proper Primer

Porous surfaces—wood, plaster, wallboard, etc., must be sealed with the proper primer as specified in each case. Otherwise the finish "strikes in" and even three coats applied over such a surface may continue to soak in unevenly and appear spotty. Such a finish does not wash easily or wear well.

◇ ◇ ◇

Varnishing Walls

Any painted wall may be varnished over. It is a common practice to varnish fine Tiffany glaze finishes as well as plain walls, for reason of protection.

◇ ◇ ◇

Restful Blue

Morning blue is a lovely color for breakfast room walls. Your painter can mix it with Prussian blue, light green, raw sienna, black and a white base.

NEW ROOF LAID ON N. C. SANITARIUM

More than a quarter car-load of composition-shingle roofing has been laid on the Elwyn Sanitarium, 640 National-av, National City, and on the home of Dr. Carl S. Owen, 1206 National-av, in the same city, who owns the sanitarium. Title I National Housing Act loans were used in financing this large roofing job.

The Noyes Maintainance Service had charge of the work, while the roofing materials were supplied by the Jones-Moore Paint house.

Modernization Waves Its Magic Wand

An old residence, of a type popular in the "Eighties," is shown at the top from a picture taken several years ago. Below is the same house shown after modernization.

BUILDING LOANS TO BE PUSHED

Passage of Title 11 National Housing Act loan applications through the local offices of the Federal Housing Administration, 347 W. Broadway, will be speeded up, Mgr. Edward A. Walsh, has informed material dealers, manufacturers, builders, financiers and the local members of the Associated General Contractors.

This announcement received approval of FHA officials who met with the local dealers Tuesday in the Chamber of Commerce auditorium. The FHA representatives were Capt. W. G. Bingham, Frank B. Keelan, H. R. Thompson and Troy Hewett, assistant to W. D. Flanders, National FHA field director, Washington, D. C.

Roy E. Hegg, chairman of the Better Housing program, urged action to relieve the acute housing shortage in San Diego. V. R. Dennis, president of the Associated General Contractors, acted as chairman, assisted by M. A. Mathias, H. V. Davidson and DeWitt K. Priday, general manager of the Better Housing program.

HEATING - COOLING SYSTEMS POPULAR

Popularity of the Marvelaire heating and cooling system among San Diego home builders is increasing rapidly, according to Maj. H. B. Oakleaf of the Peterson Lumber and Finance Co., who reports 18 sales of the systems since August, when his firm began handling the agency.

Marvelaire systems now are in progress of construction in the homes of A. E. Parrish 5092 35th-st; L. H. Brown, El Cerrito; J. F. Blanton, Hillsdale-rd, Virgil Scott 4314 Jefferson, and P. W. Walzer, 4386 Cherokee-st.

MAP DISCLOSES FIRM'S RECORD

A map of San Diego and its suburbs, eight by three and a half feet, marked with various symbolic pins and showing every vacant lot by number, is a new addition to the "Home of Ideas," in the Peterson Lumber and Finance company's sales rooms.

In addition to showing prospective builders all the firm's building activities, the map serves to determine as to whether any particular lot is subject to Federal Housing Loan privileges.

During the past two years the Peterson Co. has constructed more than 300 homes, fifty per cent of which is financed, according to officials. Two-thirds of these homes the firm equipped with heating facilities for which they are agents. All of these facts are shown on the new map.

SAN DIEGAN TAKES OUT HIS THIRD LOAN

E. C. Comstock, 943 17th-st, has taken out his third NHA loan under Title I and has extensively remodeled his house into income producing property.

A two-family Monterey style flat having eight rooms has been added to his house, the rentals from which will take care of amortizing the loan and bring in added revenue. Mechanical refrigeration and linoleum were also included in the cost handled by the loan.

The work was handled by the Noyes Maintainance Service, the Dixie Lumber Co. furnished the lumber; the Jones-Moore Paint House the roofing, paint and linoleum, while the loan was secured through the San Diego Trust and Saving Bank.

PAINT STORE'S NEW HOME IS ACCLAIMED

At the formal opening of the new home of Frazee's paint store, Broadway at Tenth, old timers compared the new store with the original Sherwin-Williams store opened in the old Express block 33 years ago, pointing out that the present store reflects faithfully newer trends.

Sam R. Frazee and Robert Frazee, owners, received many congratulations on their new business home.

COUNTY CAN ACT ON PENSION, SAYS WOOD

Under terms of an amendment to Section 4, Old Age Security act, provision is made for receiving applicants for aid by the county Board of Supervisors, according to advice from the office of Fred B. Wood, legislative counsel supplied to the San Diego Board by Sen. Ed Fletcher.

To clear up the question of authority of the Board in connection with the act, Wood submitted an opinion which states that "in the event the application is denied, the applicant may file a petition with the department of social welfare and if the appeal is sustained by the department, payment of aid in the amount determined by the department must be made by the county as provided."

Nearly 2000 farms in New York State have adopted this summer the device of tattooing chickens in a drive to reduce chicken stealing.

Fearing that dentists may yet face a gold famine, University of California College of Denstry is testing stainless steel and other metals for dentures.

AN EXPERIENCE COVERING 25 ROOFING YEARS

It is a recognized fact that there is no substitute for practical experience and qualified training to render efficient service in various lines of endeavor and the fact that the Benton Roof & Paint Company has been in the roofing business for 25 years in San Diego should be a sufficient recommendation that this progressive concern can be relied upon for satisfactory roofing repairs, renewing and painting of all types.

Not only does the Benton firm repair roofs and offer a complete service on various types of new roofs but they also manufacture proven quality roof coatings that can be purchased at factory-to-you savings. For example, Benton bright red and green Gilsinite roof coating is retailed for $2.25 per gallon at 2136 Kettner Boulevard and asbestos fibred roof coating at 70c per gallon in five gallon lots. Equally attractive values in Benton quality paints for every purpose, and remember Franklin 5108 for roof repairs.—Adv.

CONSTRUCTION OF RESIDENCES IN S. D. BOOMS

Building Industry Greatly Stimulated Here Since 1934

"Residential construction and the allied units of the building industry are providing the vast bulk of employment in San Diego. Since October 1st, 1934, repair and modernization construction alone has provided almost two and one-half million man-hours of employment." So says Roy Hegg, executive vice-president of the San Diego Building and Loan Association in stressing the importance of the local building and allied industries.

"This major activity has been stimulated tremendously by the National Housing Act with its most liberal loans in history for the financing of new construction as well as repair and modernization. San Diego Building and Loan Association records show that loan applications are about evenly divided between those for new construction and for repair and modernization.

"San Diego's ever growing navy personnel is reflected in construction activity. Among the many building loans arranged by our association this month for members of the navy colony was that for Lieut. C. L. Westhoufen. Construction of the Westhoufen home on Palm-av between Second and Third-sts, Coronado, was started this week by the R. L. Irwin Construction Co. A Spanish-type residence featuring a most interesting floor plan and an effective beam ceiling treatment, it is commanding widespread interest on the part of prospective home builders.

MEXICO ESTABLISHES BORDER GAME REFUGE

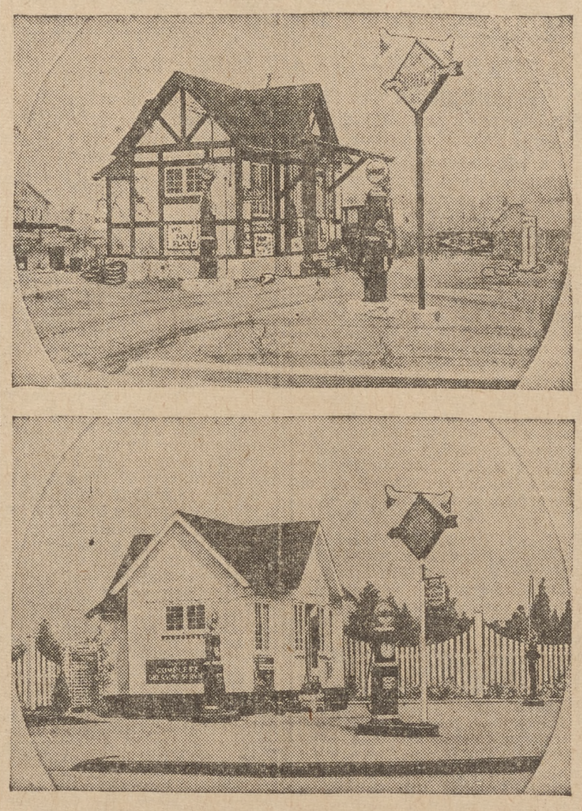
A 325-mile strip along the Mexican-U. S. border has been set aside as a game refuge to preserve Mexican wild life, according to word from Mexico City.

According to Fernando Villasenor, fish and game commissioner, this means that no hunting will be permitted anywhere along the border for a distance of 325 miles into Mexico. Americans, however, may obtain hunting licenses for the district below the zone, he said.

MASON TO SPEAK

Charles P. Mason Jr., fifth area commander, will be guest speaker at tomorrow's meeting of the Woman's Post, American Legion, in DeWitt C. Mitchell hall.

Business Repairs Pay Profit



Sales increase for a filling station when it is dressed up under the Federal Housing Administration's allowance of credit. Here are before-and-after photographs showing how an owner made his place more alluring to customers.

Builder Transforms Old Home Into Modern House

John J. Smiley, 4928 Vista-pl, has completely remodeled an old-fashioned five-room house into a modern seven-room home at a cost of $1700, the Better Housing program has been advised.

The basement and upstairs part of the house were modernized, all rooms were redecorated, and a large breakfast room, finished in knotty pine, was added, also the kitchen had new plumbing and a tile sink installed. The outside was newly painted.

Smiley, who is a designer and builder, purchased the plumbing and electrical fixtures from various San Diego firms. The Peterson Lumber and Finance Company furnished all the building materials and the paint used on the job.

"I have a wonderful view lot, overlooking Mission Valley and the mountains and want to live there and enjoy the scenery and the fine surroundings, so thought at this time when the cost of building materials are low, it was the best time to make my home modern and comfortable; also I am thoroughly in favor of the fine work done in this community by the Better Housing program in helping people to live in better homes," said Smiley.

HOUSE BUYING GAINS IMPETUS

Reports from the California Building-Loan League, according to Harold B. Starkey, president, indicate that the rate of new home acquisition is now far in excess of the rate of home foreclosures and is gaining momentum.

"This situation," he adds, "not only denotes healthier economic conditions, but also has a direct bearing on retarding the progress of radicalism.

"I do not fear any radical movement in the United States. We have too high a percentage of home owners. The impetus given to home ownership during the past few years, the more general acceptance of the building and loan amortizing mortgage by other lending institutions, and a wider appreciation on the part of the public that a man in his own home is better able to withstand economic storms, are all evidences that home ownership is bound to increase during the next 10 years."

LOAN REMODELS, REPAIRS HOUSE

Emil J. Berger, Highland-av, National City has taken out his second Title I NHA loan through the San Diego Trust and Savings Bank for about $350 for remodeling and repairing another house owned by him.

On this home, he has built a new porch, running it around three sides of the dwelling, has glassed-in a portion of it for a solarium, and has added on a new bedroom. In addition, a complete new roof of composition shingles has been laid by the Noyes Maintainance Service, and the interior of the home has been redecorated with paint.

Paint and roofing materials were supplied by the Jones-Moore Paint house, the Better Housing Program reports.

NEW CLASSES ADDED

A course in home nursing and first aid, with classes at 7 p. m. Monday and Wednesday has been added to the program of San Diego evening high school it was announced today.

The classes are conducted by Mrs. Grace Reinmiller in room 210.

Monterey Style Residence Combines Novel Features

A pleasing Monterey style home was recently completed by the Jarboe Construction Co., for Mr. and Mrs. J. A. Archard, 3330 Dumas-st., Loma Portal, it was reported to the Better Housing program.

The lower exterior walls are stuccoed, and the upper part finished with cream-colored wooden panels under a shingled roof. A Monterey balcony runs across the front of the bedroom and hallway on the second floor, and a huge living room, built as a one-story off-set, extends out in front of the home. A colonial electric lanternier lights the brick stoop in front of the doorway into the front entry. Many novel features and innovations, beauty and convenience are emphasized in this modern home.

The Century Lumber Co. furnished the building materials, and the plumbing was installed by O. W. Jordan, plumber.

PENAL SCHOOLS FIND SIX-CENT MEAL OKEH

SACRAMENTO, Cal.—If the average housewife could do her buying on large scale and exhibit the same economy as that shown by officials of California's mental hospitals and reform schools, she could set a good table for only six cents a meal per person. At the rate of six cents a meal, 26,470 institution inmates are given three good meals a day, with fruit, cereal, bread and butter, syrup coffee, milk and sugar for breakfast; meat, potatoes, vegetables, bread and butter, tea and dessert for lunch; and soup, meat, potatoes or rice or spaghetti, vegetables, bread, butter and milk for supper.

The United States ranks third in air power, among leading countries.

TOP SOIL—Small load $1.00; large load, $2.00

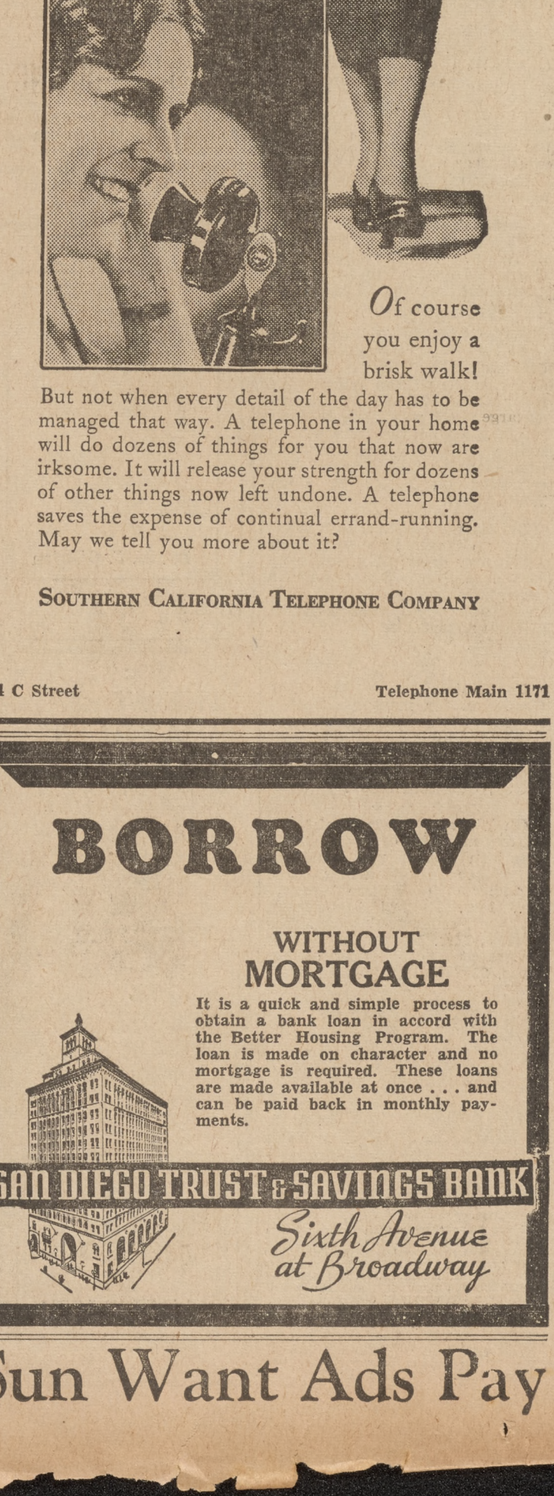
You'll have to *walk fast* to keep up with a Telephone



Of course you enjoy a brisk walk! But not when every detail of the day has to be managed that way. A telephone in your home will do dozens of things for you that now are irksome. It will release your strength for dozens of other things now left undone. A telephone saves the expense of continual errand-running. May we tell you more about it?

MARVELAIRE
The Perfect AIR CONDITIONER and FURNACE
Read This Testimonial By Lt. Paul D. Peery
PETERSON LUMBER & FINANCE CO.
4105 Pacific Boulevard, San Diego, California.

LT. PAUL D. PEERY

October 17, 1935

Gentlemen:

I want to tell you just how much the MARVELAIRE which you recently installed in my new home has meant to me in comfort and convenience. The unit completely justifies its presence in my home on the first night.

As you know, I have just been retired from active duty in the army and only recently arrived in Coronado from Honolulu. Consequently, all my goods were in storage, and smelled considerably of moth balls. My family and I went to bed the first night under blankets that had been in storage for nearly a year, and on mattresses that have been camphored for the same length of time. About two-thirty in the morning I was awakened by my small daughter who was crying and coughing. I, too, had a dry cough and my throat felt as if were filled with cloth. After the first few dazed minutes I realized that it was the camphor in the bedding that was bothering us so much. And then I remembered my MARVELAIRE!

I threw the switch which started the air conditioner, and in less than ten minutes the whole house was cool and fresh, and in a very few more minutes we were all sound asleep again. A restless night was turned into a sound sleep and possibly serious consequences avoided, all by the use of MARVELAIRE, which certainly more than earned its right to the titile: The Perfect Air-Conditioner.

Allow me to take this opportunity to congratulate you on the excellence of your product, and to state that my whole family and I are enthusiastic boosters of its superior features.

Yours sincerely,
PAUL D. PEERY,
Lieut, U. S. A. (Rtd.)
1414 Tenth St., Coronado, Calif.

MARVELAIRE
That new MAGIC WAY Furnace and Air Conditioner that costs only a little more than a Furnace
Heats, Cools and Purifies the Air
Easily Installed in Existing Homes—No Basement Needed

FRAZEE'S OFFER:—
MANY MONEY-SAVING VALUES
IN QUALITY PAINTS

Thank You!

May we express our appreciation for the wonderful interest shown by our many friends and customers who visited our store last Thursday. The formal opening attracted hundreds of people to see the new home of which we believe we may feel justly proud.

To those friends and customers, we say, THANK YOU!

(Signed) Sam R. Frazee.

To get your money's worth—make every dollar buy a full dollar's worth of value—it pays to buy merchandise of known value. At Frazee's you get quality paints and wallpaper, full value for your money.

Below are a few of the many money-saving values to be found here—others await you. But, come, see for yourself.

Trial Offer of
ENAMELOID
Regular 27c Value for 12c
To give everyone an opportunity to try Sherwin-Williams ENAMELOID, we are offering, at less than half price a quarter pint can—regular 27c value, for only 12c.

Sherwin-Williams
Liquid Roof CEMENT
2½ Gallons Reduced to $1.95
Add a new seamless roof at the cost of only one coating of S-W Liquid Roof Cement; 2½ gallons, black, reduced to $1.95. Single gallon, black, 85c.

EBONOL ROOF PAINT—A tough, durable, heavy-bodied black paint for composition and metal roofs. Black, gallon, 85c; 5 gallons, $3.75.

ELASTIC ROOF PAINT—Heavy paste consistency, ground in long asbestos fibre. Always elastic. Black, 5-pound package, 65c

BARGAINS IN WALLPAPER
MEZZANINE FLOOR
The end of each season we have a few rolls each of many patterns. These we must clear out to make room for coming season patterns. These you will find reduced and clearly marked on our mezzanine floor.

Sherwin-Williams
Stovepipe and Iron ENAMEL
Half Pint For only 32c
Sherwin-Williams Stove Pipe and Iron Enamel is splendid for all metal surfaces. Will stand extreme heat. Easy to apply; dries quickly. Half pint, 32c; pint, 43c.

Self-Polishing
FLOOR WAX
One pint can Self-Polishing Floor Wax and one Lamb's Wool Applicator; $1.35 value; both for..... 98c
No rubbing or polishing required. Dries in 15 minutes.

Sherwin-Williams
POLISH-OL
30c Bottle Special 19c
Sherwin-Williams Polish-Ol dries quickly and polishes easily to a finger-print-resisting finish. 30c bottle, special at 19c. Full pint, regularly 50c, for 39c.

Sherwin-Williams
Opex Auto Polish
Pint—worth double—for 60c
Sherwin-Williams Opex Auto Polish cleans, polishes and waxes, all in one operation. Pint, 60c.

Sherwin-Williams
FLAT-TONE
One Qt. For only 85c
This Sherwin-Williams Flat Wall Paint gives dull, genteel effects, is easy to wash and comes in 16 fast to light colors. Quarts, 85c; half. gals., $1.55; gals. $2.85.

City News In Brief

Secretary Resigns—An appointment is to be made within two weeks by the San Diego County Celery Association board of directors to fill the post of assistant secretary from which I. Kawashima has resigned to become an executive on the Japanese American News of San Francisco. He will be in charge of the San Pedro branch office.

◇ ◇ ◇

Hard of Hearing Party—With James Taft as master of ceremonies, the San Diego League for the Hard of Hearing will open observance of National Hard of Hearing Week with a party in Chamber of Commerce building at 7:30 p. m. today.

◇ ◇ ◇

Council Session Set — The Southern California Economic Council will hold its annual meeting Oct. 26 in the Exposition director's room it was announced today by Hal Hotchkiss, member and former chairman. Other county members of the council are Fred J. Hansen, William T. Hart, A. E. Holloway, and Fred Annable. Grant Holcomb, San Bernardino, is chairman.

◇ ◇ ◇

Markley Heads Chamber—New head of San Ysidro Chamber of Commerce is F. A. Markley, elected at a meeting Thursday. H. O. Brown is vice president, Ralph Schultz treasurer and Lorenz Judd secretary.

◇ ◇ ◇

Award For Thorpe—The Order of the Purple Heart will be awarded Ola A. Thorpe, San Diego attorney, for "wounds received in action" during the World War, it was learned from the War Department today. He will also be given the Silver Star award. He was wounded as a private in the 96th Company of Marines, June 14, 1918.

◇ ◇ ◇

Iowans To Meet — The Iowa State Society will meet tomorrow at 7:30 p. m. in the Chamber of Commerce auditorium for a program including musical entertainment and refreshments.

◇ ◇ ◇

Foster Adopted—His name used to be Harry L. Foster, but now it's Chief Jua Lloo Wing Ga, at least so far as the Ottawa Indian tribe is concerned. The Exposition purchasing agent was made a member of the Michigan tribe at the Indian Village yesterday. The title, meaning "Big Trader," was conferred on Foster by Chief White Cloud.

◇ ◇ ◇

Dry Farming Aid Seen—Revolutionary changes in dry farming which may bring great prosperity to the southwest were predicted here by Dr. John A. Widtsoe, U. S. C. lecturer and former president of Utah Agricultural College. Dr. and Mrs. Widtsoe were Exposition visitors over the week-end.

◇ ◇ ◇

To Winter Here — Mr. C. C. Cloutman, for many years Missouri Pacific freight agent at Atchison, and his sister, Mrs. Ella Dow Cloutman, will winter in San Diego and may settle here permanently, they said today.

◇ ◇ ◇

On Welfare—Marie Teufel will address members of Fighting Bob American Legion post auxiliary on welfare work at a meeting in Chamber of Commerce Wednesday, Mrs. Edward McCormick, president, announced today. Tomorrow, Mrs. McCormick will be hostess at a card party at her home, 2077 California-st.

FLUSH OUT 15 MILES OF KIDNEY TUBES

Medical authorities agree that your kidneys contain 15 MILES of tiny tubes or filters which help to purify the blood and keep you healthy. Kidneys should empty 3 pints a day and so get rid of more than 3 pounds of waste.

If you have trouble with bladder irregularity and irritation, the 15 MILES of kidney tubes may need flushing out. This danger signal may be the beginning of nagging backache, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes and dizziness.

Don't wait. Ask your druggist for DOAN'S PILLS, used successfully by millions for over 40 years. They give happy relief and will help to flush out the 15 MILES of kidney tubes. Get Doan's Pills.

SINCLAIR JOINS HEARST FORCES IN RED BAITING

By L. E. CLAYPOOL

Upton Sinclair and the bulk of his EPIC followers have gone pfsst.

John A. Prattof San Diego, chairman of the California Federation for Production for Use, brought home the word today that Sinclair had lost the more radical wing of his EPIC following, and had joined William Randolph Hearst in a red-baiting enterprise.

The 800,000 followers of Mr. Sinclair in his race for governor last year have split up into EPICS, Production for Use Federationists, Technocrats, Utopians, Communists, Unemployed groups, Labor groups and Co-operatives, according to Pratt.

Raps Late Leader

Reporting on a public address in Los Angeles which he just delivered, Pratt brought charges against Sinclair as follows:

1.—Sinclair told the voters they could not build a new house on the rotten political foundation of the Democratic party, and then came out as the party's candidate.

2.—Sinclair misled his backers about having President Roosevelt's support for his production for use plan.

3.—Sinclair is now backing away from the Democratic party.

4.—Sinclair goes Townsend one better by coming out for an old age pension of $400 a month.

Pratt added that Sinclair is arranging through a Los Angeles medium to contact Huey Long and carry out his "Share the Wealth" ideas.

The PFU head claims his federation contains most of the former EPICS, and that it is moving forward and expects to play an important part in the next campaign.

FOURTH BANDIT SHOT BY YOUTH

PORTSMOUTH, O., Oct. 21.—Burglars soon will learn to steer clear of Louis Highland's store at Franklin Furnace, 15 miles east of here.

Highland, 27-year-old railway detective, killed the third robber who tried to rob him recently.

The most recent victim was an unidentified Negro, who was caught by Highland in the act of removing merchandise from his store.

Sheriff Arthur Oakes exonerated Highland. He said the detective-storekeeper had killed two other men and wounded four in previous attempted robberies of his store.

BREAKS OWN WINDSHIELD

CLARION, Ia., Oct. 21—Bert Samson hooked his drive off No. 1 tee. It veered in the direction of the clubhouse and then headed for a lot where 20 automobiles were parked. The ball soared toward Samson's car, bounced off the windshield, and broke it.

Major Fleet Foresees Splendid Future For Aviation In S. D.; Lauds Leaders

Major Reuben Fleet's dedication address at the Consolidated Aircraft factory yesterday follows, in part:

For twelve and one-half years we have striven for this day. It marks the culmination of a dream for a factory of our own in a city of our choice. Although we regretted to leave Buffalo friends of eleven years' standing, we are very happy here and thank you all for your warm welcome to San Diego. We hope to be worthy of the good treatment we have received from your excellent Chamber of Commerce, your efficient Board of Harbor Commissioners with its hustling port director and your fine city officials.

S. D. Enterprise

Your people are welcoming us with warm hand-clasps; your newspapers are already boosting us as a San Diego enterprise; your clubs have invited us to join; your banks and your merchants are anxious to extend us reasonable credit; your realtors helped us find homes at as reasonable rents as could be expected at a time when our arrival coincided with the peak demand for houses caused by the opening of schools, coupled with the Labor Day holidays when your great Fair attracted its largest crowds, taxing hotels, rooming houses and auto courts to overflow capacity.

We trust that your co-operation will benefit you all and we hope to do our bit in the upbuilding of your beautiful city and county and your great state of California. . . .

Although the company is publicly owned, with its stock listed on the New York curb and the San Francisco stock exchanges, it has no stock for sale.

For more than five years we carefully surveyed all cities in the United States having more than 100,000 population, to select the best location for our future factory. We decided finally upon Southern California. . . .

Twice each year I flew around the country examining localities and municipal airports. We wanted a site on a publicly owned and operated airport having publicly owned water-front on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, in a Southern clime unhampered by snow and ice and yet not unbearably hot, with all-year-round flying weather for test flying and for flight deliveries.

Inspected San Diego

We inspected San Diego again and again. We had about what we were looking for. We contacted that sturdy San Diegan, your hard-working Chamber of Commerce manager, my old flying friend, T. C. Macauley, who was instructing at North Island when I learned to fly there in 1917. Then we met that ardent San Diego booster, Tom Bomar, who ably heads your chamber's aviation department. Again and again they emphasized the merits of San Diego.

They introduced us to your very efficient Harbor Commission and to your amiable port director, Joe Brennan, and they called in their counselor and attorney, H. B. Daniel. Finally we signed a contract, operative only if we built and moved here.

Business conditions throughout the country were uncertain. We were in the valley of the world's worst depression. Our directors seriously questioned the advisability of going ahead. Then your Harbor Board sent its able commissioner, Emil Klicka to Buffalo to argue the merits of San Diego before our full board of directors. Every month brought more and more arguments from Maculey and Bomar. Finally we made up our minds to have faith in the future and to set an example by showing it to the limit of our ability by building and moving to San Diego. . . . . .

Chamber Lauded

Let me here congratulate San Diego upon her Chamber of Commerce and her harbor set-up. I have conferred with many chambers of commerce and with many public officials, but never any that excel your chosen representatives in handling matters for the welfare of their city and harbor and people.

Your city is somewhat handicapped in undertaking public improvements by the fact that so much of your valuable area is nontaxable because of Government ownership. For this reason and others the Federal Government should be generous in its contributions to your harbor and waterfront, as, for example, it must needs be in highway building in states having large areas absorbed by Federal forest reserves and Indian reservations. We note with pleasure this week's Federal allotment of $553,619 to enlarge and improve Lindbergh Field, thus insuring its holding its A 1A rating.

From your newspapers we conclude that your tax problems have become more intense because of the Mattoon blight on approximately 10 per cent of your county's assessed value. For this reason our men feel hesitant about purchasing property here for the time being. We hope you are on the way toward adjusting this.

Navy Contract

We are proud that under the direction of the Navy and with its constant cooperation, we were able to design and construct for it the XP3Y-1 that broke the world's seaplane distance record this week by flying non-stop 3500 statute miles from our Canal Zone to San Francisco with its able Navy crew under the command of that famous pilot Commander McGinnis, and we are also proud that we have been entrusted with the task of building 60 more of these flying boats for our Navy.

Likewise we are proud that under the direction of the Army and with its constant cooperation, we are now building for it 50 two-seater pursuit airplanes that represent the highest performing aircraft of this type in the world.

We congratulate our Navy on its acquisition of the finest combined fleet and air base in the world, and predict, now that its aviation has room to expand, it will do so to the limit. Admiral King in Washington and Admirals Butler and Horne and Captain Towers here have striven earnestly to acquire all of North Island adjoining this wonderful harbor where the Navy can berth its airplane carriers. That these officers should now be assembled here to plan the future is fortunate for our fair city.

We mustn't lose the Army Air Corps from San Diego county. Perhaps our President might sanction acquisition and development with government funds of an extensive land air base for the Army in this vicinity, where air traffic will not interfere with the Navy, if we fully inform him of our advantages, for nowhere on earth have I ever felt, breathed or flown in such air as you have here. For flying it seems to have a "body" that one finds nowhere else.

Great Enterprise

Pan-American Airways is doing wonderful development work in pioneering flying over the Pacific and we should give that great enterprise our earnest and continued support. . . .

Now let us look into the future!

Aviation needs aeronautical engines of from 2000 to 2500 horsepower. To develop such costs millions of dollars and years of tireless effort. Our government should give financial encouragement to American experienced and proven aeronautical engine builders so that our country may not lag behind this all-important development.

When such engines are available we expect to build gigantic flying ships that will carry a hundred passengers to Honolulu or across the Atlantic in 12 hours with greater comfort and safety than do surface ships at present. . . .

What an age to live in! And what a joy and pride to take inert metals and fashion them into mighty carriers of the air that bring people closer so that they may know each other better! . . .

Just as the airplane has become man's greatest means of making neighbors of all nations, so will it surely become the instrumentality to guarantee world peace by force until the temperament of mankind changes.

Two-thirds of a century ago, when Eugenie, empress of France, with M. de Lesseps as her guest, led a line of 68 ships through the Suez canal, in opening it with Oriental fanfare, the builder said, "I have done something for peace and progress." Some day this will be true of our endeavors as we now carry on under most auspicious surroundings in this, the city of our choice.

SAN DIEGO HOSPITAL NOW HAS NEW NAME

The San Diego Hospital henceforth will be known as the Hoffman Memorial Hospital.

The new name of the Seventh-av and G-st institution will honor the memory of Dr. David Bancroft Hoffman, first San Diego physician, surgeon and pharmacist, to whom it was originally dedicated Oct. 6, 1928. Mrs. Rachel Wegeforth, owner, said today.

The WASHINGTON MERRY-GO-ROUND

By DREW PEARSON AND ROBERT S. ALLEN

WASHINGTON, Oct. 21.—A head-on collision over neutrality legislation is brewing behind the scenes. The present law expires Feb. 29. Meanwhile the State Department is at work on a bill, to be offered as the Administration's measure, which would give the President wide discretionary power. On the other hand, Senators Nye, Bone and Clark, authors of the original neutrality proposals, plan to renew their demand for a law mandatorily banning munitions, loans and war materials of all kinds to foreign belligerents . . . Floyd Dell, widely known novelist, is the latest addition to the WPA's writers' division . . . If Chairman Henry Fletcher has his way, the meeting of the Republican National Committee, tentatively scheduled for early December, will not be held in Washington. Fletcher favors a mid-western city, first because it is more centrally located, second because the atmosphere of the capital is too Democratic.

◇ ◇ ◇

Going? The inner circle is buzzing with a report that Madame Secretary Perkins soon may retire from the cabinet. Her absence from Washington for nearly two months is lending strong color to the whisper. Reports are that Miss Perkins is being tempted with the job of heading a nationally-known college. However, the rumor should be taken with a grain of salt. Miss Perkins is ardently attached to her job and proud of her high official eminence . . . Employes of the Works Progress Administration have been instructed never to refer to the McLean mansion, recently rented for office space by Harry Hopkins. Instead, they must use "1500 Eye Street." Even verbal use of "McLean mansion" is frowned on . . . A drive to line up the lawyers of the country against the Administration has been quietly launched by the Liberty League. The entire membership of the American Bar Association is being circularized with application blanks to join the league's committee of lawyers which "handed down" an unofficial opinion holding the Wagner labor disputes act unconstitutional.

◇ ◇ ◇

Aircraft Dan Roper's Department of Commerce is staging a high pressure sales act in the interest of U. S. aircraft manufacturers. By inviting South American aviation officials to Washington, then allowing private companies to spirit them over the nation's airways, the idea of U. S. superiority in aircraft is being driven home. The act was timed to beat Europe to this new market. French, German and Italian companies will try to sell their aeronautical stuff at a conference in Lima, Peru, next month.

(Copyright, 1935, by United Features Syndicate, Inc.)

BELLEFONTAINE, O., Oct. 21.—The corn grew so tall on Tony Fischer's farm this year that it couldn't be put through a mechanical cutting device. Averaging stalks of 14 feet, it had to be done by hand.

CAR SALES IN S. D. COUNTY RISE SHARPLY

Each month of 1935 has registered an increase in motor vehicle sales for San Diego county over those for the first nine months of last year.

6107 New Autos

Reporting a total of 6107 new vehicles sold from Jan. 1 to Sept. 30, E. Robert Anderson, manager of local office of the Department of Motor Vehicles, announced a 72 per cent gain over the first nine months of 1934, when 3537 new motor cars were sold in the county. The best sales month was April, when 920 all-type new motor vehicles were sold for a gain of 134 per cent over the fourth month of 1934.

Monthly Totals

Following are the monthly totals of new motor vehicles sold in the county for the first nine months of 1934 and this year:

Month—	1934	1935
January	138	341
February	235	456
March	373	812
April	393	920
May	446	712
June	465	813
July	537	753
August	449	749
September	451	551
Totals	3537	6107

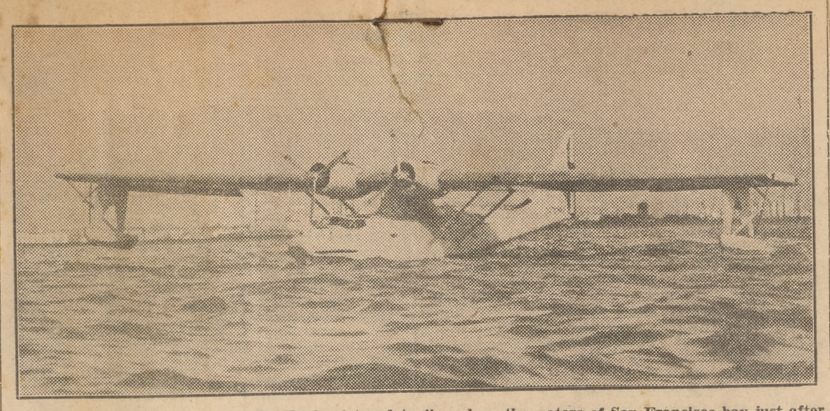
U. S. to Build 60 Ships Like This



The navy's newest seaplane XP3Y-1 is pictured taxiing along the waters of San Francisco bay just after alighting at Alameda from a 3387-mile flight from Panama, which is believed to have set a new world's non-stop record for seaplanes. The big craft, commanded by Lieut. Comm. Knefler McGinnis and carrying a crew of five others, made the flight in 34 hours and 51 minutes. Among unusual features of the seaplane, first of 60 such ships being purchased by the navy, are the retractable wing pontoons and high tail. (Associated Press Photo)

LOS ANGELES, Oct. 18. (AP)—Marking a momentous stride in the nation's air defense, the United States navy was embarked today on a gigantic construction program of 60 trans-oceanic planes to augment its high seas flying force.

Rear Admiral Ernest J. King, chief of the navy bureau of aeronautics, announced the building program after a conference with Admiral Joseph M. Reeves, commander-in-chief of the fleet, aboard the flagship Pennsylvania.

The planes will be duplicates of the record-breaking "XP3Y-1," the navy's new flying patrol boat which successfully flew a 3700-mile non-stop course from Panama to Alameda, Calif., several days ago.

Advices from Washington, D.C., indicated the 60-plane contract would be the first award under the new 555-plane building program for the fiscal year authorized in the $26,000,000 appropriation voted by congress.

Admiral King said the 60-ocean-spanning ships will be constructed without delay by the Consolidated Aircraft corporation at San Diego. The group will form the nucleus of a planned armada of long-range planes.

Facilities are already under construction at Pearl Harbor, Hawaii, for the establishment of a focal base for the new air patrol, and Admiral King said the navy is soon to locate two similar patrol squadron bases at Sand Point, Wash., and Norfolk, Va.

With congress to be asked to authorize expeditious construction of at least two fast tenders for the patrol wing, naval experts pointed out that the service would maintain a constant protective weapon over this country's entire coastal areas in case of war.

"Daily Press" Riverside, Calif 10/18/35

Navy's 'Mystery Plane' Lands For New Record

The United States Navy's new "mystery ship" manufactured by Consolidated Aircraft Corporation, shown after landing at Alameda, setting a new non-stop record for seaplanes. It will be on display at the Consolidated plant tomorrow.

"San Diego Sun" 10/19/35

ALL TYPES OF PLANES BUILT BY S. D. FIRM

Flying Boats Costing Total Of $4,500,000 Made For Navy

The principal business of the Consolidated Aircraft Corp. is the design and manufacture of airplane parts for the Army and Navy, air line operators, private owners and foreign governments.

The principal types of aircraft manufactured are as follows:

Consolidated PT and Consolidated NY training airplanes used practically exclusively for primary training in the Army and Navy, of which 800 have been delivered.

ARMY GETS 171

The Consolidated PT-11 and Consolidated BT-7, primary and basic training airplanes respectively, specifically developed for the Army. Thirty-six of these planes have now completed successfully two years of service tests. Thomas-Morse 0-19 observation planes, of which 171 have been delivered to the Army Air Corps.

Consolidated Commodore flying boats, of which 14 were sold to the NYRBA line, later absorbed by the Pan-American Airways. All of these are still in operation by this transport company, one of the great air transportation systems, on South American commercial routes as far south as Buenos Aires. These planes, sold at $100,000 each, have flown more than 4,000,000 miles.

CRUISE 3,000 MILES

Consolidated P2Y-1 and Consolidated P2Y-2, two twin-motored patrol boats of which 47 have been built for the Navy at a cost of approximately $4,500,000. These flying boats have 1,250 horse power, weigh 24,000 pounds, a high speed of 130 miles per hour, and a cruising range of 3,000 miles.

Fleet trainer and sport plane. Over 500 of the Fleet combination military and commercial training and sport planes have been sold to commercial schools, the U. S. Government, foreign governments and private owners since 1928.

S. D. AIRCRAFT INDUSTRY IN NEW ADVANCE

Consolidated Establishment Definitely Marks 'New Era'

By MAJ. T. C. MACAULAY
Executive Manager, Chamber of Commerce

San Diego's aircraft industrial development—making good the city's slogan of "Air Capitol of the West"—is on its way.

Dedication of the new plant of the Consolidated Aircraft Corp., scheduled to take place tomorrow, at Lindbergh Field, marks a new era in the growth and development of an industrial San Diego.

1500 Needed

This corporation has more than $9,000,000 worth of business on its books at the present time, and it has indicated that in order to get out these large Army and Navy orders, it will be necessary to employ 1500 men by Jan. 1, 1936, and 2500 men by March 1, 1936.

Ever since the citizens of San Diego, under the leadership of the Chamber of Commerce, voted an investment of $625,000 in Lindbergh Field, aircraft manufacturing interests have taken a very keen interest in the growth and development of this section. The field combines three of the outstanding major features that go to the making of an ideal airport, namely: safety, utility and accessibility. Very few airports in the United States are as safe from the operating end as is Lindbergh Field; its utility as both a land plane airport and a seaplane base is made possible through the fact that it is contiguous to a very splendid basing for seaplanes in the northeasterly portion of San Diego bay.

In Easy Reach

Its accessibility is demonstrated by the fact that it is less than five minutes from down town San Diego, and this air terminal is practically contiguous to the other transportation facilities which play such an important part in the life of a modern city.

These favorable factors were called to the attention of the Consolidated Aircraft Company in particular almost constantly during the past five years.

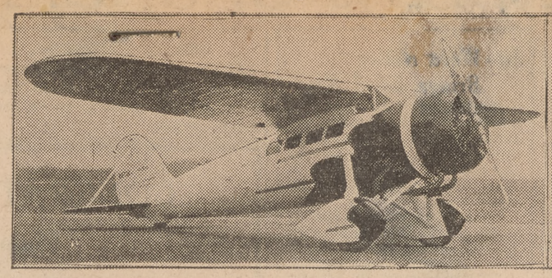
At the present time they are carrying on a national advertising campaign in aeronautical publications, in which they depict "An aerial preview of Consolidated Aircraft Corporation's new factory on Lindbergh Field at San Diego, California, where air, land, rail and water compine to afford the ideal location to aircraft production.

Modern Plant

Consisting of the most modern airplane plant in the world, 240,000 square feet of floor space, Consolidated dedicates its new facilities to the continuous development and production of aircraft which will assure our Nation's power in the Air.

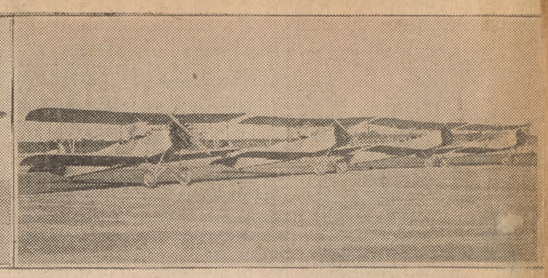
Citizens of this community alive as never before to the advantages derived from great manufacturing enterprises of this nature, and with the cooperation of the Harbor Commisssion, the San Diego California Club, and other agencies in a nation-wide campaign to call to the attention of the aircraft manufacturers of the country the advantages possessed by San Diego, its future growth as an aircraft manufacturing city should be assured.

De Luxe Ship For Civilians



This trim, racy Fleetster model designed in 1931 is Consolidated Aircraft Corporation's offering to the business man or sportsman who finds a plane convenient and enjoyable.

In Tropical Service



The Cuban government wanted to send its youth aloft. Consolidated Aircraft Corporation received the contract to build these training ships, designed specially for that purpose.

Latest For Army Fledglings

Here is a late Consolidated word on what the properly trained Army cadet uses in the advanced flying school at Kelly Field, Tex., Uncle Sam's military university of the air.

San Diego "Sun" 10/19/35

DISTINGUISHED FLYING CROSS

Lieutenant Commander Knefler McGinnis, U. S. N., was presented with the Distinguished Flying Cross by the Acting Secretary of the Navy on April 13th. The award was made for his extraordinary achievement in establishing two World's distance records with the Twin Wasp-powered Navy Consolidated XP3Y-1 flying boat, shown above. The non-stop flight, from Coco Solo, Canal Zone, to San Francisco, covered 3,281 miles air line distance, and 3,443 miles broken line distance.

"Beehive" May 1936

Consolidated XP3Y-1 Breaks Two Records

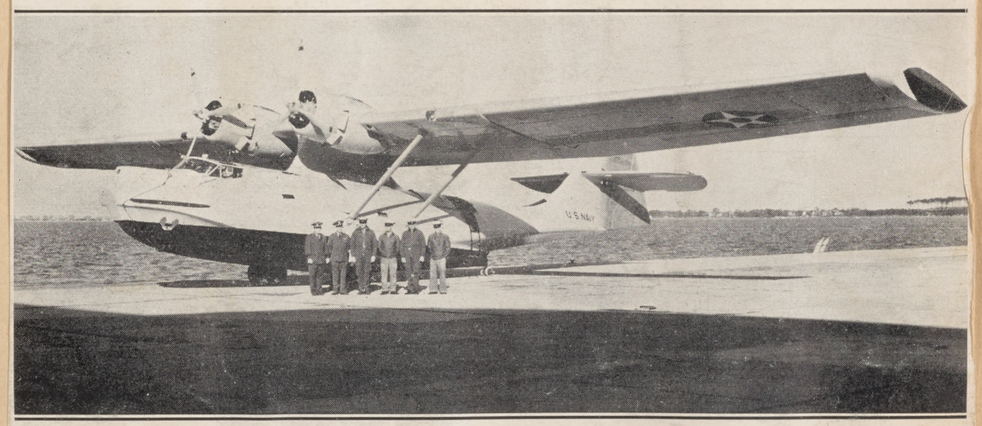
SECRETARY of the Navy Swanson announced last month that Lieutenant Commander Knefler McGinnis, executive officer of the Naval Air Station at Anacostia, and a crew of five in the patrol seaplane, XP3Y-1, had broken two international records for seaplanes—the record for airline distance and the record for broken line distance by their flight from the Naval Fleet Air Base, Coco Solo, Canal Zone, to San Francisco, California, on October 14 and 15; and had broken Lieutenant Commander McGinnis' U. S. airline distance record of 2,398.999 miles.

The XP3Y-1 took off from Coco Solo, Canal Zone, at 6:30 o'clock (EST) on the morning of the 14th and arrived at San Francisco at 2:10 o'clock (PST) on the afternoon of the 15th, having covered 3,300 statute miles, broken line distance.

The previous international airline distance record for seaplanes was made on July 15, this year, by two Italian flyers, who covered 3,063 miles from Monfalcone, Italy, to Berbera, in Italian Somaliland.

The previous international broken line distance record for seaplanes was established on December 31, 1933 and January 1, 1934 by two French aviators in a flight from Berreport, Etienne, to St. Louis, Senegal, a broken distance of 2,356.908 statute miles.

Lt. Commander McGinnis commanded the flight of patrol planes from San Francisco to Honolulu in January, 1934, setting a world's non-stop record for distance, in formation, when the squadron flew 2450 miles in 24 hours, 45 minutes.



ONE FROM ITALY, ONE FROM FRANCE—TWO MORE INTERNATIONAL RECORDS REPOSE IN AMERICA

When the XP3Y-1 pictured above took off from Coco Solo on the morning of October 14th and arrived in San Francisco on the afternoon of the 15th, she had covered 3,300 statute miles, broken line distance. The crew (left to right): Lt. Commander Knefler McGinnis, Lt. James Kent Averill, aviation chief machinist mate Thomas P. Wilkinson, chief radioman Antonio E. J. Dionne, aviation chief machinist mate Charles Stanley Bolka and chief radioman Edward V. Sizer.

"Southwestern Aviation" November 1935

Major Fleet Foresees Splendid Future For Aviation In S. D.; Lauds Leaders

Major Reuben Fleet's dedication address at the Consolidated Aircraft factory yesterday follows, in part:

For twelve and one-half years we have striven for this day. It marks the culmination of a dream for a factory of our own in a city of our choice. Although we regretted to leave Buffalo friends of eleven years' standing, we are very happy here and thank you all for your warm welcome to San Diego. We hope to be worthy of the good treatment we have received from your excellent Chamber of Commerce, your efficient Board of Harbor Commissioners with its hustling port director and your fine city officials.

S. D. Enterprise

Your people are welcoming us with warm hand-clasps; your newspapers are already boosting us as a San Diego enterprise; your clubs have invited us to join; your banks and your merchants are anxious to extend us reasonable credit; your realtors helped us find homes at as reasonable rents as could be expected at a time when our arrival coincided with the peak demand for houses caused by the opening of schools, coupled with the Labor Day holidays when your great Fair attracted its largest crowds, taxing hotels, rooming houses and auto courts to overflow capacity.

We trust that your co-operation will benefit you all and we hope to do our bit in the upbuilding of your beautiful city and county and your great state of California. . . .

Although the company is publicly owned, with its stock listed on the New York curb and the San Francisco stock exchanges, it has no stock for sale.

For more than five years we carefully surveyed all cities in the United States having more than 100,000 population, to select the best location for our future factory. We decided finally upon Southern California. . . .

Twice each year I flew around the country examining localities and municipal airports. We wanted a site on a publicly owned and operated airport having publicly owned water-front on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, in a Southern clime unhampered by snow and ice and yet not unbearably hot, with all-year-round flying weather for test flying and for flight deliveries.

Inspected San Diego

We inspected San Diego again and again. We had about what we were looking for. We contacted that sturdy San Diegan, your hard-working Chamber of Commerce manager, my old flying friend, T. C. Macauley, who was instructing at North Island when I learned to fly there in 1917. Then we met that ardent San Diego booster, Tom Bomar, who ably heads your chamber's aviation department. Again and again they emphasized the merits of San Diego.

They introduced us to your very efficient Harbor Commission and to your amiable port director, Joe Brennan, and they called in their counselor and attorney, H. B. Daniel. Finally we signed a contract, operative only if we built and moved here.

Business conditions throughout the country were uncertain. We were in the valley of the world's worst depression. Our directors seriously questioned the advisability of going ahead. Then your Harbor Board sent its able commissioner, Emil Klicka to Buffalo to argue the merits of San Diego before our full board of directors. Every month brought more and more arguments from Maculey and Bomar. Finally we made up our minds to have faith in the future and to set an example by showing it to the limit of our ability by building and moving to San Diego. . . . . .

Chamber Lauded

Let me here congratulate San Diego upon her Chamber of Commerce and her harbor set-up. I have conferred with many chambers of commerce and with many public officials, but never any that excel your chosen representatives in handling matters for the welfare of their city and harbor and people.

Your city is somewhat handicapped in undertaking public improvements by the fact that so much of your valuable area is nontaxable because of Government ownership. For this reason and others the Federal Government should be generous in its contributions to your harbor and waterfront, as, for example, it must needs be in highway building in states having large areas absorbed by Federal forest reserves and Indian reservations. We note with pleasure this week's Federal allotment of $553,619 to enlarge and improve Lindbergh Field, thus insuring its holding its A 1A rating.

From your newspapers we conclude that your tax problems have become more intense because of the Mattoon blight on approximately 10 per cent of your county's assessed value. For this reason our men feel hesitant about purchasing property here for the time being. We hope you are on the way toward adjusting this.

Navy Contract

We are proud that under the direction of the Navy and with its constant cooperation, we were able to design and construct for it the XP3Y-1 that broke the world's seaplane distance record this week by flying non-stop 3500 statute miles from our Canal Zone to San Francisco with its able Navy crew under the command of that famous pilot Commander McGinnis, and we are also proud that we have been entrusted with the task of building 60 more of these flying boats for our Navy.

Likewise we are proud that under the direction of the Army and with its constant cooperation, we are now building for it 50 two-seater pursuit airplanes that represent the highest performing aircraft of this type in the world.

We congratulate our Navy on its acquisition of the finest combined fleet and air base in the world, and predict, now that its aviation has room to expand, it will do so to the limit. Admiral King in Washington and Admirals Butler and Horne and Captain Towers here have striven earnestly to acquire all of North Island adjoining this wonderful harbor where the Navy can berth its airplane carriers. That these officers should now be assembled here to plan the future is fortunate for our fair city.

We mustn't lose the Army Air Corps from San Diego county. Perhaps our President might sanction acquisition and development with government funds of an extensive land air base for the Army in this vicinity, where air traffic will not interfere with the Navy, if we fully inform him of our advantages, for nowhere on earth have I ever felt, breathed or flown in such air as you have here. For flying it seems to have a "body" that one finds nowhere else.

Great Enterprise

Pan-American Airways is doing wonderful development work in pioneering flying over the Pacific and we should give that great enterprise our earnest and continued support. . . .

Now let us look into the future!

Aviation needs aeronautical engines of from 2000 to 2500 horsepower. To develop such costs millions of dollars and years of tireless effort. Our government should give financial encouragement to American experienced and proven aeronautical engine builders so that our country may not lag behind this all-important development.

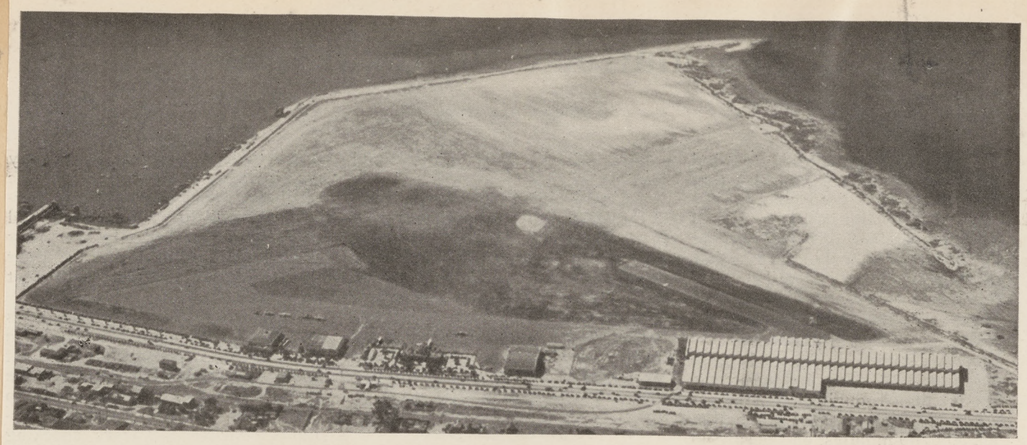
When such engines are available we expect to build gigantic flying ships that will carry a hundred passengers to Honolulu or across the Atlantic in 12 hours with greater comfort and safety than do surface ships at present. . . .

What an age to live in! And what a joy and pride to take inert metals and fashion them into mighty carriers of the air that bring people closer so that they may know each other better! . . .

Just as the airplane has become man's greatest means of making neighbors of all nations, so will it surely become the instrumentality to guarantee world peace by force until the temperament of mankind changes.

Two-thirds of a century ago, when Eugenie, empress of France, with M. de Lesseps as her guest, led a line of 68 ships through the Suez canal, in opening it with Oriental fanfare, the builder said, "I have done something for peace and progress." Some day this will be true of our endeavors as we now carry on under most auspicious surroundings in this, the city of our choice.

San Diego "Sun" 10/21/35



Lindbergh Field, San Diego; the new Consolidated factory in lower right-hand corner

The dedication of Consolidated

TO the citizens of San Diego, the Exposition has been the most important event in the history of the world, or at least since San Diego's last exposition, but on Oct. 20, the Exposition went into temporary eclipse while the burghers and the yeomanry of the city devoted all their energies to the celebration of the official opening of the Consolidated Aircraft Corporation's new factory. Lindbergh Field, where the factory is located, was thronged by 30,000 visitors during the day, and among the 700 guests at the great civic luncheon that was the high spot of the day's ceremonies, were numbered the leaders of army, navy and civil aviation of the entire nation.

During the day hundreds of army and navy planes swarmed over Lindbergh Field, and scores of airplanes from various parts of California and the Southwest flew into San Diego bringing with them members of the aviation fraternity anxious to add their bit to California's welcome to its newest airplane factory.

The actual dedication ceremonies were held from a platform constructed on the south side of the Consolidated factory, where the materials for Consolidated airplanes enter, and the completed planes roll out. Over 6,000 people jammed the airport, and heard the speeches of various city and civic organization officials, army and navy officers, and leaders in the aviation industry.

The speakers

Major T. C. Macauley, head of the aviation department of the San Diego Chamber of Commerce, presided over the dedication ceremonies. The speakers included such well-known names in aviation as Rear Admiral Ernest J. King, chief of the Bureau of Aeronautics, Capt. John Towers, commanding the Naval Air Station, Col. Jacob Wuest, commanding officer of Rockwell Field, Major Albert Hagenberger, first to fly to Hawaii, Col. Lewis B. Goodyear, Lieut. Commander Knefler McGinnis, who commanded the Consolidated XP3Y-1 on its record-breaking flight from Panama to Alameda, Commander Elmer Stone, who flew the famous NC-4 across the Atlantic 16 years ago, Glenn Martin, builder of bombers and flying boats, and Claude Ryan, pioneer in San Diego aeronautics, and Col. Clarence M. Young, of Pan -American Airways.

Major Reuben H. Fleet, president of the Consolidated Aircraft Corporation was the principal and final speaker at the dedication ceremonies, and his address was a masterly exposition of the possibilities of aviation, its needs, and the necessity for adequate national aerial defense. He said in part—

"Consolidated incorporated under the laws of Delaware with a perpetual charter and only one kind of stock. The company is amply financed and has no bonded or mortgage debt; owes no loans; there are no judgments or suits pending or threatened against it. It has never given any stock or warrants to any officer, director or employe or to anyone for nothing or for services rendered and it has no warrants or stock options of any kind outstanding. Although the company is publicly owned with its stock listed on the New York curb exchange and the San Francisco stock exchange, it has no stock for sale.

"During our 12½ years we have manufactured and sold over $23,000,000 of aircraft and parts, on which we have made a net profit of approximately 10 per cent. We have in round figures $9,000,000 of unfilled orders booked at present, which I estimate will occupy our new plant to 80 per cent capacity on a day shift basis for a year and a half. Airplanes that we have designed and manufactured have flown a total of more than 200,000,000 miles and have a record for safety and ease of maintenance unequalled by those of any company in the world whose aircraft have more than a quarter of this flying time.

"More than 300 selected employes came with us from the east and form the nucleus of our trained organization. We have 874 employes now, should have about 2000 within six months and about 3000 next summer. For some time we shall have jobs to offer to experienced craftsmen; executives, administrative, accounting and clerical jobs are filled.

"Pan American Airways is doing wonderful development work in pioneering flying over the Pacific and we should give that great enterprise our earnest and continued support. By constant practice on the part of experienced pilots and engineers who have specialized in flying boat navigation over vast expanses of water for a half dozen years, and who are using and developing blind flying instruments and navigation aids beyond our fondest dreams when they began, this great American enterprise can now safely carry our flag around the world in competition with all foreign-subsidized airlines. The future of American business on the Pacific depends upon our development of fast air transport and mail to the markets of the Far East. Three days against three weeks one way across the Pacific guarantees trade that will mean much to our country and to San Diego.

"Now let us look into the future!

"Aviation needs aeronautical engines of from 2000 to 2500 horsepower. To develop them will cost millions of dollars and years of tireless effort. Our government should give financial encouragement to experienced and proven American aeronautical engine builders so that our country may not lag behind in this all-important development.

"When such engines are available we expect to build gigantic flying ships that will carry a hundred passengers to Honolulu or across the Atlantic in 12 hours with greater comfort and safety than do surface ships at present."

Twelve years of progress

FOR twelve years the Consolidated Aircraft Corporation has been building airplanes at the average rate of almost $2,000,000 worth every year. In other words, the company, with a little more than twelve years of operation has produced aircraft valued at more than $23,000,000, the bulk of this business being military.

The company was founded on May 29, 1923, at East Greenwich, R. I. Like all airplane companies, especially of that period, it was a small affair at first, and its production for its first year was a long way from the average it established in its succeeding history. After about a year in East Greenwich, Consolidated moved to Buffalo, N. Y. where it occupied a part of the former government aircraft factory, which was constructed, and used during the war. From that beginning, Consolidated has progressed steadily, slowly at times, and with surprising vigor at others, until, at the time of the company's move to San Diego, its plant in Buffalo was one of the major industrial enterprises of that highly industrial city.

The keystone of the success of Consolidated was in the manufacture of training planes for the army and navy. Its primary training planes, and basic training planes have been standard with the army and navy for ten years, nearly 800 of these planes having been delivered to the army and navy.

Another important product of Consolidated was the Thomas Morse 0-19 observation airplane, of which 171 were delivered to the Army Air Corps.

The first big airplane built by Consolidated was the Commodore flying boat which originally was developed about 1929. It was one of the very first of the large commercial airplanes, and was adopted by the old Nyrba line, operating from New York to Buenos Aires, which later was absorbed by the Pan American Airlines system. Consolidated sold Nyrba 14 of these big flying boats at a price of $100,000 each, the highest price a commercial concern had ever paid for an airplane up to that time. These ships are still in service in South America.

Maj. Reuben H. Fleet

Another highly successful Consolidated plane was the twin-engined patrol boat, P2Y-1, and its following models, P2Y-2 and P2Y-3, of which the U. S. Navy purchased 47, at a cost of about $4,500,000.

But the ship for which Consolidated is best known in commercial aviation circles is the Fleet trainer and sports plane, which is to be found on commercial airports throughout the length and breadth of the United States, and in the service of a dozen foreign countries. Over 500 of these Fleet airplanes have been sold to commercial operators, private flyers, and to the United States and foreign governments.

Besides these planes which have formed the bulk of Consolidated's production record, the company has undertaken at various times, and still is conducting an extensive program of development work for the army and navy air services. Among these is the XB2Y-1, a dive bomber for the Navy, the P-30, a two-seater pursuit plane for the Army, and the A-11, a high-performing attack plane. The XB2Y-1 is now undergoing tests by the Navy, so far with complete success. The P-30 was so successful that the Army ordered 50 of them, this being the first job to go through the new San Diego plant.

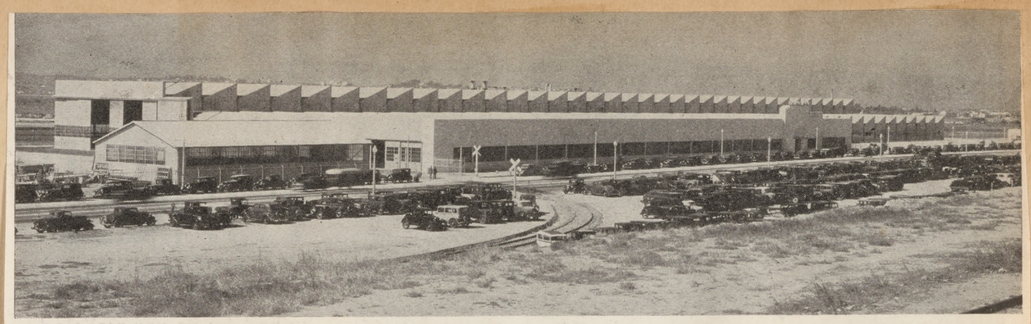
The most spectacular recent achievement of a Consolidated airplane, however, was the flight, on October 14-15, of the Consolidated XP3Y-1, a twin-engined flying boat, which flew from Coco Solo, Panama, to Alameda, Calif., a distance of 3,700 statute miles in 34 hours and 45 minutes, a crew of six. This constituted a world record for a long-distance non-stop flight for this type of aircraft.

These Consolidated P2Y-3's weigh 24,000 pounds each, have a wing spread, from tip to tip, of 100 feet and are 62 feet in length. Powered by two Wright Cyclone engines, each of 625 horsepower, these planes have a cruising speed of 110 miles an hour, a top speed of 140 miles per hour and a cruising range of 3,000 miles.

In January, 1934, another world record was set by a squadron of six Consolidated P2Y2 patrol flying boats, which flew in mass formation, first from Norfolk, Va. to Coco Solo, 2,059 miles, then to Acapulco from Coco Solo, 1,677 miles, then from Acapolco to San Diego, 1,616 miles, and finally from San Francisco to Honolulu, approximately 2,408 miles, all of these long flights made in the ordinary course of duty.

All of these Consolidated flying boats are the result of years of cooperative efforts between Consolidated and Navy engineers. The original prototype was the old Commodore flying boat which Nyrba used to establish the first airline from New York to Buenos Aires.

Consolidated Fleet and other Consolidated training airplanes have been sold to the following foreign countries: Spain, Portugal, North China, South China, Japan, Turkey, Mexico, Canada, Guatemala, Colombia, Peru, Argentine, Brazil, Siam, Cuba and Roumania. Colombia has operated a P2Y1 flying boat, purchased from the Company, for more than a year.



The new Consolidated plant—Offices in front—Mill at right—Factory behind

The factory goes to work

WITH nearly 900 men already at work on its first work project of fifty pursuit planes for the United States Army, the Consolidated Aircraft Corporation's new factory at San Diego is completed and, when the installation of tools and machinery, which is still going on, is done, the plant will be ready to proceed at full speed with its work of turning out $9,000,000 worth of aircraft for the army and navy. When everything is ready, the plant will accommodate a working force of 2500 men.

The Consolidated factory is by no means the most beautiful building in San Diego, but there is no structure in the city of which San Diegans are more proud. It is a plain factory plant of all-steel construction, with a saw-tooth roof, well-lighted, and perfectly ventilated, extending along Pacific Highway, on Lindbergh Field for a distance of 900 feet, with a width of 300 feet, and its high bay section extending 45 feet into the air. It covers a total area of 250,000 square feet of working space.

From Pacific Highway, the main artery leading from the north into San Diego, the visitor sees only the main office building, with its plain exterior, lighted by a practically continuous window extending from end to end of the structure. In this building are housed all the offices of the plant, including the offices of the company, and its executive personnel, and the offices of the various departments and their executive heads. The office building, incidentally, is separated from the main factory only by a partition, so that when the necessity for expansion arrives, which Consolidated officials confidently expect, the factory can be extended into the office building by the simple expedient of knocking out the intervening wall, in which case a new office building will be built elsewhere on the 20 acres which the city of San Diego has donated to the company.

The factory itself is constructed according to the latest ideas of in-line production. Everything starts at the south end of the center bays, where a spur track delivers raw materials, such as steel, duralumin, and parts and supplies to the main stock room, which is located in the southwest corner of the plant. From the main store room, the materials start north on their journey through the various fabricating departments, the various parts gradually taking form as they progress, until they reach the northern end of the center bays.

When the work reaches the northern end of the building, most of the work of fabrication has been completed, and the finished parts are shunted across to the northern end of the high bay, where the work of sub-assembly, and final assembly begins. As this assembly process goes on, the plane slowly moves southward, gradually taking form until, when it again reaches the south end of the structure, only about a hundred feet from where the raw material entered, it rolls out onto the flying field, a completed airplane, and ready for the air.

Practically all of the work of fabrication and assembly is done under the roof of the main factory building. The only exception is a small auxiliary structure, located on the west side of the main building, where the bumping hammers are located which form the sheet metal into the various shapes required in fabricating the planes. It is interesting to note that all of the aircraft now under production by Consolidated, or contemplated, are all-metal, not a stick of wood being used in any part of their structure.

For all this, however, the Consolidated plant, boasts as complete a carpenter shop, and wood mill as is to be found anywhere in San Diego. This plant, known as the mill-house, accommodates the saws, lathes, and planing machinery which are used to make the jigs and patterns necessary in the forming of the metal parts of the airplanes. Here also is the lumber prepared and cut for the mammoth crates that are necessary to pack the modern airplane. Most Consolidated Aircraft, destined for the army and navy, will be delivered at the doors of the plant, because of the proximity of army and navy air bases, and flown by army and navy pilots to their various destinations. However, where it is necessary to ship a plane by rail or by water, it is necessary to crate the fuselage, wings and engine, in great lumber structures that are as large, and as expensive as a good-sized house. So that, while there is no wood used in Consolidated airplanes, there will be plenty of work for the mill-house.

The Consolidated contract with the city of San Diego provides for the use of Lindbergh Field for testing purposes, and other flying activity connected with the operation of the plant. It also provides for the construction of a ramp, from the airport to San Diego Harbor, for the convenience of amphibian craft, and for the handling of the huge flying boats which are an important part of the Consolidated construction program.

From left to right: R. S. Madison, Secretary-Treasurer; Lt. Comdr. D. M. Carpenter, Inspector of Naval Aircraft; I. M. Laddon, Vice President and Chief Engineer; R. A. Miller, Chief of Structures; H. A. Sutton, Assistant Chief Engineer; R. E. Oversmith, Chief of Production; J. L. Kelley, Factory Superintendent; George Newman, Jr., Assistant Factory Superintendent; C. T. Leigh, Vice President and Material Supervisor; C. A. Van Dusen, Vice President and Works Manager; Capt. L. C. Hurd, Inspector of Army Aircraft; E. F. Neff, Personnel Supervisor; B. W. Sheahan, Chief of Drafting; D. G. Fleet, Assistant to the Manager.

REUBEN H. FLEET
President and Manager

Born 1887 in Montesano, Washington. Served in U. S. Army from March 22, 1917 to November 30, 1922, with ranks of Captain and Major; airplane pilot in the Air Corps —January 1919 to resignation in 1922. Contracting Officer, U. S. Army Air Corps, and Business Manager of its Engineering Division at McCook Field, Dayton, Ohio.

November 30, 1922 to May 29, 1923, Vice-President and General Manager Gallaudet Airplane Corporation, East Greenwich, R. I.

May 29, 1923, founded Consolidated Aircraft Corporation, serving since as its President.

CHARLES T. LEIGH
Vice President and Material Supervisor

B. S. in mechanical engineering, Worcester Polytechnic Institute 1911. Chief engineer, Raymond, Washington Unit, Airplane Spruce Division, 1917-1918. Resident engineer, State of Washington, Department of Highways, 1919-1921. Service engineer, Portland Cement Association, State of Montana, 1922. General superintendent, Grays Harbor Construction Company, Hoquiam, Washington, 1922-1926. Assistant to factory manager, Consolidated Aircraft Corporation, August 1926 to November 1927. General manager, Tonawanda Products Corporation, Buffalo, N. Y., November 1927-June, 1932. Purchasing agent, Consolidated Aircraft Corporation, June 1932 to November 1932. Material supervisor, Consolidated Aircraft Corporation, November 1932. Vice president, Consolidated Aircraft Corporation, March 1935.

CHARLES A. VAN DUSEN
Vice President and Works Manager

1914-1934—Was connected with the Glenn L. Martin Company holding successively positions of tool room foreman, master mechanic, tool engineer, production manager, factory manager and vice president and general manager with that company.

On December 10, 1934—Became connected with Consolidated Aircraft Corporation as factory manager. Promoted to vice president and works manager on July 3, 1935.

R. S. MADISON
Secretary and Treasurer

Graduated University of Illinois in 1926 with Bachelor of Science degrees in Accountancy, Banking and Finance. One and a half years as accountant with F. W. Lafrentz & Co. Analytical accountant for A. G. Becker & Co. In 1929 with the firm of Pynchon & Co., in a similar capacity. Joined the Consolidated Aircraft Corporation organization in May 1931, as auditor, being elected secretary and treasurer in November of the same year.

I. M. LADDON
Chief Engineer

Born—New Jersey, 1894. Education, B. Sc. in Civil Engineering—McGill University 1915.

1917-1927—Aeronautical Engineer, Engineering Division of Air Service, McCook Field, Dayton, O. During this period designed several airplanes including the first all-metal type constructed in U.S.A., completed in 1921. Was responsible for some of original development work done on airplane wheels, brakes and oleos, being granted patents on devices of this type.

1927 — Resigned from Air Service to join Consolidated Aircraft Corporation. Designed the following types:

Consolidated XPY-1, first navy monoplane patrol plane. Consolidated Commodore, 25-35 place commercial flying boat. Consolidated Fleetster, 8 place commercial passenger and mail land transport. Consolidated P2Y-1, navy sesqui plane patrol boat. Consolidated P2Y-3, a development of the P2Y-1. Consolidated XP3Y-1, a navy patrol plane.

HARRY A. SUTTON
Assistant Chief Engineer

Born—Geneva, Nebraska, January 28, 1895. Education—Graduated Oregon Agricultural College, School of Mines, June, 1916.

Entered Aviation Section, U. S. Signal Corps, June, 1917, Berkeley, Calif. Flying training, Rockwell Field, San Diego, August and September, 1917. Commissioned 1st lieutenant, Kelly Field, San Antonio, Texas. Instructor and assistant officer in charge of flying training at Kelly Field, San Antonio, Texas, Sept. 1917 to Sept. 1918. Promoted to captain October, 1918. Aero engineering course at M.I.T. October, 1918 to February, 1919. Air Corps, Engineering Division, McCook Field and Wright Field, February, 1919, to September, 1929. Air Corps Engineering School, 1923. Aero engineering M.I.T., 1925-1926. Resigned Air Corps September, 1929. MacKay Trophy, 1929. Distinguished Flying Cross, 1929.

Vice President and Chief Engineer, American Airways, September, 1929 to June, 1932. Curtiss Aeroplane & Motor Co. research engineering and flight testing, July, 1932, to August, 1935. Assistant chief engineer, Consolidated Aircraft Corporation, August, 1935, to present.

R. A. MILLER
Chief of Structures

Education—University of Illinois. B. S. in C. E., 1907.

1917—Enlisted in the Signal Officers Reserve Corps of the U. S. Army. Commissioned First Lieutenant in Air Service May 31, 1918, after preliminary flying training at Second A.I.C., Tours, France. Adjutant of the Acceptance and Inspection Division, Air Service Headquarters, Paris, France. Honorably discharged September 12, 1919.

1919 — General construction engineer with Packard Motor Car Company, Chicago Bell Telephone Company and Illinois Highway Department.

1921—Junior engineer in the Structures group of the Engineering Division of the U.S. Army Air Corps. Assistant to the Chief of Structures Group under A. S. Niles, Jr.

1927—Structural engineer with the Consolidated Aircraft Corporation and upon expansion of the engineering activities, chief of the structures group.

B. W. SHEAHAN
Chief of Drafting

Education—Air Service Engineering School Extension Course in Aerodynamics and Airplane Design, 2 years.

1917-1920—Airplane design work with U. S. Signal Corps, Washington, D. C. 1920-1925—Assistant engineer in charge of Design Branch No. 3 at McCook Field, Dayton, Ohio. 1925-1928—Project engineer in chief engineer's office, McCook Field, Dayton, Ohio. 1928-1933—Designer with Consolidated Aircraft Corporation. 1933—Chief draftsman.

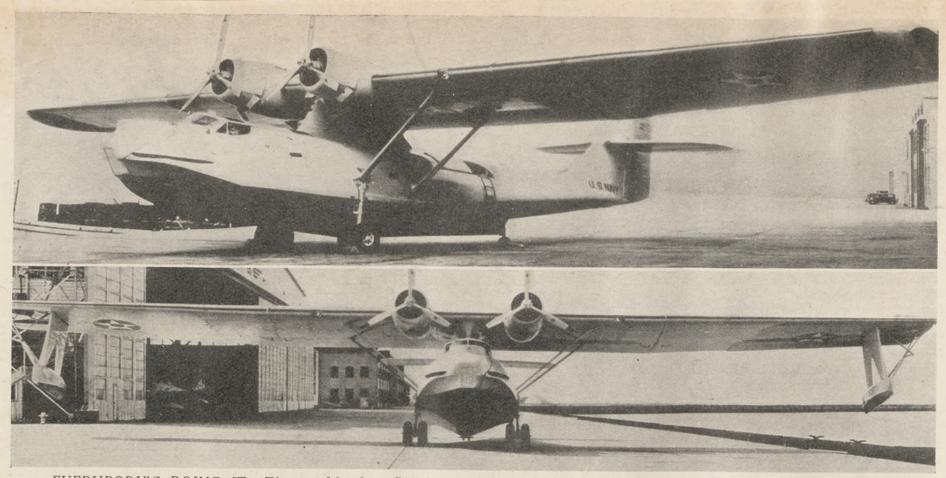
JAMES L. KELLEY
Factory Superintendent

Born—September 7, 1892, in Galeton, Pennsylvania. Attended grade and high school in Galeton, Pa.

1908-1914—Lumber industry at Fassett, Quebec, Canada, as assistant to manager. 1915-1917—Edward Clark & Sons, Toronto, Canada. In the purchase and inspection of propeller lumber for the French government. 1917-1920—U. S. Army Air Corps Inspection at Dayton, Ohio. 1921-1922—U. S. Army Air Corps Inspection at Keyport, New Jersey and College Point, Long Island. 1923—Supervising the erection of Martin Bombers at Camp Nichols, Philippine Islands. 1924—Army Air Corps Inspection at the Consolidated Aircraft Corp., Buffalo, N. Y. 1928—Joined the Consolidated Aircraft Corp. as superintendent in charge of manufacture of Thomas-Morse O-19 B, C, & E. 1935—Factory superintendent, San Diego, California.

J. C. THOMPSON
Chief of Inspection

Nineteen years in the aircraft industry, starting with the U. S. Signal Corps as inspector of airplanes and airplane engines.



EVERYBODY'S DOING IT.—The record-breaking Consolidated flying-boat of the type XP3Y-I, which has controllable flaps on the cowling of the motors, and retracts its floats to form the tips of its wings. Controlled cowling and retractable floats are quite the latest fashions among designers.

"Aeroplane" Dec. 11, 1935 (England)

WORLD'S RECORD

A new world's record, made by Lieut. Comdr. Kneffler McGinnis of the U. S. Navy, was a new record for the Gyropilot. In an XP3Y-1, a new type of seaplane, with a crew of five, he flew from Panama to Alameda, California, a distance of 3,387 miles, without a stop. The plane, the first of sixty being purchased by the Navy, has a stabilizer mounted higher than usual which adds to its seaworthiness. It is predicted that this type of seaplane will make longer flights feasible.

We learn from our Pacific Coast representative that the Gyropilot was in use for 33 hours on the Coco Solo-Alameda flight, the total time for the flight being 33 hours, 45 minutes. The Gyropilot also flew the ship to Coco Solo from Norfolk, Virginia.

Sperry-scope Dec. 1935

FAST ARMY SHIP TO SEEK SPEED RECORD IN FLIGHT TO DAYTON

Plane Will Take Off from California Today in Race Against Time.

Piloting a new army pursuit plane, believed to be one of the fastest of its type in the world, Captain L. C. Hurd, air corps test pilot, was scheduled to leave Lindbergh field, California, today in a speed flight to Dayton.

The ship, a low-wing monoplane powered by a 12-cylinder, 800 horsepower motor, according to United Press, was to leave the San Diego field early today with a view of establishing a new air corps west-east speed record.

Captain A. W. Brock, Jr., adjutant and assistant executive at Wright field, said last night, however, that no word had come through at the base in regard to the reported transcontinental flight, but he intimated that it was entirely probable it would be attempted.

Captain Hurd, the Wright field officer said, is the army air corps representative with the Consolidated Aircraft company. He was stationed at Detroit until the plane manufacturing concern moved its plant from the motor car city to California.

50 PLANES ORDERED FROM S. D. FACTORY

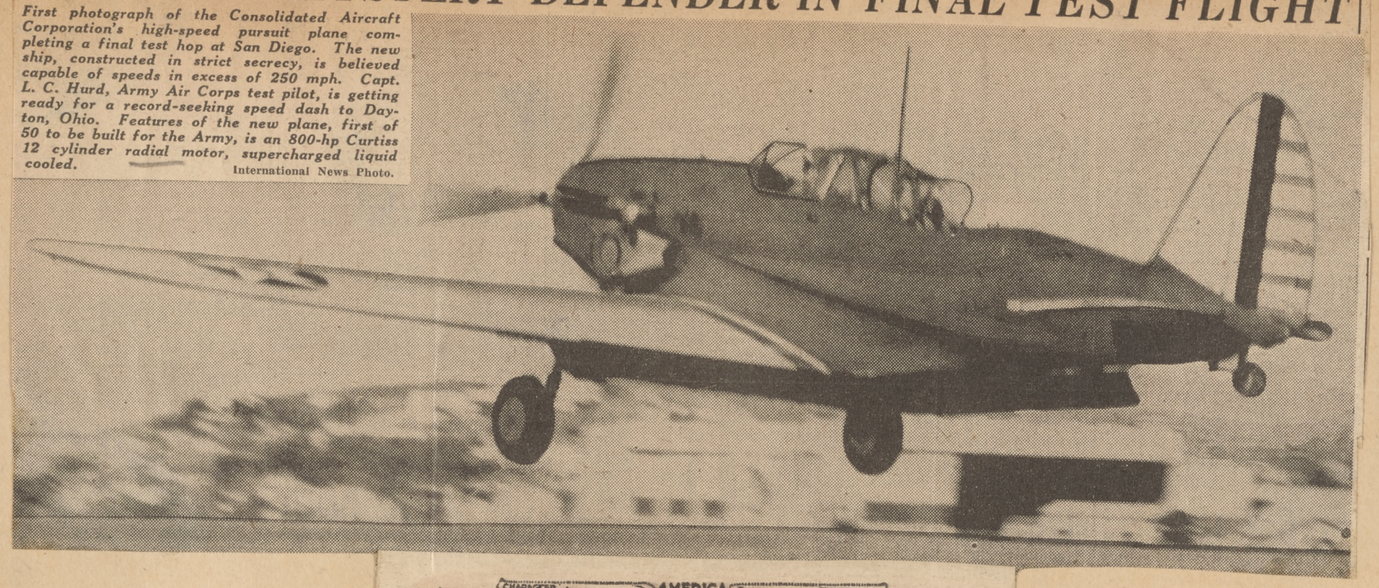
TRIBUNE 7-15-36

The navy awarded a $4,898,000 contract today to the Consolidated Aircraft Corp. of San Diego for 50 new bomber planes of the patrol type. The Associated Press reports in a dispatch from Washington, D. C. The planes are described as being of the V-P-B type.

Official Photo U. S. Navy
LT. COMDR. KNEFLER McGINNIS, U. S. N., holder of non-stop distance record for seaplanes, 1935.

1934—Jan. 10 to 11—Six flying boats of U. S. Navy flew non-stop from San Francisco, California, to Pearl Harbor, Hawaii, making a seaplane distance record of 2,400 miles in less than 25 hours.

AMERICA'S MYSTERY DEFENDER IN FINAL TEST FLIGHT



First photograph of the Consolidated Aircraft Corporation's high-speed pursuit plane completing a final test hop at San Diego. The new ship, constructed in strict secrecy, is believed capable of speeds in excess of 250 mph. Capt. L. C. Hurd, Army Air Corps test pilot, is getting ready for a record-seeking speed dash to Dayton, Ohio. Features of the new plane, first of 50 to be built for the Army, is an 800-hp Curtiss 12 cylinder radial motor, supercharged liquid cooled. International News Photo.

American Securities

Consolidated Aircraft

Larger Orders

By LONDON FINANCIER

SHARES of American manufacturers of aeroplanes, engines, and parts all sell at high ratios to current earnings, or, in other words, at a low earnings yield.

But the Government's programme for the next year or two is so remarkable in its scope as to explain, if not to justify, the speculative boom in these issues.

* * * * *

ONE of the leaders in this field is **Consolidated Aircraft,** whose Common shares are quoted on the New York kerb exchange at around 18.

The company has some $9,000,000 in orders on hand, and is considered to be in line for additional military and naval business over the next year or two.

* * * * *

BUT Government business always has a peremptory quality, requiring large working capital **and very frequently resulting in much lower actual profits than the same volume of business would furnish if received from private enterprise.**

Thus, while Consolidated Aircraft will probably show for 1935 earnings per share of Common of around 65 cents, shareholders do not look for dividends.

* * * * *

THE United States thinks of air defence in terms of the Pacific seaboard, and this company has, at considerable expense, moved its plant from Buffalo to San Diego.

This expense is now behind it—paid for out of current earnings—and it is not unreasonable to assume that it can now settle down.

And as it settles down sizeable profits should begin to emerge—profits on a sufficient scale to leave ample working capital and something over for dividends.

* * * * *

FROM this point on, everything is guesswork. The company reports its earnings every quarter, and brokers can keep shareholders informed.

But there still remains the problem of working capital, which exacts patience from shareholders.

Even if it paid small dividends in 1936—something to go on with—the real dividends justifying the current price for the shares and reflecting the profits of 1936 might not emerge until 1937.

* * * * *

IN short, distinctly speculative.

In addition, there will probably be interim movements in the shares if the Pacific situation deteriorates.

FIFTY SHIPS FOR NAVY; PLANS NEW BUILDING

TRIBUNE 7-15-36

Announcement that the Consolidated Aircraft Corp. of San Diego today received from the United States navy two notices of award of contracts aggregating $5,485,115 for 50 giant flying boats and "a secret development of an advanced nature," was made this afternoon by Maj. R. H. Fleet, president.

"Secret Developments"

"The largest of these two awards covers 50 of the same model as the 60 flying boats now under construction at Consolidated," said Fleet. "This is the same design as the boat which was flown non-stop from Coco Solo to San Francisco last October by Comdr. Knefler McGinnis of the navy, breaking the distance record for this type of plane. The record still stands. This same boat, on duty with the fleet, yesterday flew from Seattle to San Diego non-stop in eight hours.

"With today's awards, Consolidated will be in production on a total of 110 units, plus spare parts equivalent to 22 more, or a grand total of 132 of this type of plane for the United States navy. This, we believe, is the largest production of one type of flying boat in the history of American aviation and the largest volume of business so far enjoyed by this company, thus justifying our faith in the future of aviation, our products and the increase of approximately 80 percent in our manufacturing facilities, now well under way.

"The smaller of the two awards received from the navy covers a secret development of an advanced nature. To handle this, Consolidated is constructing a three-story building for experimental and engineering purposes which will provide as fine facilities in this regard as any in the world. It is for this building that the steel piling is now being driven at the south side of the plant adjoining the Ryan addition,'" he added.

Additional flying boats of earlier design now are being manufactured by Consolidated for other nations with permission of the United States government, according to Fleet.

"Also," he said, "this month the plant is finishing an order of approximately $2,300,000 for 50 two-seater pursuit planes for the United States army air corps."

Consolidated opened its plant Sept. 3, 1935. Some 2269 men are employed and the payroll now is approximately $285,000 per month, according to Fleet. "With the completion of plant facilities, 1000 additional trained mechanics will be required as the new facilities are finished, and as fast as they can properly be assimilated," he said.

Trade Winds -March 1936

NAVY PATROL BOATS ON 1800 MILE MERCY FLIGHT

Two Wright Cyclone - powered Navy P2Y3 patrol boats, in an 1800 mile "mercy" flight on February 3, brought three badly injured survivors of the wrecked tuna clipper Olympia from Cape San Lucas, Lower California to San Diego where proper medical attention could be administered. The planes made the trip in 17 hours elapsed time. Each carried 1500 gallons of fuel—more than enough for the round trip.

Flyer Always Has Lady Luck as Passenger

REDLANDS, April 18.—J. A. Philpot's luck began before he fell out of an army bombing plane near San Francisco Wednesday and parachuted to the ground, according to H. E. Packard, 26 Kendall street. He says Philpot's luck began a year ago.

In 1934 the flyer and the Redlands man were "bunkies" at March Field. Last year the former went to Randolph Field, Tex., as a flying cadet, and the latter left the Army.

Near the end of Philpot's training course he attempted to do an outside loop with a PT-3 training ship. Instead of looping the plane went into a tailspin, belly up. Completely out of control the plane spiraled down for 3000 feet to what seemed certain death.

When the plane was but a few hundred feet above the ground Philpot released the controls and the plane righted itself.

"That's when the boy's luck began," Packard commented.

PACIFIC FACTORY - May 1936

is president; Paul Lehrkind, vice-president; J. E. Merrick, secretary; and E. C. Best, superintendent and brewmaster. At least 100 local distributors will handle this product.

Take Bids On Aircraft Plant Additions

Bids are being taken by Architects Edward C. Taylor and Ellis W. Taylor, 803 W. Third street, Los Angeles, for work on additions to the manufacturing plant at 3302 Atlantic street, San Diego, for the Consolidated Aircraft Corporation.

The work will include concrete work, plank and finish flooring, form work, interior and exterior metal lathe, hand plaster, steel sash, sheet metal and corrugated iron, corrugated iron and composition and wood roofing. The new units will consist of an L-shaped addition to the northeast end of the plant, 45x100 ft. in area; with a wing 100x200 ft. in area and a mezzanine floor 100x100 ft. in area; an addition 50x200 feet in area to the west side of the plant and three small detached buildings, one 50x200 ft. in area. A contract was recently awarded to the Consolidated Steel Corp., 6500 E. Slauson avenue, Los Angeles, for furnishing and erecting the steel frame for the work.

Low-cost Houses Licensed In 16 Permits in a Day

3/3/36

A miniature building "boom" for San Diego was seen last week as the building department issued, in a single day, 16 permits for residences—most of them for low-cost houses. Six were for $1,000 buildings, and six others for $800 each.

The day before a Chamber of Commerce report showed an alarming shortage of moderate-rental places here, a factor in restraining expansion of the Consolidated Aircraft Corp.

Maj. R. H. Fleet, president of Consolidated, has announced that his firm could employ some 800 additional men if the city had available homes to rent for from $20 to $30.

Consolidated

At the **Consolidated Aircraft Corporation,** San Diego, California, production is being rushed to complete 60 PBY-1 patrol boats for the Navy which must be completed by the first part of the coming year. In addition there are 50 PB-2A pursuit planes under construction which will be completed before mid-summer.

Plans are now being completed for an experimental building in which the company can enter into secret development of large military aircraft for the U. S. Government. The building will be 200'x200', or large enough to assemble an aircraft with a wingspread of almost 200 feet. To the experimental building will be added a warehouse, giving a total floor space for the building of 97,300 square feet. Seventy-five thousand square feet of floor space will be added to the present factory building also.

The Consolidated expansion program calls for a tool and fixture storage building 50'x100', and an additional 10,000 square feet of floor space to be added to the present paint department. A photographic, physical, and chemical laboratory will also be constructed, according to present plans.

When the new buildings are completed, it is expected that present force of 2,000 employees will be doubled, which will double the company's capacity output.

Curtiss-Wright

Directors of the **Curtiss-Wright Corporation** met in New York, March 27, and decided to offer additional shares of com-

Western Flying - May 1936

• To Lt. Commander Knefler McGinnis come new honors in the form of the Distinguished Flying Cross, presented him on April 18 by Acting Secretary of the Navy William H. Standley on behalf of President Roosevelt. Commander McGinnis was in command of the Navy seaplane flight from Norfolk, Va. to San Francisco, via Coco Solo, C. Z., which established "a new international airline distance record for seaplanes of 3,281 statute miles, and a broken line distance record of 3,443 statute miles." The Navy's non-stop flight from San Francisco to Honolulu in January, 1934, also under Commander McGinnis, set up a new world's distance non-stop flight of more than 2,400 miles.

BIG AIRCRAFT CO. PLANS EXPANSION

594

SAN DIEGO, March 21 (UP).—Consolidated Aircraft Corporation, already at work on huge government military airplane contracts, tonight announced further expansion in the San Diego plant to entail an expenditure of $600,000 and additional employment of 2000 men.

An experimental aircraft plant with a floor space of 100,000 square feet is to be a feature of the new project announced for the annual meeting of the firm's directors.

Consolidated

Announcement that the **Consolidated Aircraft Corporation** of San Diego received from the United States Navy two notices of award of contracts aggregating $5,485,115 for 50 flying boats and "a secret development of an advanced nature" was made by **Maj. R. H. Fleet,** president, on July 15.

"The largest of these two awards covers 50 of the same model as the 60 flying boats now under construction at Consolidated," said Maj. Fleet. "With the new awards, Consolidated will be in production on a total of 110 units, plus spare parts equivalent to 22 more, or a grand total of 132 of this type of plane for the Navy."

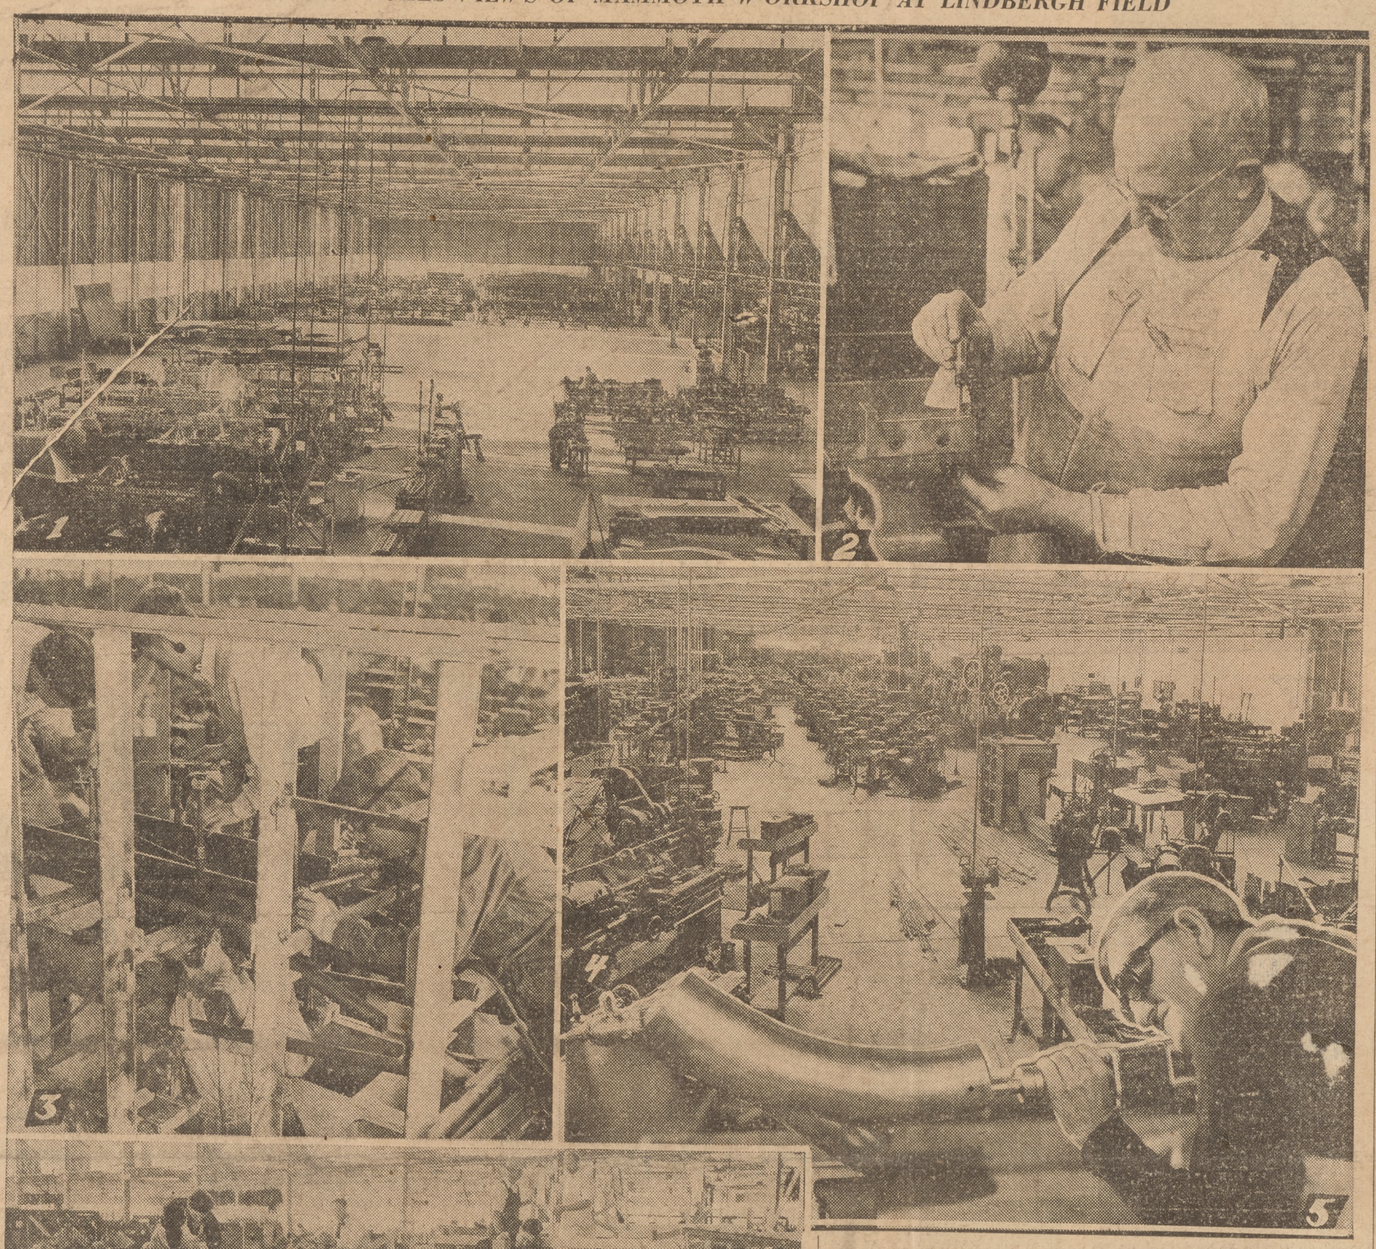
BEST ARTISANS MOBILIZED FOR BIG AIRCRAFT PLANT HERE

CAMERA CATCHES VIEWS OF MAMMOTH WORKSHOP AT LINDBERGH FIELD



—Consolidated Aircraft Corp. photo by Otto F. Menge.

A veritable machinist's paradise with the latest lathes, grinders, shapers, planers and a hydraulic press capable of exerting a pressure of 150 tons is included in the Consolidated Aircraft Corp. plant at Lindbergh field. 1—A view north from the center of the plant. 2—Emmett Clark, machinist for more than 40 years, checking a machined piece. 3—Welders fusing the engine support framework into a single piece. 4—The machine shop. 5—Grinding burrs from inside an exhaust stack. 6—Flying boat hull buck or framework upon which hull is built.

PERSONNEL OF 1850 GATHERED AT CONSOLIDATED FACTORY TO PRODUCE LATEST TYPE PLANES

By NORMAN DAVIDSON

At this date some 1850 persons concentrated at one spot on Lindbergh field are expending airplane building effort to the tune of 75,000 man-hours a week. This is the Consolidated Aircraft Corp., by far San Diego's largest manufacturing plant and likewise the largest manufacturing employer in this area. Yet few San Diegans have formed a definite conception of the size of the personnel involved and fewer still have a conception of the effort that has been expended to date and the amount that daily is being expended within the huge plant.

The quiet building and mobilization of personnel at the time when publicity was focusing attention upon our current attraction of the Exposition tended to divert public attention away from the miracle performed on Lindbergh field in the scant few months since ground was broken, and a subsequent military policy attending the present contracts has continued to shield the tremendous activity from public view.

Those who have been privileged by brief views of the plant in operation, however, have been amazed that so much could have been created, and organized to present running schedule, in such a brief time. And further amazement comes too when the answers to the questions most frequently asked are learned: How many San Diegans now are playing a part in this organization? What has been the total of those who came here from the east? And just how are these 1850 skilled workers whose number grows almost daily, employed and what are the ramifications in which they find their daily employment?

586 San Diegans

So far nearly one-third, or 586 San Diegans to be exact, drawn exclusively from this area, now are working at Consolidated. Approximately 500 persons came here from the east since the plant was established, bringing their families to swell San Diego's population. That our late eastern citizens are rapidly becoming San Diegans is attested by the fact that they already have learned to pronounce the Spanish J as H and even complain of the "unusualness" of the weather which denies them use of the local golf courses occasionally at this time of the year. The remainder of the present personnel was drawn from all parts of the United States with a heavy emphasis upon the west coast area.

The multitude of jobs necessary for the rapidly approaching 2000-mark, can best be gained from a rough picture of how the plant operates.

The manufacturing process starts early with the engineering department formulating a new aircraft design in anticipation of the current trend, whether this be along military lines as at present, or for commercial requirements. The engineers labor for months over the fine points of performance requirements, the potentialities of new fabrication methods which make these performances possible and the latest innovations gleaned from the maze of technical data secured from the leading aeronautical laboratories of the world. To this is added knowledge gained from engineering experimentation within the plant. The result so far has been to thrust Consolidated into the lead with every indication of continued leadership and futhure growth.

Trial Ship Built

Once the design has been formulated, a first trial ship is built in the shop by a virtual hand-made process with the skill and dexterity so essential in aircraft workers, thorough testing follows, for proof of engineering soundness. Engineering problems and details which were not fully anticipated on the drafting board are settled and the plans released to the tool designers, who gauge the engineering requirements to the size of the contract, the tools of the plant and the exacting requirements of so complicated a mechanism as the modern flying machine.

A single plane design calls for hundreds of special tools in the form of jigs, fixtures, form dies, templates, bucks, etc., in addition to the hundreds of standardized tools of the shop and those obtainable from firms specializing in aircraft industry requirements. A seeming-

LONDON PARLEY EMPHASIZES NEW NAVAL BUILDING

Action of the London naval conference in limiting the construction of heavy and light cruisers emphasizes, local naval officers say, the navy's program for building up destroyer, battleship, aircraft carrier and auxiliary tonnage in the next five years. Under the existing treaty no more light cruisers can be laid down for the navy until 1943 and heavy cruisers until 1949 beyond what already have been provided for by congress.

The navy has completed and in service 15 of the heavy cruisers. Another, the Quincy, will be finished in April. The Vincennes will be commissioned in 1937 and the Wichita in 1938, completing the heavy cruiser category and giving the navy a total tonnage in this class of warships of 172,425. The treaty provides for 180,000 tons.

In addition there are now on the ways in varying stages of completion seven 10,000-ton cruisers carrying six-inch guns, ships which are heavy cruisers in size but rank as Class B ships because of their lighter armament.

There are 18 light cruisers completed, ships less than 8000 tons in

S. D. Air Factory Builds Fighters For Uncle Sam

The San Diego plant of the Consolidated Aircraft Corp. now employs more than 1850 persons on two daily shifts.

One of the newest, yet foremost firms in the aviation manufacturing industry, Consolidated, under the executive management of Maj. Reuben H. Fleet, president, makes San Diego one of the centers of aviation activity on the Pacific Coast and holds out promise of jobs to San Diego's youth.

The plant is now engaged in building 50 two-seater pursuit planes for the Army Air Corps, under a contract with the War Department. The first of these already has been delivered, and the balance will be flown away at the average rate of eight per month.

The huge Naval flying ship which recently made the record non-stop flight from the Panama Canal zone to San Francisco Bay is a product of the Consolidated plant. This plane was made in the old Buffalo plant.

Now, here in San Diego, 60 of these flying boats are under construction for the Navy Department.

In commenting on future activity and employment problems, David G. Fleet, assistant to the manager said, "Many persons can not understand why they are not hired after placing their application for employment with us.

"The fact is that aircraft production is highly specialized and a very high degree of proficiency is required of all persons seeking employment, as their work must pass rigid plant and government inspection.

"Due to industry having been centered on the east coast, the demand for skilled craftsmen on the west coast has been very limited. Consequently, there is a comparatively small number of persons here who are qualified for work in the various departments engaged in manufacturing these planes.

"Consolidated Aircraft Corp. is employing graduates of the better airplane trade schools, particularly those who have had training in sheet metal construction work. And there is every reason to believe that we will continue to provide opportunities for employment of these graduates.

"While many so-called 'white-collar' workers are never sure of a job, the man who has learned a trade—and who is good at the trade—need never fear for unemployment."

Production work in the plant is termed "progressive" as the raw stock enters at one end of the plant and the parts made and then assembled at the opposite side. The planes take form without lost motion or duplication of effort.

When a plane is finished, William B. Wheatley, chief test pilot, takes the planes aloft. He holds a commission as a first lieutenant in the Army Air Corps reserve, and inaugurated the air-mail service between Albany, Buffalo and Cleveland in 1928. He joined Consolidated in 1929.

One of the many important positions is that of metallurgist, held by Thomas J. Galvin. He must test all incoming material.

One of the oldest employes is S. J. Newitt, who lives at 2616 El Cajon-av. Newitt is in charge of inspection of the finished parts and has been with the firm for 11 years.

The production of planes and the chance of steady employment has acted as a magnet. Among the 1850 employes can be found workmen from nearly every state on the Atlantic and Pacific seaboards. These workmen have made San Diego their new home.

Consolidated Air Plans New Preferred Issue

CAPITAL SOUGHT FOR EXPANSION

Would Offer Convertible Stock to Holders of Common; $3 Preference

CALLS MEETING APRIL 29

SAN DIEGO — Consolidated Aircraft Corp., which last year moved from its leased plant in Buffalo to its own much larger and new plant in San Diego, has found its present facilities inadequate. To reimburse its treasury in part for capital expenditures already made, and to acquire additional plant facilities, the corporation now plans to create a convertible $3 preferred stock which will be offered to common stockholders.

A special meeting of stockholders of Consolidated Aircraft Corp. has been called on April 29 to authorize 60,000 shares of no par value preferred stock. It is planned to issue only 24,000 shares of the new stock at this time and to reserve the remaining 36,000 shares for issuance in the future, when needed and with such designations as shall then be decided upon, except that none shall have rights prior to the 24,000 shares which the corporation is now planning to issue.

Convertible Into Two Common Shares

The 24,000 shares are to be designated "convertible $2 preferred stock," non-cumulative, and convertible at the option of the holder at the rate of one share of preferred to two shares of common stock and will be callable at $55 a share.

It is expected that as soon as the stockholders authorize the new preferred stock and the necessary registration made under the Securities Act, the present stockholders will be offered the right to subscribe for one share of the new convertible $3 preferred for each 25 shares of common held at $50 a share.

Consolidated has outstanding 574,000 shares of common stock for which there will be required the reservation of 22,976 shares of the new preferred. The remaining 1,024 shares would be reserved for sale to certain employes at the same subscription price as offered to common stockholders.

It is understood that an underwriting agreement has been entered into with Hammons & Co., Inc., and Hammons & Co. incorporated in California, for the underwriting of shares not subscribed for by the shareholders.

In his letter to stockholders calling the special meeting, Major R. H. Fleet, president of Consolidated, said that world conditions point to rapid development in the aviation industry, and the corporation should be prepared for its share of additional business by expanding plant facilities.

Consolidated now has more than 2,000 persons on its pay rolls working on an order for 50 pursuit ships for the Army and is preparing for construction of 60 twin-engine flying boats for the Navy. These two contracts comprise a large part of the $9,000,000 of undelivered business now on the books of the corporation.

Stockholders have also been asked to vote on the proposal to deny all preemptive rights to subscribe to any additional issues of stock other than the 22,976 preferred shares now contemplated.

Fleet on Preemptive Elimination

"The management believes that it should also request the stockholders to amend the certificate of incorporation so as to eliminate, in the future, preemptive rights," Major Fleet said. "A preemptive right is the right of a stockholder to subscribe for his proportion of an issue of additional stock. This right, under the Delaware law, may be limited or denied in the certificate of incorporation. Unless this certificate does deny this right, however, it is necessary, before additional stock may be sold, first to offer it to stockholders.

"This procedure frequently results in failure to obtain on the best terms the desired capital because stockholders, whether or not they subscribe, must be given a certain period in which to make up their minds, and this delay may result in our missing an advantageous capital market. The elimination of preemptive rights does not mean that the corporation will be unable to offer subscription rights to its stockholders, but that it will be free to procure additional capital if and when necessary in the shortest time and on the best terms."

MOTORS LIMIT SIZE OF PLANES, SAYS GOTT

SD SUN 8/18/36

Power plants will limit the size of flying boats, Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp., told the Executives Association in U. S. Grant Hotel yesterday.

Development of more effective and lighter power plants and all-metal plane construction have been the reasons for the tremendous advancement in the aircraft industry, Mr. Gott said.

TWO FLIERS KILLED IN MICHIGAN CRASH

ALLEGAN, Mich., Aug. 18 (A.P.) —An army pilot and his mechanic were killed today when a new two-place pursuit plane from Selfridge field, Mich., crashed near Otsego while taking part in the western Michigan war games. Reports received at the operations office at Selfridge field said the plane was piloted by Lt. William W. Harding, 25, air corps reserve, and that his mechanic was Private Francis Maier, of Dowagiac, Mich., Harding's home was in Los Angeles. The plane a PB-2, was one of 18 participating the the war maneuvers. The plane caught fire in flight, Mrs. W. D. Clock, who lives near the scene of the crash, related, and the fliers made an unsuccessful attempt to leap with their parachetes.

THE SAN DIEGO SUN — Sunday, March 1, 1936

Consolidated Speeds War Plane Production

2000 NOW AT WORK IN BIG S. D. FACTORY

Difficulty Of Getting Skilled Men Is Cited By Maj. Fleet

More than fulfilling predictions voiced by its president and general manager, Maj. Reuben H. Fleet, at dedication of its new plant last October 20, Consolidated Aircraft Corp. had nearly 2000 persons on its San Diego payroll as of yesterday.

As rapidly as experienced aviation mechanics can be obtained, they are being accepted for employment in the big plant on Atlantic-blvd to speed up the work of filling two government aircraft contracts for 50 Army pursuit ships and 60 twin-engined patrol bombers for the Navy.

MAJ. R. H. FLEET

Work Pushed

Two eight-hour shifts are in effect at the plant.

In addition to the general office, engineering, factory non-productive and factory productive personnel, nearly 100 San Diego youths have been accepted as apprentice aircraft mechanics at somewhat more than the minimum scale for such employes, Maj. Fleet said.

"While these youngsters cannot be expected to contribute much to production while learning, and in addition require the supervision of experts who are thus kept away from the actual production of which they are capable, we of the aircraft industry accept the responsibility for training the newcomers in the rapidly growing airplane building business," the president explained.

Future Value Seen

"Many of them already show definite promise of becoming valuable men, we are glad to say."

Rumors that mechanics were being paid as low as 38 cents per hour at the Consolidated plant arose from the fact that the apprentices are started at that rate of pay, the Major said.

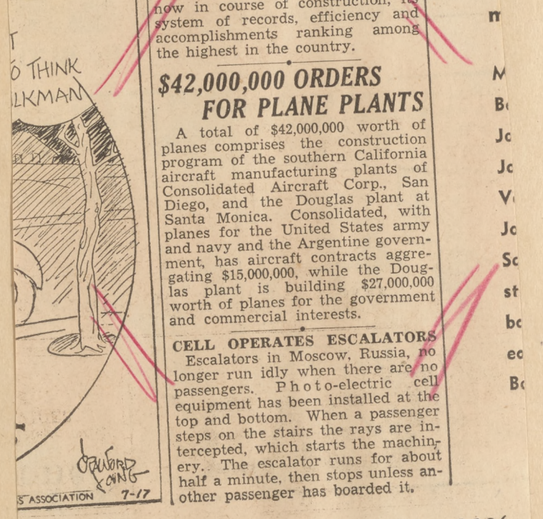
"We pay the highest wages in the industry for qualified men," he stated, "which is indicated by the fact that one other aircraft company has complained some of their men came to us by preference."

Most Jobs Responsible

Maj. Fleet showed a daily employe report for a recent day. Of the 1894 persons on the payroll that day, 43 were in the general office, 105 in engineering, 240 in factory non-productive work, and 1506 were engaged directly in productive work. Two hundred and eight-five persons were on salary and 1609 on hourly wages.

Indicating the demand for qualified aircraft mechanics, Maj. Fleet pointed out that the Douglas plant at Santa Monica, which exceeds the Consolidated plant in size by nearly 50 per cent, is to be expanded in the near future and that it eventually will require 6,000 mechanics. With expansion of other aircraft factories in Southern California, the demand will be intensified.

"This does not mean that we can open our doors to hundreds of unskilled men and undertake their training, however," the Major explained.



AA class among similar projects now in course of construction, its system of records, efficiency and accomplishments ranking among the highest in the country.

$42,000,000 ORDERS FOR PLANE PLANTS

A total of $42,000,000 worth of planes comprises the construction program of the southern California aircraft manufacturing plants of Consolidated Aircraft Corp., San Diego, and the Douglas plant at Santa Monica. Consolidated, with planes for the United States army and navy and the Argentine government, has aircraft contracts aggregating $15,000,000, while the Douglas plant is building $27,000,000 worth of planes for the government and commercial interests.

CELL OPERATES ESCALATORS

Escalators in Moscow, Russia, no longer run idly when there are no passengers. Photo-electric cell equipment has been installed at the top and bottom. When a passenger steps on the stairs the rays are intercepted, which starts the machinery. The escalator runs for about half a minute, then stops unless another passenger has boarded it.

"SAN DIEGO TRIBUNE" July 17th, 1936

ARMY AIR CHIEF VISITS S.D.PLANT

SD SUN — 8/18/36

Inspection of the newest and most modern aircraft factory in the United States, if not in the world, occupied Maj. Gen. Oscar Westover, chief of the Army Air Corps, today.

Gen. Westover was escorted through the Consolidated Aircraft Corporation plant by Maj. Reuben H. Fleet, president and general manager. Accompanying the Air Corps chief were Col. Robert Goolrich, commanding officer of the Shreveport, La., Army air base; Col. Jacob Wuest, commander of Rockwell Field Army Air Corps repair depot, and Maj. Leland C. Hurd, Army Air Corps chief test pilot at Consolidated.

Gen. Westover and his aides were guests of Maj. and Mrs. Fleet at an informal luncheon at the plant official's home today. Gen. Westover planned to continue his tour of Air Corps bases tomorrow.

Consolidated

At the **Consolidated Aircraft Corporation,** San Diego, California, production is being rushed to complete 60 PBY-1 patrol boats for the Navy which must be completed by the first part of the coming year. In addition there are 50 PB-2A pursuit planes under construction which will be completed before mid-summer.

Plans are now being completed for an experimental building in which the company can enter into secret development of large military aircraft for the U. S. Government. The building will be 200'x200', or large enough to assemble an aircraft with a wingspread of almost 200 feet. To the experimental building will be added a warehouse, giving a total floor space for the building of 97,300 square feet. Seventy-five thousand square feet of floor space will be added to the present factory building also.

The Consolidated expansion program calls for a tool and fixture storage building 50'x100', and an additional 10,000 square feet of floor space to be added to the present paint department. A photographic, physical, and chemical laboratory will also be constructed, according to present plans.

When the new buildings are completed, it is expected that present force of 2,000 employees will be doubled, which will double the company's capacity output.

AVIATION: Consolidated Aircraft Brings to the West Country's Second Largest Plane Factory

(NEWS REVIEW will, from time to time, publish such stories as the following, concerning Pacific Coast industrial units which are establishing the West's future great economic position. In choosing as its first subject, Consolidated Aircraft Corporation, NEWS REVIEW was prompted by two considerations: first, the fact that Consolidated is, today, the largest manufacturer in the West's most southerly metropolis; second, that its history illustrates the continued centralization of aviation on the Pacific Coast.)

Situated in the southwestern corner of the United States, San Diego possesses ideal conditions for the development of an aviation industry. Consolidated Aircraft Corporation, second largest manufacturer of commercial and fighting craft in the country, moved to San Diego last fall, however, for more reasons than ideal flying weather and a good business deal. At San Diego is the Naval Air Base and a large part (90 per cent) of Consolidated's production is on army and navy contracts, deliverable at San Diego.

Nevertheless, the movement of Consolidated to San Diego from Buffalo, New York, brought to the California city its largest industrial unit. Last month, Consolidated was employing over 2,000 persons, putting finishing touches on its $700,000, already-enlarged, plant, adjacent to Lindbergh Field.

Consolidated was organized in Delaware on May 29, 1923, by Major Reuben H. Fleet, president of the concern ever since that date, [redacted]. The elder Fleet entered aviation through air service in the World War, became business manager of the engineering department of the Air Corps at Cook's Field, Dayton, Ohio, from which post he resigned in 1922. He became vice-president and general manager, at that time, of a Rhode Island airplane manufacturing concern, resigned in 1923 to start his present company in the same state. Two years later the company began operations in Buffalo. Consolidated decided on its western migration in 1935, is now firmly entrenched, in its sprawling buildings at Lindbergh Field, as San Diego's pride.

Present production of Consolidated centers around its own pride, its PBY-type planes, 60 of which are now being primed for Navy delivery before the fall of 1937. Two-motor planes, similar in lines to the familiar China Clipper, they have greater speed and longer cruising range than the larger trans-Pacific flying boats. Few days before Consolidated's San Diego plant was formally dedicated on October 20, 1935, one of these Consolidated boats flew from Panama to Alameda, California, 3300 miles, setting a long-distance record for flying boats. Beside these ships and the small-type planes, like the fighting ship illustrated on page one, Consolidated has manufactured a commercial sea plane, used currently by Pan-American Airways. Fourteen of these ships have flown, since 1930, without loss of life or serious plane accident. Consolidated's wholly-owned Canadian subsidiary, Fleet Aircraft of Canada, Ltd., manufactures primarily a small two-place training plane.

Consolidated's authorized stock numbers 1,200,000 shares, outstanding, 574,000; par value is $1. Currently, stock sells on the New York Curb and San Francisco Stock exchanges at around $16. Price range in 1934 was $12¾ to $6½, in 1935, $16¼ to $7¾; high point this year was $23¼. A $3 preferred stock issue of 24,000 shares was authorized on April 29; last year's profit was equal to

Toward the lower right-hand corner of this bird's-eye photograph of San Diego's Lindbergh Field can be seen, in sharp, black outline, the new buildings of Consolidated Aircraft; San Diego's Lindbergh Field, on which the government has spent $700,000 to double its size recently, is close by the Naval Air Base, where Consolidated is making delivery soon on much of its current $9 million government contracts.

NEWS REVIEW FOR JULY 6, 1936

Western Flying June 1936

Consolidated

Following a definitely outlined program of expansion, the **Consolidated Aircraft Corporation,** San Diego, California, has awarded a contract of $138,832 to the Consolidated Steel Corporation of Los Angeles for the construction of six additional factory units. The new buildings will adjoin the present Consolidated factory now located on Lindbergh Field.

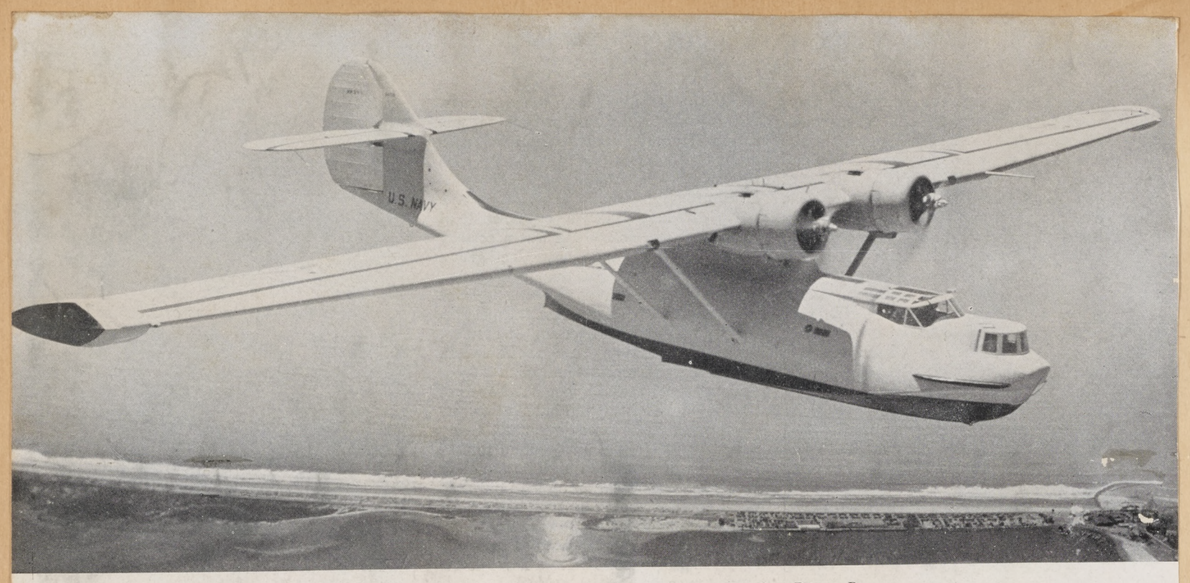
"We Can Therefore Assume that the Flying Boat of the Future Will Be of Considerably More Value Both for Carrying on Naval Functions and for Transoceanic Commercial Purposes. Any Development Carried Out in the Interest of One Will React to the Benefit of the Other."

U. S. Air Services March 1936

EDGAR N. GOTT

IT WAS a sincere pleasure to receive a call from Edgar N. Gott, last month, and be told that he would represent the Consolidated Aircraft Corporation at the capital. Mr. Gott is looking fit, and no wonder, for he has been luxuriating in the famed climate of California, supervising on his large farm whatever it is that must be done to insure bumper crops of that clover-like plant of the bean family known as alfalfa. But there is something about aviation that can't be got by hanging around even the slickest alfalfa.

So Mr. Gott, who is an outstanding aeronautic executive, with much to his credit during many active years for Boeing, Keystone, and others, in disposing of aircraft to the military and naval flying services, will be active again, this time for the highly successful company headed by Major Reuben H. Fleet. Mr. Gott's address at present is: Westchester Apartment, Washington, D. C.

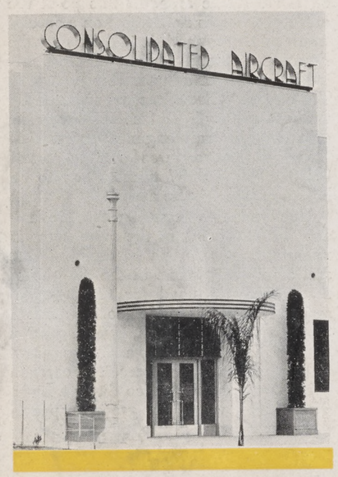


Famous Consolidated XP3Y-1 flying boat cruising over San Diego Bay.

WARRIORS OF THE AIR

SAN DIEGO, scene of many of aviation history's outstanding achievements, is the home of The Consolidated Aircraft Corporation's giant new plant. A visitor, entering the northern outskirts of the city is oftentimes accorded the treat of seeing one of the army pursuit planes, product of this firm, being put through its paces by a veteran test pilot. Almost as swift as sound, these planes streak through the air at amazing speeds as gracefully as a swallow—but with far more deadly intent. Perfectly streamlined, every angle smoothly curved, these are engines of destruction—designed to outspeed and outsmart the enemy. Even in time of peace the age-old adage, "survival of the fittest" is being manifested in our eternal quest for something that is more dangerous—more destructive—than that possessed by our potential enemies.

In the 900-foot-long Consolidated building at Lindbergh Field, 250,000 square feet of floor space is covered with modern machinery, stockrooms and work benches, comprising every up-to-the-minute facility for the manufacture of latest type pursuit, bombing and commercial planes. The building, which is of sawtooth construction so as to admit plenty of natural light, is the very acme of engineering efficiency. It is so arranged that raw materials are unloaded at one end and they proceed, through stockrooms and the various manufacturing processes, down one side and back the other and emerge, in the form of a finished plane, not a hundred feet from the point where they entered as raw materials.



PENNZOIL
Protects all Consolidated Aircraft During Their Crucial Test Flights

★

Two thousand skilled workers are employed at Consolidated at the present time. Work is well under way on U. S. government contracts calling for 110 planes at a total cost of $9,000,000. Another $1,000,000 of foreign government business is on the books. Giant "flying boat" bombers are being built for the navy, while the army has ordered a large number of the speedy, heavily armed, two-man pursuit planes previously mentioned. One of the most interesting things pertaining to their manufacture is the fact that only ten planes are being built each month—despite the fact that 2000 men, putting in a total of 90,000 hours a week, are working at top speed in order to maintain production. The answer is a precision in workmanship and methods that has been heretofore unknown to industrial enterprise. Every part of these planes must be perfect—and there's no guesswork. No better work goes into the making of a fine watch than that which it takes to build the modern airplane.

The manufacture of Consolidated's planes begins on the drawing board. Every last detail is worked out mathematically before a lathe turns. The engineering department is constantly at work on new aircraft designs—trying to anticipate the future trend for military and commercial requirements. With information at hand from the leading aeronautical laboratories of the world. these en-

(Continued on Page 15)

1936
June

U. S. Air Services May, 1936

FOUR MODEL PURSUIT PLANES were received April 15th by the Matériel Division of the Air Corps at Wright Field, Dayton, Ohio, for testing after bids submitted by the Curtiss Aeroplane Company, of Buffalo, N. Y.; Chance Vought (division of United Aircraft Corporation), of East Hartford, Conn.; Seversky Aircraft Corporation, of Farmingdale, Long Island, N. Y., and the Consolidated Aircraft Corporation, of San Diego, Calif., were opened.

These four Pursuit planes will now undergo rigid tests by Air Corps boards to determine their engineering and maintenance features and their military suitability as to type. At the conclusion of these tests, about the middle of June, contract for about 150 Pursuit planes will be awarded by the War Department to the winning company.

At the Capital for Consolidated Aircraft Corporation

WARRIORS OF THE AIR

(Continued from Page 6)

gineers work out the fine points of performance requirements—of potential fabrication methods—until finally all preparatory developments are complete. Then comes the supreme test—a trial or experimental ship is built, virtually by hand.

These experimental ships are subjected to every known test within the plant. Engineering problems which had not fully been anticipated on the drafting board are ironed out and finally the ship is flown—but only after it has been proven sound from an engineering standpoint. Government specifications must be met. If the plane falls short in any respect it will not be considered. When that happens—which is not often because of the precision methods involved—it just has to be charged up to experience. It's a pretty stiff price to pay, too, because the first plane is always, by far, the most expensive. In the case of the huge Model XP3Y-1 flying boat which was built for consideration by the navy, the craft flew 3000 miles non-stop in one of its official tests. Incidentally, Consolidated was awarded a contract for a large number of these ships.

Under mass production methods, a single plane design calls for hundreds of special tools besides those found in the shop and those which are obtainable from firms which specialize in aircraft industry requirements. As a result, it is necessary to make these items, and this job provides occupation for many skilled workmen in the Consolidated plant. Tool designers formulate the plans and the tool makers tax skill, precision and experience to the limit in order to build into the tools those qualities which will give the finished part the high standard of perfection which is required.

Simultaneously with the release of plans to tool designers, a planning department begins the routing of materials through some 18 departments in the plant which synchronizes the activities of the various departments and insures smooth functioning of the plant as a whole. With operating plans laid out, the plant begins production as a unit. Each man knows his job, and the hundreds of different parts required begin their trek from raw material, through the various operations, until finally they are assembled to make a complete job. Every part of the planes now being manufactured is made of metal, not one piece of wood being used in their construction. Every operation is checked and double checked by plant and army or navy inspectors, every device known for the detecting of metal faults, etc., being utilized.

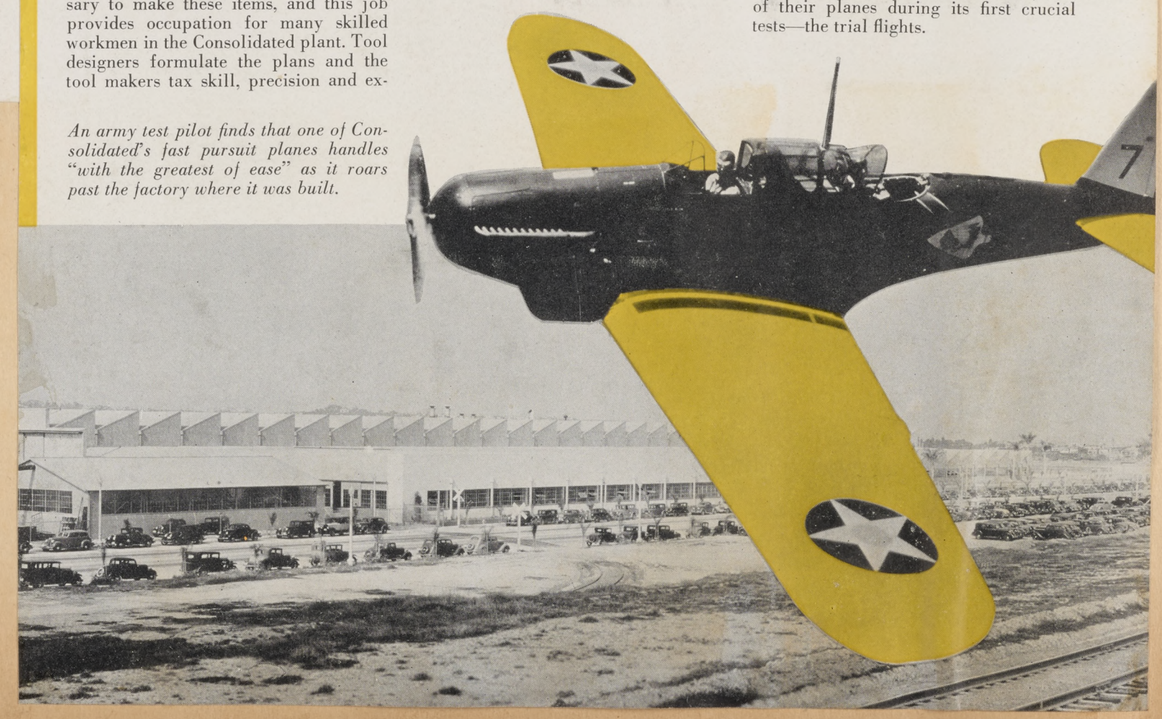
Thousands of rivets are used in the manufacturing process, a machine making them from aluminum alloy wire stock. The rivets are heat treated, softened up and are stored in a large electric refrigerator. From here they are taken to smaller refrigerators on wheels at convenient locations near assembly lines. It is necessary to keep them at a low temperature because they tend to age or harden if exposed to room temperatures.

Every engineering drawing specifies not only the material from which every part is to be made, but the treatment it is to get before, during and after fabrication. A complete chemical and physical testing laboratory is maintained within the plant for testing these various stages and it is constantly being utilized as a double check on the rigid inspection conducted by plant and government inspectors.

In the final stages of assembly, the army pursuit planes turned out by Consolidated are fitted with 12 cylinder V-type supercharged aviation engines, developing 700 horsepower. The navy flying boats are equipped with two radial motors each developing 900 horsepower. When completed, each plane is carefully checked over, after which it is fueled, the motor filled with PENNZOIL, and it is ready for the trial flights.

All the research and experimental effort of Consolidated's engineers, the mathematical preciseness of their draftsmen and the skilled workmanship of their hundreds of highly trained employees are focussed on one thing—the production of a ship that will exceed the buyer's specifications and that will be as safe in the air as human ingenuity can make it. It is an acknowledged fact that proper lubrication can spell the difference between success or failure when it comes to meeting with government specifications for their air fighters. The Pennzoil Company is indeed proud that PENNZOIL has been selected by The Consolidated Aircraft Corporation to lubricate *every one* of their planes during its first crucial tests—the trial flights.

An army test pilot finds that one of Consolidated's fast pursuit planes handles "with the greatest of ease" as it roars past the factory where it was built.



....And Consolidated Was Born

By W. H. HITCHMAN

Consolidated Aircraft has been making aviation records fly in many directions. Few months ago it moved from Buffalo, New York, to a new and larger factory at San Diego and is now busy fulfilling Government contracts. The author—"Hitch" to his many acquaintences—is with the aviation division of Shell Oil Company in Los Angeles and is West Coast correspondent for this magazine.

WHEN Major Reuben H. Fleet, then a flying cadet at Rockwell Field, San Diego, was practising Figure 8's during the Late Great War, he often thought he would like to build 'planes in the land of Eternal Sunshine. Today, nineteen years later, he is not only at the helm of one of the world's largest aircraft factories in the Sunny South, but has had the satisfaction of seeing one of his Company's ships give to America the World's Long Distance Record, not as a personal venture, but as a militarized unit of the United States Navy, under full military load. Not long ago a Long Range Patrol Boat (X P 3 Y 1), built by Consolidated flew from Coco Solo, Panama, C. Z., to San Francisco, California, in thirty-three hours!

Flying Cadet Fleet moved rapidly upwards in the U. S. Army . . . a Captain . . . a Major. He was Commanding Officer at Sacramento's Mather Field; Contracting Officer for the United States Air Corps at crack McCook Field, Dayton, Ohio. Responsible for the inauguration of the first official airmail, he actually flew one of the three 'planes from New York to Washington, D. C. He resigned from the Air Corps with much manufacturing experience behind him, became General Manager for Gallaudet Aircraft at East Greenwich, R. I. Work slackened and Major Fleet decided to form his own Company, using the manufacturing facilities of the Gallaudet Company and the engineering services of the Dayton-Wright Company, of which latter outfit the well-known Colonel Virginus E. Clarke was then Chief Engineer . . . and Consolidated Aircraft, incorporated for $25,000, was born. Thirteen years later its assets total nearly three million dollars, and it has a record of delivered business in an amount exceeding twenty-three millions of dollars.

Consolidated, in its first years, specialized on training types of ships and Consolidated Training Planes became standard for both the U. S. Army and Navy. Many thousands of military pilots earned their wings in these sturdy ships.

Now a subsidiary, Fleet Aircraft of Canada, makes training aircraft. At the present time they have many foreign orders, for both military and commercial trainers; sixteen Trainers for the Mexican Government and ten similar ships for the Royal Canadian Air Force, to say nothing of a complete range of parts for 110 Fleet Trainers operating in China!

The East Greenwich quarters soon became too small. In Buffalo, New York, there stood the great war-time Curtiss Airplane factory. Consolidated leased a portion of it, promptly branched into other lines. Fast transports were designed and built; attack and pursuit aircraft were built for the Army, and large patrol-type flying boats for the Navy. No less than sixty-two of these flying boats have been manufactured in the last seven years and all are still flying . . . a record unparalleled in the history of Aviation.

By 1935 the manufacturing situation had again grown so acute that factory and families were again moved . . . to the place of Reuben Fleet's early day dreams . . . San Diego. Here seaplanes . . . and especially the big patrol-type boats, could be cradled on wheels to deep Bay water. Here non-flying days were practically nil, and sub-zero flying conditions were always absent. In less than a year Consolidated's new plant, covering a quarter of a million square feet of space, has been erected, production has been started and airplanes are being delivered at the rate of ten a month! The immensity of moving can be imagined when it took place in the middle of a large contract and tools and jigs were dismantled, packed, shipped, set up in the new plant.

Chief Engineer is I. M. Laddon, and many a famous ship has first taken shape on the immense Laddon drawing board. At present no new aircraft designs are contemplated by Consolidated; instead, considerable money and effort is being expended to refine the famous ship that put the United States Navy's long range Patrol Boats so far ahead in the world.

W. B. Wheatley is Test Pilot. To him, and every other Test Pilot in the aircraft factories of the world, is the grave responsibility of first finding out what "bugs" there are in a new type of ship. Not one ship has Wheatley "washed out", not a ship has he cracked up and he has never "bailed out." Consolidated's ex-U. S. Mail Pilot has had good ships under him and every one has been safely landed on Mother Earth again.

Roughly, around 2,000 men go to make up the bench hands, sheet metal workers, riveters, machinists, tool and die makers, assemblers, heat treaters, spray painters, clerks, stenographers, executives, and a most competent telephone operator imported from the U. S. Army Air Corps at Rockwell Field, that is known as Consolidated Aircraft.

At left, model PTIIC Seaplane, one of the trainers for which Consolidated is noted. At right on opposite page is the XP3Y-1 which made the record flight last October with Lieut. Comdr. Knefler McGinnis at the extreme left of the crew of six.

The Major, six-foot, blue-eyed and thorough-going, is a busy man and takes plenty of toll from his own iron constitution. He delegates responsibility through his department heads, is brief, to the point, and has one idea firmly fixed in his mind. That idea is "Performance." It is Major Fleet's fetish in life. Opportunity never knocked on hard-working Major Fleet's door twice!

Quiet, slim, son David is general factotum and keeps his big organization harmoniously knit together, working for a common cause. Of present day engines he said he'd like to see motors of 2,000 to 2,500 H.P. built. "Generally speaking" said he, "engines are behind airplane development. Today we can use engines of greater output, and the new Wright and Pratt Whitney Motor, developing a 1,000 H.P. plus is the only engine we can count on right now, but we're ready when more power in single units is available."

Of the men, David Fleet said "We have had and continue to have difficulty in obtaining skilled help. This is primarily due to schools of different kinds turning out too many scholars and white-collar men and not enough craftsmen. It is physically impossible to give every one in the country a white-collar job, and many a hundred thousand boy should learn a trade. He would rarely be without a job, he would have technical knowledge, be a master of his trade and all the amazing short-cuts thereof, and be a real asset to his intelligent employer. He would have an immense amount of self-respect, be reliant, reliable and resolute. In terms of modern working conditions he would be his own master for never yet have we fired a competent worker." Major Fleet's company has hired many a youngster from approved type technical schools.

Men who get into a jam (and what society of men far less numerous than Consolidated's 2,000 never gets into some sort of a jam?) have recourse. The many foremen in the plant have the right to fire a man for such things as incompetence, insobriety, insubordination . . . or other causes which do not make for hearty, intelligent work. So much depends upon the last minute detail of each man's job . . . nothing less than the lives of the pilot and crew when the ship is aloft . . . but any man can take his troubles, real or fancied, to Production Manager Van Dusen for a fair, impartial and unbiased hearing. Van Dusen has a knack of getting down to the essentials of life; if a man is evasive, shifts uneasily, won't look his fellow workers in the eye, it's a score against him. Nevertheless the smallest details are gone into and the man is either upheld or dismissed. Few, incidentally, are let out.

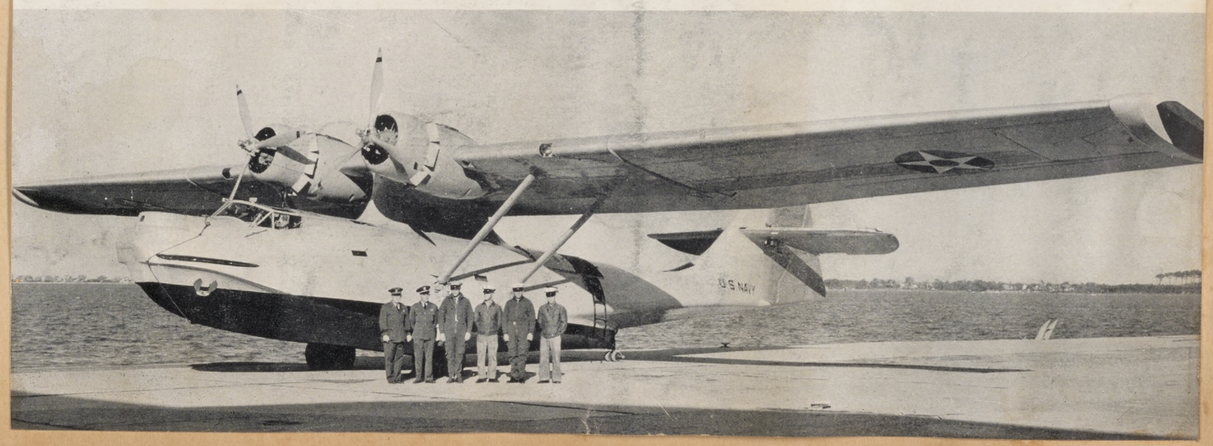
At the present time Consolidated is building fifty two-seater pursuit planes for the U. S. Air Corps and sixty Long Range Flying Boats for the United States Navy. It would be interesting to see one of these flying boats converted into a passenger carrier! Perhaps someday in the near future famous, potent Consolidated will also be building mighty clipper ships for use on the sealanes of the World.

Welding a steel attachment fitting in Consolidated's plant.

Air Traffic Increases

While domestic air lines carried fifty per cent more passengers in 1935 than in 1934 (860,761 carried in 1935), indications point to an even bigger year for 1936. Nineteen of the twenty scheduled air lines carried nearly 15,000 more passengers in March of this year than in the same month of 1935, while eighteen companies carried approximately 300,000 more pounds of express. The current gain over last year may be shown by the following report for March.

	March 1936	*March 1935*
Reporting companies	19	21
Passengers carried	70,123	55,198
Passenger miles flown	31,615,386	24,750,894
Express carried (pounds) ..	535,541	238,369
Express pound miles flown ..	280,688,857	155,673,202
Miles flown	4,834,699	4,125,991
Passenger seat miles flown ...	50,646,932	41,147,967
Percent used—seats	62.42%	60.15%



tor attack ships were used in the design of the structure.

San Diego's largest aircraft factory is, of course, the one built by Consolidated in 1935 and added to repeatedly during 1936. At present, this factory, the second-largest on the West coast, employs about 3000 men and runs day and night producing Navy patrol boats and two-place pursuit ships for the Army.

The boats, now known as PBY-1s, were designated XP3Y-1s originally, and under that baffling title made history with their formation flight to Coco Solo, Canal Zone, last year. Powered with two Twin-Wasps, they are built for long-range work and have a span of 105 feet.

The PB-2A, two-place pursuit, ranks first among the Army's high altitude performers. A number of these were built in the company's Buffalo plant, before the San Diego lay-out was finished, and delivered to the G. H. Q. Air Force, where for a time they shared with the Martin bombers the doubtful honor of being the only modern airplanes in the Army. With the completion of the new plant, regular production on these ships was begun.

Reuben H. Fleet, after whom the company's first and probably most famous airplane was named, is president of Consolidated.

Western Flying Oct. 1936

Consolidated

A total of 185,300 square feet are being added to the floor space of **Consolidated Aircraft's** new plant in San Diego, bringing the total floor space up to 432,141 square feet, an increase of approximately 75 per cent over the original area. The main factory additions equal 65,000 square feet; paint shop, 10,000; tool and fixture storage building, 10,000; paint and oil storage, 2,000; and the experimental building, 96,300. In addition to the expansion of the plant an overhead monorail system consisting of 6,755 feet of track is being installed.

The construction, which started in July, should be completed by the first of November.

Consolidated Aircraft employees introduced a new house organ to the aviation industry with the publication of the first issue in September.

Factory Record in S.D. Plane Award

"SD Union" July 16 '36

FIFTY SHIPS FOR NAVY; PLANS NEW BUILDING

Announcement that the Consolidated Aircraft Corp. of San Diego today received from the United States navy two notices of award of contracts aggregating $5,485,115 for 50 giant flying boats and "a secret development of an advanced nature," was made this afternoon by Maj. R. H. Fleet, president.

"Secret Developments"

"The largest of these two awards covers 50 of the same model as the 60 flying boats now under construction at Consolidated," said Fleet. "This is the same design as the boat which was flown non-stop from Coco Solo to San Francisco last October by Comdr. Knefler McGinnis of the navy, breaking the distance record for this type of plane. The record still stands. This same boat, on duty with the fleet, yesterday flew from Seattle to San Diego non-stop in eight hours.

"With today's awards, Consolidated will be in production on a total of 110 units, plus spare parts equivalent to 22 more, or a grand total of 132 of this type of plane for the United States navy. This, we believe, is the largest production of one type of flying boat in the history of American aviation and the largest volume of business so far enjoyed by this company, thus justifying our faith in the future of aviation, our products and the increase of approximately 80 percent in our manufacturing facilities, now well under way.

"The smaller of the two awards received from the navy covers a secret development of an advanced nature. To handle this, Consolidated is constructing a three-story building for experimental and engineering purposes which will provide as fine facilities in this regard as any in the world. It is for this building that the steel piling is now being driven at the south side of the plant adjoining the Ryan addition,'" he added.

Additional flying boats of earlier design now are being manufactured by Consolidated for other nations with permission of the United States government, according to Fleet.

"Also," he said, "this month the plant is finishing an order of approximately $2,300,000 for 50 two-seater pursuit planes for the United States army air corps."

Consolidated opened its plant Sept. 3, 1935. Some 2269 men are employed and the payroll now is approximately $285,000 per month, according to Fleet. "With the completion of plant facilities, 1000 additional trained mechanics will be required as the new facilities are finished, and as fast as they can properly be assimilated," he said.

'Consair' Finishes Last of 50 Pursuit Planes For Army AS New Contract For $5,485,115 Navy Craft Is Signed

As the last of 50 high-speed pursuit planes for the Army was whisked off "the line" last week, Consolidated Aircraft Corp. rejoiced as it received contracts for construction of 50 new Navy flying boats and other aircraft for a combined cost of $5,485,115. Maj. R. H. Fleet, president of the local corporation, described the business as "largest production of one type of flying boat in the history of American aviation, and largest volume of business so far enjoyed by this company."

What's "the dope" on these new flying boats—also the "dope" on the Army ships? Consolidated officials hope to execute another contract with the Army for the pursuit "jobs," too.

"The dope" is that specifications and performance figures are secret and confidential, as far as Consolidated is concerned. But from other sources, and from knowledge of the actual performances of these craft, certain facts are evident.

Distance Flyers

The flying boats are similar to the type which Comdr. Kneffler McGinnis of the Navy flew on record-breaking hops from Coco Solo to San Francisco, and from San Francisco to Hawaii in formation. From the elapsed flying time of these flights, you can figure the cruising speed at around 140 mph. Top speed may be around 170 mph. They are powered with two radial motors which generate a total of about 1400 horsepower.

In appearance they are of the "high-wing" type, a monoplane set on top of a central structure on the boat proper. The motors are built into the leading edge of the wing, at either side of the cabin. There is a single empennage or "tail." This consists of the "fin" and rudder vertically, and the horizontal stabilizer and "flippers." Wing-tip floats are folded into, and then become a part of, the wing surface.

It's no secret—and in fact a proud boast—that these patrol planes "represent the joint development of the Navy and Consolidated," said Maj. Fleet, "and are the most advanced type of military patrol bomber flying boats in the service of any Navy in the world.

"They are, in reality, air cruisers, operating with the fleet. They are self-supporting and do not require hangars or carrier space, being constructed to weather the elements and sea. They can patrol without landing for more than 24 hours, thus affording the greatest security to crew.

Air or Sea

"Landings on water can be made without difficulty since these boats have successfully passed all seagoing tests to which the Navy trial board could subject them. However, forced landings on water should be extremely rare—unless occasioned by an enemy. The motive power of these craft is such that they can fly on one engine."

From the beginning to now the Consolidated has been very secretive about the new Army fighter. But Army pilots who fly them have remarked on their performance—their tremendous speed of 265 mph, their ability and maneuverability at high altitudes, and withal their long range. They are of a two-seater type, powered with a supercharged "in line" motor developing 650 horsepower, and throwing a three bladed propeller.

Secret Plane

About half a million dollars of the new Navy contract will be used for "secret development of an advanced nature." To handle this contract, Consolidated is building a three story building for experimental and engineering purposes which will give this plant as fine facilities in this regard as any in the world.

What will that "secret" plane be? Your guess is as good as anybody's. Only the Navy, Consolidated and the Almighty know. But certain observers can—and have—made good guesses. The gist of them is that it will be a huge four-motored long-distance flying boat similar, but superior to, the "clipper" Martin type used on Pan-America's Oriental service.

MAJ. R. H. FLEET

The layman might ask: why couldn't it be a "super-super" speed plane for the Navy? Improbable. Most of the Army flyers admit that Consolidated's new pursuit ship can not only out-maneuver anything else—but can out-maneuver the human ability of the pilot. That is, the human body isn't of stern enough stuff to put that ship through the limit of its capers.

They say that it's so fast that if you aren't careful about your t[illegible], centrifugal force will "turn out the lights on you"—i.e., draw the blood from your head, cause temporary unconsciousness.

If this is true, then fighting planes have reached the absolute limit of practical speed. Further improvements would be confined to refinements in fighting equipment, protective equipment and accuracy of firing guns or bombs.

AVIATION HISTORY TO BE SHOWN AT 'HATTER' MEETING

S.D. UNION - 8/13/36

Lyman H. Johnson, promotional director for the national air races in Los Angeles Sept. 4-7, will be honor guest at a special "national air race" program at Hi Hatters' luncheon tomorrow noon at the San Diego club.

Feature of the meeting will be the screening of historic aviation movies, "Man's Conquest of the Air," compiled by Zeno Klinker, Los Angeles aviation enthusiast.

Special guests of honor will be Capt. Arthur L. Bristol, commanding Naval Air station; C. A. Van Dusen, vice president, R. S. Madison, secretary-treasurer, and Edgar N. Gott, assistant to the president, of Consolidated Aircraft Corp. William Van Dusen, chamber of commerce official who is in charge of arrangements for San Diego's big aviation round-up Aug. 28, will be chairman.

Freak aviation inventions—which didn't fly—furnish the comic element of the films.

Cons. Aircraft Pfd. Is Offered at $55

8/18/36
WASH. DC. POST

Hammons & Co. are offering today, subject to prior subscription by holders of common stock, 22,976 shares of convertible $3 preferred stock, without par value, of Consolidated Aircraft Corporation at $55 a share.

The registration statement covers also 73,600 shares of $1 par common, 48,000 shares of which are being reserved for issuance upon the conversion of 24,000 shares of the convertible $3 preferred, and 25,600 for subscription by employes.

Proceeds from the offering will be used for construction and equipment of additions to plant, and to provide additional working capital.

The company's plant is on San Diego Bay, Calif.

36 "Wall St. Journal"
AUG 3 - 1936

Consolidated Aircraft Corp.

SAN DIEGO—Consolidated Aircraft Corp. and subsidiaries report for the quarter ended June 30, 1936, net income of $184,950, equal to 32 cents a share on 574,400 shares (par $1). No mention was made of any provision for federal surtax on undistributed profits. In the preceding quarter net profit was $3,730.

For the six months ended June 30, last, indicated net profit was $188,680, equal to 33 cents a share, against $276,143, or 48 cents a share in the first six months of 1935.

Unfilled orders totaled approximately $13,000,000 on June 30, 1936.

The company has 2,269 men employed. With the completion of additional plant facilities 1,000 additional men will be required.

S. D. PLANE FIRM GETS BIG ORDER

Production of Huge Flying Boats to Set Record; $5,485,115 Award Calls For Secret Experiments.

Contracts for construction of 50 flying boats and for a "secret development of an advance nature," totaling $5,485,115, were awarded to the Consolidated Aircraft Corp. by the navy department yesterday, according to announcement by Maj. R. H. Fleet, aircraft plant president.

The largest of the awards was for the flying boats, 60 like models of which are under construction at the plant.

Shattered Distance Mark

The new ships will be of the same design as the boat flown non-stop from Coco Solo to San Francisco last October by Comdr. Knefler McGinnis of the navy, breaking the distance record for this type of plane, Maj. Fleet said.

With the new contract, Consolidated will be working on production of a total of 110 units in addition to spare parts equivalent to 22 more planes.

"This," Maj. Fleet said, "we believe is the largest production of one type of flying boat in the history of American aviation and the largest volume of business so far enjoyed by this company. It justifies our faith in the future of aviation, our products and the increase of approximately 80 per cent of our manufacturing facilities."

Tested Here in June

In explaining the merits of the boats, Maj. Fleet said that they are "air cruisers, operating with the fleet, are self-supporting and do not require hangars or carrier space. They have the ability to patrol without landing for more than 24 hours, thus affording the greatest security. Landings on water can be made without difficulty since these boats have undergone successfully all the seagoing tests to which the navy trial board has subjected them. Forced landings on water, however, should not occur as their motive power is such that they can fly on one engine. The trials on this model of ship were officially conducted by the navy at San Diego last June."

The local plant also designed and manufactured the P2Y-1 and P2Y-3 flying boats. The former broke the world's mass formation distance record, by flying in formation nonstop from San Francisco to Honolulu, a distance of 2408 miles, in January, 1934, under direction of Comdr. McGinnis with Comdr. M. A. Mitscher as official navy observer.

"All of these boats," Maj. Fleet said, "represent the joint development of the navy and of Consolidated and are the most advanced type of military patrol bomber flying boats in the service of any navy in the world."

New Building Under Way

The smaller award made the Consolidated by the navy covers a "secret development of an advanced nature," Maj. Fleet said. "To handle this contract, Consolidated is constructing a three-story building for experimental and engineering purposes which will give this plant as fine facilities in this regard as any in the world. It is for this building that the steel piling is now being driven at the south side of the plant adjoining the Ryan addition."

Other flying boats, the president said, are now being manufactured for other nations by Consolidated with permission of this government.

The local plant, Maj. Fleet said, this month is finishing a $2,300,000 order for 50 two-seater pursuit units for the army air corps. These ships are the highest performing airplanes at an altitude of any aircraft of its type in the country, he added. The plant also is manufacturing spare parts for other products mar-

(Continued on Page 2, Col. 7)

STOMPED KILLED

$5,485,115 NAVY CONTRACT IS WON BY CONSOLIDATED

(Continued from Page 1)

keted throughout the world in the last 13 years.

Engines and propellers manufactured by Pratt & Whitney and Wright Aeronautical Corp. are being used in Consolidated's current production.

Consolidated opened its plant Sept. 3 last year and already is increasing its facilities by about 80 percent, an indication of the phenomenal growth it is enjoying. Its proximity to naval activities gives the plant an opportunity to be of superlative service to the navy, Maj. Fleet said. The enlarged factory, which will be completed in about three months, is the only aircraft plant in the U. S. able to apply line production methods successfully used by the automobile industry.

Maj. Fleet said that within three months the seaplane base and ramp which the city has agreed to build for the plant, in common with other users, will be necessary to effect delivery of these large boats.

The pant head said that 2269 men are employed at the plant and that the payroll is about $285,000 a month. With the completion of plant facilities, he said, 1000 additional trained mechanics will be required. The lowest wage paid by the firm, Maj. Fleet said, is 40 cents an hour. The day shift temporarily is working 45 hours a week and the night shift 50 hours a week with payments of time and a third for more than 40 hours, thus conforming to the old NRA requirements.

Urges Dredging

"San Diego is to be congratulated upon its location of Lindbergh field, which rapidly is becoming the center of much aviation activity," Maj. Fleet stated. "With aircraft moving as they do today, San Diego is only 40 minutes from Los Angeles and a single day to any point in the United States. As the capacity of flying boats increases, the differential of 200 miles between Honolulu to San Francisco and Honolulu to San Diego will become a negligible element. Hence the weather conditions of San Diego should amply justify its location in preference to San Francisco as the United States terminal for transpacafic flying. This, however, will necessitate the contemplated enlargement of Lindbergh field immediately, particularly now that the city has arranged for the acquisition of adjacent properties near the marine base. Dredging should be started at once."

CONS. AIRCRAFT'S ORDERS AT PEAK

Wall St Journal 7-17-36

Navy Awards Add $5,485,115 to Backlog; in Production on 110 VPBs

FINISHING ARMY PLANES

SAN DIEGO—The two awards from the United States Navy to Consolidated Aircraft Corp. announced this week bring the volume of business to the highest point so far enjoyed by the corporation. The contracts totaled $5,485,115, all for flying boats. One award was for 50 of the VPB type, the same model as the 60 boats now under construction at Consolidated.

The corporation will now be in production on a total of 110 units, plus spare parts, equivalent to 22 more, or a grand total of 132 of this type of airplane for the Navy.

Commenting on the awards, Major R. H. Fleet, president, said: "This, we believe, is the largest production of one type of flying boat in the history of American aviation and the largest volume of business so far enjoyed by this company, thus justifying our faith in the future of aviation, our products and the increase of approximately 80% in our manufacturing facilities which is now well under way."

Contract for Secret Development

The second contract covers a secret development of an advanced nature for which Consolidated is constructing a three-story building for experimental and engineering purposes. It is for this building that the steel piling is now being driven at the south side of the plant adjoining the Ryan addition.

Consolidated this month is finishing an order of approximately $2,300,000 for 50 two-seater pursuit units for the United States Army. In addition, the plant is manufacturing spare parts for its products marketed all over the world during the last 13 years. Besides the VPB models, Consolidated is manufacturing other flying boats of earlier design for foreign nations with permission of the United States Government.

Engines and propellers manufactured by both Pratt & Whitney and Wright Aeronautical Corp. are being used in current production.

VPB Seagoing Plane

The VPB ship is the same design as the boat which was flown non-stop from Coco Solo, Canal Zone, to San Francisco last October by Commander McGinnis of the Navy, breaking the distance record for this type of airplane. The record still holds. This same boat, on duty with the United States fleet, this week returned from Seattle non-stop to San Diego in eight hours.

"These boats are really air cruisers operating with the fleet; self-supporting; do not require hangars or carrier space," Major Fleet said. "They have the ability to patrol without landing for more than 24 hours, thus affording the great-

est security to our coast lines. Landings on water, rough water, can be made without difficulty and they have undergone successfully all the seagoing tests to which the Navy trial board has subjected them. Forced landings on the water, however, should not occur as their motive power is such that they can fly on one engine (half their total horsepower). The trials on this ship were officially conducted by the Navy at San Diego last June."

Consolidated opened its new plant at San Diego last September and is already increasing its facilities by 80%.

To Apply Line Production

"The enlarged factory, which will be fully completed in about three months, is the only aircraft plant in the United States able to apply line production methods so successfully used by the automotive industry," Major Fleet said. "Within three months the seaplane base and ramp which the city has agreed to build for it in common with other users will be a necessity in order to deliver these large boats."

The corporation now has 2,269 employes with a pay roll approximating $285,000 a month. When the new plant facilities have been completed, 1,000 additional trained mechanics will be required. The lowest wage paid by the company is 40 cents an hour. The day shift is temporarily working 45 hours a week and the night shift 50 hours a week with payments of time and a third for over 40 hours, thus conforming to the old NRA requirements, although the latter permitted apprentices at 32 cents an hour instead of the 40 cents minimum at Consolidated.

The Motor in Australia and Flying — JULY 1, 1936

STEAM AS POWER FOR AIRCRAFT.

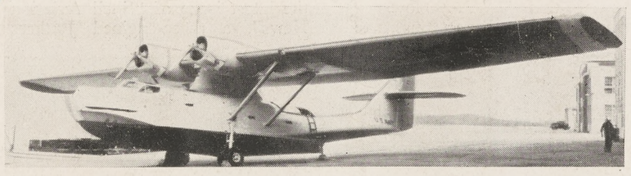
EXPONENTS of steam propulsion are busily at work attempting to perfect still another type of aircraft engine.

Acording to the latest information received by the Vacuum Oil Company, some of these experimental engines have progressed far.

One of these, developed in California, is the Doble-Besler steam aero engine, said to be the first to power successfully a man-carrying airplane. This engine, the two-cylinder V-type, develops 150 h.p. at 1,650 r.p.m. and is reported to weigh only 180 lbs. The condenser, it is claimed, retrieves 90% of the water used — with the result that water consupmtion is only one gallon to 40 miles.

Reports from Germany speak of a successful steam turbine called scendants of the speedy "Comets" which provided a sensation in the England-Australia air race. One of the type, it will be remembered flew the distance in three days. From this type have been developed the much larger weight-carrying models now nearing completion.

They will have a top speed of at least 250 miles an hour, and will be able to cruise across the Atlantic at more than 200 miles an hour. The all-up weight of these machines, carrying mail load and sufficient fuel for 4,000 miles still air flying, will be more than 11 tons.



The XP3Y1 Flying boat manufactured by the Consolidated Aircraft Corporation and powered with two Pratt and Whitney 825 h.p. engines, which holds the world's record non-stop flight for aircraft of this type with 3281.402 miles airline distance, and 3443.255 miles broken line distance.

'SECRET PLANE' HINTED AS PART OF CONTRACTS

Two contracts involving a total of $5,485,115 for construction of 50 huge flying boats, parts equivalent to 22 more of like design, and for "a secret development of an advanced nature," were let by the Navy Department today to Consolidated Aircraft Corp. of San Diego.

Huge Plane Hinted

The contracts placed Consolidated in the position of being the largest builder of long-range flying boats in the world, it was announced.

The "secret development," it was believed, although officials declined to discuss it, involved nearly a half-million dollars of the awards for construction of a huge four-motored flying boat of clipper type, to be tested by the Navy for possible adoption in its patrol wing.

Plant Expanding

The company now has the equivalent of 132 flying boats to build for the Navy, not including the secret project.

Announcement of plant expansion by 79 per cent was made recently. Work already is under way. Nearly 2300 are employed now and a thousand more mechanics will be needed.

Cons. Aircraft Gets Navy Order

Wall St Journal 7-16-36

WASHINGTON—The Navy Department yesterday awarded a contract to Consolidated Aircraft Corp. of San Diego, Calif., for 50 ships of the VPB type for a total of $4,893,000.

PLANT IS INSPECTED BY MARINE OFFICERS

S.D. TRIBUNE 8/22/36

The Consolidate Aircraft Corp. plant on Lindbergh field was inspected yesterday by a group of high-ranking marine corps officers, guests of Maj. Reuben Fleet, president, at a luncheon at his home. Headed by Brig. Gen. Douglas C. McDougal, commander of the fleet marine force and of the San Diego marine base, the group included Col. P. H. Torrey, Lt. Col. W. H. Rupertus, Lt. Col. R. J. Mitchell, Lt. Col. J. W. Webb and Lt. E. B. James. Mrs. McDougal accompanied her husband.

Feature of the luncheon will be showing of historic aviation movies compiled by Zeno Klinker, Los Angeles aviation enthusiast. Special guests of honor will be Capt. Arthur L. Bristol, commanding Naval Air station; C. A. Van Dusen, vice president of Consolidated Aircraft corp.; R. S. Madison, secretary-treasurer, and Edgar N. Gott, assistant to the president, of that air firm. Wm. Van Dusen, chamber of commerce official in charge of San Diego's aviation round-up Aug. 28, will be chairman.

S.D. Employment Shoots Up Nearly 90 Per Cent

S.D. SUN — AUG. 22-1936

Employment in San Diego county is skyrocketing.

Roy Ferguson, assistant manager of the California State Employment Service, today displayed figures showing that 1215 unemployed persons had been put to work during July.

This is an 98.7 per cent increase over the total for the same month last year, Ferguson said.

Consolidated Aircraft Corporation and Solar Aircraft Co., Ltd., boosted their working crews over 200 per cent.

The former company needs 2000 more skilled workmen at the present time than they are able to obtain, according to Ferguson.

Out of the 1215 jobless given work, 518 were hired by private organizations and 697 placed on jobs provided by contractors constructing public works.

In 1935 for the same month the total placements by the employment office was 482. Of this number 275 were classified under private placements.

The avalanche of openings has swept many names from the lists of the WPA and SRA.

More Homes Needed At $20 to $28 Rent For Plane Builders

SD TRIBUNE-9-1-36

Need for moderately-priced houses for employes of Consolidated Aircraft Corp. is accentuated by the rapidly-increasing additions to the personnel of the firm, reports Edgar Gott, assistant to R. H. Fleet, president.

"The majority of our employes who need houses express a desire to pay from $20 to $28 a month," said Gott. "While we realize that there are a number of houses vacant in San Diego, these generally rent from $30 to $40. It is the type of house renting from $20 to $28 a month that we must have to accommodate the men who are seeking employment at the plant."

SERVICE NOTES

Real Acid Test Checks Hidden Plane Flaws

By TOM CAMERON

Navy pilots are going to be assured their motors and propellers will be almost 100 per cent free from hidden defects in material which might fail under terrific stress of operating conditions, thanks to a new process for detecting flaws in metal utilized by Consolidated Aircraft Corporation, here.

The device, known as the magnaflux, consists of a magnetizing apparatus for charging the piece of metal to be tested. This, done in a couple of seconds, is followed by immersion of the metal in one chemical bath and then another.

If there's a flaw, its presence is betrayed by a thin tar-like raised line on the metal. If it passes this literally acid test, it is demagnetized and sent on its way to become a part of a motor.

This is important to the Navy, for Consolidated is building 110 huge flying boats for the patrol wing whose mission may be extended flights from here to Honolulu. And it wouldn't do for motors or props to fly to pieces about halfway over.

ARMY SHIFTS MAJOR HURD TO INGLEWOOD

But Test Pilot Won't Change Residence From S. D.

If Maj. Leland C. Hurd, Army Air Corps chief test pilot at Consolidated Aircraft Corp., doesn't hold membership in the San Diego Chamber of Commerce, he ought to.

There's no stronger booster for lcoal climate and living advantages than the major.

Inspects Factory

Ordered transferred to inspection duty at North American Aviation Corps in Inglewood, Maj. Hurd flew north today to make his first official visit to the factory where he will be detailed for months while 100 basic training planes are manufactured for the Air Corps.

But make arrangements to give up his residence in San Diego? The major won't do it—even if it means commuting more than 100 miles each way every week-end.

Maj. Hurd's transfer follows completion of the 50 pursuit plane contract at Consolidated.

Two Pursuiters Left

Only two pursuit planes built by Consolidated remain here. One, used by Maj. Hurd, is to be flown east in the near future along with three stored at March Field to await propellers. The last one to go will be the plane now exhibited at the Exposition, which will be flown away by the Army after Sept. 9, closing date of the Exposition, Maj. Hurd said.

Meanwhile, Consolidated has turned to production of 110 twin-engined flying boats for the Navy. The first of these will be ready for testing in a couple of weeks, it was said.

PAYROLLS RISE EACH WEEK AT CONSOLIDATED

Nevada Congressman Tours Plant Of Aircraft Factory

Payrolls at Consolidated Aircraft Corp., San Diego's largest industrial concern, are increasing each week.

To maintain high speed in production of 110 "flying boats" for the Navy, continual additions in personnel are required, executives of the firm announced today.

With Consolidated industrial expansion, the problem of housing the plant's 2000 employes is assuming serious proportions, according to Edgar N. Gott, public relations counsel.

Low-Rent Homes Scarce

"Our newest workers are finding it increasingly difficult to secure houses or apartments where the rent is within their means," he said today. "The majority of our employes are heads of small families and require furnished houses with one bedroom at rents ranging from $20 to $28.50 per month. The single men usually look for room and board facilities.

Officials of the firm have repeatedly declared their intention of remaining out of the real estate business, but it is freely rumored that Consolidated may launch a large-scale building venture of its own to supply moderate-rent residences, should the supply of such homes be definitely found inadequate in San Diego.

Congressman James G. Scugham of Nevada was a visitor at Consolidated during the past week-end. He made a trip of inspection through the plant with Comdr. Ralph D. Weyerbacher, attached to the U. S. S. Wright.

A group of 32 large stockholders and representatives of the aircraft company's eastern bankers, toured the factory Saturday, later were guests of Maj. Reuben Fleet, Consolidated chief, at a luncheon in San Diego Club. The Western Air Express planes were chartered to fly the visitors east at 3 p. m. Saturday.

AUG. 31-1936

E SAN DIEGO UNION: TUE

NEED OF HOUSES FOR PLANE PLANT EMPLOYES CITED

Announcement that rapidly increasing additions to the personnel of the Consolidated Aircraft Corp. plant at Lindbergh field again has accentuated the need for moderate priced houses was made yesterday by Edgar Gott, assistant to R. H. Fleet, firm president.

"While we realize," said Gott, "that there are a number of houses vacant in San Diego, these generally rent for from $30 to $40. The majority of our employes needing houses express a desire to pay from $20 to $28 a month and it is this type of house that we must have to accommodate the men who are seeking employment at the plant.

It is pointed out that while there is a large percentage of skilled workmen at Consolidated, there also is a comparatively large group of unskilled workers, many of them men with families, who cannot afford to rent houses beyond $25 a month. It is this group that is causing concern to Consolidated officials, Gott said.

22 Stockholders, Bank Aids Fly to Visit Consolidated

S.D. UNION-8/30/36

On a tour of inspection of the San Diego plant of Consolidated Aircraft, 22 eastern stockholders and representatives of the company's eastern banking connections visited San Diego yesterday. They arrived in a chartered Western Air plane from Los Angeles and after a visit to the plant were guests of Maj. Reuben H. Fleet, president of the company, at the San Diego club. They returned in their plane later in the day.

Friday Rep. James G. Scrugham of Nevada, and the state's former governor, visited the Consolidated plant in company with Comdr. R. D. Weyerbacher, attached to the U. S. S. Wright. Later in the day he was a luncheon guest of Maj. Fleet.

Hawaiian Air Patrol Due to Get Thirty Big Planes

By United Press

As many as 30 of the 60 huge patrol planes under construction for the Navy may be assigned to the Hawaiian Islands-mainland patrol service, it was indicated at the Navy Department today.

While these planes are going out to replace aircraft becoming obsolete, they actually will constitute reinforcements because of their superior size, speed, cruising radius and general utility.

The new planes will be flying fortresses. Their great cruising radius will make it possible, theoretically at least, to patrol actively the vast areas of water stretching from Hawaii to Wake Island and from there to the Aleutians.

Wash. Post - Aug. 8, 1936

FLYING S. D. PLANES TO HAWAII FOR NAVY

S.D. TRIBUNE - 8-26-36

Announcing that two flights of new navy patrol planes being built at the Consolidated Aircraft Corp. plant will be made this winter from California to Hawaii, Rear Adm. Ernest J. King, commander of aircraft base force, also reports that he will go to Hawaii in October to direct extensive flights by aircraft squadrons now based there. The first filght of new planes will leave San Diego Dec. 1 for Pearl Harbor, followed by a second flight Jan. 15. Six planes will be flown on each filght. King, leaving San Diego Oct. 10 aboard his flagship, the U.S.S. Wright, is due back here in November.

TWO HAWAII FLIGHTS ARE PLANNED BY NAVY

By the Associated Press.

SAN DIEGO, Calif., August 27.—Two flights will be made from California to Hawaii by United States Navy planes now nearing completion here.

Six planes are scheduled to leave San Diego for Pearl Harbor December 1 and six on January 15. They will replace flying boats now based at the Pearl Harbor Navy Yard.

S.D. UNION-9-11-36

Forum to Hear Gott In Talk on Aircraft

"Development of the Plane and its Effect Upon Transportation" will be discussed by Edgar N. Gott, assistant to the Consolidated Aircraft Corp. president at the first meeting of the East San Diego forum this evening at Herbert Hoover Evening High school, in room 108, at 7:30.

Gott's talk will be the first in a series on "These Changing Times," Mrs. Marguerite E. Bowlby, chairman, said yesterday. Meetings will be held each Thursday evening and admission will be free.

FLEET PLANS SPEECH AT FRATERNITY MEET

David Fleet, of the Consolidated Aircraft Corp., will address the graduate chapter of his college fraternity, Phi Gamma Delta, at its regular monthly meeting Thursday noon at the Cuyamaca club. Thomas G. Cross, president of the local chapter, announces that Fleet's subject will be "The Consolidated Aircraft Corp. and the Aircraft Industry." S.D. TRIBUNE - 9-16-36

• To Lt. Commander Knefler McGinnis come new honors in the form of the Distinguished Flying Cross, presented him on April 18 by Acting Secretary of the Navy William H. Standley on behalf of President Roosevelt. Commander McGinnis was in command of the Navy seaplane flight from Norfolk, Va. to San Francisco, via Coco Solo, C. Z., which established "a new international airline distance record for seaplanes of 3,281 statute miles, and a broken line distance record of 3,443 statute miles." The Navy's non-stop flight from San Francisco to Honolulu in January, 1934, also under Commander McGinnis, set up a new world's distance non-stop flight of more than 2,400 miles.

An $870,000 contract for flying boats of the U. S. Navy XP3Y type has been awarded to the Consolidated Aircraft Corporation, San Diego, Cal. Purchaser is an unnamed South American republic.

Consolidated

Announcement that the **Consolidated Aircraft Corporation** of San Diego received from the United States Navy two notices of award of contracts aggregating $5,485,115 for 50 flying boats and "a secret development of an advanced nature" was made by **Maj. R. H. Fleet**, president, on July 15.

"The largest of these two awards covers 50 of the same model as the 60 flying boats now under construction at Consolidated," said Maj. Fleet. "With the new awards, Consolidated will be in production on a total of 110 units, plus spare parts equivalent to 22 more, or a grand total of 132 of this type of plane for the Navy."

Consolidated Aircraft, in production on an order for 60 patrol boats for the Navy, will practically double existing space at its San Diego plant with the addition of 200,000 sq.ft. at a cost of $800,000. Included in the plans is a 52,000 sq.ft. experimental building. A stockholders' meeting was scheduled for April to authorize issuance of 60,000 shares of preferred stock to pay for capital expenditures already made and for future expansion.

The National Pacific Aircraft and Boat Show, held in Los Angeles early in February, last month reported financ-

EXECUTIVES HEAR GOTT PLANE TALK; HAINES INDORSED

"Size of flying boats will be limited only by the development of sufficiently large power plants," Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp., said yesterday, addressing the Executives association in the U. S. Grant hotel.

Tracing the history of the flying boats from the original F5L patrol boats developed by the navy in the war to the present flying boats recently contracted for with the Consolidated by the navy, Gott explained that the development was due to two main factors, one the use of all metal construction and second the development of more effective and lighter power plants.

"The original boats with their wood and fabric construction," he said, "absorbed a great deal of water and became heavier as they became older. The original motors had a weight of three pounds to the horsepower and were very limited in total horsepower. Present metal flying boats are lighter in weight in proportion and have motors developing almost one thousand horsepower per unit."

He predicted an extremely bright future for San Diego as a result of the aviation activities and manufacture.

The executives unanimously adopted a resolution indorsing Judge Charles C. Haines for nomination for justice of the supreme court of California and ordered the resolution sent to Gov. Merriam.

D. W. Campbell, president, presided and Sam G. Snyder, vice president, was chairman.

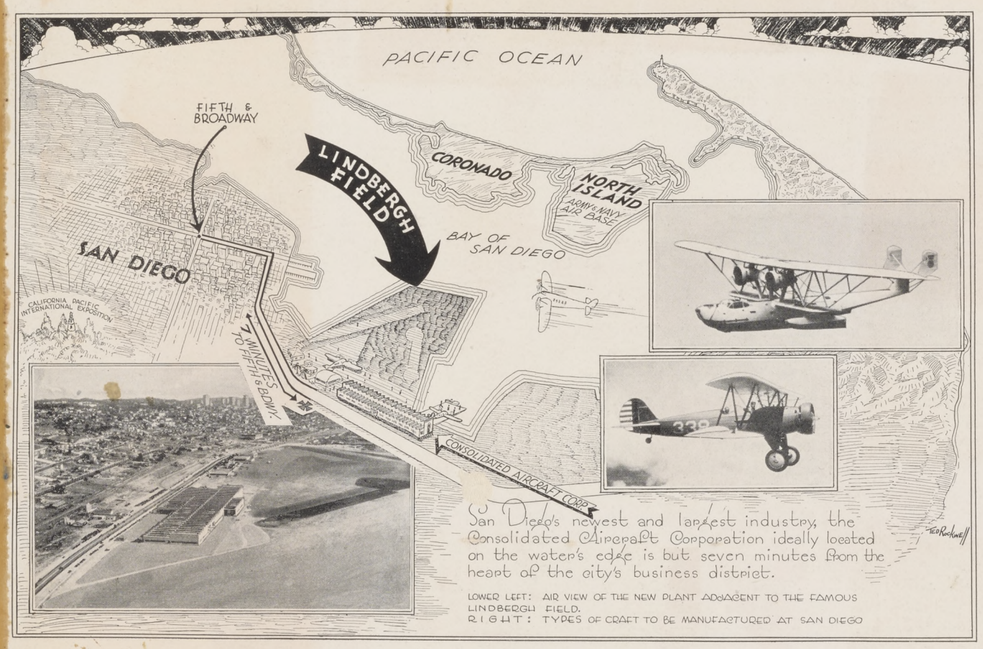
New Million Dollar Aircraft Plant in San Diego Begins Production

By P. P. PINE and FORREST M. RAYMOND
San Diego Consolidated Gas and Electric Company

SINCE Charles Lindbergh hopped off for Paris in his San Diego made plane, "The Spirit of St. Louis," this Southern California community has styled itself the "Air Capital of the West." The appropriateness of this title has been unquestioned on account of the great Army and Navy Air Bases situated across the Bay at North Island. The location of several airplane manufacturing plants in San Diego has strengthened the city's position as the most air-minded community on the Pacific Coast. How-



San Diego's newest and largest industry, the Consolidated Aircraft Corporation ideally located on the water's edge is but seven minutes from the heart of the city's business district.

LOWER LEFT: AIR VIEW OF THE NEW PLANT ADJACENT TO THE FAMOUS LINDBERGH FIELD.
RIGHT: TYPES OF CRAFT TO BE MANUFACTURED AT SAN DIEGO

Plane in Test Takes Off From Railroad Carriage

L.A. Times — 9-26-36

SAN DIEGO, Sept. 25. (U.P.) — W. B. Wheatley, chief test pilot for Consolidated Aircraft Company, today shot a light biplane into the air from a specially constructed railway carriage, taking off in a maneuver said to be the first of its kind since the Wright Brothers experimented with railway take-offs at Kitty Hawk.

Wheatley flipped the small fleet two-seater into the air from the carriage after a 400-foot run along regular railroad tracks near the Chula Vista airport.

Braking mechanism on the carriage caught too quickly after the plane's take-off and the car was wrecked, but the plane's departure was not impeded.

The carriage was a revamped railroad hand-car, eight feet long, with a steel superstructure on which the landplane rested. It was not powered, depending on the pull of the plane's propeller to drive it to the necessary speed for a take-off.

Wheatley said the device had been developed with a view to making possible quicker and safer take-offs for heavily loaded planes, such as the Clipper type in use for trans-Pacific hops, or large military or commercial ships.

"I took off in about 400 feet. If I had given the motor full throttle I could have done it in 350 feet, much less than the distance ordinarily required," Wheatley said.

GOTT URGES REALTY LAW

S.D. Sun — 10-6-36

Possibility of further delay in obtaining low-cost homes for employes of his firm because of a "great difference of opinion" regarding a city subdivision ordinance was seen yesterday by Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp.

Gott praised the work of the San Diego Realty Board in attempting to obtain a subdivision ordinance "which will protect the property owner."

"At this time we vigorously reiterate the statement frequently made by officials of this company that one of the crying needs of this city is low-priced housing facilities," he said.

FLYING BOAT, 150 CAPACITY, PREDICTED

S.D. Sunday Union - 9/13/36

SPEED FIXED AT 230 MILES

Crew of 20 Will Operate Huge Craft; Staterooms And Convertible Seats to Be Provided; 6 Propellers.

By I. M. LADDON
Chief Engineer, Consolidated Aircraft Corp.
(Courtesy Consolidated Aircraft)

Flying 300,000 pounds through the air at more than four miles a minute may seem fantastic but present design trends indicate that we may expect flying boats of this size and speed within the near future. Larger and faster flying boats with long range and commodious passenger facilities for fast inter-continental transportation at lower cost are being planned.

Our engineering department has made a study of a flying boat based on characteristics of racing type seaplanes which have attained speeds of 440 miles an hour. Making appropriate changes in size and improvements consistent with present day knowledge the general appearance and performance of a large flying boat has been determined. A maximum speed of 260 miles an hour with a cruising speed of 230 miles an hour are attainable.

One hundred and fifty passengers can travel in this airliner amid luxurious facilities for recreation and traveling comfort. Extra-fare passengers can enjoy the privacy of staterooms while others will be provided with commodious Pullman seats convertible to sleeping berths for overnight travel. The staterooms and recreational facilities will be housed in the wing. The twin hulls will carry a majority of the passengers and part of the crew of 20, as well as tons of express and mail. Fuel tanks in the outer wing panels will carry more than 15,000 gallons of gasoline which will be sufficient for 4000 miles of flight.

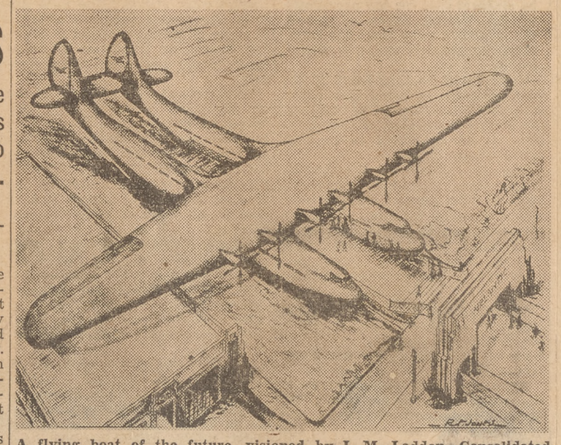
The design of the twin hulls is based on the most advanced type tested by the national advisory committee for aeronautics at Langley field, Va. This type gives very low water and air resistance.

Each of the six 16 3-4 foot propellers is driven by two 1500 horsepower engines housed in the leading edge of the wing where they can be serviced in flight. The streamlined structure supporting the propellers will contain the power plant accessories. The total combined output of the engines will be 18,000 horsepower half of which could be disconnected for servicing in flight.

Although this design study was based on light gasoline engine design, great strides are being made in Diesel engine development so that it is reasonable to believe

(Continued on Page 2, Col. 4)

HUGE SKY QUEEN OF THE FUTURE



A flying boat of the future, visioned by I. M. Laddon, Consolidated Aircraft Corp. chief engineer, which will have a cruising speed of 250 miles an hour and a range of 4000 miles.

BIG FLYING BOAT NEAR, FORECAST

(Continued from Page 1)

that they also may be available for airplanes of this size. The Diesel engine would give even greater efficiency resulting in lower cost of operation.

A landing speed of 60-75 miles an hour (dependent upon loading) will be obtained by the use of wing flaps and is considered entirely safe for a flying boat of this size. The application of twin hulls to this design permits a wider distribution of weight along the wing span with a corresponding reduction in wing weight.

An initial wing loading of 46 pounds a square foot will insure riding comfort hitherto unkown. Although the range of the plane would permit circumnavigation of a storm area, it is not believed that the craft would be uncomfortable if driven through mild storms. Wing loadings have succesfuly increased from 15 to 30 pounds a square foot with increase in size of much smaller flying boats. This increase in loading has been accompanied with increased comfort and therefore, a still further increase is logical especially for long range where a considerable change in weight occurs due to consumption of fuel.

More technical data are accumulating daily toward the solutions of the problems accompanying the development of large aircraft. Devices for control of super-size aircraft are rapidly being worked out so that great forward strides are inevitable.

CONSOLIDATED, RYAN ENLARGE FLOOR SPACE

Plants To Increase Rate Of Production In Additions

Building expansion of San Diego's two largest aircraft concerns, Consolidated Aircraft Corporation and Ryan Aeronautical Co., is almost complete.

At a cost of approximately $500,000, the huge Consolidated plant will have increased its floor space 80 per cent at the conclusion of its present building program.

Equipment is already being moved into the north wing addition, which will be available for production use within three weeks, according to Edgar N. Gott, assistant to Maj. Reuben Fleet, president of Consolidated.

Congestion Relieved

Steel work is under way on the south wing addition, which when completed will give the factory 10 acres under roof.

Not only will the present congested condition of the plant be relieved, thus enabling an accentuated flow of production, but separate space will be provided in the additions for work of a confidential and experimental nature, Mr. Gott said.

Consolidated is at present speeding construction of 110 "flying boats" for the Navy.

Production Tripled

Productive capacity of Ryan Aeronautical Co.'s enlarged plant will be tripled, President T. Claude Ryan announced yesterday, as he ordered the moving of new equipment into the $20,000 addition due to be completed in two weeks.

In a factory floor space which will virtually be doubled, production will be stepped up to three Ryan ST monoplanes weekly. On hand are sufficient orders to keep the enlarged plant busy for four months, according to Mr. Ryan. Recent appointment of a South American sales representative indicates increased demand for the sports planes.

Additional equipment necessitated by the factory enlargement will require an expenditure of $35,000.

CONSOLIDATED BID LOW ON 66 SHIPS

S.D. Union - 10-4-36

Consolidated Aircraft Corp. was low bidder on a contract for building 66 new flying patrol boats of the PBY type, the navy department announced yesterday. Edgar N. Gott, assistant to the president of the company, said the Consolidated factory would begin constructing the planes as soon as the award of the contract takes place.

The bid of Consolidated was $6,374,073. That of Glen F. Martin Co., Baltimore, was $7,106,120, and the Douglas Aircraft Corp., Santa Monica, bid $8,540,007.

SERVICE NOTES

Real Acid Test Checks Hidden Plane Flaws

By TOM CAMERON

Navy pilots are going to be assured their motors and propellers will be almost 100 per cent free from hidden defects in material which might fail under terrific stress of operating conditions, thanks to a new process for detecting flaws in metal utilized by Consolidated Aircraft Corporation, here.

The device, known as the magnaflux, consists of a magnetizing apparatus for charging the piece of metal to be tested. This, done in a couple of seconds, is followed by immersion of the metal in one chemical bath and then another.

If there's a flaw, its presence is betrayed by a thin tar-like raised line on the metal. If it passes this literally acid test, it is demagnetized and sent on its way to become a part of a motor.

This is important to the Navy, for Consolidated is building 110 huge flying boats for the patrol wing whose mission may be extended flights from here to Honolulu. And it wouldn't do for motors or props to fly to pieces about halfway over.

ARMY SHIFTS MAJOR HURD TO INGLEWOOD

But Test Pilot Won't Change Residence From S. D.

If Maj. Leland C. Hurd, Army Air Corps chief test pilot at Consolidated Aircraft Corp., doesn't hold membership in the San Diego Chamber of Commerce, he ought to.

There's no stronger booster for lcoal climate and living advantages than the major.

Inspects Factory

Ordered transferred to inspection duty at North American Aviation Corps in Inglewood, Maj. Hurd flew north today to make his first official visit to the factory where he will be detailed for months while 100 basic training planes are manufactured for the Air Corps.

But make arrangements to give up his residence in San Diego? The major won't do it—even if it means commuting more than 100 miles each way every week-end.

Maj. Hurd's transfer follows completion of the 50 pursuit plane contract at Consolidated.

Two Pursuiters Left

Only two pursuit planes built by Consolidated remain here. One, used by Maj. Hurd, is to be flown east in the near future along with three stored at March Field to await propellers. The last one to go will be the plane now exhibited at the Exposition, which will be flown away by the Army after Sept. 9, closing date of the Exposition, Maj. Hurd said.

Meanwhile, Consolidated has turned to production of 110 twin-engined flying boats for the Navy. The first of these will be ready for testing in a couple of weeks, it was said.

PAYROLLS RISE EACH WEEK AT CONSOLIDATED

Nevada Congressman Tours Plant Of Aircraft Factory

Payrolls at Consolidated Aircraft Corp., San Diego's largest industrial concern, are increasing each week.

To maintain high speed in production of 110 "flying boats" for the Navy, continual additions in personnel are required, executives of the firm announced today.

With Consolidated industrial expansion, the problem of housing the plant's 2000 employes is assuming serious proportions, according to Edgar N. Gott, public relations counsel.

Low-Rent Homes Scarce

"Our newest workers are finding it increasingly difficult to secure houses or apartments where the rent is within their means," he said today. "The majority of our employes are heads of small families and require furnished houses with one bedroom at rents ranging from $20 to $28.50 per month. The single men usually look for room and board facilities.

Officials of the firm have repeatedly declared their intention of remaining out of the real estate business, but it is freely rumored that Consolidated may launch a large-scale building venture of its own to supply moderate-rent residences, should the supply of such homes be definitely found inadequate in San Diego.

Congressman James G. Scugham of Nevada was a visitor at Consolidated during the past week-end. He made a trip of inspection through the plant with Comdr. Ralph D. Weyerbacher, attached to the U. S. S. Wright.

A group of 32 large stockholders and representatives of the aircraft company's eastern bankers, toured the factory Saturday, later were guests of Maj. Reuben Fleet, Consolidated chief, at a luncheon in San Diego Club. The Western Air Express planes were chartered to fly the visitors east at 3 p. m. Saturday.

D. W. Campbell, president, presided and Sam G. Snyder, vice president, was chairman.

Army two-seater pursuit plane built by Consolidated Aircraft Corporation

ever, that position was made more secure this fall when the million dollar plant of the Consolidated Aircraft Corporation started production.

Several months ago one of the country's major manufacturers of flying boats found itself handicapped for proper launching facilities. San Diego's municipal airport with surrounding factory sites located ideally on the water's edge of San Diego, seemed the answer to this concern's problem. Moving plans were inaugurated and the Consolidated Aircraft Corporation, formerly of Buffalo, New York, has now completed and placed in operation what is considered the finest, most modern aircraft manufacturing plant in this country. Located on the famous Lindbergh Field, a few minutes from the heart of the San Diego business district, this huge plant will represent an investment in excess of $1,000,000, employing 2,000 men and women, with present Government contracts totaling $9,000,000. These orders, according to D. G. Fleet, assistant to the manager, provide for the immediate building of 50 two-seat pursuit planes and 60 twin-engine flying boats.

Headed by Major R. H. Fleet, president, the Consolidated Aircraft Corporation is well known throughout the field of aircraft manufacturing. It was organized in 1923 at East Greenwich, Rhode Island, an outgrowth of both the Dayton-Wright Corporation of Dayton, Ohio, and the Galludet Corporation of East Greenwich. The entire plant was moved to Buffalo in 1924, and three years later, took over the Thomas Morse Aircraft Corporation of Ithaca, New York. During its early history this concern specialized in the manufacture of training aircraft used by both the Army and the Navy. Later it was successful in developing observation and pursuit types and has produced several hundred of these for both branches of the military service. In 1928, the Consolidated Aircraft Corporation designed its first flying boat; later developments were made which have completely revolutionized naval aviation.

It was the Consolidated Aircraft Corporation that built the first flying boats for the Nybra line (now the Pan-American) which carries mail and passengers between the United States and South America. In 1934, the Navy staged its first successful non-stop mass flight between San Francisco and Honolulu. All six planes were products of this manufacturing concern.

The San Diego plant covers an area of approximately 250,000 square feet and is modern in every respect. Natural gas was selected as a basic fuel for all heating needs with a maximum demand of 10,000 cubic feet as an hourly requirement. All machinery will be electrically operated, calling for 1,200 horsepower in connected load. Modern factory lighting accounts for additional 400 kilowatts of load. Gas and electricity are supplied by the San Diego Consolidated Gas and Electric Company.

Since its inception the Consolidated Aircraft Corporation has averaged $2,000,000 in yearly business and has built nearly 2,000 planes. C. A. Van Dusen is vice president and works superintendent, I. M. Laddon, vice president and chief engineer, C. T. Leigh, vice president and material supervisor, and R. S. Madison, secretary-treasurer.

This industrial plant is the largest located in the territory served by the San Diego Consolidated Gas and Electric Company. For this reason the company was naturally gratified by the friendly receptiveness and wholehearted cooperation extended by the new concern in mutual efforts to determine the most effective applications of gas and electricity to the manufacture of airplanes.

ONE of the largest air conditioning installations in the southwest, 400 horsepower for conditioning the offices of an oil company in Ponca City, will be completed about December 1. Oklahoma Gas and Electric Company will furnish current for operating the equipment.

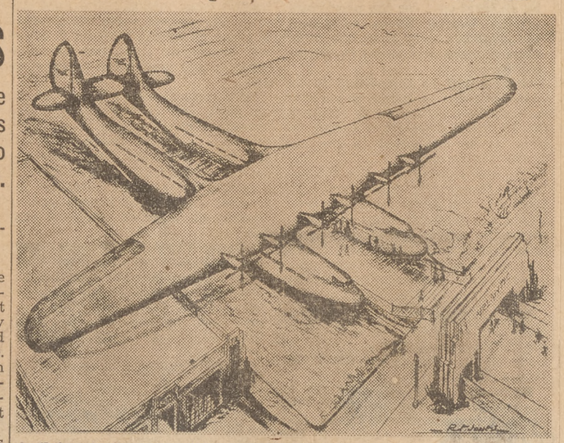
FLYING BOAT, 150 CAPACITY, PREDICTED

S.D. Sunday Union - 9/13/36

SPEED FIXED AT 230 MILES

Crew of 20 Will Operate Huge Craft; Staterooms And Convertible Seats to Be Provided; 6 Propellers.

HUGE SKY QUEEN OF THE FUTURE



A flying boat of the future, visioned by I. M. Laddon, Consolidated Aircraft Corp. chief engineer, which will have a cruising speed of 250 miles an hour and a range of 4000 miles.

By I. M. LADDON
Chief Engineer, Consolidated Aircraft Corp.
(Courtesy Consolidated Aircraft)

Flying 300,000 pounds through the air at more than four miles a minute may seem fantastic but present design trends indicate that we may expect flying boats of this size and speed within the near future. Larger and faster flying boats with long range and commodious passenger facilities for fast inter-continental transportation at lower cost are being planned.

Our engineering department has made a study of a flying boat based on characteristics of racing type seaplanes which have attained speeds of 440 miles an hour. Making appropriate changes in size and improvements consistent with present day knowledge the general appearance and performance of a large flying boat has been determined. A maximum speed of 260 miles an hour with a cruising speed of 230 miles an hour are attainable.

One hundred and fifty passengers can travel in this airliner amid luxurious facilities for recreation and traveling comfort. Extra-fare passengers can enjoy the privacy of staterooms while others will be provided with commodious Pullman seats convertible to sleeping berths for overnight travel. The staterooms and recreational facilities will be housed in the wing. The twin hulls will carry a majority of the passengers and part of the crew of 20, as well as tons of express and mail. Fuel tanks in the outer wing panels will carry more than 15,000 gallons of gasoline which will be sufficient for 4000 miles of flight.

The design of the twin hulls is based on the most advanced type tested by the national advisory committee for aeronautics at Langley field, Va. This type gives very low water and air resistance.

Each of the six 16 3-4 foot propellers is driven by two 1500 horsepower engines housed in the leading edge of the wing where they can be serviced in flight. The streamlined structure supporting the propellers will contain the power plant accessories. The total combined output of the engines will be 18,000 horsepower half of which could be disconnected for servicing in flight.

Although this design study was based on light gasoline engine design, great strides are being made in Diesel engine development so that it is reasonable to believe

(Continued on Page 2, Col. 4)

BIG FLYING BOAT NEAR, FORECAST

(Continued from Page 1)

that they also may be available for airplanes of this size. The Diesel engine would give even greater efficiency resulting in lower cost of operation.

A landing speed of 60-75 miles an hour (dependent upon loading) will be obtained by the use of wing flaps and is considered entirely safe for a flying boat of this size. The application of twin hulls to this design permits a wider distribution of weight along the wing span with a corresponding reduction in wing weight.

An initial wing loading of 46 pounds a square foot will insure riding comfort hitherto unkown. Although the range of the plane would permit circumnavigation of a storm area, it is not believed that the craft would be uncomfortable if driven through mild storms. Wing loadings have succesfuly increased from 15 to 30 pounds a square foot with increase in size of much smaller flying boats. This increase in loading has been accompanied with increased comfort and therefore, a still further increase is logical especially for long range where a considerable change in weight occurs due to consumption of fuel.

More technical data are accumulating daily toward the solutions of the problems accompanying the development of large aircraft. Devices for control of super-size aircraft are rapidly being worked out so that great forward strides are inevitable.

CONSOLIDATED, RYAN ENLARGE FLOOR SPACE

Plants To Increase Rate Of Production In Additions

Building expansion of San Diego's two largest aircraft concerns, Consolidated Aircraft Corporation and Ryan Aeronautical Co., is almost complete.

At a cost of approximately $500,000, the huge Consolidated plant will have increased its floor space 80 per cent at the conclusion of its present building program.

Equipment is already being moved into the north wing addition, which will be available for production use within three weeks, according to Edgar N. Gott, assistant to Maj. Reuben Fleet, president of Consolidated.

Congestion Relieved

Steel work is under way on the south wing addition, which when completed will give the factory 10 acres under roof.

Not only will the present congested condition of the plant be relieved, thus enabling an accentuated flow of production, but separate space will be provided in the additions for work of a confidential and experimental nature, Mr. Gott said.

Consolidated is at present speeding construction of 110 "flying boats" for the Navy.

Production Tripled

Productive capacity of Ryan Aeronautical Co.'s enlarged plant will be tripled, President T. Claude Ryan announced yesterday, as he ordered the moving of new equipment into the $20,000 addition due to be completed in two weeks.

In a factory floor space which will virtually be doubled, production will be stepped up to three Ryan ST monoplanes weekly. On hand are sufficient orders to keep the enlarged plant busy for four months, according to Mr. Ryan. Recent appointment of a South American sales representative indicates increased demand for the sports planes.

Additional equipment necessitated by the factory enlargement will require an expenditure of $35,000.

Plane in Test Takes Off From Railroad Carriage

L.A. Times — 9-26-36

SAN DIEGO, Sept. 25. (U.P.) — W. B. Wheatley, chief test pilot for Consolidated Aircraft Company, today shot a light biplane into the air from a specially constructed railway carriage, taking off in a maneuver said to be the first of its kind since the Wright Brothers experimented with railway take-offs at Kitty Hawk.

Wheatley flipped the small fleet two-seater into the air from the carriage after a 400-foot run along regular railroad tracks near the Chula Vista airport.

Braking mechanism on the carriage caught too quickly after the plane's take-off and the car was wrecked, but the plane's departure was not impeded.

The carriage was a revamped railroad hand-car, eight feet long, with a steel superstructure on which the landplane rested. It was not powered, depending on the pull of the plane's propeller to drive it to the necessary speed for a take-off.

Wheatley said the device had been developed with a view to making possible quicker and safer take-offs for heavily loaded planes, such as the Clipper type in use for trans-Pacific hops, or large military or commercial ships.

"I took off in about 400 feet. If I had given the motor full throttle I could have done it in 350 feet, much less than the distance ordinarily required," Wheatley said.

GOTT URGES REALTY LAW

S.D. Sun — 10-6-36

Possibility of further delay in obtaining low-cost homes for employes of his firm because of a "great difference of opinion" regarding a city subdivision ordinance was seen yesterday by Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp.

Gott praised the work of the San Diego Realty Board in attempting to obtain a subdivision ordinance "which will protect the property owner."

"At this time we vigorously reiterate the statement frequently made by officials of this company that one of the crying needs of this city is low-priced housing facilities," he said.

CONSOLIDATED BID LOW ON 66 SHIPS

S.D. Union - 10-4-36

Consolidated Aircraft Corp. was low bidder on a contract for building 66 new flying patrol boats of the PBY type, the navy department announced yesterday. Edgar N. Gott, assistant to the president of the company, said the Consolidated factory would begin constructing the planes as soon as the award of the contract takes place.

The bid of Consolidated was $6,374,073. That of Glen F. Martin Co., Baltimore, was $7,106,120, and the Douglas Aircraft Corp., Santa Monica, bid $8,540,007.

SERVICE NOTES

Real Acid Test Checks Hidden Plane Flaws

By TOM CAMERON

Navy pilots are going to be assured their motors and propellers will be almost 100 per cent free from hidden defects in material which might fail under terrific stress of operating conditions, thanks to a new process for detecting flaws in metal utilized by Consolidated Aircraft Corporation, here.

The device, known as the magnaflux, consists of a magnetizing apparatus for charging the piece of metal to be tested. This, done in a couple of seconds, is followed by immersion of the metal in one chemical bath and then another.

If there's a flaw, its presence is betrayed by a thin tar-like raised line on the metal. If it passes this literally acid test, it is demagnetized and sent on its way to become a part of a motor.

This is important to the Navy, for Consolidated is building 110 huge flying boats for the patrol wing whose mission may be extended flights from here to Honolulu. And it wouldn't do for motors or props to fly to pieces about halfway over.

S.D. Sun —

Thursday, August 13, 193

ARMY SHIFTS MAJOR HURD TO INGLEWOOD

But Test Pilot Won't Change Residence From S. D.

If Maj. Leland C. Hurd, Army Air Corps chief test pilot at Consolidated Aircraft Corp., doesn't hold membership in the San Diego Chamber of Commerce, he ought to.

There's no stronger booster for lcoal climate and living advantages than the major.

Inspects Factory

Ordered transferred to inspection duty at North American Aviation Corps in Inglewood, Maj. Hurd flew north today to make his first official visit to the factory where he will be detailed for months while 100 basic training planes are manufactured for the Air Corps.

But make arrangements to give up his residence in San Diego? The major won't do it—even if it means commuting more than 100 miles each way every week-end.

Maj. Hurd's transfer follows completion of the 50 pursuit plane contract at Consolidated.

Two Pursuiters Left

Only two pursuit planes built by Consolidated remain here. One, used by Maj. Hurd, is to be flown east in the near future along with three stored at March Field to await propellers. The last one to go will be the plane now exhibited at the Exposition, which will be flown away by the Army after Sept. 9, closing date of the Exposition, Maj. Hurd said.

Meanwhile, Consolidated has turned to production of 110 twin-engined flying boats for the Navy. The first of these will be ready for testing in a couple of weeks, it was said.

PAYROLLS RISE EACH WEEK AT CONSOLIDATED

Nevada Congressman Tours Plant Of Aircraft Factory

Payrolls at Consolidated Aircraft Corp., San Diego's largest industrial concern, are increasing each week.

To maintain high speed in production of 110 "flying boats" for the Navy, continual additions in personnel are required, executives of the firm announced today.

With Consolidated industrial expansion, the problem of housing the plant's 2000 employes is assuming serious proportions, according to Edgar N. Gott, public relations counsel.

Low-Rent Homes Scarce

"Our newest workers are finding it increasingly difficult to secure houses or apartments where the rent is within their means," he said today. "The majority of our employes are heads of small families and require furnished houses with one bedroom at rents ranging from $20 to $28.50 per month. The single men usually look for room and board facilities.

Officials of the firm have repeatedly declared their intention of remaining out of the real estate business, but it is freely rumored that Consolidated may launch a large-scale building venture of its own to supply moderate-rent residences, should the supply of such homes be definitely found inadequate in San Diego.

Congressman James G. Scugham of Nevada was a visitor at Consolidated during the past week-end. He made a trip of inspection through the plant with Comdr. Ralph D. Weyerbacher, attached to the U. S. S. Wright.

A group of 32 large stockholders and representatives of the aircraft company's eastern bankers, toured the factory Saturday, later were guests of Maj. Reuben Fleet, Consolidated chief, at a luncheon in San Diego Club. The Western Air Express planes were chartered to fly the visitors east at 3 p. m. Saturday.

AUG. 31-1936

E SAN DIEGO UNION: TUE

NEED OF HOUSES FOR PLANE PLANT EMPLOYES CITED

Announcement that rapidly increasing additions to the personnel of the Consolidated Aircraft Corp. plant at Lindbergh field again has accentuated the need for moderate priced houses was made yesterday by Edgar Gott, assistant to R. H. Fleet, firm president.

"While we realize," said Gott, "that there are a number of houses vacant in San Diego, these generally rent for from $30 to $40. The majority of our employes needing houses express a desire to pay from $20 to $28 a month and it is this type of house that we must have to accommodate the men who are seeking employment at the plant.

It is pointed out that while there is a large percentage of skilled workmen at Consolidated, there also is a comparatively large group of unskilled workers, many of them men with families, who cannot afford to rent houses beyond $25 a month. It is this group that is causing concern to Consolidated officials, Gott said.

22 Stockholders, Bank Aids Fly to Visit Consolidated

S.D. UNION-8/30/36

On a tour of inspection of the San Diego plant of Consolidated Aircraft, 22 eastern stockholders and representatives of the company's eastern banking connections visited San Diego yesterday. They arrived in a chartered Western Air plane from Los Angeles and after a visit to the plant were guests of Maj. Reuben H. Fleet, president of the company, at the San Diego club. They returned in their plane later in the day.

Friday Rep. James G. Scrugham of Nevada, and the state's former governor, visited the Consolidated plant in company with Comdr. R. D. Weyerbacher, attached to the U. S. S. Wright. Later in the day he was a luncheon guest of Maj. Fleet.

Hawaiian Air Patrol Due to Get Thirty Big Planes

By United Press

As many as 30 of the 60 huge patrol planes under construction for the Navy may be assigned to the Hawaiian Islands-mainland patrol service, it was indicated at the Navy Department today.

While these planes are going out to replace aircraft becoming obsolete, they actually will constitute reinforcements because of their superior size, speed, cruising radius and general utility.

The new planes will be flying fortresses. Their great cruising radius will make it possible, theoretically at least, to patrol actively the vast areas of water stretching from Hawaii to Wake Island and from there to the Aleutians.

Wash. Post - Aug. 8, 1936

FLYING S. D. PLANES TO HAWAII FOR NAVY

S.D. TRIBUNE - 8-26-36

Announcing that two flights of new navy patrol planes being built at the Consolidated Aircraft Corp. plant will be made this winter from California to Hawaii, Rear Adm. Ernest J. King, commander of aircraft base force, also reports that he will go to Hawaii in October to direct extensive flights by aircraft squadrons now based there. The first filght of new planes will leave San Diego Dec. 1 for Pearl Harbor, followed by a second flight Jan. 15. Six planes will be flown on each filght. King, leaving San Diego Oct. 10 aboard his flagship, the U.S.S. Wright, is due back here in November.

TWO HAWAII FLIGHTS ARE PLANNED BY NAVY

By the Associated Press.

SAN DIEGO, Calif., August 27.—Two flights will be made from California to Hawaii by United States Navy planes now nearing completion here.

Six planes are scheduled to leave San Diego for Pearl Harbor December 1 and six on January 15. They will replace flying boats now based at the Pearl Harbor Navy Yard.

Consolidated

Announcement that the **Consolidated Aircraft Corporation** of San Diego received from the United States Navy two notices of award of contracts aggregating $5,485,115 for 50 flying boats and "a secret development of an advanced nature" was made by **Maj. R. H. Fleet**, president, on July 15.

"The largest of these two awards covers 50 of the same model as the 60 flying boats now under construction at Consolidated," said Maj. Fleet. "With the new awards, Consolidated will be in production on a total of 110 units, plus spare parts equivalent to 22 more, or a grand total of 132 of this type of plane for the Navy."

Consolidated Aircraft, in production on an order for 60 patrol boats for the Navy, will practically double existing space at its San Diego plant with the addition of 200,000 sq.ft. at a cost of $800,000. Included in the plans is a 52,000 sq.ft. experimental building. A stockholders' meeting was scheduled for April to authorize issuance of 60,000 shares of preferred stock to pay for capital expenditures already made and for future expansion.

The National Pacific Aircraft and Boat Show, held in Los Angeles early in February, last month reported financ-

Apparently the Army is unaware of Consolidated Aircraft Co.'s present whereabouts.

In a recent news letter of the Army Air Corps, the nation-wide

SDSUN-10-5-36

tour of Maj. Gen. Oscar Westover was described in minute detail.

"During the course of his inspection trip," the accounts states, "Gen. Westover visited some of the foremost aircraft factories in the United States. Among these was the Consolidated Aircraft Co. at Glendale, Calif."

RECORD

S.D. UNION 8/15/36

EXECUTIVES HEAR GOTT PLANE TALK; HAINES INDORSED

"Size of flying boats will be limited only by the development of sufficiently large power plants," Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp., said yesterday, addressing the Executives association in the U. S. Grant hotel.

Tracing the history of the flying boats from the original F5L patrol boats developed by the navy in the war to the present flying boats recently contracted for with the Consolidated by the navy, Gott explained that the development was due to two main factors, one the use of all metal construction and second the development of more effective and lighter power plants.

"The original boats with their wood and fabric construction," he said, "absorbed a great deal of water and became heavier as they became older. The original motors had a weight of three pounds to the horsepower and were very limited in total horsepower. Present metal flying boats are lighter in weight in proportion and have motors developing almost one thousand horsepower per unit."

He predicted an extremely bright future for San Diego as a result of the aviation activities and manufacture.

The executives unanimously adopted a resolution indorsing Judge Charles C. Haines for nomination for justice of the supreme court of California and ordered the resolution sent to Gov. Merriam.

D. W. Campbell, president, presided and Sam G. Snyder, vice president, was chairman.

Army two-seater pursuit plane built by Consolidated Aircraft Corporation

ever, that position was made more secure this fall when the million dollar plant of the Consolidated Aircraft Corporation started production.

Several months ago one of the country's major manufacturers of flying boats found itself handicapped for proper launching facilities. San Diego's municipal airport with surrounding factory sites located ideally on the water's edge of San Diego, seemed the answer to this concern's problem. Moving plans were inaugurated and the Consolidated Aircraft Corporation, formerly of Buffalo, New York, has now completed and placed in operation what is considered the finest, most modern aircraft manufacturing plant in this country. Located on the famous Lindbergh Field, a few minutes from the heart of the San Diego business district, this huge plant will represent an investment in excess of $1,000,000, employing 2,000 men and women, with present Government contracts totaling $9,000,000. These orders, according to D. G. Fleet, assistant to the manager, provide for the immediate building of 50 two-seat pursuit planes and 60 twin-engine flying boats.

Headed by Major R. H. Fleet, president, the Consolidated Aircraft Corporation is well known throughout the field of aircraft manufacturing. It was organized in 1923 at East Greenwich, Rhode Island, an outgrowth of both the Dayton-Wright Corporation of Dayton, Ohio, and the Galludet Corporation of East Greenwich. The entire plant was moved to Buffalo in 1924, and three years later, took over the Thomas Morse Aircraft Corporation of Ithaca, New York. During its early history this concern specialized in the manufacture of training aircraft used by both the Army and the Navy. Later it was successful in developing observation and pursuit types and has produced several hundred of these for both branches of the military service. In 1928, the Consolidated Aircraft Corporation designed its first flying boat; later developments were made which have completely revolutionized naval aviation.

It was the Consolidated Aircraft Corporation that built the first flying boats for the Nybra line (now the Pan-American) which carries mail and passengers between the United States and South America. In 1934, the Navy staged its first successful non-stop mass flight between San Francisco and Honolulu. All six planes were products of this manufacturing concern.

The San Diego plant covers an area of approximately 250,000 square feet and is modern in every respect. Natural gas was selected as a basic fuel for all heating needs with a maximum demand of 10,000 cubic feet as an hourly requirement. All machinery will be electrically operated, calling for 1,200 horsepower in connected load. Modern factory lighting accounts for additional 400 kilowatts of load. Gas and electricity are supplied by the San Diego Consolidated Gas and Electric Company.

Since its inception the Consolidated Aircraft Corporation has averaged $2,000,000 in yearly business and has built nearly 2,000 planes. C. A. Van Dusen is vice president and works superintendent, I. M. Laddon, vice president and chief engineer, C. T. Leigh, vice president and material supervisor, and R. S. Madison, secretary-treasurer.

This industrial plant is the largest located in the territory served by the San Diego Consolidated Gas and Electric Company. For this reason the company was naturally gratified by the friendly receptiveness and wholehearted cooperation extended by the new concern in mutual efforts to determine the most effective applications of gas and electricity to the manufacture of airplanes.

ONE of the largest air conditioning installations in the southwest, 400 horsepower for conditioning the offices of an oil company in Ponca City, will be completed about December 1. Oklahoma Gas and Electric Company will furnish current for operating the equipment.

Plane in Test Takes Off From Railroad Carriage

L.A. Times — 9-26-36

SAN DIEGO, Sept. 25. (U.P.) — W. B. Wheatley, chief test pilot for Consolidated Aircraft Company, today shot a light biplane into the air from a specially constructed railway carriage, taking off in a maneuver said to be the first of its kind since the Wright Brothers experimented with railway take-offs at Kitty Hawk.

Wheatley flipped the small fleet two-seater into the air from the carriage after a 400-foot run along regular railroad tracks near the Chula Vista airport.

Braking mechanism on the carriage caught too quickly after the plane's take-off and the car was wrecked, but the plane's departure was not impeded.

The carriage was a revamped railroad hand-car, eight feet long, with a steel superstructure on which the landplane rested. It was not powered, depending on the pull of the plane's propeller to drive it to the necessary speed for a take-off.

Wheatley said the device had been developed with a view to making possible quicker and safer take-offs for heavily loaded planes, such as the Clipper type in use for trans-Pacific hops, or large military or commercial ships.

"I took off in about 400 feet. If I had given the motor full throttle I could have done it in 350 feet, much less than the distance ordinarily required," Wheatley said.

GOTT URGES REALTY LAW

S.D. Sun — 10-6-36

Possibility of further delay in obtaining low-cost homes for employes of his firm because of a "great difference of opinion" regarding a city subdivision ordinance was seen yesterday by Edgar N. Gott, assistant to the president of Consolidated Aircraft Corp.

Gott praised the work of the San Diego Realty Board in attempting to obtain a subdivision ordinance "which will protect the property owner."

"At this time we vigorously reiterate the statement frequently made by officials of this company that one of the crying needs of this city is low-priced housing facilities," he said.

CONSOLIDATED BID LOW ON 66 SHIPS

S.D. Union - 10-4-36

Consolidated Aircraft Corp. was low bidder on a contract for building 66 new flying patrol boats of the PBY type, the navy department announced yesterday. Edgar N. Gott, assistant to the president of the company, said the Consolidated factory would begin constructing the planes as soon as the award of the contract takes place.

The bid of Consolidated was $6,374,073. That of Glen F. Martin Co., Baltimore, was $7,106,120, and the Douglas Aircraft Corp., Santa Monica, bid $8,540,007.

Consolidated Aircraft To Speed Production In Enlarged Plant

WALL STREET JOURNAL

Present $13,500,000 Unfilled Orders May Be Cleared by January, 1938 —Most Is Navy Work

SEP 10 1936 ACCTG

SAN DIEGO—Expansion of about 85% in plant facilities now under way and projected by Consolidated Aircraft Corp. here is expected to provide sufficient equipment and factory space to make possible completion of present unfilled orders by January, 1938.

Consolidated's total undelivered business, including that of its Canadian subsidiary, now approximates $13,500,000 and consists principally of PBY-1 type twin-engine military flying boats for the Navy. A total of 60 of this type ship is now under construction at San Diego and a recent order for 50 additional units and spare parts which are the equivalent of 22 additional complete ships places the total of this type of craft now on order and under construction at 132.

Builds Commercial Planes Also

Although the company is engaged principally in the construction of military aricraft, it has built a number of commercial airplanes including 15 Consolidated Commodores, which were sold to Pan American Airways and have more than 6,000,000 miles of scheduled flying to their credit.

The company has emerged as a leading designer of large heavy-duty flying boats. The PBY-1 twin-engine patrol boats are built for long range operation and are capable of patroling without landing for more than 24 hours, enabling them to operate with the fleet as self supporting units without requiring hangers or carrier-space. They are capable of sustaining flight on one of their two engines and have demonstrated in naval trial board tests their ability to land on rough water.

In July, 1936, Consolidated completed delivery of 50 high-altitude, two-seater pursuit planes for the Army.

Profit From Sales

A summary of delivered business and earnings after deducting proportionate federal income taxes, exclusive of other income not applicable to sales, by calendar years from 1930 to 1935, inclusive (estimated for 1930 and 1931) follows:

	Sales	Sales Profit After Income Taxes	% to Sales
Army			
1930	$1,894,259	$254,103	11.4
1931	1,554,056	*162,511	*10.5
1932	344,391	*212,647	*61.7
1933	218,692	13,229	6.0
1934	622,758	6,157	1.0
1935	68,084	23,311	34.2
Navy			
1930	$411,989	*$210,588	*51.1
1931	40,179	11,649	29.0
1932	381,915	45,259	11.9
1933	1,876,834	*46,860	*2.5
1934	140,019	1,478	1.1
1935	2,314,726	158,780	6.9
Commercial			
1930	$2,047,693	$63,606	3.1
1931	318,099	*218,484	*68.7
1932	548,304	*129,540	*23.6
1933	265,000	12,988	4.9
1934	716,712	*2,555	*0.4
1935	438,469	74,107	16.9

*Represents losses.

From May, 1923, to December 31, 1935, completed and delivered business of the company has totaled $23,189,181, of which $9,586,069 has been for the Army, $8,128,964 for the Navy, and $5,474,148 for commercial customers.

Foreign Sales Not Included

Sales figures listed for Army, Navy and commercial account do not reflect Consolidated's total sales due to certain foreign and miscellaneous sales not included.

Sales profit after deducting federal income taxes over this period has been $2,271,565, or 9.8% of sales. Work handled for the Army has been the most profitable, aggregate earnings on Army work completed between May, 1923, and December 31, 1935, amounting to $1,226,688, or 12.8% of the delivered value. Profit from Navy work over the same period is placed at $887,564, or 10.9% of orders filled, and commercial profit is placed at $157,313, or 2.9% of sales delivered.

Consolidated net profit of Consolidated Aircraft Corp. and subsidiaries for the six months ended June 30, 1936, was $188,680 after all charges, including normal federal taxes, but before provision for federal surtaxes on undistributed profits, equal to $8.20 a share on 22,976 convertible $3 preferred shares.

SPACE NEEDED BY BOOMING AIR PLANT

The additional space provided by new buildings being erected by the Consolidated Aircraft Corp. at its plant on Lindbergh field "will be used to relieve the extreme congestion that exists in every department of our plant."

This statement, appearing in "Consolidated Aircraft," new publication of the aircraft manufacturing firm, illustrates the strides which have been made by Consolidated in less than a year.

"Those of us who came to San Diego from Buffalo remember very vividly the 'big move' and we all recall how immense our 'new home' seemed to us when we first moved in," states W. A. Maloney, plant engineer. "It seemed as though we were finally in a position to manufacture all the aircraft that could possibly be sold, without congestion or confusion. However, within the short space of four months after beginning operations in San Diego, we discovered that it was going to be extremely difficult, if not impossible to complete the PBQ-1 contract on schedule without enlarging our manufacturing facilities, and when we were awarded the new 'X' contract, which required that experimental work on the new ship be carried on in a separate building isolated from regular manufacturing operations, it was then realized that something had to be done, and that quickly."

In Use Already

Maloney said a firm of architects and engineers was retained last January and authorized to prepare plans and specifications of additions to the existing plant, as well as for construction of an experimental building and warehouse, tool and fixture storage building, paint and oil storage building, and physical, chemical and photographic laboratory building. Construction was started July 6 on the experimental building, and on July 27 on the addition to the main factory. The main factory addition is more than 70 percent completed, and 25,000 square feet of floor space has been released to the manufacturing departments. The experimental building is expected to be completed by the latter part of next month.

The original plant has usable floor space of 246,841 square feet. The area of the various additions are: Main factory additions, 65,000; paint shop addition, 10,000; tool and fixture storage building, 10,000; paint and oil storage, 2000; laboratory building, 2000, and experimental building, 96,300. The total additional usable floor space is 185,300 square feet, making a total area in the enlarged plant of 432,141 square feet, an increase of approximately 75 percent over the original area.

"We are in a wonderful business," said Maj. Reuben H. Fleet, president of Consolidated. "Man's desire to fly is as old as the human race. From the moment that he discovered himself earthbound, he has been struggling to break the chains of bondage. Through the process of time and unfoldment of human intelligence we have come up through the Stone Age, the Bronze Age, the Iron Age, until at last we have reached the Air Age with its illimitable possibilities.

Giant Ships Coming

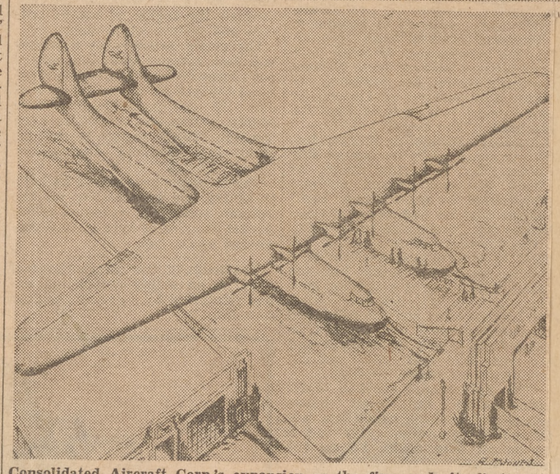
"Thirty-three years ago the first airplane flew for 12 seconds. The world applauded the daring feat. Today, Consolidated is building boats that fly for over 24 hours without refueling. Luxurious passenger ships are carrying passengers, mail and express from coast to coast in as little as 15 hours. Within a comparatively few years regular ocean travel by air will be as matter of fact as it now is by water."

That Consolidated Aircraft officials have their eyes on the future is seen in a report by I. M. Laddon, chief engineer, that present design trends indicate that flying boats can be expected which will be capable of flying 300,000 pounds through the air at more than four miles a minute. He said the Consolidated engineering department has made a study of a flying boat based on characteristics of racing type seaplanes which have attained 440 miles an hour.

"Making appropriate changes in size and improvements consistent with present day knowledge, the general appearance and performance of a large flying boat has been determined," said Laddon. "A maximum speed of 260 miles an hour, with a cruising speed of 230 miles, are attainable. One hundred and fifty passengers can travel in this airliner amid luxurious facilities for recreation and traveling comfort. Extra-fare passengers can enjoy the privacy of staterooms, while others will be provided with commodious seats convertible to sleeping berths. Staterooms and recreational facilities will be housed in the wing. The twin hulls will carry a majority of the passengers and part of the crew of 20 (as well as tons of express and mail. Fuel tanks in the outer wing panels will carry over 15,000 gallons of gasoline, which will be sufficient for 4000 miles of flight."

RUSHING TO KEEP UP WITH CONSOLIDATED

S.D. TRIBUNE 9/15/36



Consolidated Aircraft Corp.'s expansion as the firm ends its first year at San Diego is illustrated in the accompanying layout. Upper: View of the factory on Lindbergh field, showing new construction work under way to enlarge the plant. Lower: Design of a giant twin-hulled plane capable of carrying 150 passengers, which Consolidated Aircraft officials are studying.

S. D. FLIER IN ALTITUDE HOP

S.D.SUN —— 10-16-36

A San Diego Army officer today was to try for a new military altitude record in a San Diego-built pursuit plane at Selfridge Field, Mich., the United Press reported to The Sun.

The officer is Lieut. Rudolph Fink—the plane one of the 50 two-place fighting ships completed several months ago by Consolidated Aircraft Corp.

Army officials at Rockwell Field today believed Lieut. Fink had an even chance of breaking the present record—34,500 feet—in the new super-charged craft which is capable of climbing 20,000 feet without losing horsepower.

Tomorrow's Air Cruiser

S.D.UNION — 9-18-36

THE 150-PASSENGER flying boat predicted by Consolidated Aircraft's chief engineer may not materialize for some time yet—Mr. Laddon deals in engineering probability rather than accomplished fact. But predictions of this sort are coming so frequently—and from such recognized authorities—that the sensible layman must take them seriously.

The technical problems connected with flying boat development must be left to the experts, necessarily. But it is not too early for the general public and particularly public officials to consider the implications of this new leap forward in air transport.

The flying boat Mr. Laddon describes is really a flying ship. It will be far larger than many ships now plying the seas. It will carry many more passengers and cover greater distances more safely than the average passenger ship of less than a century ago. And it will relocate the world's transport channels.

Every individual and every community concerned at all with transportation might well afford a little time for studying what this will do to established travel lanes —and what advantages will accrue to individuals and communities which are first in providing facilities for handling the new flying ships.

Such seaplanes will need large take-off and landing areas, for example. They will require ample mooring space in smooth, protected anchorages. The ideal port for flying ships will differ radically, in some respects, from the ideal surface-ship port.

San Diego seems, at a glande, to have many advantages for such a use over any other port on the Pacific coast. That possibility is worth examination now. For if we are better equipped to attract tomorrow's air cruisers than other potential air bases we might begin now to prepare for this new craft which, the experts assure us, will materialize within a very short time.

$6,374,073 BID LOW ON 66 NAVY BOMBERS

Department to Study Offers Further Before Awarding Big Plane Contract.

Special to THE NEW YORK TIMES.

WASHINGTON, Oct. 3.—Bids for sixty-six long-range combination patrol-bombing planes of the flying-boat type were opened by the Navy Department today, but a contract will not be awarded, officials said, until bids and plans have been further studied.

The Consolidated Aircraft Corporation of San Diego submitted the lowest bid, $6,374,073. The Glenn S. Martin Company of Baltimore offered a bid of $7,106,120 and the Douglas Aircraft Corporation of Santa Monica, Calif., was highest with a bid of $8,540,077.

In the current year the navy has awarded two contracts for fifty and sixty, respectively, of the same type craft, and when the award for those bid today is made it will practically complete the navy's 1936 program for the big planes.

While no information was offered, it was reported that the planes will be of the same type as the flying boat which last October set a non-stop record by flying from Coco Solo to San Francisco. The original model was built by the Consolidated company at its Buffalo plant.

ATLANTIC JOURNEY OVERNIGHT IN BIG AIRLINERS, PREDICTION

S.D. "UNION" 9-18-36

The time is coming when airliners three times the size of the present clipper ships, capable of sustained flight for 4000 miles at 250 miles an hour, will be crossing the Atlantic overnight and soaring away from the Pacific seaboard to the Orient in two nights and a day, Edgar N. Gott, Consolidated Aircraft Corp., told members of the Rotary club yesterday.

"In no other mode of transportation has development been as rapid as in air travel," he said. "Aviation received its impetus during the World war, less than 20 years ag Yet the planes of today are as f away from the planes of wartim as is the modern streamlined tra from the oxcart.

"The two important factors in av ation have been streamlining an light weight, and study and exper mentation in these fields have bee reflected in new designs in railroa ing, motor cars, boats, furnitu architecture and luggage. Air-co ditioning of trains was attributabl to aviation experimentation, an radio has advanced further than it would have without the help of avi ation, which utilizes the ether waves to a large extent in modern opera tion.

"Aviation has made all other modes of transportation take notice. Use of new and lighter metals has become popular, centers of gravity have been reduced, internal combustion motors have been given wider use and streamlining has become the mode of the day."

Mr. Gott was introduced by Charles Cotant, chairman of the day, as a man long identified with airplane manufacture. He formerly was with the Boeing factory at Seattle as president, then president of the Keystone factory in New England and last January he came to San Diego to become personal assistant to Maj. Reuben H. Fleet, president of Consolidated.

The speaker expressed gratitude to the city officials who have cooperated wholeheartedly in providing facilities for the company at Lindbergh field and who facilitated placing 10 acres of plant under roof, where 2700 men are employed in filling a large contract for the Navy.

GOTT PREDICTS AIR WONDERS

S.D.SUN — 9-25-36

Airplanes that will fly to China in two nights and a day, carrying 150 people, are anticipated soon by Maj. Edgar N. Gott, assistant to Maj. Reuben Fleet, president of the Consolidated Aircraft Corporation.

Maj. Gott told the Lions' club yesterday that progress was being made so rapidly in airplane manufacture that it took a daring man to make a guess beyond 10 years. He believes that the great flying boats of the future will span the Atlantic over night.

President Leslie Gould, assisted by George Crawford, inducted L. E. Claypool and Forrest Warren into the club.

BIDS SUBMITTED BY CONSOLIDATED

S.D. TRIBUNE 10-7-36

Four aircraft companies, including Consolidated Aircraft Corp. of San Diego, submitted bids to the coast guard yesterday for construction of from two to six airplanes which, if purchased would be used in offshore rescue work, The Associated Press reported in a dispatch from Washington, D. C.

The planes would be of the twin engine type, have a crusing range of 2000 miles and be heavy enough to land with safety in rough water.

The number of planes to be purchased depends finally upon the amounts available from appropriations, coast guard officials said.

The Consolidated bids were: $195,000 each for two planes; $172,500 each for three; $156,200 each for four; $145,750 each for five and $139,100 each for six.

WORK BEGINS ON RECEIPT OF AWARD

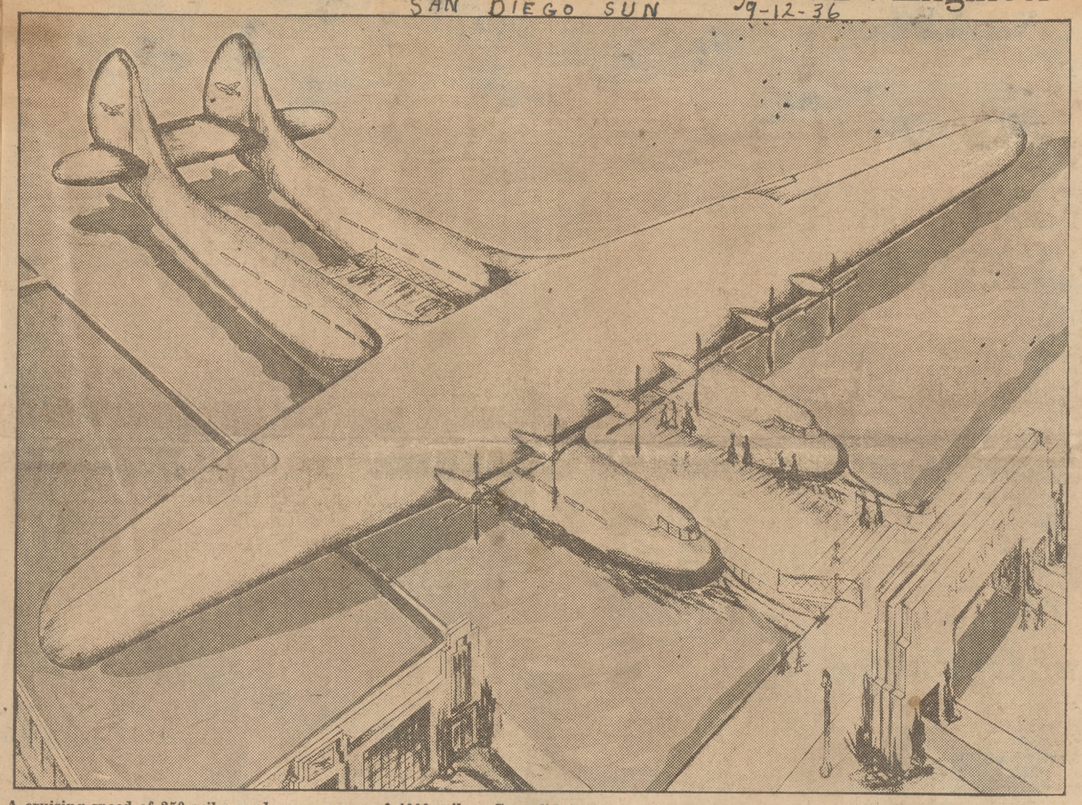
SD TRIBUNE 10-3-36

With the announcement today by the navy department that Consolidated Aircraft Co. was low bidder on a contract for construction of 66 twin-motored patrol flying boats of the PBY type, Major E. N. Gott today said that construction on the contract would begin immediately the award was received.

Consolidated's bid, according to the navy department, was $6,374,073, compared with $7,106,120 bid by the Glen F. Martin Co. of Baltimore and $8,540,007 bid by the Douglas Aircraft Corp. of Santa Monica.

Monster Ocean Airliner Visioned By S. D. Engineer

SAN DIEGO SUN 9-12-36



A cruising speed of 250 miles an hour, a range of 4000 miles—Consolidated Aircraft's flying boat of the future. The huge twin-hulled ship pictured above, clearly illustrates types of design and engine mounting which may mark the huge ocean airliners of the days to come. A million dollar job, and one requiring such accurate manufacture, that it gives I. M. Landon, its designer, a headache whenever he thinks of it, the ship nevertheless may be materially similar to those which will ply the air lanes of tomorrow.

☼ ☼ ☼ ☼ ☼ ☼

150-Passenger Flying Boat Dream Of Future

By HAROLD KEEN

Engineers live on dreams, and in the mind of Consolidated Aircraft's I. M. Laddon is an indelible image—

The flying boat of the future!

Chief Engineer Laddon's dream is so impressive he cannot help but shudder slightly at the immensity of the equipment needed to create this twin-hulled monster of the airways, the pinpoint accuracy required in its design.

Every aircraft company in the country has departments which work in the field of realities-to-be. For them no plane moves fast enough, or carries sufficient express, or accommodates enough passengers.

Consolidated's blueprint fantasy, which may be tomorrow's eventuality, represents the most advanced conception in U. S. aviation today, in the opinion of Laddon and his fellow engineers.

One hundred and fifty passengers could be carried across country at a cruising speed of 230 miles per hour in such a plane, Laddon believes. Use of twin hulls enables a wider distribution of weight along the wing span with a corresponding reduction in wing weight.

Twelve 1500 horsepower engines housed in the leading edge of the wing will propel the huge craft. In the streamlined structure sup-

Turn to Page 2, Col. 3.

150-Passenge Boat Dr

(Continued from Page 1)

porting the propellers would be contained the power plant accessories.

Design of the hulls provides a minimum of water and air resistance, as provided by the National Advisory Committee for Aeronautics in tests at Langley Field, Virginia.

The cruising range of 4000 miles would enable non-stop cross-country flights, according to Laddon. Fuel tanks in the outer wing panels would have a 15,000 gallon capacity.

$1,000,000 Shudder

So spacious is the wing itself that staterooms and recreational facilities could be provided within it!

The construction cost, another item which causes Mr. Laddon to shudder, would be approximately $1,000,000. This does not take into consideration the countless thousands of dollars necessary for its experimental development.

Just a Dream

A special pier would be required at the ship's terminal bases. As shown in the drawing, the hulls would lie along each side of the dock when the plane is "in port."

It's only a dream, but aviation

AVIATION
February, 1936

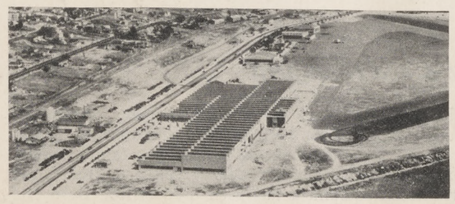
CONSOLIDATED AIRCRAFT CORPORATION

WHENEVER the Navy decides to practice long distance flying, they gas up a squadron or two of Consolidated patrol boats (XP Y series) and send them out. In commercial service these famous ships are known as "Commodores," and are in daily use on certain of the routes of Pan American Airways. Other illustrious members of the Consolidated family are the PT & NY series, the Fleets and Fleetsters.

Most of these designs were conceived when the company was located at Buffalo, N. Y., whence it was moved from East Greenwich, R. I., where it was organized in 1923. The new 250,000 sq.ft. plant on Lindbergh Field, San Diego, Cal. is already at work filling an order for 50 pursuit ships for the Army, 60

Maj. Reuben Fleet, president.

Left to right: R. S. Madison, Lt.-Comdr. D. M. Carpenter, I. M. Laddon, R. A. Miller, H. A. Sutton, R. E. Oversmith, J. L. Kelley, George Newman, Jr., C. T. Leigh, C. A. Van Dusen, Capt. L. C. Hurd, E. F. Neff.



patrol boats (XP3Y) for the Navy. At present 1,450 men are working.

The new plant is of sawtooth construction providing a maximum degree of lighting for the assembly floors. A carefully planned production flow is provided. Materials unloaded at the spur track at the southeast corner move northward through the center bays for fabrication and the fabricated parts move southward through a higher bay for partial and final assembly, thence out to the flying field for testing.

BIPLANE SHOT FROM RAIL CARRIAGE IN SPECTACULAR TEST

W. B. Wheatley, chief test pilot for a San Diego aircraft concern, is shown in his biplane just before he was catapulted from the railroad handcar into the air at the Chula Vista airport yesterday. After a 400-foot run under the plane's power Wheatley flipped the plane into air to prove feasibility of rail take-off.

BIG SEAPLANE RAMP READY FOR USE SOON AT LINDBERGH FIELD

UNUSUAL METHOD USED TO INSTALL CONCRETE PAVING

Capable of accommodating the transpacific clipper planes and other huge flying boats, the new seaplane ramp at Lindbergh field, built under novel conditions, was reported finished yesterday and is expected to be ready for use within a few days.

Where the ordinary ramp is 40 feet wide, the one here has a width of 100 feet and marks the successful completion of another joint WPA-harbor department project. The big slab of concrete, 8 inches thick and heavily reinforced with steel rods, extends from 10 feet above high water to 8 feet below mean low water, and was built "on dry land" by forming an earthwork dam around the working area.

About 70 men from the local WPA district were assigned to the job by George White, in charge of the district, and carried out work which ran all the way from truck driving to cement finishing. Port officials who superintended the work are enthusiastic over the way in which the WPA men handled their tasks, aften working against rising water, battling with time to get a certain unit completed.

The dyke surrounding the project, said to be the first of its kind ever used, was planned by Port Director Joe Brennan, and was filled in with earth, the trucks starting out from one end of the job and working all the way around to the other, packing down the material as they worked. Muck from the bottom of the bay, forced up by the weight of the dyke, was removed with a clamshell operated by a power crane, and dumped on the outside to reinforce the embankment. Then the enclosed area was pumped out, and preparations for the actual laying of the ramp were made.

A layer of firm material was put down first, and on this the concrete, in four 25-foot slabs, was poured. Pumps were kept going to keep the seepage down, and the ramp slowly took form, from the end which will be far below water level.

An interesting feature of the work was the necessity of leaving drain holes in the concrete, the huge weight of which forced up water and seepage from below, like so many springs. At one time, the pumps broke down, and a hurry call brought a fire-engine to the scene, to keep the water down until the main pump was repaired.

Now that all the concrete has been poured, all that remains is to remove the dyke. By using an earth fill instead of a cofferdam, some $10,000 was saved, the only expense being the gasoline for the trucks. Labor was, of course, supplied by WPA. Present plans call for cutting away the dyke with a dredger, which will pump the earth, "borrowed" from surfacing material, out onto the new fill where a hard surface will be required for the landing of planes.

WPA IMPROVEMENT AT MUNICIPAL AIRPORT

S.D. UNION - 9-29-36

Built under novel conditions, this new seaplane ramp for the municipal airport has been completed at the west end of Lindbergh field, adding another unit to the "finished business" of local WPA projects.

TAKE-OFF SPED WITH USE OF HANDCAR

9-26-36 S.D. TRIBUNE

A successful test of launching an airplane from railroad tracks, in which a handcar was used to carry the plane on the take-off, was completed yesterday afternoon by Consolidated Aircraft Corp. officials, who developed the novel launching method. They assert the device will double the cruising radius of

(Continued on Next Page, Col. 6)

flying boats and increase payloads 38 percent.

The test, witnessed by Maj. R. H. Fleet, Consoldated's president; I. M. Laddon, chief engineer, and department of commerce representatives, was made on railroad tracks near Chula Vista airport by W. B. Wheatley, a lieutenant in the naval reserve, who is Consolidated's chief tets pilot. Mounting a Fleet training biplane on a hand car, which was equipped with an automatic brake to stop it when the plane rose from the platform, Wheatley sped the plane down the railroad track on the flat car until a speed of 60 miles an hour was attained, when he pulled back the stick, raised the elevators and the plane soared into the air.

The plane, drawn by its propeller as it sped down the track on the tiny flatcar, left its mobile launching platform when about 300 feet from the starting point. The hand car, only eight feet long and six feet wide, jumped the track immediately after the plane was in the air. Wheatley flew to a safe landing at the Chula Vista airport.

Lists Advantages

Fleet, Laddon and Wheatley are inventors of newest advancement in aviation.

In a statement issued soon after the test, Wheatley said, "This device would permit take-offs with heavier loads than could be handled by conventional take-off practice." Among its advantages he listed:

Take-offs in the winter when water is obstructed with ice and flying fields are obstructed with snow.

Elimination of ice formation on seaplanes during take-off in freezing weather.

Permit land planes to take off with landing gears in place, retracted or removed.

Permit seaplanes to take off with wing tip floats retracted or removed, increasing efficiency.

Permit wing tip floats to be installed of a size smaller than required under conventional take-off conditions with heavy load.

Elimination of spray which sometimes strikes propellers and tail surfaces.

Elimination of the pounding on the hull usually experienced in taking off heavily loaded air boats from the surface of the water.

Safer take-offs at night, in dense fog or in heavy snow storms because it would not be necessary for the pilot to steer the plane on a narrow runway or in a channel on the water.

Safe blind take-offs as the track guides the plane in the run and no-lift longitudinal attitude of plane is maintained up to the moment the pilot decides to take off.

No illumination at night (such illumination impairs the pilot's vision after take-off).

"Because the rolling friction of a carriage is less than the friction and drag of landplane wheels on soft airports and much less than the retarding action of water on the hull of flying boats," Wheatley explained, "and as an aircraft would gather speed in the no-lift minimum drag position from the very start of the take-off run when using this device, it would permit carrying more useful load, thus increasing range of operation or augmenting passengers, mail or other cargo.

"A study of the advantages to be derived from using this device for the launching of a modern air boat reveals approximately 38 percent more gross load may be safely launched than could be taken off from the surface of water under conditions of no wind. If this additional load was used to carry more fuel and oil, the range of the plane would be approximately doubled.

"The air boat still could climb at full throttle with this overload and could maintain level flight with less than three-fourths power output.

"In case of engine failure before enough fuel had been used to lighten the load so that flight might be maintained, part of the fuel could be dumped, permitting the air boat to reach suitable protected water for alighting."

A boat, approximating in size and power the Pan American Clipper ships, could accelerate from a standing start to a speed of 100 miles per hour in less than a mile through use of the device, Wheatley said.

In company with Edgar N. Gott, assistant to Consolidated's president, Wheatley demonstrated the device at the company's plant last night. He pointed out a crib-like steel structure, behind the Fleet biplane's landing gear, which balanced the plane on its platform. Illustrating the take-off, he said cross-winds would have little effect on the ship.

"The ship cannot possibly rise from the car because the wings are at such an angle as to give no lift," Wheatley explained. "That car could go 100 miles an hour and the ship would not take off until the pilot pulled back on the stick."

Increased distance between tracks and larger cars mounted with platforms will accommodate giant air boats, Wheatley said.

Experimentation and development of the device will continue at Consolidated's plant, officers of the company announced.

Western Aviation — October

Consolidated Flying

A total of 185,300 square feet are being added to the floor space of **Consolidated Aircraft's** new plant in San Diego, bringing the total floor space up to 432,141 square feet, an increase of approximately 75 per cent over the original area. The main factory additions equal 65,000 square feet; paint shop, 10,000; tool and fixture storage building, 10,000; paint and oil storage, 2,000; and the experimental building, 96,300. In addition to the expansion of the plant an overhead monorail system consisting of 6,755 feet of track is being installed.

The construction, which started in July, should be completed by the first of November.

♦

Consolidated Aircraft employees introduced a new house organ to the aviation industry with the publication of the first issue in September.

The Pilot-October '36

A mammoth new flying boat, details of which will not be available for some time, is being designed by Consolidated Aircraft Co., of San Diego. This company has also recently issued a comprehensive bulletin on the spinning characteristics of the Fleet, in which several common rigging faults which make for bad spinning habits are explained.

HUGE PLANES DUE IN NEXT 5 YEARS, OPINION OF GOTT

Maj. Ed Gott, assistant to Maj. Reuben S. Fleet of the Consolidated Aircraft Corp., told the San Diego Lions club yesterday noon at its luncheon, held in U. S. Grant hotel, thta, in his opinion, the future will bring greater development of the airplane. He stated that he expects to see within the next five years a plane weighing 150 tons with a cruising speed of 240 miles an hour; also, this ship will be able to travel 5000 miles without refueling.

Major Gott turned back the pages of airplane building to 1917 when William Van Dusen was learning to fly. In those days, he said, the planes were of wood construction, and woodshops were the biggest part of the building activities. Since steel is used in the building of ships, the woodshop is confined to a tiny space where crates are built for the crating of planes for shipment.

The pay roll of the Consolidated, said Major Gott, is $4,000,000 a year. There are 2600 on the pay roll and 9000 persons are involved.

Craft for the Navy

Further down the coast, Consolidated Aircraft is also at work on big flying boats. These are craft for the navy—the patrol bombers which have set up such fine distance records in the last year or two, but still further refined and improved in design.

An order for sixty of these big fellows recently was placed with Major Reuben Fleet's organization, as a result of a competition at San Diego. In this competition a Douglas two-decker boat was likewise entered and is expected to be a strong contender for future navy boat business.

The Consolidated boats also have retractable wing-tip floats. In flight they are raised outward so that the pontoon support forms an extension of the under side of the wing and the pontoon itself forms the wing tip. Officials at the factory, which is in process of enlargement by nearly 80 per cent in floor space to take care of new work, said that the pontoon offered very good aerodynamic qualities when in raised position and gave the craft more than ten miles an hour additional top speed.

Two Twin-Row Engines

This flying boat, as ordered by the navy, is powered with two twin-row, 1,000 horsepower Wasp engines. It is expected to hang up some more records for long-distance cruising.

It is an open secret here that the Boeing company at Seattle has progressed far with a very large commercial flying boat, some 50 per cent bigger in gross weight than the largest of the craft now flying the Pacific Airline of Pan American. Details and date of emergence of this huge aircraft cannot as yet be revealed.

It is plain, from the foregoing, that if Great Britain is looking to the roads of the sea for the linking of her empire, the aircraft designers of the United States are also wide awake to the importance, from both the military and the civil angle of the further development of large water-going aircraft. Indeed, there is a strong school of thought in the navy which holds that this is the prime line of development in so far as naval aviation is concerned. N.Y. TIMES-SUN

LOCAL INVENTION LAUNCHES PLANES FROM R. R. TRACKS

S.D. UNION — 9-26-36

Cruising Radius Doubled, Pay Loads Increased 38 Percent By Device Evolved by Three Consolidated Aircraft Corp. Associates; Small Flat Car Is Used in Successful Demonstration Near Chula Vista Airport.

Gigantic air boats will have their cruising radius doubled and pay loads increased 38 percent through a device for launching aircraft from railroad tracks, tested secretly and successfully yesterday by W. B. Wheatley, Consolidated Aircraft Corp. chief test pilot, aviation experts reported. Witnesses to the test, which they termed another milestone in aviation progress, included Maj. R. H. Fleet, Consolidated's president; I. M. Laddon, chief engineer, and department of commerce representatives.

Cruising Radius Increased

Loads and cruising radii of land planes also will be increased by the device, which was invented and perfected through the efforts of the three men chiefly responsible for the navy's new flying boats being built here. The inventors of aviation's newest advancement are Maj. Fleet, Laddon and Wheatley.

Simple in principle, the device was tested yesterday afternoon at 1:15 on railroad tracks near Chula Vista airport.

A Fleet training two-passenger biplane, weighing 1700 pounds and with a 28-foot wing spread, was mounted on an old hand car, 8 feet long and 6 feet wide. An automatic brake was placed so it would halt the car when the plane rose from the platform, lending the effect of a catapult.

After checking the tiny airship and every mechanism, Wheatley, a lieutenant in the naval reserve, climbed into the cockpit. With a wave of his hand he signaled for the chocks to be pulled.

Slight Cross-Wind

The 160-horsepower Kinner engine roared. Drawn by its propeller, the plane rushed down the track on its small flat car.

Wheatley waited for the moment when he would attain 60 miles an hour speed, necessary to lift the plane into the air. He watched the effects of a slight cross-wind and was satisfied with his calculation that the adverse breeze would have no effects on his take-off.

At about 300 feet from the start Wheatley's hand tensed on the stick. Then he pulled the stick back, raising the elevators. The biplane literally jumped from the platform. Wheatley turned the ship to land later at the near-by airport. The flat car came to grief a few seconds after Wheatley's take-off.

(Continued on Page 2, Col. 2)

FLATCAR 'GUNS' SEEN FOR PLANES

S. D. Union 10-10-36

Huge airplanes of the future will be catapulted into the air by flat cars operating on railroad tracks.

That was the opinion expressed to the Chamber of Commerce aviation committee yesterday by William Wheatley, chief test pilot of the Consolidated Aircraft Corp. Wheatley recently was successful in piloting a Consolidated plane into the air from a San Diego & Arizona Railway flat car.

The committee passed a resolution calling upon the Harbor Department to speed up construction of the seaplane launching ramp of the municipal airport.

U.S. Air Services
Consolidated Aircraft Magazine
Oct — 1936

THERE CAME TO THE EDITOR'S desk last month a copy of Vol. 1, No. 1 issue of *Consolidated Aircraft Magazine*, published by and for the employes of the Consolidated Aircraft Corporation, San Diego, Calif. Its size is 11¾ by 8¾. There are 32 pages and cover. The paper and typography are splendid, the reading matter and illustrations excellent. On the cover is a picture of the main entrance to the plant of Consolidated Aircraft Corporation.

We congratulate all concerned on the appearance of this new house organ in the aeronautical field.

WAR SECRETARY POST GIVEN TO HARRY WOODRING

Appointment Is Temporary, White House Announces; Strong Defense Pledged

(Picture on Page 3)

HYDE PARK, N. Y., Sept. 25 (A. P.)—President Roosevelt tonight gave a recess appointment to Harry H. Woodring as secretary of war, temporarily filling the vacancy caused by the death of George H. Dern.

Woodring, a former governor of Kansas, has been acting as head of the war department since Dern, a former governor of Utah, died late last month.

The White House said the Woodridge appointment was only temporary, but gave no indication whether he or someone else would be given the post permanently.

The announcement said that under the law the cabinet vacancy must be filled within 30 days.

VETERAN OF WORLD WAR

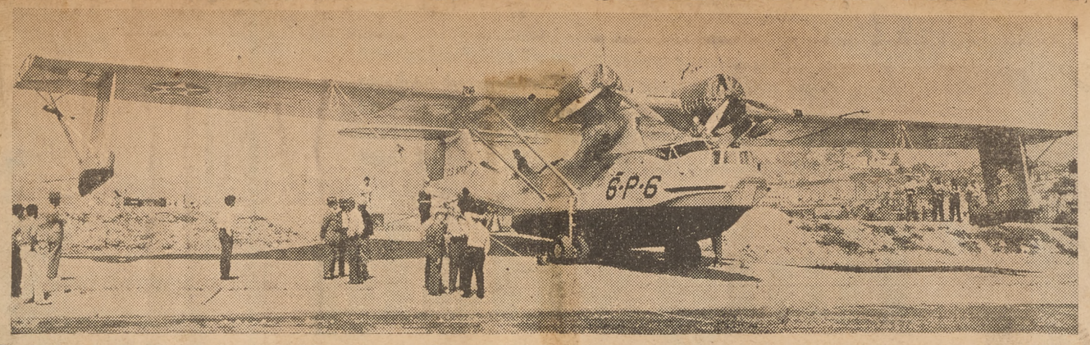
WASHINGTON, Sept. 25 (A.P.)—Harry H. Woodring pledged tonight to carry out the policies started by his predecessor for "an adequate national defense in the interest of peace for our nation."

Woodring, 46, a former governor of Kansas and a World war veteran, as assistant secretary, has been in charge of all procurement for the army, including large purchases of aircraft the last two years under a five-year program to build up that branch of the service. He was active head of the war department during the long illness of Secy. Dern. Upon Dern's death Aug. 26, he automatically became acting secretary.

RESERVES HANGAR JOB IS RESUMED

ago. More than $25,000 will be expended in erection of the hangar, offices, shops, stock room and commanding officer's quarters.

100-FOOT WINGSPREAD ON NEW S.D. FLYING SHIP FOR NAVY



Emphasized in the photo is the hundred-foot wing spread of the first huge twin-motored flying boat delivered to the navy by Consolidated officials yesterday. Powered by radial engines of the latest design, the ship is the first of 110 similar planes now in construction at Consolidated for navy contracts. The high-wing monoplane is of the PBY type—a patrol bomber. A standard navy type of ship, the new flying boat is the kind that holds several records for long-distance non-stop flights, most recent of which was from Coco-Solo, C. Z., to San Francisco. The seaplane ramp at Lindbergh field is not yet finished and though no difficulty was experienced in launching the big ship, necessity for the ramp clearly was shown.

S.D. TRIBUNE 10-6-36

New Navy Flying Boats Assigned To San Diego

S.D. SUN- Oct. 7-1936

One squadron of the new Navy flying boats in San Diego—
Another in Coco Solo, Canal Zone—
Two more squadrons in Pearl Harbor—

Thus, probably, will the first 48 patrol bombers being constructed by Consolidated Aircraft Corp. be apportioned, Rear Adm. Ernest J. King, commander Aircraft Base Force, indicated today.

Each of the squadrons will consist of 12 planes. Adm. King pointed out that more new airships would be dispatched to these three bases as quickly as Consolidated delivers the remainder in its order of 110 flying boats.

"I am going to Guantanamo Bay, Cuba, next February to conduct a concentration of planes from the Canal Zone and the East Coast," he said. "San Diego naval aircraft, however, will not take part in those maneuvers."

Leaving for Pearl Harbor aboard the aircraft tender USS Wright Saturday, Adm. King will direct annual tactical flights of the five Hawaii patrol squadrons, consisting of approximately 40 planes. The maneuvers will extend from Oct. 25 to Nov. 10. The Wright returns to San Diego Nov. 24.

Six crews from Squadron VP-6, Pearl Harbor, will fly the first group of six flying boats from North Island to Hawaii in mid-December.

The remainder of this squadron will arrive here next month to ac-

Turn to Page 2, Col. 8.

S. D. WINS NEW BOMBER PLANES

(Continued from Page 1)

quaint themselves with operation of the gigantic airships, preparatory to winging the second group of six to Honlulu in January.

Early next summer, another complete squadron will come from Pearl Harbor to accept delivery on 12 more patrol bombers which will be flown to their home base.

In the allocation of the new flying boats, the Navy is contemplating strengthening its Pacific Coast defenses, Adm. King declared.

BOMBER DELIVERED TO NAVY IN S. D.

SD. SUN-10-6-36

A graceful huge "flying boat" dipped into the waters of San Diego bay late yesterday.

Spread about the giant airship was a cordon of Navy officers and sailors. Civilians who strayed near the ship were politely ordered away.

Thus Navy accepted the first of 110 patrol bombers to be built by Consolidated Aircraft Co. in its San Diego plant.

NAVY TAKES OVER BIG FLYING BOAT; FIRST BUILT HERE

S.D. UNION-10-6-36

Craft Made by Consolidated Goes to North Island For Grueling Tests.

Surrounded by a naval "secrecy guard," the first glistening PBY flying boat to be constructed from the ground up at Consolidated Aircraft's year-old plant here was lowered into harbor waters at 11:53 a. m. yesterday, ready to take its place as "finest of naval fighting equipment."

Seven minutes later, brief ceremonies of government acceptance completed, wing lines of the huge monoplane were cast off and the powerful craft started for North Island and weeks of grueling tests planned by crack naval pilots who will prove it out.

It is the first flying boat ever constructed in San Diego and the first naval ship to be delivered after complete fabrication here, Consolidated officials said.

Curious Driven Away

Swarming blue jackets drove away all curious persons and kept all but workers clear of the ship as it was hauled across a strip of beach and launched.

Censorship rules halted release of exact descriptions of the huge boat. The following paragraph of description was contained in an official dispatch from the aircraft factory:

"The ship is the latest design of flying boat in the service of the navy for patrol and bombing service, powered with two of the latest type radial air-cooled engines. The boat is of the high wing monoplane type, spans more than 100 feet and is approximately 70 feet in length.

"This type of airboat is the holder of several distance flight records, including a non-stop flight from Coco-Solo, Canal Zone, to San Francisco. It is a standard type in navy service.

Ramp Need Told

"In the absence of the completion of the new seaplane ramp, which is now being constructed by the harbor department on Lindbergh field, it was necessary to launch this large vessel across the shore of a beach not especially prepared. Its handling emphasized the urgent need and extreme utility of the ramp, which it is hoped will be completed within a few weeks.

"During this time, however, it probably will be necessary to launch several more ships of this type with the improvised facilities."

The plane is one of 110 being constructed at Consolidated under government contract. Others will be delivered at intervals during the next year. Releases said it was completed exactly on schedule.

CONSOLIDATED EXCEEDS QUOTA

One of the big moments to date in the Chest-Red Cross united appeal came at yesterday's meeting of volunteer workers when Edgar N. Gott, of the Consolidated Aircraft Corp., announced employes of that plant already had oversubscribed their quota nearly 50 percent, and the solicitation was not yet finished. Gott is pictured handing a package of subscriptions to C. L. Cotant, general of the payroll division.

S.D. UNION-10-6-36

$108,526 RAISED BY CHEST; PLANE FIRM 'OVER TOP'

Reported yesterday.....	$ 36,654.00
Previously reported	71,872.00
Total	$108,526.00

Additional subscriptions of $36,654 which raised the total to $108,526, and announcement that employes of the Consolidated Aircraft Corp. had far exceeded their quota and were "still going strong," highlighted yesterday's report luncheon of Community Chest and Red Cross workers.

The total to date is just over the half-way mark in the campaign for $215,608, and represents 50.3 percent of the fund which is sought for support of the 35 Chest agencies and the local Red Cross. The quota for this stage of the united appeal had been set at 50 percent.

Enthusiasm of an already spirited meeting reached a new high for this campaign when Edgar N. Gott, assistant to the president of the Consolidated Aircraft Corp., and one of the leaders in the payroll division, announced that with a quota of $5500 assigned his plant, the employes of this newest and largest industry here already had pledged $7625, and the job was not yet finished.

'Fine Respnse'

"Consolidated employes are responding splendidly to the Chest and Red Cross appeal," Gott told

(Continued on Page 2, Col. 5)

the assembled workers. "This response indicates how they feel about the campaign, and their desire to be identified with a movement that means so much to the community."

Another interesting feature of yesterday's meeting was a tribute to Samuel I. Fox, pioneer merchant and long-time civic leader, who this year is celebrating his 50th year in business here. Guilford H. Whitney voiced the tribute in behalf of the Community Chest, of which Mr. Fox is honorary president, and of the Red Cross, with which he also has been long identified.

An electric desk clock was presented to Mr. Fox by John L. Fox, campaign chairman. R. King Kauffman, chairman of San Diego chapter, Red Cross, pinned the emblem of that organization on Mr. Fox's lapel.

Mr. Fox, responding, said his years of association with both the Chest and Red Cross had been a real pleasure to him, and added, "The only way we can build a city is for everyone to do his or her part, giving unselfishly to the community whether it be in civic work or in endeavors such as the Chest and Red Cross represent."

'Quota Club' Listed

Firms eligible to the "quota club," with subscriptions equal to a day's pay from each employee, announced at the meeting, were: John Burnham & Co., Burroughs Adding Machine Co., Carlson & Simpson, Challenge Cream & Butter Co., Cuyamaca club, Humpty Dumpty Stores, Klauber-Wangenheim Co., H. V. Lee, Alfred M. Lewis, Inc., New York Life Insurance Co., Prudential Insurance Co. of America, Remington Rand Business Service, Inc., San Diego chamber of commerce, San Diego Macaroni Manufacturing Co., San Diego Trust & Savings bank, Tanner Motors Tours, Underwood-Elliott-Fisher Co.

Awards of merit to the following team leaders and workers were made for outstanding performance: Mesdames Ray Brown, R. A. Boyett, Wiley V. Ambrose, Susie Byers, Charles Tracy, W. H. Porterfield, Victor Venberg, Will Crawford, C. L. Staely, Lillian MacLellen, Cecil W. Neff, George Preston, J. M. McColl, Karl Shears, O. E. Tyler, H. W. Coonradt, W. S. Fay, E. H. Depew, Dorothy Cabana, R. L. Powers, E. H. Granger, Bertha Shadwell, H. L. Foster, Jennie Winkelmann, C. H. Birkenstock, Emil Black, Frances Berenson, F. E. Marcy, Fred Bolton, L. D. Jones, Louis Perna, J. P. Witherow jr., Sam Mason, Everett N. Curtis, C. E. Ferris, Elliot G. Colby; Misses Lois Doane, Dorothy Nyhus, Mary Jane Barry. In the men's division awards went to George Stone, O. W. Todd jr., Ray Cavell, R. W. Merrill, E. R. Ferris, Harry Callaway.

S.D. SUN 10-6-36

Page 2

CHEST DRIVE NETS $108,526 WITHIN WEEK

Half-Way Mark Passed; Aircraft Workers Pay More Than Quota

With more than half of the $215,608 fund subscribed in the first week, Community Chest and Red Cross workers today entered the second phase of the annual campaign. To date, $108,526 has been obtained.

Reports of further progress will be made at a luncheon meeting tomorrow in Hotel San Diego.

The fund went over the half-way mark at yesterday's luncheon meeting, which was featured by announcement that employes of Consolidated Aircraft Corp. already have exceeded their quota by nearly 50 per cent.

Quota Club Boosted

New names of firms to reach the "quota club" class, with subscriptions equal to one day's pay from each employe, are:

John Burnham & Co., Burroughs Adding Machine Co., Carlson & Simpson, Challenge Cream & Butter Co., Cuyamaca Club, Humpty Dumpty Stores, Klauber-Wangenheim Co., H. V. Lee, Alfred M. Lewis, Inc., New York Life Insurance Co., Prudential Insurance Co. of America, Remington Rand Business Service, Inc., San Diego Chamber of Commerce, San Diego Macaroni Mfg. Co., San Diego Trust & Savings Bank, Tanner Motors Tours, Underwood Elliott Fisher Co.

WOMEN HONORED

Awards for merit in reaching quotas were made yesterday to the following team leaders and workers:

Mesdames, Ray Brown, R. A. Boyett, Wiley V. Ambrose, Susie Byers, Charles Tracy, W. H. Porterfield, Victor Venberg, Will Crawford, C. L. Stealy, Lillian MacLellan, Cecil W. Neff, George Preston, J. M. McColl, Karl Shears, O. E. Tyler, H. W. Coonradt, W. S. Fay, E. H. Depew, Dorothy Cabana, R. L. Powers, E. H. Granger, Bertha Shadwell, H. L. Foster, Jennie Winkelmann, C. H. Birkenstock, Emil Black, Frances Berenson, F. E. Marcy, Fred Bolton, L. D. Jones, Louis Perna, J. P. Witherow jr., Sam Mason, Everett N. Curtis, C. E. Ferris, Elliot G. Colby; Misses Lois Doane, Dorothy Nyhus, Mary Jane Barry. In the business men's division, George Stone, O. W. Todd jr., Ray Cavell, R. W. Merrill, E. R. Ferris, Harry Callaway.

S.D. TRIBUNE PAGE TEN 10-7-36

TWELVE TO FLY FROM S.D. TO HONOLULU

The first 12 of 60 twin-motored patrol bombers being built at Consolidated Aircraft for the navy will make non-stop flights from San Diego to Honolulu as part of naval massed flight operations within the next five months, Rear Adm Ernest J. King, commander patrol wing, fleet air force, announces.

Dec. 10 will see the take-off of the first six planes for the transpacific hop, the remaining six following on Jan. 15. Now undergoing load, speed, altitude and endurance tests at North Island, the first of these flying boats was launched Monday. They will be based at Pearl Harbor.

3000-mile flight of 48 planes from San Diego to Canal Zone maneuvers is scheduled for February and March. Patrol groups now at Coco Solo, C. Z., and Guantanamo bay, Cuba, will participate in the exercises. Altogether, there will be about 100 planes under Adm. King's direction taking part in the maneuvers.

The officer will sail for Pearl Harbor Saturday aboard the aircraft tender Wright to direct flight maneuvers by the 65-plane group there during the latter part of this month and early November. Operations will be in the Hawaii-Midway island-Kingman reef triangle.

Dividend Move Seen By Consolidated Aircraft

SD SUN 10-11-36

Holders of Consolidated Aircraft Corporation common stock may receive a dividend this year. In fact, such action on the part of the corporation is "likely," according to Standard Statistics Co., of New York.

In a current survey of the aircraft industry, Standard notes the business improvement registered by Consolidated and concludes that "retention of speculative holdings is justified by the promising earnings outlook" of the concern.

Says Standard:

"Unfilled orders approximating $13,500,000 on Aug. 7, 1936, about the highest in the company's history, assure active operations at least through 1937. Net of $0.32 a common share was earned in the second quarter of 1936, on moderately increased shipments, compared with a nominal profit in the initial three months.

"With production capacity being expanded 80 per cent, deliveries probably can be considerably speeded in the near future. In addition to the order for 60 patrol-bomber flying boats now being filled, the Navy ordered 50 more, with spare parts for an additional 22, on July 15, 1936, at a cost of $4,900,000.

"Although profit margins on Navy business are limited to 10 per cent, and profits per share henceforth will be slightly diluted by the recent issue of 24,000 shares of $3 preferred, the larger volume should promote better earnings. A small common dividend is likely this year."

Flat Car Favored In Plane Take-Off

S.D. TRIBUNE 10-12-36

The huge, multi-motored transport plane is gently lowered into its cradle aboard a large flat-bed car at one end of a length of railroad tracks. All passengers and mail aboard, the ship's motors idle softly, propellers barely turning. The retractable landing gear is drawn up; figures cluster at the thick glass windows along three decks in the leading edge of the thick wing.

At the pilot's all-clear signal, the car rolls along the rails, quickly gathering speed. Near the center of the runway, the powerful engines roar and the ship rises from the speeding flatcar which immediately begins to stop—and another transcontinental non-stop flight begins on its daily schedule.

That is how huge landplanes of the future will be launched, it is believed. William Wheatley, chief test pilot of Consolidated Aircraft Co., at a recent meeting of the aviation committee of the chamber of commerce said that with the take-off speed of giant ships now being planned well over 100 miles an hour, ordinary ground take-offs will be impractical. That specially-built, fast railroad flat cars will launch the ships is not only possible but probable.

Recent successful launching of a plane from a flat railroad handcar by Consolidated officials near Chula Vista airport proved that the new method is extremely practical. Less space for runways would be required; greater loads could be carried; much less vibration and jarring would be experienced, and many other advantages realized.

Further railway catapultic tests are being planned by Consolidated officials for launching an army bombing plane, Wheatley said.

BIG SEAPLANE RAMP READY FOR USE SOON AT LINDBERGH FIELD

UNUSUAL METHOD USED TO INSTALL CONCRETE PAVING

Capable of accommodating the transpacific clipper planes and other huge flying boats, the new seaplane ramp at Lindbergh field, built under novel conditions, was reported finished yesterday and is expected to be ready for use within a few days.

Where the ordinary ramp is 40 feet wide, the one here has a width of 100 feet and marks the successful completion of another joint WPA-harbor department project. The big slab of concrete, 8 inches thick and heavily reinforced with steel rods, extends from 10 feet above high water to 8 feet below mean low water, and was built "on dry land" by forming an earthwork dam around the working area.

About 70 men from the local WPA district were assigned to the job by George White, in charge of the district, and carried out work which ran all the way from truck driving to cement finishing. Port officials who superintended the work are enthusiastic over the way in which the WPA men handled their tasks, often working against rising water, battling with time to get a certain unit completed.

The dyke surrounding the project, said to be the first of its kind ever used, was planned by Port Director Joe Brennan, and was filled in with earth, the trucks starting out from one end of the job and working all the way around to the other, packing down the material as they worked. Muck from the bottom of the bay, forced up by the weight of the dyke, was removed with a clamshell operated by a power crane, and dumped on the outside to reinforce the embankment. Then the enclosed area was pumped out, and preparations for the actual laying of the ramp were made.

A layer of firm material was put down first, and on this the concrete, in four 25-foot slabs, was poured. Pumps were kept going to keep the seepage down, and the ramp slowly took form, from the end which will be far below water level.

An interesting feature of the work was the necessity of leaving drain holes in the concrete, the huge weight of which forced up water and seepage from below, like so many springs. At one time, the pumps broke down, and a hurry call brought a fire-engine to the scene, to keep the water down until the main pump was repaired.

Now that all the concrete has been poured, all that remains is to remove the dyke. By using an earth fill instead of a cofferdam, some $10,000 was saved, the only expense being the gasoline for the trucks. Labor was, of course, supplied by WPA. Present plans call for cutting away the dyke with a dredger, which will pump the earth, "borrowed" from surfacing material, out onto the new fill where a hard surface will be required for the landing of planes.

WPA IMPROVEMENT AT MUNICIPAL AIRPORT

S.D. UNION - 9-29-36

Built under novel conditions, this new seaplane ramp for the municipal airport has been completed at the west end of Lindbergh field, adding another unit to the "finished business" of local WPA projects.

TAKE-OFF SPED WITH USE OF HANDCAR

9-26-36 S.D. TRIBUNE

A successful test of launching an airplane from railroad tracks, in which a handcar was used to carry the plane on the take-off, was completed yesterday afternoon by Consolidated Aircraft Corp. officials, who developed the novel launching method. They assert the device will double the cruising radius of

(Continued on Next Page, Col. 6)

flying boats and increase payloads 38 percent.

The test, witnessed by Maj. R. H. Fleet, Consoldated's president; I. M. Laddon, chief engineer, and department of commerce representatives, was made on railroad tracks near Chula Vista airport by W. B. Wheatley, a lieutenant in the naval reserve, who is Consolidated's chief tets pilot. Mounting a Fleet training biplane on a hand car, which was equipped with an automatic brake to stop it when the plane rose from the platform, Wheatley sped the plane down the railroad track on the flat car until a speed of 60 miles an hour was attained, when he pulled back the stick, raised the elevators and the plane soared into the air.

The plane, drawn by its propeller as it sped down the track on the tiny flatcar, left its mobile launching platform when about 300 feet from the starting point. The hand car, only eight feet long and six feet wide, jumped the track immediately after the plane was in the air. Wheatley flew to a safe landing at the Chula Vista airport.

Lists Advantages

Fleet, Laddon and Wheatley are inventors of newest advancement in aviation.

In a statement issued soon after the test, Wheatley said, "This device would permit take-offs with heavier loads than could be handled by conventional take-off practice." Among its advantages he listed:

Take-offs in the winter when water is obstructed with ice and flying fields are obstructed with snow.

Elimination of ice formation on seaplanes during take-off in freezing weather.

Permit land planes to take off with landing gears in place, retracted or removed.

Permit seaplanes to take off with wing tip floats retracted or removed, increasing efficiency.

Permit wing tip floats to be installed of a size smaller than required under conventional take-off conditions with heavy load.

Elimination of spray which sometimes strikes propellers and tail surfaces.

Elimination of the pounding on the hull usually experienced in taking off heavily loaded air boats from the surface of the water.

Safer take-offs at night, in dense fog or in heavy snow storms because it would not be necessary for the pilot to steer the plane on a narrow runway or in a channel on the water.

Safe blind take-offs as the track guides the plane in the run and no-lift longitudinal attitude of plane is maintained up to the moment the pilot decides to take off.

No illumination at night (such illumination impairs the pilot's vision after take-off).

"Because the rolling friction of a carriage is less than the friction and drag of landplane wheels on soft airports and much less than the retarding action of water on the hull of flying boats," Wheatley explained, "and as an aircraft would gather speed in the no-lift minimum drag position from the very start of the take-off run when using this device, it would permit carrying more useful load, thus increasing range of operation or augmenting passengers, mail or other cargo.

"A study of the advantages to be derived from using this device for the launching of a modern air boat reveals approximately 38 percent more gross load may be safely launched than could be taken off from the surface of water under conditions of no wind. If this additional load was used to carry more fuel and oil, the range of the plane would be approximately doubled.

"The air boat still could climb at full throttle with this overload and could maintain level flight with less than three-fourths power output.

"In case of engine failure before enough fuel had been used to lighten the load so that flight might be maintained, part of the fuel could be dumped, permitting the air boat to reach suitable protected water for alighting."

A boat, approximating in size and power the Pan American Clipper ships, could accelerate from a standing start to a speed of 100 miles per hour in less than a mile through use of the device, Wheatley said.

In company with Edgar N. Gott, assistant to Consolidated's president, Wheatley demonstrated the device at the company's plant last night. He pointed out a crib-like steel structure, behind the Fleet biplane's landing gear, which balanced the plane on its platform. Illustrating the take-off, he said cross-winds would have little effect on the ship.

"The ship cannot possibly rise from the car because the wings are at such an angle as to give no lift," Wheatley explained. "That car could go 100 miles an hour and the ship would not take off until the pilot pulled back on the stick."

Increased distance between tracks and larger cars mounted with platforms will accommodate giant air boats, Wheatley said.

Experimentation and development of the device will continue at Consolidated's plant, officers of the company announced.

Western Builder — Consolidated Flying

Consolidated A total of 185,300 square feet are being added to the floor space of **Consolidated Aircraft's** new plant in San Diego, bringing the total floor space up to 432,141 square feet, an increase of approximately 75 per cent over the original area. The main factory additions equal 65,000 square feet; paint shop, 10,000; tool and fixture storage building, 10,000; paint and oil storage, 2,000; and the experimental building, 96,300. In addition to the expansion of the plant an overhead monorail system consisting of 6,755 feet of track is being installed.

The construction, which started in July, should be completed by the first of November.

♦

Consolidated Aircraft employees introduced a new house organ to the aviation industry with the publication of the first issue in September.

The Pilot-October '36

A mammoth new flying boat, details of which will not be available for some time, is being designed by Consolidated Aircraft Co., of San Diego. This company has also recently issued a comprehensive bulletin on the spinning characteristics of the Fleet, in which several common rigging faults which make for bad spinning habits are explained.

9-25-36 SD UNION

PAGE TWELVE

HUGE PLANES DUE IN NEXT 5 YEARS, OPINION OF GOTT

Maj. Ed Gott, assistant to Maj. Reuben S. Fleet of the Consolidated Aircraft Corp., told the San Diego Lions club yesterday noon at its luncheon, held in U. S. Grant hotel, thta, in his opinion, the future will bring greater development of the airplane. He stated that he expects to see within the next five years a plane weighing 150 tons with a cruising speed of 240 miles an hour; also, this ship will be able to travel 5000 miles without refueling.

Major Gott turned back the pages of airplane building to 1917 when William Van Dusen was learning to fly. In those days, he said, the planes were of wood construction, and woodshops were the biggest part of the building activities. Since steel is used in the building of ships, the woodshop is confined to a tiny space where crates are built for the crating of planes for shipment.

The pay roll of the Consolidated, said Major Gott, is $4,000,000 a year. There are 2600 on the pay roll and 9000 persons are involved.

Craft for the Navy

Further down the coast, Consolidated Aircraft is also at work on big flying boats. These are craft for the navy—the patrol bombers which have set up such fine distance records in the last year or two, but still further refined and improved in design.

An order for sixty of these big fellows recently was placed with Major Reuben Fleet's organization, as a result of a competition at San Diego. In this competition a Douglas two-decker boat was likewise entered and is expected to be a strong contender for future navy boat business.

The Consolidated boats also have retractable wing-tip floats. In flight they are raised outward so that the pontoon support forms an extension of the under side of the wing and the pontoon itself forms the wing tip. Officials at the factory, which is in process of enlargement by nearly 80 per cent in floor space to take care of new work, said that the pontoon offered very good aerodynamic qualities when in raised position and gave the craft more than ten miles an hour additional top speed.

Two Twin-Row Engines

This flying boat, as ordered by the navy, is powered with two twin-row, 1,000 horsepower Wasp engines. It is expected to hang up some more records for long-distance cruising.

It is an open secret here that the Boeing company at Seattle has progressed far with a very large commercial flying boat, some 50 per cent bigger in gross weight than the largest of the craft now flying the Pacific Airline of Pan American. Details and date of emergence of this huge aircraft cannot as yet be revealed.

It is plain, from the foregoing, that if Great Britain is looking to the roads of the sea for the linking of her empire, the aircraft designers of the United States are also wide awake to the importance, from both the military and the civil angle of the further development of large water-going aircraft. Indeed, there is a strong school of thought in the navy which holds that this is the prime line of development in so far as naval aviation is concerned. N.Y. TIMES-SUN

LOCAL INVENTION LAUNCHES PLANES FROM R. R. TRACKS

S.D. UNION - 9-26-36

Cruising Radius Doubled, Pay Loads Increased 38 Percent By Device Evolved by Three Consolidated Aircraft Corp. Associates; Small Flat Car Is Used in Successful Demonstration Near Chula Vista Airport.

Gigantic air boats will have their cruising radius doubled and pay loads increased 38 percent through a device for launching aircraft from railroad tracks, tested secretly and successfully yesterday by W. B. Wheatley, Consolidated Aircraft Corp. chief test pilot, aviation experts reported. Witnesses to the test, which they termed another milestone in aviation progress, included Maj. R. H. Fleet, Consolidated's president; I. M. Laddon, chief engineer, and department of commerce representatives.

Cruising Radius Increased

Loads and cruising radii of land planes also will be increased by the device, which was invented and perfected through the efforts of the three men chiefly responsible for the navy's new flying boats being built here. The inventors of aviation's newest advancement are Maj. Fleet, Laddon and Wheatley.

Simple in principle, the device was tested yesterday afternoon at 1:15 on railroad tracks near Chula Vista airport.

A Fleet training two-passenger biplane, weighing 1700 pounds and with a 28-foot wing spread, was mounted on an old hand car, 8 feet long and 6 feet wide. An automatic brake was placed so it would halt the car when the plane rose from the platform, lending the effect of a catapult.

After checking the tiny airship and every mechanism, Wheatley, a lieutenant in the naval reserve, climbed into the cockpit. With a wave of his hand he signaled for the chocks to be pulled.

Slight Cross-Wind

The 160-horsepower Kinner engine roared. Drawn by its propeller, the plane rushed down the track on its small flat car.

Wheatley waited for the moment when he would attain 60 miles an hour speed, necessary to lift the plane into the air. He watched the effects of a slight cross-wind and was satisfied with his calculation that the adverse breeze would have no effects on his take-off.

At about 300 feet from the start Wheatley's hand tensed on the stick. Then he pulled the stick back, raising the elevators. The biplane literally jumped from the platform. Wheatley turned the ship to land later at the near-by airport. The flat car came to grief a few seconds after Wheatley's take-off.

(Continued on Page 2, Col. 2)

FLATCAR 'GUNS' SEEN FOR PLANES

S.D. [illegible] 10-10-36

Huge airplanes of the future will be catapulted into the air by flat cars operating on railroad tracks.

That was the opinion expressed to the Chamber of Commerce aviation committee yesterday by William Wheatley, chief test pilot of the Consolidated Aircraft Corp. Wheatley recently was successful in piloting a Consolidated plane into the air from a San Diego & Arizona Railway flat car.

The committee passed a resolution calling upon the Harbor Department to speed up construction of the seaplane launching ramp of the municipal airport.

U.S. Air Services *Consolidated Aircraft Magazine* OCT 1936

THERE CAME TO THE EDITOR'S desk last month a copy of Vol. 1, No. 1 issue of *Consolidated Aircraft Magazine*, published by and for the employes of the Consolidated Aircraft Corporation, San Diego, Calif. Its size is 11¾ by 8¾. There are 32 pages and cover. The paper and typography are splendid, the reading matter and illustrations excellent. On the cover is a picture of the main entrance to the plant of Consolidated Aircraft Corporation.

We congratulate all concerned on the appearance of this new house organ in the aeronautical field.

WAR SECRETARY POST GIVEN TO HARRY WOODRING

Appointment Is Temporary, White House Announces; Strong Defense Pledged

(Picture on Page 3)

HYDE PARK, N. Y., Sept. 25 (A. P.)—President Roosevelt tonight gave a recess appointment to Harry H. Woodring as secretary of war, temporarily filling the vacancy caused by the death of George H. Dern.

Woodring, a former governor of Kansas, has been acting as head of the war department since Dern, a former governor of Utah, died late last month.

The White House said the Woodridge appointment was only temporary, but gave no indication whether he or someone else would be given the post permanently.

The announcement said that under the law the cabinet vacancy must be filled within 30 days.

VETERAN OF WORLD WAR

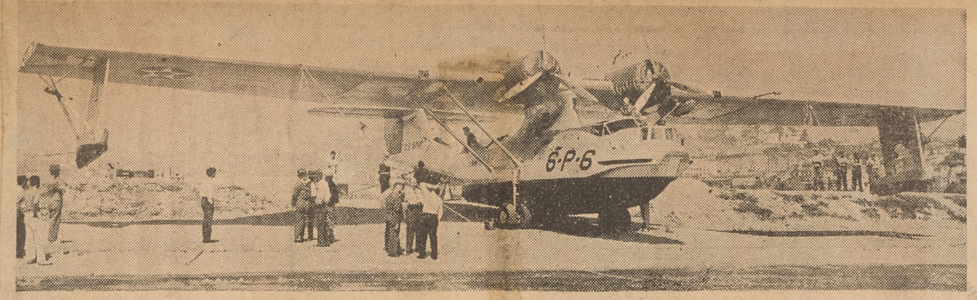
WASHINGTON, Sept. 25 (A.P.)—Harry H. Woodring pledged tonight to carry out the policies started by his predecessor for "an adequate national defense in the interest of peace for our nation."

Woodring, 46, a former governor of Kansas and a World war veteran, as assistant secretary, has been in charge of all procurement for the army, including large purchases of aircraft the last two years under a five-year program to build up that branch of the service. He was active head of the war department during the long illness of Secy. Dern. Upon Dern's death Aug. 26, he automatically became acting secretary.

RESERVES HANGAR JOB IS RESUME[illegible]

Final construction of the army air corps reserve 514th observation squadron hangar at Lindbergh field started yesterday with WPA workers and funds. The project was halted temporarily several weeks ago. More than $25,000 will be expended in erection of the hangar, offices, shops, stock room and commanding officer's quarters.

100-FOOT WINGSPREAD ON NEW S.D. FLYING SHIP FOR NAVY



Emphasized in the photo is the hundred-foot wing spread of the first huge twin-motored flying boat delivered to the navy by Consolidated officials yesterday. Powered by radial engines of the latest design, the ship is the first of 110 similar planes now in construction at Consolidated for navy contracts. The high-wing monoplane is of the PBY type—a patrol bomber. A standard navy type of ship, the new flying boat is the kind that holds several records for long-distance non-stop flights, most recent of which was from Coco-Solo, C. Z., to San Francisco. The seaplane ramp at Lindbergh field is not yet finished and though no difficulty was experienced in launching the big ship, necessity for the ramp clearly was shown.

New Navy Flying Boats Assigned To San Diego

S.D. SUN- Oct. 7-1936

One squadron of the new Navy flying boats in San Diego—
Another in Coco Solo, Canal Zone—
Two more squadrons in Pearl Harbor—

Thus, probably, will the first 48 patrol bombers being constructed by Consolidated Aircraft Corp. be apportioned, Rear Adm. Ernest J. King, commander Aircraft Base Force, indicated today.

Each of the squadrons will consist of 12 planes. Adm. King pointed out that more new airships would be dispatched to these three bases as quickly as Consolidated delivers the remainder in its order of 110 flying boats.

"I am going to Guantanamo Bay, Cuba, next February to conduct a concentration of planes from the Canal Zone and the East Coast," he said. "San Diego naval aircraft, however, will not take part in those maneuvers."

Leaving for Pearl Harbor aboard the aircraft tender USS Wright Saturday, Adm. King will direct annual tactical flights of the five Hawaii patrol squadrons, consisting of approximately 40 planes. The maneuvers will extend from Oct. 25 to Nov. 10. The Wright returns to San Diego Nov. 24.

Six crews from Squadron VP-6, Pearl Harbor, will fly the first group of six flying boats from North Island to Hawaii in mid-December.

The remainder of this squadron will arrive here next month to ac-

Turn to Page 2, Col. 8.

S. D. WINS NEW BOMBER PLANES

(Continued from Page 1)

quaint themselves with operation of the gigantic airships, preparatory to winging the second group of six to Honlulu in January.

Early next summer, another complete squadron will come from Pearl Harbor to accept delivery on 12 more patrol bombers which will be flown to their home base.

In the allocation of the new flying boats, the Navy is contemplating strengthening its Pacific Coast defenses, Adm. King declared.

BOMBER DELIVERED TO NAVY IN S. D.

SD. SUN-10-6-36

A graceful huge "flying boat" dipped into the waters of San Diego bay late yesterday.

Spread about the giant airship was a cordon of Navy officers and sailors. Civilians who strayed near the ship were politely ordered away.

Thus Navy accepted the first of 110 patrol bombers to be built by Consolidated Aircraft Co. in its San Diego plant.

S.D. TRIBUNE
PAGE TEN 10-7-36

TWELVE TO FLY FROM S.D. TO HONOLULU

The first 12 of 60 twin-motored patrol bombers being built at Consolidated Aircraft for the navy will make non-stop flights from San Diego to Honolulu as part of naval massed flight operations within the next five months, Rear Adm Ernest J. King, commander patrol wing, fleet air force, announces.

Dec. 10 will see the take-off of the first six planes for the transpacific hop, the remaining six following on Jan. 15. Now undergoing load, speed, altitude and endurance tests at North Island, the first of these flying boats was launched Monday. They will be based at Pearl Harbor.

3000-mile flight of 48 planes from San Diego to Canal Zone maneuvers is scheduled for February and March. Patrol groups now at Coco Solo, C. Z., and Guantanamo bay, Cuba, will participate in the exercises. Altogether, there will be about 100 planes under Adm. King's direction taking part in the maneuvers.

The officer will sail for Pearl Harbor Saturday aboard the aircraft tender Wright to direct flight maneuvers by the 65-plane group there during the latter part of this month and early November. Operations will be in the Hawaii-Midway island-Kingman reef triangle.

Dividend Move Seen By Consolidated Aircraft

SD SUN 10-11-36

Holders of Consolidated Aircraft Corporation common stock may receive a dividend this year. In fact, such action on the part of the corporation is "likely," according to Standard Statistics Co., of New York.

In a current survey of the aircraft industry, Standard notes the business improvement registered by Consolidated and concludes that "retention of speculative holdings is justified by the promising earnings outlook" of the concern.

Says Standard:

"Unfilled orders approximating $13,500,000 on Aug. 7, 1936, about the highest in the company's history, assure active operations at least through 1937. Net of $0.32 a common share was earned in the second quarter of 1936, on moderately increased shipments, compared with a nominal profit in the initial three months.

"With production capacity being expanded 80 per cent, deliveries probably can be considerably speeded in the near future. In addition to the order for 60 patrol-bomber flying boats now being filled, the Navy ordered 50 more, with spare parts for an additional 22, on July 15, 1936, at a cost of $4,900,000.

"Although profit margins on Navy business are limited to 10 per cent, and profits per share henceforth will be slightly diluted by the recent issue of 24,000 shares of $3 preferred, the larger volume should promote better earnings. A small common dividend is likely this year."

CHEST DRIVE NETS $108,526 WITHIN WEEK

Half-Way Mark Passed; Aircraft Workers Pay More Than Quota

With more than half of the $215,608 fund subscribed in the first week, Community Chest and Red Cross workers today entered the second phase of the annual campaign. To date, $108,526 has been obtained.

Reports of further progress will be made at a luncheon meeting tomorrow in Hotel San Diego.

The fund went over the half-way mark at yesterday's luncheon meeting, which was featured by announcement that employes of Consolidated Aircraft Corp. already have exceeded their quota by nearly 50 per cent.

Quota Club Boosted

New names of firms to reach the "quota club" class, with subscriptions equal to one day's pay from each employe, are:

John Burnham & Co., Burroughs Adding Machine Co., Carlson & Simpson, Challenge Cream & Butter Co., Cuyamaca Club, Humpty Dumpty Stores, Klauber-Wangenheim Co., H. V. Lee, Alfred M. Lewis, Inc., New York Life Insurance Co., Prudential Insurance Co. of America, Remington Rand Business Service, Inc., San Diego Chamber of Commerce, San Diego Macaroni Mfg. Co., San Diego Trust & Savings Bank, Tanner Motors Tours, Underwood Elliott Fisher Co.

WOMEN HONORED

Awards for merit in reaching quotas were made yesterday to the following team leaders and workers:

Mesdames, Ray Brown, R. A. Boyett, Wiley V. Ambrose, Susie Byers, Charles Tracy, W. H. Porterfield, Victor Venberg, Will Crawford, C. L. Stealy, Lillian MacLellan, Cecil W. Neff, George Preston, J. M. McColl, Karl Shears, O. E. Tyler, H. W. Coonradt, W. S. Fay, E. H. Depew, Dorothy Cabana, R. L. Powers, E. H. Granger, Bertha Shadwell, H. L. Foster, Jennie Winkelmann, C. H. Birkenstock, Emil Black, Frances Berenson, F. E. Marcy, Fred Bolton, L. D. Jones, Louis Perna, J. P. Witherow Jr., Sam Mason, Everett N. Curtis, C. E. Ferris, Elliot G. Colby; Misses Lois Doane, Dorothy Nyhus, Mary Jane Barry. In the business men's division, George Stone, O. W. Todd Jr., Ray Cavell, R. W. Merrill, E. R. Ferris, Harry Callaway.

NAVY TAKES OVER BIG FLYING BOAT; FIRST BUILT HERE

S.D. UNION-10-6-36

Craft Made by Consolidated Goes to North Island For Grueling Tests.

Surrounded by a naval "secrecy guard," the first glistening PBY flying boat to be constructed from the ground up at Consolidated Aircraft's year-old plant here was lowered into harbor waters at 11:53 a. m. yesterday, ready to take its place as "finest of naval fighting equipment."

Seven minutes later, brief ceremonies of government acceptance completed, wing lines of the huge monoplane were cast off and the powerful craft started for North Island and weeks of grueling tests planned by crack naval pilots who will prove it out.

It is the first flying boat ever constructed in San Diego and the first naval ship to be delivered after complete fabrication here, Consolidated officials said.

Curious Driven Away

Swarming blue jackets drove away all curious persons and kept all but workers clear of the ship as it was hauled across a strip of beach and launched.

Censorship rules halted release of exact descriptions of the huge boat. The following paragraph of description was contained in an official dispatch from the aircraft factory:

"The ship is the latest design of flying boat in the service of the navy for patrol and bombing service, powered with two of the latest type radial air-cooled engines. The boat is of the high wing monoplane type, spans more than 100 feet and is approximately 70 feet in length.

"This type of airboat is the holder of several distance flight records, including a non-stop flight from Coco-Solo, Canal Zone, to San Francisco. It is a standard type in navy service.

Ramp Need Told

"In the absence of the completion of the new seaplane ramp, which is now being constructed by the harbor department on Lindbergh field, it was necessary to launch this large vessel across the shore of a beach not especially prepared. Its handling emphasized the urgent need and extreme utility of the ramp, which it is hoped will be completed within a few weeks.

"During this time, however, it probably will be necessary to launch several more ships of this type with the improvised facilities."

The plane is one of 110 being constructed at Consolidated under government contract. Others will be delivered at intervals during the next year. Releases said it was completed exactly on schedule.

CONSOLIDATED EXCEEDS QUOTA

One of the big moments to date in the Chest-Red Cross united appeal came at yesterday's meeting of volunteer workers when Edgar N. Gott, of the Consolidated Aircraft Corp., announced employes of that plant already had oversubscribed their quota nearly 50 percent, and the solicitation was not yet finished. Gott is pictured handing a package of subscriptions to C. L. Cotant, general of the payroll division.

S.D. UNION-10-6-36

$108,526 RAISED BY CHEST; PLANE FIRM 'OVER TOP'

Reported yesterday.....	$ 36,654.00
Previously reported	71,872.00
Total	$108,526.00

Additional subscriptions of $36,654 which raised the total to $108,526 and announcement that employes of the Consolidated Aircraft Corp. had far exceeded their quota and were "still going strong," highlighted yesterday's report luncheon of Community Chest and Red Cross workers.

The total to date is just over the half-way mark in the campaign for $215,608, and represents 50.3 percent of the fund which is sought for support of the 35 Chest agencies and the local Red Cross. The quota for this stage of the united appeal had been set at 50 percent.

Enthusiasm of an already spirited meeting reached a new high for this campaign when Edgar N. Gott, assistant to the president of the Consolidated Aircraft Corp., and one of the leaders in the payroll division, announced that with a quota of $5500 assigned his plant, the employes of this newest and largest industry here already had pledged $7625, and the job was not yet finished.

'Fine Respnse'

"Consolidated employes are responding splendidly to the Chest and Red Cross appeal," Gott told

(Continued on Page 2, Col. 5)

the assembled workers. "This response indicates how they feel about the campaign, and their desire to be identified with a movement that means so much to the community."

Another interesting feature of yesterday's meeting was a tribute to Samuel I. Fox, pioneer merchant and long-time civic leader, who this year is celebrating his 50th year in business here. Guilford H. Whitney voiced the tribute in behalf of the Community Chest, of which Mr. Fox is honorary president, and of the Red Cross, with which he also has been long identified.

An electric desk clock was presented to Mr. Fox by John L. Fox, campaign chairman. R. King Kauffman, chairman of San Diego chapter, Red Cross, pinned the emblem of that organization on Mr. Fox's lapel.

Mr. Fox, responding, said his years of association with both the Chest and Red Cross had been a real pleasure to him, and added, "The only way we can build a city is for everyone to do his or her part, giving unselfishly to the community whether it be in civic work or in endeavors such as the Chest and Red Cross represent."

'Quota Club' Listed

Firms eligible to the "quota club," with subscriptions equal to a day's pay from each employee, announced at the meeting, were: John Burnham & Co., Burroughs Adding Machine Co., Carlson & Simpson, Challenge Cream & Butter Co., Cuyamaca club, Humpty Dumpty Stores, Klauber-Wangenheim Co., H. V. Lee, Alfred M. Lewis, Inc., New York Life Insurance Co., Prudential Insurance Co. of America, Remington Rand Business Service, Inc., San Diego chamber of commerce, San Diego Macaroni Manufacturing Co., San Diego Trust & Savings bank, Tanner Motors Tours, Underwood-Elliott-Fisher Co.

Awards of merit to the following team leaders and workers were made for outstanding performance: Mesdames Ray Brown, R. A. Boyett, Wiley V. Ambrose, Susie Byers, Charles Tracy, W. H. Porterfield, Victor Venberg, Will Crawford, C. L. Staely, Lillian MacLellen, Cecil W. Neff, George Preston, J. M. McColl, Karl Shears, O. E. Tyler, H. W. Coonradt, W. S. Fay, E. H. Depew, Dorothy Cabana, R. L. Powers, E. H. Granger, Bertha Shadwell, H. L. Foster, Jennie Winkelmann, C. H. Birkenstock, Emil Black, Frances Berenson, F. E. Marcy, Fred Bolton, L. D. Jones, Louis Perna, J. P. Witherow jr., Sam Mason, Everett N. Curtis, C. E. Ferris, Elliot G. Colby; Misses Lois Doane, Dorothy Nyhus, Mary Jane Barry. In the men's division awards went to George Stone, O. W. Todd jr., Ray Cavell, R. W. Merrill, E. R. Ferris, Harry Callaway.

Flat Car Favored In Plane Take-Off

S.D. TRIBUNE
10-12-36

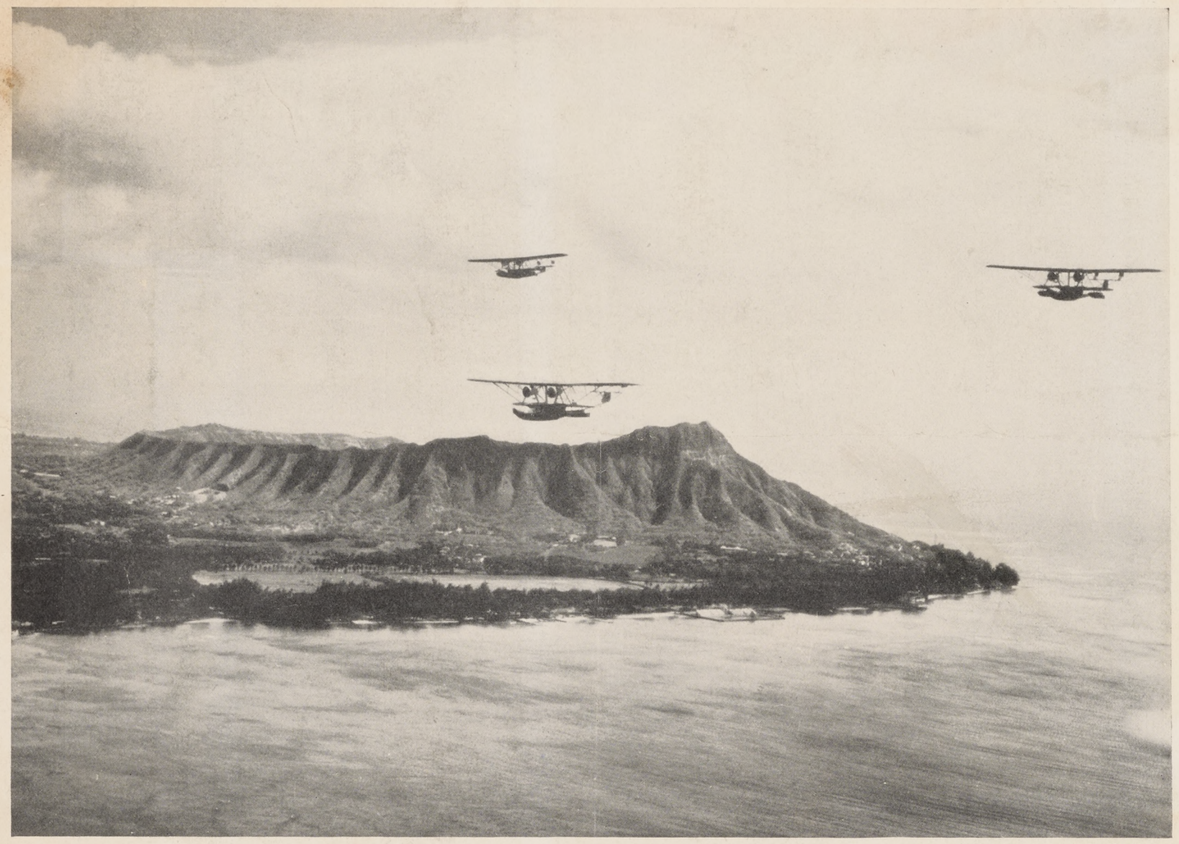
The huge, multi-motored transport plane is gently lowered into its cradle aboard a large flat-bed car at one end of a length of railroad tracks. All passengers and mail aboard, the ship's motors idle softly, propellers barely turning. The retractable landing gear is drawn up; figures cluster at the thick glass windows along three decks in the leading edge of the thick wing.

At the pilot's all-clear signal, the car rolls along the rails, quickly gathering speed. Near the center of the runway, the powerful engines roar and the ship rises from the speeding flatcar which immediately begins to stop—and another transcontinental non-stop flight begins on its daily schedule.

That is how huge landplanes of the future will be launched, it is believed. William Wheatley, chief test pilot of Consolidated Aircraft Co., at a recent meeting of the aviation committee of the chamber of commerce said that with the take-off speed of giant ships now being planned well over 100 miles an hour, ordinary ground take-offs will be impractical. That specially-built, fast railroad flat cars will launch the ships is not only possible but probable.

Recent successful launching of a plane from a flat railroad handcar by Consolidated officials near Chula Vista airport proved that the new method is extremely practical. Less space for runways would be required; greater loads could be carried; much less vibration and jarring would be experienced, and many other advantages realized.

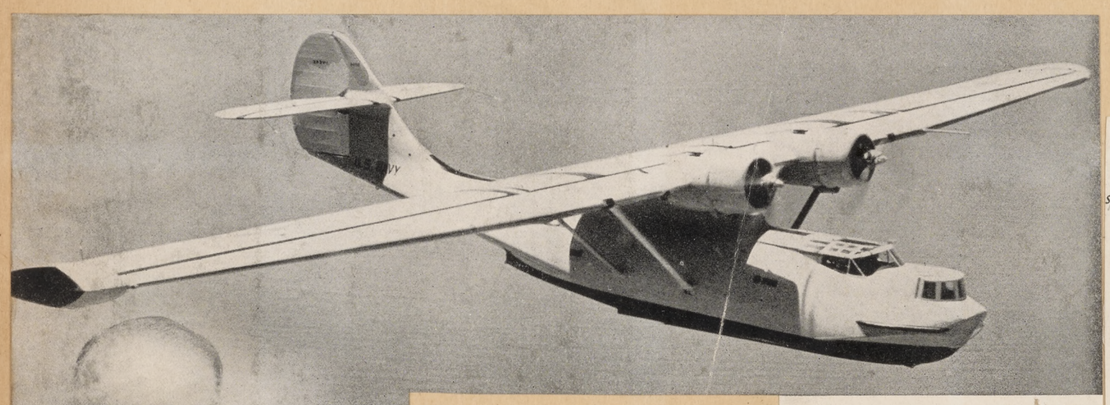
Further railway catapultic tests are being planned by Consolidated officials for launching an army bombing plane, Wheatley said.



Official photograph, U. S. Navy

NAVY CONSOLIDATED PATROL AIRPLANES, P2Y-1, OFF DIAMOND HEAD, HAWAII AREA

Shown on Their Historic Nonstop Flight from San Francisco to Pearl Harbor



FLEET OF CONSOLIDATED AIRCRAFT

CONSOLIDATED AT SAN DIEGO HAS ORDERS FROM THE UNITED STATES NAVY FOR 110 OF THESE SPEEDY FLYING BOATS.

Two other California plants are engaged solely in the production of aircraft for the Army and Navy. One is North American Aviation, Inc., at Inglewood, and the other is the Consolidated Aircraft Corporation at Lindbergh Field, San Diego. Both are newcomers, moving to Southern California from the East, erecting new plants and getting into production in recent months.

Consolidated, organized in 1923, made planes in Buffalo, N. Y., until last fall, when it picked up and moved into a new plant in San Diego. Since then, by virtue of government orders, it has been compelled almost to double its plant capacity. The enlarged factory will be completed soon and will be, it is claimed, the only aircraft plant in the United States able to apply the line-production methods used so successfully in the automotive industry. In San Diego, Consolidated not only escapes the rigors of an eastern winter, but it also finds itself right next door to the Navy's Pacific Coast center of aviation activity.

Orders from the Navy total 110 flying boats, plus spare parts equivalent to twenty-two more. These boats are designed to operate with the fleet, and are capable of staying aloft on patrol, without landing, for more than twenty-four hours. One of these boats, piloted by Commander McGinnis of the United States Navy, was flown nonstop from Coco Solo, Canal Zone, to Alameda, breaking the distance record for this type of plane, which is the joint development of the Navy and Consolidated engineers.

Consolidated finished this summer a $2,000,000 order for fifty two-seater planes for the Army and as part of its modern and up-to-date, the fame of their products is world-wide.

"CALIFORNIA" magazine of Calif. Chamber of Commerce OCT 8 1936 61

Order Royal Canadian Air Force Planes

THE FLEET AIRCRAFT COMPANY, a subsidiary of Consolidated Aircraft Corporation, announces receipt of an order for 20 planes for the Royal Canadian Air Force, one of the largest orders ever given by the Air Force. Eighteen will be training planes, and two will be used by civilian aviation inspectors. U.S. Air Services Mar. 1936

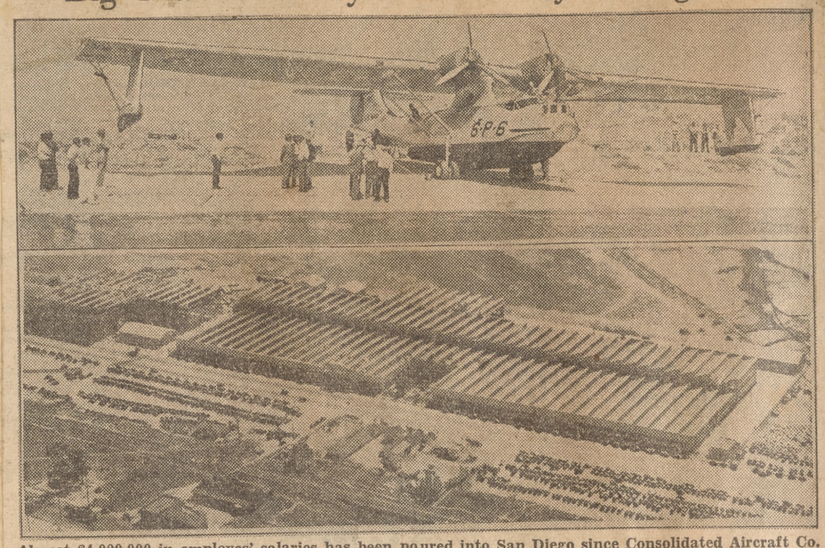
CONSOLIDATED'S BIG CONTRACT

THE NAVY DEPARTMENT announced on July 15th that a contract had been awarded to the Consolidated Aircraft Corporation, San Diego, Calif., for fifty airplanes, VPB type, for a total of $4,898,000.

U.S. Air Services Aug. 1936

S.D. SUN - 10-9-36 THE SAN DI

Big Plane Factory Boosts City's Progress



Almost $4,000,000 in employes' salaries has been poured into San Diego since Consolidated Aircraft Co. began moving machinery into its plant a year ago this week. Signalizing completion of a year's activity was delivery of the first of 110 Navy flying boats, shown at top, an aviation achievement which establishes San Diego's first large-scale industry in the forefront of military plane manufacture. Below an air view of the recently enlarged plant which has enough advance work to keep it humming well into 1938.

☼ ☼ ☼

When they began moving machinery into the new Consolidated Aircraft Corp. plant a year ago this week, every member of the Chamber of Commerce aviation committee emitted long sight of relief.

The labor of seven years, during which many disappointments were encountered, had ended. San Diego was now certain of its first major industry.

Today, with the huge Consolidated plant employing 3000 men and humming at high speed in the production of 110 "flying boats" for the Navy, Tom Bomar, secretary of the aviation committee, recalled the early negotiations to move the plant here from Buffalo, N. Y.

Just Another Dream

"When the Chamber of Commerce, the Harbor Commission and the City Council conceived the idea, back in 1928, of attracting a large aircraft manufacturer to San Diego, many San Diegans scoffed at us," he said today.

"In the face of opposition from many sources, we continued our negotiations. And only until they actually began to move machinery into the buildings early in October, 1935, could we realize that Consolidated was irretrievably a San Diego concern."

300 From East

From the east with Maj. Reuben Fleet, president of the enterprise, came 300 employes, the nucleus of an organization which boasted 874 workers on the day the plant was dedicated, Oct. 20, 1935.

It was then that Maj. Fleet prophesied: "We should have about 2000 employes within six months and about 3000 next summer." His forecast came true.

Since establishment of the Consolidated plant here, building additions have added 80 per cent to the floor space, enabling mass production necessary for prompt delivery of military planes.

Smokeless Factory

No black smoke is belched from this well ordered plant, no nerve-grating sounds of pounding machinery are heard in its vicinity.

"Many San Diego people were sceptical of having a new large industry established here," Edward Gott, assistant to President Fleet, said today.

"Do you realize that Consolidated pours $75,000 a week in salaries into San Diego, re-absorbs not one cent of this sum, because this factory sells nothing here?

Uncle Sam Pays

"All our income comes from the national treasury in Washington."

On Oct. 20, Consolidated celebrates the first anniversary of the plant's dedication. On present contracts, the concern can continue operating at full capacity well into 1938.

Hazards Eliminated By Navy Plane 'Shakedown'

By HAROLD KEEN

S.D. Sun - 10-9-36

New Navy planes are given "shakedowns" just as are warships. The trial tests are just as extensive, in many ways more hazardous.

If a piece of machinery suddenly fails to function on a warship, there is likely to be little human damage. But if a minute contraption on a big flying boat, for example, goes "haywire," several lives may be sacrificed.

Take as an example the new patrol bomber delivered by Consolidated Aircraft Corp. to the Naval Air Station last Monday.

When it was turned over to VP-6, the Honolulu squadron which will fly this ship and five similar ones to Pearl Harbor in December, a swarm of mechanics clambered over the giant to see if everything was as it should be.

Before the plane is actually lifted into the air, all its controls are tested in gingerly handling on the water. The pilots must be assured of hair-trigger responsiveness when they think the airship is ready to soar away on its maiden flight.

Then follows a long period of endurance runs, altitude hops, fuel consumption tests.

"It's not a matter of nonchalance, this making sure a plane is ready for a non-stop 2500-mile flight," Rear Adm. Ernest J. King, Aircraft Base Force commander, declared yesterday.

"When those six planes take off from North Island for Hawaii next December, they will be in perfect condition. We can't afford to have anything go wrong on a trip like that."

◇ ◇ ◇

Incidentally, the new patrol bombers are referred to by Adm. King as "air boats." "That title is compact and completely descriptive, he commented.

Exit "flying boat"; enter "airboat."

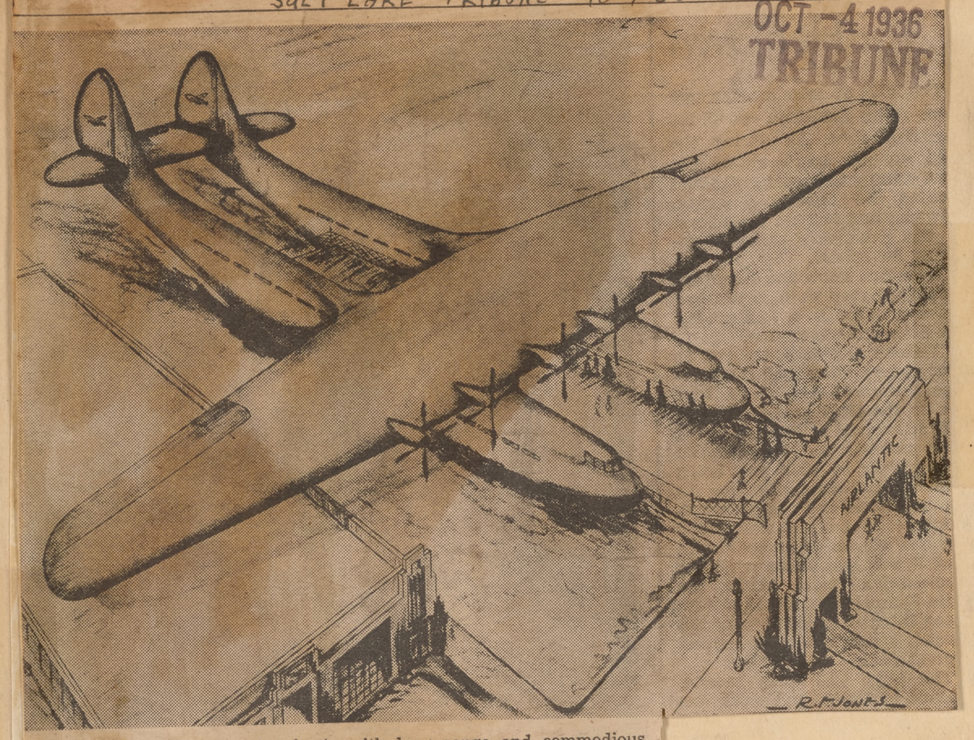
◇ ◇ ◇

The first Consolidated plane will probably make its initial flight from North Island Saturday, Adm. King indicated. During the past few days, it has been gradually prepared for this test of its operating ability by short, hesitant trips along the water.

TREND IN PLANES PICTURED

SALT LAKE TRIBUNE 10-4-36

OCT -4 1936 TRIBUNE



Larger and faster flying boats with long range and commodious passenger facilities for intercontinental transportation at a lower cost with the ability to fly 300,000 pounds in the air at more than four miles a minute seem to be indicated by present design trends at Consolidated Aircraft corporation's San Diego factory with the announcement that their engineering staff is making a study of these possibilities.

Making appropriate changes in design and based on the characteristics of racing type seaplanes which now hold the world speed record at 440 m. p. h. and making use of present-day knowledge the general appearance and performance of a large flying boat has been determined. A maximum speed of 260 m. p. h. and a cruising speed of 230 m. p. h. and carrying 15,000 gallons of gasoline the plane will have a range of 4000 miles. One hundred fifty passengers can travel amid luxurious comfort and facilities for recreation. Extra fare passengers can enjoy the comfort of staterooms which will afford the privacy of Pullman seats and sleeper berths for overnite travel.

Diesel engines may be used providing development continues in the great strides now being made. The total horsepower will be 18,000, approximately half of which could be disconnected for servicing during flight.

SERVICE NOTES

How To Provide Shelter For 'Airboats' Is Puzzle

S.D. SUN 10-30-36

By HAROLD KEEN

It is no secret that Capt. Arthur L. Bristol, commanding officer of the Naval Air Station, spent several days this week at the Pan-American Airways base at Alameda because he sought solution for certain problems affecting the Navy's new patrol bombers.

The Clippers have twice the tonnage of the new Consolidated "flying boats." Observation of the manner in which Pan-American houses the Clippers and prepares them for flight was of inestimable value to Capt. Bristol.

Where to Put 'Airboats'

Right now, he is trying to outline a plan for the accommodation of the new 13-ton Navy airships, two of which already have been delivered by Consolidated. There is not enough hangar space for all the smaller planes on North Island, let alone the fleet of winged giants which soon will crowd the air station.

"A system has to be devised which would enable the flying boats to get away quickly in case of emergency," Lieut. Cecil F. Harper, operations officer, said today. "This type of airship is being manufactured larger every year, and that makes it difficult to figure on permanent hangars.

May Build Docks

At present, the two Consolidated patrol bombers are perched in the open near the hangar of Squadron VP-11.

◇ ◇ ◇

Sun, Oct 29, 1936

NAVY RECEIVES SECOND BOMBER

Consolidated Aircraft Corp. today launched the second of its order of 110 Navy patrol bombers.

The huge ship's hull touched waters of the bay early this morning was towed across to North Island for delivery to Honolulu's Patrol Squadron 6, which will fly the first six "airboats" to Pearl Harbor early in December.

While production of the planes was being "stepped up," Lieut.-Comdr. Emil Chourre, Navy inspector at Consolidated, yesterday predicted that air cruisers within the next two years will be at least six times greater in tonnage than the most modern military seaplanes.

He pointed out in an address before the Ad Club yesterday that American aircraft manufacturers are already preparing specifications for "flying boats" exceeding 50 tons.

'Flying Boats' Needed In Hurry, Warns Adm. Cook

S.D SUN 10-19-36

Aeronautic's Chief Visits San Diego Plane Plant, Urges Speed On Bombers For U. S. Defense

The nation's military needs require speedy delivery of 110 "flying boats" under construction at Consolidated Aircraft Corp., Rear Adm. Arthur B. Cook, chief of the Bureau of Aeronautics, told The Sun today.

Adm. Cook, on a visit at Naval Air Station, was to go through the Consolidated plant today to examine progress on the huge new patrol bombers.

How the patrol planes will be used in defending the Pacific Coast is told on Page 9.

Consolidated facilities for the manufacture of 66 more "flying boats," on which the San Diego firm recently submitted the lowest bid, will be inspected by Adm.. Cook. His report to Secretary of Navy Swanson will have bearing on whether the contract will be awarded to Consolidated.

"We will have to be guaranteed quick deliveries," Admiral Cook said. "Our military requirements at North Island, the Canal Zone, and Pearl Harbor, Hawaii, are such that the total of 176 patrol bombers must be placed into service as soon as possible."

Expansion of the Naval Air Station to accommodate approximately 600 aviation cadets being trained at Pensacola is contemplated by the Bureau of Aeronautics, Admiral Cook revealed.

The first 20 men in this detachment have already arrived at North Island.

New barracks and hangars for Naval Air Station costing $600,000 will be considered at the next session of Congress, Admiral Cook indicated.

A large portion of the newly dredged addition to the west beach at North Island will probable be utilized by the squadrons of Consolidated patrol bombers to be assigned here, Admiral Cook said.

He will return by plane to Washington late Wednesday or early Thursday. Admiral Cook is accompanied by Comdrs. Marc A. Mitscher and Arthur C. Davis, attached to the Bureau of Aeronautics.

Plane Metal Soft In Refrigerator

S.D. TRIBUNE 10-8-36

By RUSS HAHN

Imagine a metal that must be kept in a refrigerator to remain soft and workable?—that's "dural," as it is nick-named by aircraft workers, according to technical experts on the engineering staff at Consolidated Aircraft Co.

The full name is duralumin (the abbreviation is accented on the last syllable)—and that's what airplanes are made of. Not only in the fuselage of the planes, but also in many parts of the motors is this alloy used. It is to a plane what steel is to a locomotive.

Chiefly aluminum, dural has varying percentages of manganese and copper added, depending on the hardness desired. The slightest change in formula—a bit more copper, a pinch more manganese—gives an immense difference in the physical properties of the finished product.

With the strength of steel and the light weight of aluminum, dural is the perfect material for plane construction. Its invention perhaps has done more to advance aviation than any other single factor in plane construction history.

"Have you done any aircraft work before?" is one of the first questions asked prospective employes at Consolidated. Why?—because almost exclusively in aircraft construction is dural used, and unless a man has worked with it before, he must forget all he ever has learned about handling any other metal and begin at the beginning. Regardless of how good a mechanic, or blacksmith, etc., a man may be, dural remains adamant in inexperienced hands.

To illustrate special steps required in making dural workable, airplane rivets may be used as an example.

The metal is immersed in molten sodium nitrate, then quenched. Instead of this sudden change in temperature hardening the dural, as steel similarly is tempered, the strange material becomes soft and workable. The rivets now may be pounded nicely into their places—for about two hours. At the end of that time, the dural very obstinately returns to its former state and becomes far too hard to work.

These engineers, however, are very ingenious fellows. They learned that cold retards the return of the dural to its natural hardness. Therefore, if visitors were permitted inside the plant, they would see little electric ice-boxes scattered about the factory—not to furnish ice cubes for cold drinks, but to keep the dural rivets soft enough to work over a longer period of time. Temperamental—this metal. It must be guarded like baby's milk.

Although it is all called dural, the metal has literally scores of varieties, differing almost as widely as tin from copper. The particular type of dural used in rivets varies greatly from that which is made into fuselage braces and bulkheads in planes. The rivets must be tough and able to "take it," whereas braces, for example, must be soft enough to drill readily. All these physical properties are controlled by the little pinch of manganese or copper that is, or is not, added to the alloy, according to what is desired.

Any absolutely pure metal is very resistant to corrosion. Dural, being an alloy, is just the opposite. In order to protect it from the corrosive action of salt water—on the big navy flying boats—two methods are used. One is to dress Mr. Dural up in a thin overcoat of pure aluminum. Then his name changes to "al-clad." The other method, and in many ways the more advantageous, is to thicken the protective oxide film which forms on the metal through exposure by an electroplating process.

Dull Hue Explained

D. M. Carpenter, of the Consolidated technical staff, complains that the chief disadvantage of al-clad is mere added dead weight. The protective coating of aluminum has no strength. Whereas, the film created by the electro-plating process is harder than the metal beneath, and has the added advantage of holding paint better with its more porous surface.

That is why all Consolidated ships, before painting, are a dull grey hue. The company does not use the al-clad, which has a shiny silver finish, but treats all dural with the oxide film.

In earlier experiments to develop a satisfactory corrosion-resisting material for plane construction, the company conducted a series of experiments with magnesium alloys. An airplane wheel was made and immersed in salt water for a definite period. When it was taken out of the water, there was no apparent evidence of any corrosion. The experiment seemed successful—until one of the engineers grabbed the wheel, and got nothing but a handful of aluminum paint! Nothing of the metal beneath was left but the hollow shell of paint marking its shape—like a politician's promise after election.

WACO LEADS IN PRODUCTION OF CIVIL PLANES

Consolidated Specializes In Airships For Military Use

S.D. SUN 10-23-36

More Waco planes fly the airways than any other type of licensed civil aircraft, figures released by the Department of Commerce revealed today.

Leads Stinson

From 1926 to Sept. 1, 1936, Waco built a total of 1138 airships, placing that aircraft manufacturer far ahead of Stinson, its nearest competitor, which has manufactured 695 registered planes since the first SM-1 model in 1927.

Next in order are Travel Air with 604, Curtiss with 524, and Fairchild with 384, the statistics showed. San Diego's Consolidated Aircraft Corp. built only 19 private or commercial planes since completion of the first O-17 model in 1928. However, military aircraft has been Consolidated's specialty during the past few years.

Subsidiary Builds 219

However, a subsidiary of the San Diego concern, Fleet Aircraft, produced 219 licensed ships for civilian use in the past seven years. Ranking high in the sports-plane group is Ryan Aeronautical Co., which has 89 planes bearing its stamp recognized by the Bureau of Air Commerce.

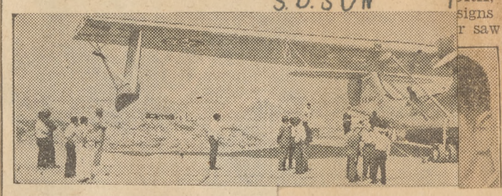
GUARDING THE

Giant Planes To

S.D. SUN



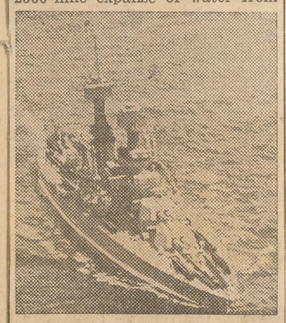
Navy Extends Line Of Defense To Hawaii

This is the first of a series on Pacific Coast defenses.—The Editor.

By HAROLD KEEN

Stretching from the Aleutian islands and Alaska on the north to the Islands of Hawaii, Midway, Wake and Guam in mid-Pacific, and south to Panama, is an imaginary arc—the United States' last frontier.

Within the bounds of this arc no enemy must cross, lest the national safety be imperilled. Yet much of this area, especially the 2500-mile expanse of water from



San Diego to Hawaii, is considered by military strategists to be exceptionally vulnerable.

U. S. Boosts Arms

Today they are rushing to completion a concentration of defense strength in this sector, and in addition are considering reinforcement of present Army and Navy bases along the Pacific seaboard.

No better example of this high-speed activity can be gained than right here in San Diego, where Consolidated Aircraft Corp. is building 110 huge "airboats"—patrol bombers that can cruise for 3000 miles without stopping.

Secrecy Maintained

The first of these new winged giants has been delivered to the Naval Air Station at North island.

Its specifications are guarded with the utmost secrecy. We know only that this craft is the most powerful patrol bomber in the United States, one of the most powerful in the world. It is to be the "front line" plane of the Navy.

More than this is not generally known. Why is the Navy so carefully hiding more specific details on this gargantuan aircraft?

Planes Vital To Plan

In the answer is tied up the future scheme of military defense of the Pacific Coast. One thing is known certainly— that the Navy's new patrol bombers are to be relied upon as one of the principal weapons of that defense plan.

Theoretically, an attack by a foreign power on the Pacific Coast is to be feared because of the vast expanse from San Diego to Hawaii which as yet is regarded as not adequately patrolled.

Long Hop Scheduled

To act as sentinels of this watery stretch, among other reasons, the new "flying boats" were ordered by the Navy. Some time in December, a group of seven officers and 28 enlisted men will "ferry" the first half-dozen Consolidated patrol bombers from North Island to Honolulu.

Later more planes will speed across until approximately 30 are delivered to Pearl Harbor, there to act as virtual "flying fortresses."

Telescopic "eyes" will be provided the Navy in the form of these new patrol bombers. In actual wartime they can be shot far ahead of the fleet—if necessary 2000 to 3000 miles—and can "spot" the enemy, and then rain destruction with their bombs.

In Touch With Fleet

Keeping in constant communication with the vessels far behind, the huge "airboats" would make possible more effective operations of the U. S. fleet. The enemy would find it difficult to keep U. S. warships "in the dark" regarding its movements.

In addition to Consolidated's 110 patrol bombers, 66 more are contemplated for construction in the near future. With all its building of cruisers, destroyers and submarines, the Navy has not forgotten that defense from the air is essential.

Vision Early Use Of 75-Ton Planes

S.D TRIBUNE 11-3-36

Within two years, production of 75-ton air cruisers will be a reality, according to a prediction made by Lt. Comdr. Emile Chourre, inspector of naval aircraft at Consolidated, and veteran navy pilot.

Now in construction, the patrol bombers for the navy weigh 13 tons. The Pan-Amreican transpacific clippers, however, tip 25 tons with their pay loads, and the Boeing plant already is building a 40-ton air boat.

American aircraft manufacturers now are preparing plans and specifications for 50-ton flying ships. When in the water the planes literally are ships. They are classified as steamships under the United States Steamboat Inspection service and come under the regulations governing world shipping.

Fitted out almost exactly as an ocean liner, the huge air boats are equipped with fog horn, anchor, running lights, engine room telegraph from pilot to engineer compartments and even bilge pumps.

With the increase in size of the flying boats comes also increase in speed, said Chourre. From 60 miles an hour, the cruising speed now has reached 160, and within a year, aeronautic experts feel sure that 200 miles on hour will be average.

NAVY GROUP OFF TO FLY CRAFT TO HAWAII

S.D. TRIBUNE 11-3-36

To ferry the navy's new Consolidated patrol bombers to Hawaii, 31 officers and men today were to leave the air base at Honolulu for San Diego. The six officers and 25 enlisted men will sail from Pearl Harbor aboard the U.S.S. Bushnell Saturday, according to news dispatches received here. The ship is due here Nov. 14.

Two transpacific flights will be made, the first scheduled for late December. This will be the second time that planes will have been sent to Honolulu under their own power. January will see the last group crossing the Pacific.

But two San Diego-based cruisers, the Concord and Cincinnati, will participate in the San Francisco bridge dedication ceremonies beginning Armistice day, Nov. 11. They will leave here Nov. 9 and return Nov. 18.

Other Armistice celebrations slate the U.S.S. Trenton and Marblehead to leave here Nov. 9 for Santa Barbara, returning Nov. 13; U.S.S. Richmond away from Nov. 9 to 13 at Hermosa Beach, and the Milwaukee at Venice for the same period.

Operations order for the U.S.S. Brazos received at naval headquarters here today calls for: Return to San Diego after repairs at Mare Island navy yard are complete (ship now en route to the yard); military inspection at San Pedro Dec. 1, following which departure, for Pearl Harbor the same day, with a load of fuel oil; return to San Diego via San Pedro, due here Dec. 22.

S.D. UNION 10-29-36

AIR LEVIATHANS OF FUTURE SEEN BY VETERAN PILOT

A prediction that air cruisers within the next two years will be more than six times greater in tonnage than the 13-ton air boats being built by the Consolidated factory at Lindbergh field for the navy, was made to the Ad club yesterday by Lt. Comdr. Emile Chourre, veteran navy pilot. Chourre is inspector of naval aircraft at Consolidated.

Chourre said that transpacific Pan-American Clippers, with their pay loads, now weigh 25 tons. The Boeing plant is building a 40-ton air boat and plans and specifications are now being prepared by American aircraft manufacturers for leviathans of the skies exceeding 50 tons. He said the speed of these flying boats has increased from 60 to 160 miles an hour and asserted the 200-mile-an-hour record will be reached within a year.

The naval flier gave an interesting description of the construction characteristics and functions of the air boats now being built by Consolidated for the navy.

Chourre said the air boats, when in the water, literally are steamboats, are classified as such under the U. S. Steamboat Inspection service and are amenable to the international rules and regulations governing world shipping. He said these air cruisers are fitted out almost precisely as an ocean liner, with anchor and running lights, fog horn, anchors, engine room telegraph from pilot to engineer compartments, and even a bilge pump.

Among guests of honor at the luncheon were Col. Jacob Wuest, commander of Rockwell field, and Edgar Gott, assistant to President Reuben Fleet of Consolidated. Kenneth Flood gave the three-minute Ad Pointer talk. Arnold Klaus was chairman. President A. C. Acason presided.

XP3Y-1 WITH CREW

This naval patrol plane in October, 1935, broke the world's nonstop air line and broken line distance records while being ferried from Fleet Air Base, Coco Solo to San Francisco, California.

Service Plans U.S. Naval Inst. Proceedings Oct. 1936

Aviation, August.—The Navy seems to be going in for bombers. In June 191 dive bombers and scout bombers were ordered from Curtiss, Northrop, and Chance Vought. Than last month came an order for 50 flying boat patrol bombers (VPB) at a total cost of $4,898,000. It went to Consolidated Aircraft, already building 60 of the XP3Y type flying boat for the Navy. Engine installations for the new flying boats have not yet been specified by the Navy.

At San Diego the men, comprising 6 complete crews of Squadron VP-6 at Pearl Harbor, will wait completion of the new PBY planes at the Consolidated Aircraft Co. works and after taking delivery of the ships engage in several weeks of training routine, preparatory to the flights for Hawaii.

The ships will come in groups of from 3 to 6, it was announced yesterday. Lieutenant Commander Henry M. Mullinnix, executive officer at the fleet air base, said that the number of the groups to be ferried over the sea will be dependent upon the rate of delivery.—*Honolulu Advertiser.*

Aviation Pioneer Flys Here, Shakes Hands, Then Hops Off

S D SUN 11-15-36

Andre A. Priester, a Dutch-born engineer who today is one of America's most important aviation figures, paid a flying visit to San Diego yesterday.

The chief engineer in charge of operations for Pan-American Airways flew here from Los Angeles in the morning, visited old friends at Consolidated Aircraft Corp., was escorted through the plant, and returned by plane to Los Angeles in the afternoon.

One of the original group whose imaginative genius conceived the far-flung system operated by Pan-American Airways today, Mr. Priester believes that the United States will never take over his company's service in time of war.

"Ours is a purely commercial venture," he said, "and will never be used for military purposes. I think the Navy will be able to patrol the Pacific adequately with its new Consolidated flying boats."

Mr. Priester joined Pan-American Airways in 1927, and helped map the first "daring" flight of the line, over 80 miles of water from Miami, Fla., to Havana. The trip was made in a three-motored Fokker land plane. "It just had to get across," he commented. "There was no stopping along the way for that plane."

On his recent flight from Manila to Alameda aboard the Philippine Clipper, Mr. Priester was a fellow passenger of Scripps-Howard's record-breaking air traveler, H. R. "Bud" Ekins.

12-PLANE FLIGHT SAN DIEGO-HAWAII STUDIED BY NAVY

S.D. UNION - 11-10-36

Possibility that the proposed mid-December flight of six Consolidated air cruisers from here to Hawaii will be postponed until the delivery of an additional six seaplanes early in January, when the entire 12 ships will hop on a non-stop flight to Pearl Harbor, was expressed yesterday in local naval circles.

Final decision will be made by Rear Adm. Ernest J. King, fleet patrol wing commander, upon his return here from Hawaii aboard the flagship Wright Nov. 24. By delaying the December flight until all 12 planes have been delivered only one series of patrol craft will be required.

The original plans of Adm. King called for six air boats to take off from here about Dec. 15 and the second squadron Jan. 15.

Lt. Comdr. William V. McDade and seven naval aviators from the Pearl Harbor base are at the Naval Air station checking and testing the two Consolidated air boats recently delivered to the navy. Should the flight be postponed until January a second group of naval fliers from Pearl Harbor will be sent here to assist in ferrying the 12-plane squadron to Hawaii.

S.D.SUN

Consolidated 5 Seeking Games

The Consolidated Aircraft Wings today issued a challenge for basketball competition, aimed at service clubs or other organizations.

Any team interested in meeting the Wings may make arrangements by calling Dave Bomberger at the City Y. M. C. A.

ILLNESS FATAL TO AVIATION PIONEER

S D SUN 11-20-36

A pioneer in the aviation industry died yesterday. J. C. Rombach, personnel director at Consolidated Aircraft Corp., succumbed in Mercy hospital. He had been ill nearly a month. He was 58.

Mr. Rombach was born in Guelph, Ont., Canada. He entered the aviation industry in 1913 when he became associated with Glenn L. Martin in Los Angeles. Mr. Rombach is survived by four sisters: Mrs. Bertha Collins, Mrs. Louise Hallman, Mrs. G. Loepere and Miss Loretta Rombach, and a brother, Joseph Rombach, all of Buffalo, N. Y. Funeral arrangements are being made with the Johnson-Saum mortuary.

ARMY BACKS MIDWAY ISLE FORTIFICATION

Six Navy 'Airboats' Ready For Mass Flight To Honolulu

S.D.SUN 11-14-36

The Army today joined the Navy in plans to fortify the bleak Pacific outposts west of Hawaii into impregnable links of U. S. military defense.

Recommendation by Maj. Gen. Edward M. Markham, chief of Army engineers, that seaplane basin be constructed at Midway basins be constructed at Midway and Wake Islands again focussed attention on the role U. S. insular possessions may play in future conflict.

Mass Pacific Hop

Within a month, six giant Consolidated Aircraft Co. "airboats" will soar to Honolulu from San Diego to form the nucleus of the Navy's first squadron capable of patrolling the 3000 miles of ocean wastes from Hawaii to Midway and on to Wake Island.

Gen. Markham's recommendation was made yesterday to the chairman of the House Committee on Rivers and Harbors, urging that Welles Harbor, Midway Island and the Wake Island harbor be improved to provide seaplane basins at a cost of $1,500,000, United Press reported from Washington.

Navy Eyes Clippers

Midway Island at present is a regular stop on the trans-Pacific route of Pan-American Airways, the operation of whose clipper ships have been officially observed recently by Capt. Arthur L. Bristol, commanding officer of the Naval Air Station here, and Lieut. (jg) L. O. Mathews Jr. of Honolulu's Squadron VP-6, which will have custody of the new Consolidated "airboats."

The proposed harbor facilities are ostensibly for commercial purposes only, mainly to assist the maintenance and servicing of the Pan-American Airways' big "clipper ships." Military and naval officials, however, readily admit the improved harbor facilities would be of great value to national defense in event of war in the Pacific.

PLANES MAY USE TRACK TAKE-OFF

Seattle Times-11-8-36

SAN DIEGO, Calif., Saturday, Nov. 7.—(UP)—The newest advance in aviation progress, and one which may prove a major boost to commercial flying, is one which the brothers Curtiss and Orville Wright, pioneers of flight, experimented with in their first crude, kite-like planes.

It is the "railway takeoff," a system whereby either a land or sea plane may rise into the air by scooting along on a speed railway carriage until it reaches flying speed. The carriage is released as the plane takes to the air, stopping by automatic brakes.

Advantage claimed for the system are increased lifting power, quicker and safer take-offs and comparatively danger-free take-offs under adverse weather or water conditions. Engineers have estimated a plane's safe lifting power could be increased by as much as 38 per cent by use of the track.

W. B. Wheatley, chief test pilot for Consolidated Aircraft Company, recently successfully tested for what is believed to be the first time, a track take off device constructed from an old railway handcar.

Light Biplane Used

Wheatley and his associates Engineer I. M. Laddon and Major R. H. Fleet, built a steel superstructure on the eight-foot-long handcar upon which the plane would rest. A small tubular-steel framework was attached to the underpart of a light biplane which would rest on the carriage.

With Wheatley at the controls, the plane rolled down a regular railroad right-of-way until it had reached a speed of sixty miles an hour. The pilot then pulled the ship into flying position and took off early. The run, about 400 feet, was shorter than that usually required for the same plane.

The only mishap to mar the first experiment was the wrecking of the carriage after the takeoff when an automatic braking device took hold too quickly and derailed the car. It is planned to construct a new one built especially for the plane experiments.

Wheatley is confident the railway takeoff will be adapted for huge planes. Such planes, he pointed out, require an exceedingly long run to take off when heavily loaded. Too, their load is definitely limited by the amount they can lift from the ground, which usually is considerably less than that which can be sustained after the plane is once in the air.

Safety Factor Considered

A railway takeoff, he said, would eliminate uncertain factors such as ground conditions or rough water. He pointed out also that a plane on the railway carriage, with the tail held high and the wings level, would be under better control at low speeds. The wings would not be slanted into flying position until the necessary speed for flight was reached.

Of the safety factors in the method, Wheatley said:

"Due to the 'no-lift' attitude of the plane during the takeoff run, and the positive directional guidance which the tracks give, and the surplus speed and excellent control which exist when the pilot elects to lift from the carriage, it is less important that the plane head directly into the wind when using this device than when conventional takeoffs are attempted.

"Fatal crashes have resulted from inability to control planes during the start of their takeoffs."

Details To Be Worked Out

At the end of each length of track, Wheatley said, suitable anchoring means would be provided to hold the planes while the motors were warmed, and also a quick-release mechanism provided to allow the ship to start with motors at full throttle.

"A study of the advantages to be derived from using this device for the launching of a modern air boat reveals that approximately 38 per cent more gross load may be launched safely than could be taken off from the surface of the water under conditions of no wind. If this additional load was used to carry more fuel and oil, the range of the plane would be approximately doubled," Wheatley said.

The railway carriage, according to the designers' plans, would be fitted with means for cushioning the plane against vibration or bumps in the track. Various types of carriages would be provided for different type ships.

The tracks themselves, it is planned, would be constructed level with the airport surface and would not interfere with conventional takeoffs.

NAVY CLIPPER PILOTS DUE AT S. D. SCHOOL

S.D.SUN 11-11-36

A group of six Navy officers and 25 enlisted men scheduled to arrive in San Diego this week from Honolulu will be the second "class" of flying corps members stationed at San Diego to learn the intricacies of the Navy's new clipper-type bombers, naval officials said today.

Sixty of the huge, twin-motored flying boats, designated PBY-1, are now under construction at the Consolidated Aircraft corporation plant. Only one has been completed to date but it is expected that six will be ready sometime in December and that they will take off for Pearl Harbor air station soon after the first of the year.

The Navy also has contracted for 50 PBY-2 flying boats, a later model, which will be constructed next year according to present plans and will provide the Navy with a fleet of 110 of the clipper-type bombers which will be stationed at various bases throughout the world.

Tentative plans are to assign a crew of five or six men to each plane.

Comdr. Kneffler McGinnis, in an experimental model of the plane, last year flew from Norfolk, Va., to San Francisco via Panama. He made the 3387-mile flight from Panama to San Francisco in one hop, establishing a world's record for a non-stop flight by seaplanes.

The group of flying corps members enroute here will join a class already receiving instruction at the Consolidated plant and the air station here.

Lieut. Comdr. William M. E. McDade explained that instruction is necessary because much new and unfamiliar apparatus is installed in the planes.

The men will be instructed in operation and maintenance of the clippers, will watch the planes being built and will fly the one already completed and the two expected to be finished this month.

When the first six have been delivered, expected to be sometime in December according to Lt. Com. Emile Chourre, Navy inspector at the Consolidated plant, they will be taken on several "shake down" flights to test them and put them in condition. They are tentatively scheduled to take off for Honolulu shortly after January 1, 1937.

The second group of six planes is expected to be completed about two months later and will be flown to Honolulu by the group of officers and men who will arrive in San Diego soon.

PIONEER AIRCRAFT LEADER EXPIRES OF LONG ILLNESS

S.D. UNION-11-19-36

J. C. Rombach, 58, pioneer in development of aircraft manufacturing and for several months personnel director of the Consolidated Aircraft Corp., here, died yesterday at a local hospital after nearly a month's illness.

Born at Guelph, Ont., Can., he began his plane building experience by becoming associated with Glenn L. Martin, in Los Angeles, in 1903. He remained with the Martin organization many years.

He later was factory superintendent of the Fairchild division of Aviation Corp., and went from that post to the Douglass Aircraft factory. He left the Douglass organization last spring to come to Consolidated. He was widely known in the aviation industry.

Surviving him are four sisters, Mrs. Bertha Collins, Mrs. Louise Hallman, Mrs. G. Loepere and Miss Loretta Rombach, and a brother, Joseph Rombach, all of Buffalo, N. Y.

Funeral arrangements will be announced later by Johnson-Saum.

Consolidated Wins $6,056,500 Plane Order

S.D. UNION-11-18-36

NEW AWARD FROM NAVY TO S. D. FIRM

Contract Brings Total of Bombing Craft to Be Built Here to 176; Ships To Have 104-Foot Span.

Award of a $6,056,500 contract for the construction of 66 patrol bombing planes for the navy to Consolidated Aircraft Corp., announced yesterday in Washington, assures the 3300 employes in the big plant here of continuous employment well into 1938, company officials said yesterday.

The new contract is the third awarded the company for construction of the PBY type airboats, bringing the total number of ships to be constructed here to 176.

Will Be 64 Feet Long

The air cruisers each will have a wing span of 104 feet, e length of 64 feet and will be 18 feet high, according to information made public yesterday by the bureau of aeronautics. Each of the big flying boats will be powered with two Pratt & Whitney motors. They will be of the monoplane type and will be based at Pearl Harbor, Panama and here.

Maj. Reuben Fleet, president of Consolidated, has been in Washington since Nov. 1, negotiating the new contract, which brings the total contracts awarded here close to $18,000,000.

Award of the new contract, it was stated, indicates the navy's satisfaction with the ships which have been delivered already and which have been undergoing rigorous tests by naval pilots for the last several weeks.

Little Staff Increase

"Although award of the contract assures us of capacity operation for some time to come it does not mean that we shall add any large number of new employes," an official of the company said last night. "We are now operating with a full staff of mechanics and technicians, who are assured of continuous employment by the new contract."

The new contract, in common with the previous awards at Consolidated, comes under the Vinson act governing naval building expenditures, passed in 1935. Under the act, profit on naval contracts is limited to 10 percent.

In enforcing the act, government officials have established a system of auditing of the books of firms operating under naval contracts. When the auditing system discloses a profit of more than the allowable 10 percent, that amount is returned to the federal treasury. Contractors who bid in jobs at a loss, however, receive no compensation for their mistake.

COMPANY DELIVERS THIRD BOMBER

SD TRIBUNE-11-12-36

Flying boat No. 3 was delivered to the navy by Consolidated Aircraft Corp. early today. Towed across the bay from the unfinished ramps at the south end of Lindbergh field, the big patrol bomber was turned over to a test squadron upon reaching North Island Naval Air station, Capt. Arthur L. Bristol, commanding officer, reported. Exhaustive trials on the first PB-Y delivered last month have been completed by test pilots, and the second is well through its initial grooming. Racing against contract-time to complete the 60-odd ships for the navy, Consolidated has Nos. 4 and 5 nearly ready for delivery.

CONSOLIDATED'S 66-PLANE JOB SPURS ACTIVITY

Plant Assured Full Time Operation Until 1938 With Navy Job

S.D. SUN-11-18-36

More than three thousand workmen at Consolidated Aircraft Corp. today buckled down to their tasks with renewed vigor as the U. S. Navy's third "airboat" contract—for 66 more planes—assured the plant of capacity operations until well into 1938.

Awarded yesterday on Consolidated's low bid of $6,056,000, the planes will be similar to the 110 airships in the first two contracts though possessing minor refinements.

176 Ships Under Way

The contract boosted to 176 the total number of patrol bombers Consolidated is manufacturing for the Navy. These planes, although of one general design, are of three types, known as PBY-1, PBY-2 and PBY-3. Separate contracts calling for 60, 50 and 66 "airboats," respectively, were awarded to Consolidated, which now has approximately $17,000,000 in Navy work outstanding.

In addition to the 176 "airboats," spare parts equivalent to 35 more planes will be supplied the Navy.

Hawaii Test Hop Due

Three of the new patrol bombers have been completed by Consolidated and have been delivered to North Island, where the Honolulu air squadron VP-6 is preparing to fly them from San Diego to Pearl Harbor next month.

The 176 patrol bombers, with a cruising range exceeding 3000 miles, will be used to fortify Pacific defenses, particularly at San Diego, the Canal Zone and Hawaii.

Purchase of these planes is in response to the plea of Rear Adm. Ernest J. King when he was chief of the Bureau of Aeronautics that new aircraft be obtained to replace obsolete equipment. The "airboats" will now come under the jurisdiction of Adm. King in his capacity as commander, Aircraft Base Force.

Consolidated Aircraft Co. officials today declared that no additional personnel would be required for the fulfillment of the new contract.

Consolidated Progress

In San Diego's roster of industrial concerns, brightest gold star is attached to the name of Consolidated Aircraft Corporation. Adjoining Lindbergh Field and within sight of the Navy's great San Diego station, Consolidated last week reported a backlog of orders totaling $19 million, announced it was assured of work for its 3500 employees (largest number in San Diego) for over a year.

Last week Consolidated made news by the placement in its hands of a new order for 66 patrol bombing air boats by the Navy, bringing the total number of these boats to be delivered by Consolidated to the Navy to 116. The new award has a value of $6,056,500.

NEWS REVIEW 11-22-36

Wednesday, November 18, 1936

S.D. SUN

$6,056,000 For San Diego

SAN DIEGO may rightfully share congratulations with the Consolidated Aircraft Corp. on its landing of a new $6,056,000 contract to build 66 more Navy patrol "flying boats." We deplore war, and the necessity of war; but we are strong for adequate naval defense in these ominous times, and we are glad that some of the work of equipping the Navy has come to San Diego in the form of this contract.

The several hundred employes of the local company are guaranteed a continuation of employment, which is highly desirable and which will help further to stabilize the local employment situation. The company has explained the new contract will not mean any further expansion in personnel—it merely lengthens the outlook for employment for those already on the payrolls.

We are glad to know that this huge contract, in common with all Naval construction contracts let since the 1935 session of Congress, falls within the scope of the Vinson Act. This act limits the profit on any contract to 10 per cent. Anything over 10 per cent as determined by government audit, must be returned to the United States Treasury—which means, returned to the people of the nation who pay the bills for armaments. If a company fails to make a profit, that is the company's hard luck.

We presume the company will see to it that its workmen get their fair share of the profits, if any, accruing from this gigantic order. Most of the money will go for labor. And most of it will remain in San Diego. The community is certain to feel the effect of the distribution of so substantial a sum.

U. S. BUYS 66 PLANES

Bomber Contract Awarded by Navy

A contract for 66 patrol bombing planes, at a price of $6,056,500, has been awarded to the Consolidated Aircraft Corp., San Diego, the Navy Department announced yesterday.

Consolidated was low bidder among three aircraft manufacturers for the planes. Other bidders were the Glenn L. Martin Aircraft Co., of Baltimore and the Douglas Aircraft Co., Santa Monica, Calif.

NOV 20 1936

Wash. D.C. Herald 19 Nov. 1936.

TOTAL BOOSTED BY BIG NAVY PLANE ORDER

11-18-36

S.D. TRIBUNE

Award of a $6,056,500 contract for 66 navy patrol bombers to Consolidated Aircraft yesterday brings the total number of the big flying boats being built here for the navy to 176, and total contracts awarded to $18,000,000. Powered by twin Pratt & Whitney motors, the PBY type airboats have a wing span of 104 feet, are 64 feet long and 18 feet high. They are to be stationed here, at Pearl Harbor and at Panama. Four already have been delivered to North Island and are undergoing rigid tests preparatory to being flown to Pearl Harbor from the Pan American airways base at Alameda in January.

Although present employes at Consolidated are assured of continuous employment well into 1938, company officials say, there will be little increase in personnel. Under the Vinson-Trammel act of 1935, the new contract and those previously awarded are limited to a 10 percent profit, anything over that being returned to the federal treasury, according to a government auditing system.

SIX MILLIONS, S. D. PLANE ORDER

D. TRIBUNE-11-17-36

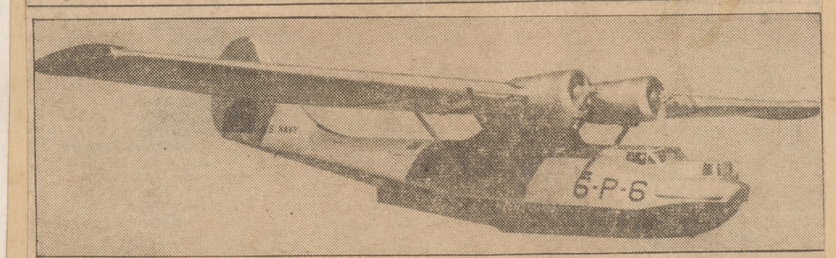
WASHINGTON, Nov. 17 (A.P.)—The navy awarded today a $6,056,500 contract to the Consolidated Aircraft Corp., of San Diego, for 66 patrol bombing planes. Speed, range and other specifications were withheld by the navy.

Consolidated Wins Six Million Job

S.D. SUN 11-17-36

WASHINGTON, Nov. 17.—The Navy Department today announced award of a contract for $6,056,000 for 66 patrol bombing planes together with spare parts from the Consolidated Aircraft Corp., of San Diego.

New Navy Planes to Hop Pacific



This is one of the latest in Navy patrol planes, half a dozen of which will hop off from the West Coast next month, bound for Honolulu, T. H. Officially known as the PBY-1, this plane has wing tip floats, which are calculated to speed up the craft and cut down wind resistance. Old types at the Fleet Air Base at Pearl Harbor, T. H., will be replaced by these latest ships.
—Official Photograph, U. S. Navy

66 NAVY BOMBERS AWARDED ON LOW CONSOLIDATED BID

S.D. SUN 11-17-36

Consolidated Aircraft Corp. today was awarded its third Navy contract—for the construction of 66 "flying boats" at a cost of $6,056,000, the United Press reported from Washington.

By underbidding Douglas Aircraft Co. of Santa Monica and Glenn C. Martin of Baltimore, the San Diego firm thus became one of the country's largest builders of military planes.

176 Ships Under Way

The contract boosted to 176 the total number of patrol bombers Consolidated is manufacturing for the Navy. These planes, although of one general design, are of three types, known as PBY-1, PBY-2 and PBY-3. Separate contracts calling for 60, 50 and 66 "airboats," respectively, were awarded to Consolidated, which now has approximately $17,000,000 in Navy work outstanding.

In addition to the 176 "airboats," spare parts equivalent to 35 more planes will be supplied the Navy.

Hawaii Test Hop Due

Three of the new patrol bombers have been completed by Consolidated and have been delivered to North Island, where the Honolulu air squadron VP-6 is preparing to fly them from San Diego to Pearl Harbor next month.

The 176 patrol bombers, with a cruising range exceeding 3000 miles, will be used to fortify Pacific defenses, particularly at San Diego, the Canal Zone and Hawaii.

U.S. COAST OPEN TO ATTACK BY AIR, CLAIM

S.D. TRIBUNE 11-11-36

Although comparatively safe from land invasion, the Pacific coast is vulnerable by air, according to Lt. Col. Homer R. Oldfield, member of the Ninth Corps area staff at the Presidio, San Francisco.

"Our best local defense against enemy bombing attacks is three groups of aircraft on the Pacific coast, so powerful that they could follow raiding bombers back to their carriers and then sink the carriers," the veteran officer told delegates at the recent convention of California natural gasoline producers at Los Angeles.

Enemy objectives in southern California would be destruction of petroleum reserves and refineries, aircraft factories and lowering of civilian morale, Oldfield said.

Naval authorities agree that long-range bombing planes, backed up by their carriers and battleships, will play the leading part in future combat. For this reason, the navy already in May will have a total air strength of 1300 planes, and when full treaty strength is reached in the next five years, nearly 2000 will form the U. S. Aerial armada.

In line with the present policy of naval construction and better coast defense, the huge patrol bombers being built at the Consolidated Aircraft Corp. are being rushed as much as possible. These ships will be able to fly nearly 2000 miles out to sea to bomb any enemy approaching the Pacific coast. A recent flight in one of the airboats from Panama to Oakland showed that their cruising range is 4000 miles. That flight covered 3300 miles, and enough gasoline still remained in the tanks for another 1000 miles of flying.

To cover all bets, however, the navy will send two flights of the new planes to Hawaii. With groups of the bombers along the Pacific coast, and squadrons in the Hawaiian island territory, even air invasion of this coast would be very difficult, if at all possible, naval officials believe.

It is significant that massed flight maneuvers under Rear Adm. Ernest J. King, commander aircraft base force, recently centered around possible advance bases between the Hawaiian islands and Midway, and particularly the strategically important French Frigate shoals, 750 miles west of Honolulu. Operations also extended south along the route proposed as an airline from Honolulu to Australia and New Zealand.

HAWAIIAN FLIGHT OF NAVY PLANES MAY BE DEFERRED

SD UNION-11-25-36

Possibility that tentative schedules for the proposed San Diego-Hawaii flight of 12 navy-Consolidated seaplanes, originally planned for the middle of December, may be postponed was seen yesterday by Rear Adm. Ernest J. King, commander of aircraft, base force.

Adm. King returned here from Hawaii aboard the U. S. S. Wright after a training cruise in the islands, during which he watched "interesting and instructive" extended training flights of U. S. naval seaplanes.

"Our original plans were to send the Hawaii flight in two groups of six planes each," Adm. King said last night. "We have not changed those plans, but it is possible that the mid-December date we contemplated for the first group will have to be postponed."

Coincident with Adm. King's arrival yesterday, Consolidated Aircraft Corp. delivered the fourth big San Diego-built flying boat to the North Island officials. The first was turned over for tests several weeks ago.

Fliers from the Hawaiian stations were brought here aboard the Wright to ferry the planes across the Pacific. They will remain at North island until the ships are ready, it was indicated.

Of the activities he supervised in the mid-Pacific, Adm. King said little.

"We would like very much to inform the American public of the work of the naval aircraft divisions," he said. "When we describe these advances for Americans, however, we are describing them for the world at large and I am not at liberty to reveal their nature. They were a part of the fleet training program, however."

Adm. King May Change Plans For Ocean Flight

SD SUN-11-22-36

MORE HONOLULU FLIERS ARRIVE IN SAN DIEGO

Trans-Pacific Hop For Bombers May Be Postponed

With the second detachment of Honolulu's VP-6 Squadron in San Diego to learn the intricacies of the new Consolidated "airboats," plans for flying the patrol bombers to Pearl Harbor today waited the return from Hawaii of Rear Adm. Ernest J. King, commander aircraft base force.

Adm. King is due at North Island Tuesday aboard his flagship, the USS Wright, which with the USS Sandpiper served as floating bases for Pearl Harbor's patrol squadrons in the recent elaborate air maneuvers in the Hawaiian sector.

Arrive On Bushnell

Six officers and 23 enlisted men arrived here last Sunday aboard the USS Bushnell, flagship of the submarine force, which has spent the past few months on maneuvers among the tropical islands.

Four more enlisted men are due to arrive aboard the Wright. The officers are Lieut. R. W. D. Woods, and Junior Grade Lieuts. W. M. Drane, G. L. Heap, R. C. Bauer, J. O. Biglow, and J. A. Murphy.

According to original plans, the initial detachment of VP-6 fliers, which came to North Island last August to acquaint themselves with new "airboats," were to fly the first six Consolidated planes to Hawaii about Dec. 15 and the second group was to "ferry" six more planes in January.

Plans May Change

However, only three of the bombers are completed, and inasmuch as complete testing of each ship as it leaves the factory requires a week to 10 days, this schedule may be altered.

It is believed probable that all 12 planes will be flown to their Pearl Harbor station in one mass flight next January. Adm. King is expected to revise the takeoff dates upon his arrival here.

No Hangar Space

With hangar space lacking for the huge "airboats," they are at present kept outside in a small area which is extremely congested. Naval Air Station officials face a problem in the accommodating of future Consolidated planes as they are delivered.

Lieut.-Comdr. William M. McDade, commanding officer of Squadron VP-6, yesterday said that the "airboats" have been performing excellently in trial hops under all kinds of weather conditions.

May Takeoff at Alameda

Possibility that the takeoff to Honolulu may be made from Alameda bay instead of San Diego is being mentioned at North Island. Because of the heavy fuel load, consisting of full gasoline tanks weighing 10,000 pounds, two barrels of oil and five crew members, a longer takeoff runway may be required than that provided in the local harbor.

Pan-American Airways' facilities may be utilized, should the trans-Pacific flight be started from Alameda.

BOMBER SQUADRON FORMATION O.K.'D

SD TRIBUNE-12-22-36

In line with established policy of bolstering Pacific coast defense, formation of new patrol-bomber squadrons here, at San Francisco, Seattle, the Canal Zone and Hawaii, announced previously in The Evening Tribune, was confirmed by Rear Adm. E. J. King, commander aircraft, base force. Airboats now in service—not the new PBYs—will comprise squadrons VP-16 and 17 at Seattle. The new Consolidated ships will take stations at the other bases mentioned as they are completed and put in service.

Inspiring sight after dreary, rain-swept days: S.D. SUN 12-20-36

Six Consolidated patrol bombers making perfect take-offs from the glistening, quite waters of the bay on a 24-hour non-stop flight last Friday morning.

Navy Plans Mightier Long Range 'Airboats'

San Diego Sun 12-13-36

1910 PLANES BY 1942, AIM OF ADM. COOK

Bureau Of Aeronautics Releases Annual Report

Development of long range patrol planes, more powerful than those being built for the Navy by Consolidated Aircraft Corporation, is one of the principal aims of naval aviation, the Bureau of Aeronautics announced yesterday in its annual report for the fiscal year 1936.

"Patrol planes of increased range and striking power are in prospect," declared Rear Adm. A. B. Cook, chief of the bureau, who recently visited North Island to determine exact need for future expansion.

Rapid Building Of Planes

By 1942, according to Adm. Cook, the U. S. Navy will possess approximately 1910 planes, with present aircraft construction progressing at an unprecedented pace.

In process of procurement or manufacture are airships for the new carriers Yorktown and Enterprise, to be based in San Diego, and the cruisers Vincennes, Savannah, Nashville, Philadelphia and Brooklyn, now under construction.

3 New Patrol Squadrons

In the 1937 appropriation funds have been provided to establish three new patrol squadrons, VP-17, VP-18 and VP-19. Aircraft will also be provided the new cruisers Boise, Honolulu and Phoenix, upon commissioning.

Most important naval accomplishments of the past year were listed by the Bureau of Aeronautics as follows:

McGinnis Flight Hailed

Flight of Consolidated's first "flying boat"—the XP3Y-1, by Comdr. Knefler McGinnis from Naval Air Station, Norfolk to Coco Solo and non-stop from Coco Solo to San Francisco, the latter flight establishing two new international distance records for seaplanes. This plane is now stationed with Squadron VP-11 at North Island.

Beginning of aviation cadet training to meet the shortage of naval aviators.

Navy Acquires Fliers

Transfer of Rockwell Field, San Diego; Luke Field, Pearl Harbor and old Bolling Field, Anacostia, D. C., from the custody of the War Department to the Navy Department.

Authorization for acquisition of site and for construction of a Naval Air Station at Alameda.

Launching of the USS Yorktown.

Delivery of 370 airplanes incorporating advanced performance.

For the coming year the bureau has recommended an increase in tender facilities for "airboats." Assigning of the USS Langley to the Aircraft Base Force is a first step in this direction.

The bureau has asked that necessary addition to facilities at shore stations such as North Island be made as required by increases in number of fleet aircraft.

Naval Air Stations' Expansion Urged

SD TRIBUNE 12-1-36

Increasing congestion at naval air cooperating and repair bases is becoming so serious as to threaten interference with fleet operations, according to the annual report of Rear Adm. A. B. Cook, chief of the bureau of aeronautics.

Cook advocates expansion of the air station here at North Island, and additional shore facilities on this coast and in Hawaii, recommending a construction program that would include housing for personnel, hangars and shops, to be begun immediately.

Future air cruisers of even greater cruising range and striking power than those now being built here for the navy are expected to mark the continuing development of long-range patrol bombers of the PBY-type, Cook believes. He also asks that the navy department provide new aircraft, in general, of the best possible performance and increase the number of the planes to the limit set by the last treaty.

Alameda War Urged

In line with this request is the recommendation to seek funds for development of the Naval Air station at Alameda. Although that base primarily is designed for long range bombing and patrol planes, it is not yet sufficiently developed to accommodate the flight of PBY airboats to Pearl Harbor. This is shown by the fact that preliminary arrangements for the flight, which is expected to be made some time in January, recently were made by Lt. (jg) L. O. Matthews of North Island with Pan-American Airways officials that the navy might use the airways base at Alameda as starting point for the transpacific hop.

Provision of an adequate number of aircraft tenders also was recommended by Cook. This however, already is under way with the remodeling at Mare Island of the carrier Langley, to be used as a tender in the fleet patrol wing.

As outstanding among the accomplishments of the past year Cook mentions the establishment of two world's records for distance and duration flights with the hop to San Diego from Norfolk of the XP3Y-1; training of aviation cadets to meet shortage of naval aviators, and establishment of a Marine aviation field at St. Thomas, Virgin Islands.

KING PONDERS ON S. D. MASS FLIGHT

S.D.SUN——12-3-36

When Consolidated Aircraft Co.'s sixth new "flying boat" is delivered to the Naval Air Station Monday, definite plans for the San Diego-Hawaii mass flight of the huge planes will begin to take shape, Rear Adm. Ernest J. King, commander aircraft Base Force, indicated today.

Adm. King today was not certain whether the 12 airboats assigned to Pearl Harbor's Squadron VP-6, now training at North Island, would make the trip in two sections, as originally scheduled, or in one formation some time in January.

Power Stressed In Big Navy Planes

SD TRIBUNE-12-1-36

By RUSS HAHN

Significant in aviation is the development of more powerful engines, as announced by the Wright Aeronautical Corp. and the Pratt & Whitney Co., when considered in relation to construction of huge navy patrol bombers.

Little is mentioned in the bureau of aeronautics report of the flying boats now being built here for the fleet. The fact that 170 already are contracted for and recommendation made for continued construction, however, shows that the fast long-range ships are regarded not only valuable as navy scouting units, but tremendously important as a striking force should the necessity arise.

Made recently by Lt. Comdr. Emile Chourre, veteran navy pilot, the prediction that airboats within two years will be six times greater than at present rapidly is becoming an actuality. The PBYs now are approximately 13 tons, but the Boeing plant already is building a 40-ton ship, and manufacturers are planning 50-ton flying cruisers.

Engines 1500 H.P.

And, it is said, these huge ships will not have sacrificed speed for size. Being built for Pan-American Airways, the 40-tonners' specifications call for 1500 horsepower engines—four of them. And they undoubtedly will get them.

The Wright Co. already has sold to Transcontinental and Western Air 41 Cyclone engines capable of developing 1205 horsepower. In daily use, these giants must deliver 1100 horsepower to the propellers at the take-off. Contracted for recently by United Air lines, the new Douglas ships are powered by Pratt & Whitney twin row Wasp radials that put out 1000 horsepower at take-off, and develop more than 1100 horsepower.

The one factor that has been the biggest hindrance in development of huge airboats—powerful enough motors—seems to be conquered, proving the contention made years ago by Wilbur Wright: "Give me enough power and I could fly a barn door."

According to builders of the aircraft, 100-ton ships today would be practical if the engines were obtainable. However, only a year ago, the engines that today sing their song of sustained power over thousands of miles of open sea, in the Hawaiian Clipper ships, for example, were non-existent, and there was no hope of obtaining them.

Size Increases

Ten years ago the Cyclone engine which produced but 500 horsepower looked almost the same as the modern motor which unleashes 1205 horses. So small, in relation to the increased power, has been the increase in size. The Cyclones are said to be the lightest engines for the power they develop in the world.

Identical with the problems of commercial air lines is the navy's increase in the territory to be covered by their big airboats. Although originally intended to be used along the Pacific and Atlantic coasts and in the Canal Zone, the big PBYs now will patrol practically the entire Pacific. Twelve of them are to be stationed at Pearl Harbor. This means that with the tremendous cruising range of the ships, Honolulu, Wake Island—2500 miles westward.—Midway island, French Frigate shoals, Kingman reef, and the Aleutian islands all will know the thrum of the twin motors that pull the big birds.

The first line of Pacific defense, by the patrol bombers, will be pushed 5000 miles from the mainland coast. Load capacity of the airboats is so great that bombing expeditions to objectives 1500 miles away, and return, easily could be accomplished.

With eagle eyes the navy high command is peering into the future as plans are made for the navy itself to do some engine development in its Philadelphia plant, and not entirely with gasoline motors. Perfection of Diesel airplane engines is rumored to be one of the major projects which navy designers will undertake.

Slow Delivery Of 'Airboats' Delays S. D.-Hawaii Flight

S. D. SUN —— 11-24-36

Adm. King Returns From Island Maneuvers, Disappointed To Find Only Three Bombers Ready

Plans for the San Diego-Pearl Harbor flight of six new Consolidated patrol bombers, originally scheduled for Dec. 15, face possible revision, Rear Adm. Ernest J. King, commander Aircraft Base Force, announced today upon his arrival from Hawaii aboard his flagship USS Wright.

Delay in delivery of the big "airboats" may cause a change in the takeoff date, Adm. King said.

"I had expected to find six of the bombers completed upon my return. I see there are only three ready and although all the personnel for the transpacific flight is at North Island, our flight plans depend on the speed of future deliveries," he said.

Praises Air Drill

Adm. King characterized the air maneuvers of 40 patrol planes in the Hawaiian sector as one of the most successful ever undertaken. The Wright and the Sandpiper, which arrived in the harbor several hours later, acted as base ships for the Pearl Harbor squadrons.

Adm. King today conferred with officers of Pearl Harbor's Squadron VP16 which will fly the first 12 patrol bombers to be completed by Consolidated across the Pacific.

S. D. Carrier To Sail

The next major air maneuvers will be held February in the Canal Zone, with planes from the Coco Solo air base and east coast squadrons participating, Adm. King said. One aircraft tender from San Diego will be dispatched to southern waters.

One of the Navy's intentions in the strengthening of its aerial forces is the development of efficient bases at San Francisco and Seattle, in addition to San Diego, according to Adm. King.

FLIGHT DATE CHANGE SEEN

SD SUN 12-8-36

Possibility that the San Diego-Hawaii mass flight of Consolidated "airboats" may be postponed beyond Jan. 15, the present tentative date, was seen today.

With Honolulu's Squadron VP-6 today in possession of its sixth patrol bomber, Lieut. Comdr. Emile Chourre, inspector of naval aircraft at Consolidated Aircraft Corp. indicated that the remaining six to be assigned to the squadron would probably be delivered by mid-January.

The requirements of testing the huge "airboats" will normally take another week to ten days, thus possibly delaying the flight, if Rear Adm. Ernest J. King decides to send all 12 at once, to on or about Feb. 1.

Adm. King said he had as yet made no definite plans regarding the longest trans-ocean delivery flight of new planes in the Navy's history.

CRAFT DELAYED; NAVY SEA HOPS 'INDEFINITE'

S.D TRIBUNE 11-24-36

Delay of Consolidated Aircraft Co. in delivery of the big PBY-type airboats to the navy is one of the chief reasons why plans for the transpacific hop of 12 of the ships can not be definitely announced at present, according to Rear Adm. Ernest J. King, commander aircraft, base force, who arrived this morning aboard his flagship, the U.S.S. Wright from Hilo, Hawaii.

King said that as originally planned, two flights were to be made to Pearl Harbor, one next month and the other in January, with six planes in each flight. However, only three of the new ships have been delivered to date, and even if the other three are completed within the next week or two, time required for naval tests would not permit a transpacific flight in December.

All At S. D. Base

Whether one flight of six ships will be made in January, or the flight of the entire 12, as has been reported, was not stated by King. He said he would have to consider local conditions before making a definite statement.

Sixty-one officers and men of Pearl Harbor squadron VP-6 who will make the flight are at North Island. The big airboats take a full crew of six men each, making a total of 72 to ferry the ships to their base. King did not say whether the planes will be fully manned.

"The recent flight maneuvers in Hawaiian waters were quite successful and instructive," he said. "Forty ships participated."

LARGER S. D. NAVAL AIR STATION URGED BY AERONAUTICS CHIEF

S.D.UNION-11-23-36

Congestion at aircraft operating and repair bases is becoming increasingly serious and requires prompt provision for expansion of existing facilities at Naval Air station here and for additional shore facilities in the Pacific northwest and in Hawaii, Rear Adm. A. B. Cook, chief of the bureau of aeronautics, announces in his annual report.

Adm. Cook states that if interference with fleet operations is to be avoided, a construction program including housing for personnel, hangars and shops must be started without delay.

Of exceptional interest was Adm. Cook's statement that the navy will continue the development and employment of long-range patrol planes of the type now being built for the navy by Consolidated. He intimated that future air cruisers will be even greater in cruising range and striking power than the 170 now being built or contracted for at the Lindbergh field plant.

Improvements Urged

The following recommendations were made by the bureau chief in his annual report to the secretary of the navy:

Make immediate provision of necessary increase in facilities at shore stations as required by the increases in the number of fleet aircraft.

Seek immediate funds for the development of Naval Air station at Alameda which is primarily designed as an operating base for long range bombing and patrol planes.

Provide new aircraft of the best possible performance and increase their number in accordance with the treaty navy program.

Provide an adequate number of suitable tenders for patrol planes. (This program already is underway with the conversion of the carrier Langley to a tender for service with the fleet patrol wing).

Achievements Noted

Among the outstanding accomplishments of the bureau during the fiscal year, Adm. Cook reported, were:

Initiation of training of aviation cadets to meet shortage of naval aviators. A total of 600 will be added to the personnel at North Island during the coming year.

Expansion of the naval aircraft factory for the manufacture of aircraft and aircraft engines in accordance with the Vinson-Trammell act requiring 10 percent of naval aircraft and engines to be built by the navy.

Transfer by executive order Oct. 26, 1935, of Rockwell field, San Diego; Luke field, Pearl Harbor, and Bolling field, Anacostia, from the war department to the navy department, and of the naval dirigible base at Sunnyvale from the navy department to the war department.

Launching of the aircraft carrier Yorktown, the first of three new carriers which are to be based at San Diego.

Delivery of 370 planes and 468 engines and the overhaul of 544 planes and 1135 engines at naval aviation bases.

Flight of the Consolidated plane XP3Y-1 from Norfolk to San Diego, the flight establishing two world's records for distance and duration.

Establishment of a marine corps aviation field at St. Thomas, Virgin islands.

S. D. AIRCRAFT CHIEFS INVITED TO EKINS TALK

Consolidated Officials Will Be Guests Of Honor

S.D SUN 11-15-36

Officials of Consolidated Aircraft Corp. will be guests of honor at the civic meeting Thursday at which H. R. (Bud) Ekins, Scripps-Howard staff writer, will describe his recent spectacular 18½-day dash around the world via commercial airlines.

The luncheon, in the Pompeiian Room of Hotel San Diego, will be under auspices of The Sun and the Aviation Committee of the Chamber of Commerce. The Rotary Club, with Wilbur Martin as chairman of the day, will be host, and all other luncheon clubs in the city have been invited to attend.

Officials to Attend

Local Consolidated officials who will be guests will include David G. Fleet, assistant to the manager; Gordon Mounce, assistant to the manager; C. A. Van Dusen, works manager; I. M. Laddin, vice-president and chief engineer; C. T. Leigh, vice-president; and Maj. Edgar N. Gott.

Ekins' trip, which was not a stunt, was made to demonstrate that any traveler may now speed around the world by air.

Students to Hear

He will speak Wednesday afternoon at 2:25 before the Point Loma High School students. Thursday morning he will speak at 10 o'clock before San Diego High's assembled student body, and at 10:55 before the Hoover High students.

He will make only one other appearance in California — in San Francisco.

E NOTES S.D.SUN 11-23-36

n Unusual Thanksgiving

LD KEEN

ing Station's "detention camp" get the traditional big feed, but they're also permitted to witness motion pictures on Thursday, Saturday and Sunday nights.

And that's news to a homesick "rookie" whose every joint is aching from vaccinations or long hours of marching on the "grinder."

Of course, they won't be allowed to mingle with those who have graduated from "quarantine." Says the Training Station bulletin: "Usual arrangements will be made for segregation."

◇ ◇ ◇

The return of the aircraft tenders USS Wright and USS Sandpiper tomorrow from several weeks' maneuvers with Pearl Harbor plane squadrons is more than an ordinary event.

It will signalize the beginning of actual preparations for another epochal achievement of the Navy—the mass flight of six to 12 new Consolidated "airboats" from San Diego to Hawaii.

Aboard the Wright is the Aircraft Base Force staff, led by Rear Adm. Ernest J. King. Uncertainty of Honolulu's Squadron VP-6 over plans to "ferry" the huge patrol bombers across the Pacific is expected to be dispelled by a pronouncement from Adm. King as to when the takeoff will occur and how many planes will participate in the hop—2080 miles from San Diego, 2280 miles from Adameda along the airlines of Pan-American Airways.

KING PONDERS ON S. D. MASS FLIGHT

S.D.SUN 12-3-36

When Consolidated Aircraft Co.'s sixth new "flying boat" is delivered to the Naval Air Station Monday, definite plans for the San Diego-Hawaii mass flight of the huge planes will begin to take shape, Rear Adm. Ernest J. King, commander aircraft Base Force, indicated today.

Adm. King today was not certain whether the 12 airboats assigned to Pearl Harbor's Squadron VP-6, now training at North Island, would make the trip in two sections, as originally scheduled, or in one formation some time in January.

S.D. SUN 11-22-36

Many Join

Editor, The Sun: I am one of those peculiar humans that believe that an industry is valuable to a community only in proportion to the payroll that it puts out to its employes. The number of dollars invested does not mean much, if the men that actually produce the products are not getting sufficient for their services to buy the necessaries of life. Particularly is that true in the case of a manufacturer of war materials and instruments of destruction.

Working on that basis, we have been conducting an organization drive, with the ultimate goal of getting into a union every man employed in the plant of the Consolidated Aircraft Corporation. We are having phenomenal success as was demonstrated by the meeting held in Hall No. 1 of the Labor Temple on Nov. 10.

At this meeting there was approximately 300 employes of this company, and after having the situation explained to them and showing them what membership in the American Federation of Labor affiliates has done for millions of their fellow workers, particularly in the building crafts in the construction of the Consolidated buildings, we had the pleasure of seeing between 250 and 300 of those men take membership in the International Association of Machinists.

We feel certain that from the enthusiasm that was demonstrated at that meeting that it will not be long before the great majority of the workers in that plant will be in the union. When that has been accomplished, the merchants of the city can put in an additional stock of merchandise, the real estate dealers and building contractors can start proceedings for additional construction, and not of the $1200 to $1800 class, but in the $2500 to $3000 class.

We ask the assistance of every citizen that desires to see working men live decently, those that feel that a workingman's wife and children are entitled to the good things of life. It is our desire to make this a better city in which to live.—A. C. ROGERS.

SUN Other Side 12-24-36

Other Side

Editor, The Sun: It is now time for the people of San Diego to express deep appreciation to the Chamber of Commerce and to Maj. R. H. Fleet for their combined efforts in making the Consolidated Aircraft factory a reality here. It is a San Diego establishment and its benefits to San Diegans, generally, are widespread.

It might be interesting to some people to know that this company owes its success mainly to the untiring, Herculean efforts of Maj. Fleet, its president. He began his industrial career as any other average young man—without any given opportunity to assure his future but with a far-sightedness and fair-mindedness that convinced him that opportunities must be created by the man himself. With this in mind, he served some years in the aeronautics division of the Army and there found the need was great for a suitable training airplane that would stand any knocks and abuse that students might give it.

This was his opportunity. With the very small sum of $25,000 capital and the aid of men he proceeded to design and build a trainer that is still being used today.

That was 12 years ago. Since then Consolidated Aircraft Corp. has grown until it is a 10 million dollar corporation, serving its country and its people, supporting three thousand men and their families—and there is one sustaining intelligence that keeps it growing and that one is Maj. Fleet's. I know of no other organization where the "head" of the company is so much the "head" of the company in fact.

He has always been fair, square and honest with all the men working for him and he helps them, personally, when they need it. They are paid higher wages here than in any other aircraft organization in this country. No man in this plant is paid less than 40 cents an hour and as a man acquires knowledge and experience his pay is raised commensurate with his ability to turn out satisfactory work.

Let us realize in time that Consolidated Aircraft Corp. is an asset to San Diego and show our gratitude to Maj. Fleet and his fine organization by promptly dismissing any unwholesome or undesirable element from its midst.—A. G. ROGERS.

◇ ◇ ◇

NAVY GETS READY FOR PLANE FLIGHT TO PEARL HARBOR

S.D UNION 11-23-36

With the arrival here tomorrow from Honolulu of Rear Adm. Ernest J. King, commander of the fleet patrol and bombing wing, final plans for the flight of 12 new Consolidated airboats to Pearl Harbor will be made public. Adm. King is returning from Hawaii aboard the aircraft tender Wright.

Fourteen officers of patrol squadron VP-6 are at Naval Air station awaiting orders to ferry the huge seaplanes from California to Pearl Harbor. The officers include Comdr. W. M. McDade, squadron commander; Lts. Ralph Woods, W. M. Drane, G. L. Heap, J. O. Biglow, J. A. Murphy, R. C. Bauer, W. W. Harvey, G. C. Briant, R. J. Stroh, J. B. Young, C. H. Ostrom, D. B. Brokenshire and L. O. Matthews.

The first detachment of VP-6 personnel arrived from Honolulu in August and the second came from Hawaii on the Bushnell. With the officers are 47 enlisted men attached to the squadron.

Original plans of Adm. King called for six of the planes to be flown to Pearl Harbor Dec. 15 and six more Jan. 15. Only two of the airboats have been delivered by Consolidated to the navy. Although 10 others rapidly are nearing completion, it is reported the December flight will be postponed and that the entire squadron will take off from San Diego or San Francisco bay about the middle of January. This will require only one series of patrol ships along the line of flight.

NAVY MAY USE SAN PEDRO AS AIRBOAT BASE

Capt. Bristol, Comdr. Pownall Survey Reeves Field

S.D SUN 12-14-36

Conjecture as to whether the Navy is planning to utilize Reeves Field amphibian airport on Terminal Island as base for the new Consolidated patrol bombers arose today.

May Expand Reeves Field

Reports from San Pedro indicate that Capt. Arthur L. Bristol, commanding officer of the Naval Air Station at North Island, admitted on his survey of Reeves Field last week that it may provide a base for more than the 112-plane observation wing of the fleet, as originally planned.

Accompanying Capt. Bristol on his visit to Terminal Island was Comdr. Charles Pownall, chief of staff to Rear Adm. Ernest J. King, commanding officer of the Aircraft Base Force, who will supervise operations of the 176 planes comprising the new patrol squadrons.

Spending $600,000

The Los Angeles Harbor Department and WPA are expending $600,000 on the Terminal Island improvement project. Need for hangars to provide plane overhaul facilities may lead to a further expenditure of $100,000, it was learned.

Meanwhile, plans for the trans-Pacific mass flight of 12 of the new Consolidated planes are yet to be formulated by Adm. King. Seven of the huge airboats have been delivered to Pearl Harbor's Squadron VP-6 at North Island, with the remaining five due for completion Jan. 15.

◇ ◇ ◇

SERVICE NOTES

Adm. King Ponders Plans For Hawaii 'Airboat' Hop

S.D.SUN By HAROLD KEEN 12-16-36

Original plans to send the first 12 Consolidated patrol bombers from San Diego to Hawaii in two mass flights of six planes each have not been changed, Rear Adm. Ernest J. King, Aircraft Base Force commander, said today.

None of the planes will leave San Diego before Jan. 2, he indicated. Officers and men of Pearl Harbor's Patrol Squadron Six meanwhile are putting the huge airports through exhaustive tests in preparation for the trans- Pacific hop.

Takeoff Date Indefinite

"No definite date for the takeoff has been set as yet," Adm. King said. "Rumors that the flight will start Jan. 15 and will be made in one group of 12 planes are not founded on any official decision. The only certainty at present is that the airboats will not be sent before Jan. 2."

Tentative plans of the Navy were to send the first six planes to Hawaii today and the second six next month. A change was required by delay in delivery.

Eighth Plane Delivered

Meanwhile, production of the huge ships is being speeded up at the Consolidated plant. Today, the eighth of the airboats was to be launched and towed across the bay to North Island.

The event caused a flurry of excitement among owners of small craft in the harbor near the improvised seaplane ramp now being used by Consolidated pending completion of a paved runway to the municipal ramp.

All fishing boats and tiny pleasure cruisers anchored on the shoreward side of the long pipe line extending from the San Francisco Bridge Co. dredger had to be removed to provide free movement for the airboat on its "cruise" to the Naval Air Station. Port Director Joe Brennan and his cohorts spent a frantic afternoon yesterday rounding up pilots of the five dozen vessels and warning them to transfer their moorings, temporarily, to the opposite side of the dredge's pipe lines.

◇ ◇ ◇

Epochal Flight Deemed Mere Routine Operation

S.D SUN By HAROLD KEEN 12-21-36

No cheers welcomed crews of the six PBY-1 patrol bombers when they splashed to graceful landings in the harbor Saturday morning.

The 38 officers and enlisted men of Pearl Harbor's Patrol Squadron Six had just completed a 24-hour non-stop endurance test in an apochal mass flight.

Excitement Lacking

But no excitement animated the shoreline observers, from Adm. Ernest J. King to the lowliest seaman who aided in towing the huge airboats up the seaplane ramp. Officially, it was just another routine Navy operation, successfully completed.

In reality, however, it was an important accomplishment. Cruising about for 24 hours, covering 2900 miles with only minor mechanical difficulties, showed that the Consolidated planes could take sustained punishment.

Ran Into Storms

And flying conditions were by no means ideal at all times, according to the pilots. The airboats occasionally ran into small storm areas offshore, and Friday night was one of the darkest in which they had ever been aloft.

It is understood that small adjustments are required and will be made on the planes as a result of this flight. Within a short time, another endurance run will be made as part of the "shakedown" process.

Comdr. William M. McDade and his lieutenants will probably fly the bombers to Hawaii, where they will be permanently based, in mid-January, although the exact date is yet to be set by Adm. King, who is awaiting results of future test flights before ordering the trans-Pacific hop.

Union BOMBER GROUNDED 12-25-36

Crash boats were called to the scene yesterday forenoon when one of the PBY patrol bombers went ashore on Dutch flats, northeasterly from the Naval Air station.

Naval officials reported that the mishap, the first one to involve one of the new type aircraft, apparently resulted from misjudging the taxiing distance of the plane. The 13-ton craft stuck its nose into soft mud, injuring no one and apparently doing itself no damage.

NAVY PLANS NEW PLANE SQUADRONS IN COAST PATROL

S.D. UNION 12-20-36

S. D.-Built Craft Scheduled For Added Units; Six in Cape Flattery Hop Return.

Formation of new patrol plane squadrons here, at San Francisco and Seattle, and in Hawaii and the Canal Zone, was announced last night by Rear Adm. Ernest J. King, commanding the base force aircraft units here.

Establishment at Seattle of the new squadrons VP-16 and VP-17 soon was verified by Adm. King, who stated that flying boats already in service would be used for the two squadrons there. As new boats of the giant PBY type are completed at the local factory of the Consolidated Aircraft Corp., squadrons composed of them will be placed in service at North Island, at the Alameda air base on San Francisco bay, and in the Hawaiian islands and the Canal Zone. The expansion is in keeping with the policy of the bureau of aeronautics to place patrol squadrons at all stategic points.

A 24-hour non-stop flight of six of the new Consolidated boats to Cape Flattery and return ended yesterday when the aerial sextet landed on the bay here, around 9:30 a. m.

The six planes making the flight, reported as a preparatory step to the flight from here to Hawaii early in January, recently were delivered to the navy by the local plant. Officers from Hawaiian patrol squadrons, who came here recently in the U. S. S. Bushnell, have been putting them through their paces and gaining experience in handling the big new planes. The flight which ended yesterday was commanded by Lt. Comdr. W. M. McDade, commanding Squadron VP-6, to which the boats are attached.

S.D.Bomber Planes North On Test Hop

'Shakedown' Cruise Prepares Pilots For Trans-Pacific Flight

S.D.SUN 12-18-36

Six new Consolidated "PBY-1" patrol bombers took off secretly from San Diego harbor this morning on a 24-hour nonstop flight in the first endurance test the huge airboats have undergone.

Their destination, The Sun learned, is Seattle, an airline distance of approximately 1400 miles. Without landing, the bombers will circle about and return to San Diego, arriving here tomorrow morning.

Full Load of Fuel

The utmost secrecy shrouded the airboats' takeoff. Led by Comdr. William M. McDade, commander of Pearl Harbor's Patrol Squadron Six, the planes took on a full load of fuel, consisting of 1600 gallons of gasoline weighing 10,000 pounds and two barrels of oil. Crews of five manned each plane.

Although this was the first time the large planes have taken off with a full load, they skimmed across the water and rose without difficulty. One or two bounded back into the water as they attempted to rise but eventually soared away gracefully.

King Sees Takeoff

So important was this mass flight takeoff deemed that Rear Adm. Ernest J. King, commander of Aircraft Base Force, and his staff, assembled near the seaplane ramp on North Island to witness the start of the flight.

Officers of Patrol Squadron Six who have been assigned ships for the San Diego-Hawaii flight were at the controls of the airboats which followed that of Comdr. McDade.

Circumstances of the takeoff were practically the same as those to be encountered on the departure of these six planes on their trans-Pacific hop to Hawaii next month.

'Shakedown' Test

The round-trip flight to Seattle is part of the "shakedown" the planes are undergoing in preparation for the jump across the Pacific, it was explained.

With a cruising speed of approximately 135 miles an hour, the airboats were expected to complete the 2800-mile trip easily within 24 hours.

They were to keep in constant communication by radio with the Naval Air Station this afternoon and tonight.

Consolidated Aircraft Co. officials awaited the outcome of the flight with great interest today. It was to prove whether the planes will be able to "take it" on the long trip to Hawaii.

That the ships have a cruising radius of more than 30 hours was demonstrated Oct. 14-15, 1935, when Lieut. Comdr. Knefler McGinnis flew from Cristobal harbor, Canal Zone, to San Francisco bay without stopping, an airline distance of 3281 miles.

Plans Flight

With the anticipated delivery tomorrow of the sixth new Consolidated "airboat," Rear Adm. Ernest J. King, commander Aircraft Base Force, above, will be in a position to begin making arrangements for the San Diego-Hawaii mass flight of the huge patrol bombers.

MUST MOVE BOATS TO AID LAUNCHING OF AIRCRAFT

S.D. TRIBUNE 12/15/36

Because the navy refuses to accept delivery on any Consolidated flying boat towed to North Island through the present gap between the Lindbergh field dredger and small craft moored in the shallows farther inshore, the harbor department must change the moorings of nearly half a hundred boats now anchored in the bay between the foot of Ash and the foot of Laurel sts., Joe Brennan, port director, reports.

Since the launching of another of the big PBYs is due at 9:30 a.m. tomorrow, the task must be completed by then. It is claimed, Brennan said, that the space between the dredger in its present location and the nearest boat is too small to permit safe passage for one of the airboats. No estimate was made of the cost to the city of the re-mooring job.

Launching of the patrol bombers on the far side of the dredger's pipe line to avoid towing them around the dredger itself is impossible, Brennan said. The ships cannot get over the pipe across Lindbergh field.

10TH AIRBOAT READY

S.D SUN 12-23-36

Tenth of the new Consolidated PBY patrol bombers was to be delivered to the Naval Air Station this afternoon, and will be assigned to Pearl Harbor's Patrol Squadron Six, which will fly 12 airboats to Honolulu next month.

S.D. UNION-12-24-36

BEACON-LIGHTED CHRISTMAS TREE AT CONSOLIDATED

Entering into the community spirit of Christmas, Maj. R. H. Fleet and the officers of Consolidated Aircraft Corp., have adorned the patio of the big plant with one of the largest and most attractively decorated Christmas trees in the city.

The tree, obtained from Palomar mountain, is 35 feet high. It is painted with seven gallons of aluminum paint and its 500 brilliant-hued electric lights are thermostatically controlled so that they flash like a lighthouse beacon.

Incidentally, the company is celebrating a $17,000,000 Christmas, the largest number of orders for aircraft since Consolidated was organized. The plant now employs 3450 men and women.

3 NAVY BOMBERS TO LEAVE S. D. BASE

S.D SUN 12-22-36

Three Navy patrol bombers will leave North Island for Seattle within the next two weeks to form nucleus for the new squadron, VP-16, which will be commissioned Jan. 2, Naval Air Station officials revealed today.

The aircraft tender USS Thrush was to depart for San Francisco Dec. 26 to act as a plane guard and refueling base for the planes, which will make the trip in two laps. The bombers are to be transferred to VP-16 from other squadrons expecting to receive a quota of new Consolidated airboats.

Hawaiian Hop to Start Soon

Six Navy Bombers at San Diego Poised for Flight in Few Days

L.A. TIMES 12-30-36

SAN DIEGO, Dec. 29.—With their test and shakedown flights completed, six newly-constructed patrol bombers delivered to the Navy here were poised today for a massed flight to Honolulu "sometime after January 2."

This announcement was made by naval officials, who thus far have shrouded in strictest secrecy tests made on the bombers, and who have refused to divulge the starting time of the Hawaiian flight.

Twelve of the huge bombers have been completed and delivered but only six have passed the stringent Navy tests. Naval officials are undecided whether the massed flight will include the entire twelve planes or whether two flights of six planes each will be made.

S.D. SUN 12-31-36

In many ways does the Navy evince interest in the trans-Pacific venture of Pan-American Airways.

Some time ago, Capt. Arthur L. Bristol, Jr., commanding officer of the Naval Air Station, visited Pan-American' Alameda base to study methods of launching the huge airboats on their long hop to Hawaii. Also attracted by their system of sheltering the planes between trips, Capt. Bristol made mental notes for possible future use at the Air Station, the capacity of which is being hard put to accommodate the new Consolidated PBY patrol bombers.

Watch Movements

Further evidence of the semi-official cognizance taken by the Navy in Pan-American is the practice, started recently, of re-rding on dispatches to 11th Naval District headquarters here the starting time of the various clippers on the run from the United States to Hawaii, Midway, Wake, Guam, or the Philippines.

As common as the listings of warships being repaired at Mare Island or Puget Sound Navy Yards, are the dispatches telling of Pan-American plane takeoffs.

Fly Important Route

Possibly the Navy's interest in the airline may arise from the fact that it traverses what is today conceded to be America's most important military frontier. It is the area from the United States to Hawaii and east to Midway, Wake and Guam, soon to be patrolled by the PBY bombers now being groomed at North Island for a January flight to Pearl Harbor.

◇ ◇ ◇

HUGE TREE AT PLANE CONCERN

S.D. SUN — 12-24-36

One of San Diego's brightest Christmas landmarks—that's the 38-foot tree set up in the patio of the Consolidated Aircraft Corp. plant.

Bedecked with 500 electric lights thermostatically controlled to keep them blinking day and night, the huge tree scintillates under a seven-gallon coating of aluminum paint.

Three days were required by a crew of men to decorate the tree, according to Ed Gott, assistant to the Major Reuben F. Fleet, president of Consolidated.

Meanwhile, production of the Navy's new PBY patrol bombers is proceeding at the most rapid pace since the contract to construct 176 of the air boats was started. The tenth ship was delivered to the Naval Air Station late yesterday.

HAWAII FLIERS AWAIT WORD TO MAKE LONG HOP

Shakedown Tests For Big Airboats Almost Finished

S.D. SUN — 12-29-36

With practically all test flights of the first six Consolidated PBY patrol bombers delivered to the Navy almost finished, officers of Pearl Harbor's Patrol Squadron Six today awaited the signal from Rear Adm. Ernest H. King to make ready for the trans-Pacific hop to Honolulu.

A spokesman for the aircraft base force today disclosed that the takeoff will take place shortly after Jan. 2 and will probably be made by the same crews which recently conducted a successful 24-hour non-stop endurance flight of the big airboats.

To Make Two Flights

It was believed that the 12 planes which will make up Squadron VP-6, commanded by Comdr. William M. McDade, will make the long trip in two sections. Approximately 60 officers and enlisted men from Honolulu are putting the bombers through shakedown tests daily. No serious flaws have been discovered in the planes which will be capable of patrolling the Pacific from the mainland to Hawaii and east toward the Philippines.

◇ ◇ ◇

Takeoff date of the first six Consolidated PBY patrol bombers to Honolulu has been postponed by Rear Adm. King, commander Aircraft Base Force, to "some time after Jan. 10."

Whether the planes will be flown directly to the islands from San Diego or from the Pan-American Airways' base at Alameda, has not yet been revealed by Adm. King, although he admits he has already decided where the flight will start. S.D. SUN 1-5-37

◇ ◇ ◇

Argentine Officer Gets Orders to Go Home

SD UNION — 1-7-37

Comdr. Ernesto Massa of the Argentine navy, who has been on special duty at the Naval Air station and the Consolidated Aircraft Corp., since August, 1935, has received orders to return to Buenos Aires. He will leave here Jan. 20, sailing from New York on the steamer Eastern Prince Feb. 6.

Comdr. Massa will be relieved here by Lt. J. C. Bachini.

S.D. SUN ◇ ◇ ◇ 1-13-37

Adm. Ernest J. King, commander Aircraft Base Force, will have very little spare time on his hands for the next two and one-half months.

He is at present in Washington conferring with Bureau of Aeronautics officials on final arrangements for the San Diego-Honolulu mass fights of PBY patrol bombers late this month.

No sooner will this important venture be off the calendar, than Adm. King will prepare for patrol plane maneuvers in the Canal Zone. He leaves for that area Feb. 2 aboard his flagship, the USS Wright, and is scheduled to return March 27.

The far-flung network of aviation bases under Adm. King's command keeps him continually on the go. The chain of patrol squadrons in the Base Force extends from Seattle down the west coast to San Diego and Panama, across the Pacific to Honolulu. And there are some aviation units on the east coast, too, which require attention occasionally.

◇ ◇ ◇

TWO NEW AIR SQUADRONS GO INTO OPERATION

Units To Be Stationed At Seattle On Transfer From S. D.

S.D. SUN — 12-31-36

Two new aircraft squadrons will begin their official existence Saturday, Rear Adm. Ernest J. King, commander of base force aircraft, announced today.

Designated as Squadrons VP-16 and VP-17, they will be stationed in Seattle and will each contain a maximum of 12 patrol bombers now being transferred from other squadrons at North Island soon to receive the new long-range Consolidated PBY airboats.

Under command of Lieut. D. C. Allen, VP-17 will be commissioned at North Island at 10 a. m. Saturday in ceremonies presided over by Capt. Arthur L. Bristol, Jr., commanding officer of the Naval Air Station.

Squadron VP-16 will be placed in commission at the same time in Seattle and will be led by Lieut.-Comdr. Carleton C. Champion, Jr., former commanding officer of the San Diego aircraft tender USS Gannet.

Date of the flight to their northern base by the VP-17 planes has not yet been determined, according to Adm. King.

S. D. NAVY PLANES DELAY SEA FLIGHT

S.D. SUN 1-5-37

Flight to Honolulu of six giant new Navy patrol bombers, the first completed under three contracts for 176 of the huge airboats, will be delayed at least until "after Jan. 10," Rear Adm. Ernest J. King, commander of Base Force Aircraft, North Island, said today.

"Nothing will be done until after Jan. 10." King said. Whether the planes will fly directly to Pearl Harbor from San Diego or go to Alameda first, has not been decided.

Ten of the new planes, said to be the most advanced of their type in the world, have been delivered to North Island, but only six will make the first flight.

NEW NAVY PLANES END TEST FLIGHT

S.D. UNION — 1-17-37

Ending the second over-night practice and performance flight of the navy's big new patrol planes, six of the planes, under command of Lt. R. W. Woods, landed here around noon yesterday.

The planes, built at the Consolidated plant here, took off early Friday afternoon, and spent the time flying back and forth in the San Diego-San Pedro area. They are a part of the group of 12 patrol planes which will take off from here in the near future on a non-stop flight to their future base in the Hawaiian islands.

PILOTS TRAIN FOR BIG NAVY SEA HOP

S.D. TRIBUNE 12-29-36

Arrival at Pearl Harbor of 12 new long-range patrol bombers, 10 of which have been delivered to the navy by Consolidated Aircraft, will give the navy its first opportunity to complete a survey of the theoretical patrol line from Guam to Alaska, the Associated Press reports. Although definite information on the mass flight is withheld by Rear Adm. E. J. King, commander aircraft base force here, it is said the hop will be made in January.

The first Hawaii-Alaska flight is expected to be made next June, in conjunction with fleet maneuvers, utilizing the new planes, which have a 3500-mile cruising range.

From Midway island, nearest take-off point, an aerial journey to Alaska would be approximately 1600 miles. Long range ships are necessary, however, because of possible head winds.

This flight would eliminate the last untested link in a theoretical patrol line which reaches as far southward as Guam, third Pan-American Airway base point on its Pacific route.

Now in training at North island are pilots of Pearl Harbor squadron VP-6, in preparation for the trans-pacific hop.

◇ ◇ ◇

Biggest question of the coming week: When will the PBY patrol bombers take off from San Diego on their trans-Pacific flight to Hawaii?

With Rear Adm. Ernest J. King in Washington on official business, it will behoove Adm. Arthur J. Hepburn, fleet commander-in-chief, to issue the long-awaited announcement.

S.D. SUN 1-10-37

RUMORS DENIED BY AIRCRAFT OFFICIAL

SD TRIBUNE - 1/8/37

Rumors that Consolidated Aircraft Corp. had laid off 600 men were denied today by officials of the company.

"We haven't heard of it yet," said one official. "While we are not increasing our force at the present time, there has been no wholesale lay-off."

CHANGE HINTED IN PLANS FOR MASS FLIGHT

2-30-36

The first mass flight of Consolidated patrol bombers to Hawaii, "some time after Jan. 2," will be made by a squadron of six of the huge airboats under Comdr. William M. McDade, naval authorities of the aircraft base force, North Island, definitely announced today.

Discounting completely previous reports that 12 ships will make the hop to eliminate double movements of surface "plane-guard" craft, this announcement is believed to indicate a change in earlier plans made necessary by delay in completions of the PBYs.

No definite date for the flight has yet been set, it was stated. While not confirmed, the report that the transpacific hop will begin at Pan-American Airways Alameda base also was not denied by the aircraft base force spokesman.

It was not stated how soon after the first six planes reach Pearl Harbor the other craft in squadron VP-6 will follow. If preliminary tests of the last six ships, however, require the same time as did those for the first group—now complete—the second hop probably will not be made until February.

McDade, squadron commander, may return to the mainland after the first hop to act as flight commander also of the second group of airboats to Hawaii. Personnel of the big seaplanes on the January mass flight probably will be the same as that during the recent 24-hour shakedown cruise, it is indicated. S.D. TRIBUNE 12-30-36

MASS FLIGHT, S. D. TO HONOLULU, IS SET FOR JAN. 20

S.D. UNION — 1-10-37

WASHINGTON, Jan. 9 (A.P.) — The navy bureau of aeronautics shaped plans today for one or possible two mass flights of 12 new patrol planes from San Diego to Honolulu.

The planes are to be used in Hawaii as replacements for obsolete craft now in service.

The date for the take off has been set tentatively for Jan. 20. Decision on the exact date awaits arrival here of Rear Adm. Ernest J. King, commander of the aircraft base force at San Diego, who is en route to Washington from the west coast.

Among details still to be decided are whether all twelve planes will make the flight together or whether they will be sent on two separate flights of six each. Each craft carries a crew of six.

The planes are of the latest and most modern design. They are said to have a much longer cruising range than any other ships of their type.

Lt. Comdr. William M. McDade, stationed at San Diego, will command the flight.

Navy department officials said it had not been decided whether surface ships would be stationed along the route of the flight.

HONOLULU FLIGHT OF CONSOLIDATED CRAFT DUE SOON

S.D. UNION — 1-5-37

Flight of a squadron of Consolidated air boats from California to Hawaii probably will be made the week beginning Jan. 10, U. S. fleet authorities said yesterday.

Adm. Arthur J. Hepburn, commander in chief, is expected to announce the definite time of the take-off as soon as Rear Adm. Ernest J. King, commander of the patrol wing, officially advises that the 12 planes are ready for the 2200-mile hop to Pearl Harbor.

The aircraft carriers Ranger and Saratoga will sail from San Diego and San Pedro, respectively, today for the drill grounds. Both are to carry out gunnery exercises.

The carrier Lexington, which sailed for the Bremerton navy yard last Saturday, will not return to southern California waters until April.

S. D. PLANES TO HOP FOR HAWAII BASE

Six Or 12 Airboats To Blaze New Skyways Path

S.D. SUN 1-10-36

Silver-winged San Diego-built Navy airboats will face their greatest test—2400 miles of gray Pacific seas—Jan. 20 when they hop off from a West Coast port for Honolulu, the Navy Bureau of Aeronautics announced tentatively yesterday.

Plans for the flight still are in the formative state, it was reported to The Sun. It is not known definitely whether the flight will begin from San Diego or Alameda and the exact date of the take-off will depend ultimately on the decision of Rear Adm. Ernest J. King, commander of the aircraft base force. Adm. King is expected to return to the city next week to begin active preparations for the hop.

6 Or 12 To Hop

Another detail to be determined is whether six or twelve of the flying boats will take to the air on the initial flight. Recently a non-stop 24-hour flight was made by six of the ships to be assigned to Honolulu where they will form Patrol Squadron No. 6 whose personnel has been testing the planes at North Island for the past few months. Lt. Comdr. William M. McDade is in command of the squadron.

Present fleet operation schedules do not yet call for the stationing of ships along the route from the mainland to Honolulu as plane guards, although this is a commonly accepted practice in long flights of this nature.

Aircraft Carriers To Aid

It is believed that several San Diego aircraft carriers will be ordered to various posts along the flight-lane before the planes take off. The Consolidated Aircraft Corp.-built ships are in their last stages of shakedown flights to test their efficiency.

For Battle In The Air!

Navy Spends Huge Sums To Strengthen Flying Force; Scores Of Planes Ordered

S. D. SUN 1-16-37

By HAROLD KEEN
The Sun's Navy Editor

Thirty-nine million dollars to lengthen the fleet's arm and increase its sight—that's the 1937 aircraft bill the Navy will pay, one of the largest in peacetime history, the Bureau of Aeronautics revealed today.

An enemy force would be unable to approach U. S. shores without escaping the eyes or feeling the heavy mailed fist of this new aerial armada.

Eighteen million dollars alone is being spent to give the Navy unprecedented telescopic sight. From Seattle to San Diego and on south to the Canal Zone and across the Pacific to Hawaii, a great force of "airboats" would swarm out to sea to locate any fleet with belligerent intentions.

Carry Heavy Bombs

Armed with heavy bombs, the craft, roaring at 150 miles per hour, would intercept the enemy vessels, radio their position to the American fleet commander-in-chief, then proceed to harass the opposition with its own ammunition.

A 1500-mile flight out to sea would be child's play for these huge "airboats." After locating and disabling part of the enemy, they could wheel about for their home port to obtain fresh ammunition, receive further orders.

Launch Two Attacks

Meanwhile, a host of torpedo and bombing planes would zoom away from the mainland to resume the deadly work of the patrol bombers. Armed with information as to the enemy's exact whereabouts, these planes would swoop down on vessels steaming toward this country, try to put them out of commission.

For this high-powered function in warfare, the Navy Department is ordering 54 Northrup bombers, 83 Curtis bombers, 90 Vought scout bombers, and 114 Douglas torpedo bombers.

Smaller than the patrol bombers, these craft can be attached to battleships, heavy cruisers and aircraft carriers, can return to their floating bases at rapid intervals.

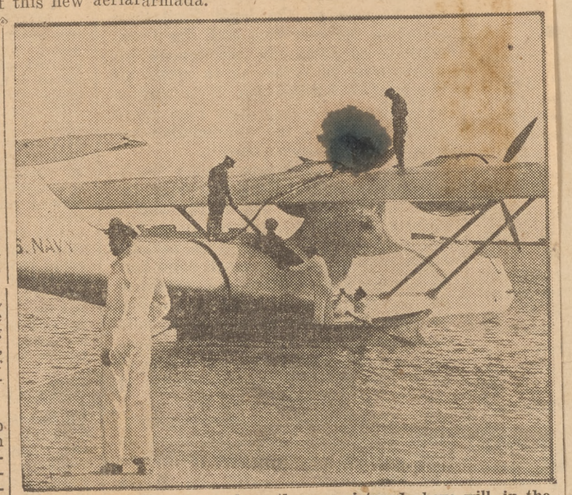
Armament Desired

That the Navy does not plan immediate construction of new fighting planes is indicative of the tendency toward heavy armament. Fighting craft are small, high-powered planes whose primary mission is to bring down enemy aircraft by means of machine-gun fire.

Although the nation's air forces cannot be complete without a minimum of these planes to ward off enemy air attacks, the emphasis apparently is on crippling the larger units, such as battleships and cruisers.

Thirty-two amphibians for shorter range patrol and scouting duty have been ordered by Gruman and Sikorsky.

Contracts for $9,000,000 worth of engines and $30,000,000 in planes constitute this year's Naval aviation expenditures, according to the Bureau of Aeronautics.



Mighty patrol bombers such as the one pictured above will, in the future, provide the Navy "eyes" many hundreds of miles at sea, where an enemy fleet would be located for the benefit of U. S. defenders. At a cost of $18,000,000 176 of these long-range craft are being manufactured by Consolidated Aircraft Corp. of San Diego.

Flier Is Ordered Back to Argentina

S. D. TRIBUNE - 1-12-37

Study Here Ended By Commander From South

Nearly 18 months' service at the naval air station ends this month for Comdr. Ernesto Massa of the Argentine navy. Coming here for special duty at the station and at the plant of Consolidated Aircraft Corp. as Argentine government inspector in August, 1935, Massa is under orders to return to Buenoc Aires, leaving San Diego Jan. 20 and sailing from New York on the steamer Eastern Prince Feb. 6.

The Argentine flier made an announcement last March that his government had closed a contract with the Consolidated Aircraft Corp. for the construction of six huge coastal patrol planes. The planes, somewhat like those built by Consolidated for the American navy, will be used, Massa said, in patrol work along the Argentine coast.

Sent to San Diego to study organization and flying methods of the navy, Massa speaks English fluently. He said that the Argentine government has separate army and navy air forces, and that the largest Argentine naval base, from which operate the major part of the navy's air force, is situated at Puerto Belgrano, near Bahia Blanca.

Relieving Massa here will be Lt. J. C. Bachini.

Consolidated Aircraft Corp. officials report that construction work on the new planes for the Argentine government is progressing. The outlook is that the planes will be ready for delivery sometime this spring, and that they may be flown from San Diego to Argentina.

Comdr. Ernesto Massa, Argentine naval flying corps representative at the naval air station, who is under orders to return to his native country. He leaves San Diego Jan. 20.

S. D. TENDERS TO GUARD NAVY SEA HOP ROUTE

Honolulu Flight Operation Schedule Calls For Seven Vessels

S. D. SUN 1-13-37

A complete operation schedule for surface craft which will act as "plane guards" on the flight to Honolulu of six to 12 Consolidated patrol bombers late this month, has been prepared, The Sun learned today.

Seven vessels, the majority probably San Diego aircraft tenders,

EXCLUSIVE

will be stationed at strategic points between the mainland and Hawaii, it is believed.

Prepare For Emergency

Crews of these ships will gather weather data in their vicinity and radio their findings to officers in charge of the flight. On the basis of these reports, and when flying conditions appear most ideal, the huge "airboats" will take off across the Pacific.

The commanding officer of each vessel will be instructed what to do should an emergency arise during the flight.

Names of the ships assigned this duty are being withheld for the present by the Navy. Secrecy also surrounds details as to the locations in the Pacific each vessel will occupy.

May Hop From Alameda

The Navy Bureau of Aeronautics tentatively announced last Saturday that the planes would take off about Jan. 20. Whether the flight will be made in two groups of six planes, or one of 12, has not been revealed.

It is believed the huge planes will take off for Honolulu from Alameda, inasmuch as the airline distance from that point to Hawaii is 200 miles shorter than from San Diego.

Rear Adm. Ernest J. King, commander Aircraft Base Force, is expected to return from Washington Friday to complete plans for the long non-stop flight. The bombers have been assigned to Honolulu's Patrol Squadron Six, commanded by Lieut.-Comdr. William M. McDade.

HUNDREDS OF BLUEJACKETS TO TAKE PART

12 Bombers To Make Hop Before End Of Month

S. D. SUN 1-17-37

One of the Navy's most elaborate operations—outside the annual fleet problem itself—will occur probably before the end of the month.

It will be occasioned by flight from the mainland to Hawaii of 12 PBY patrol bombers assigned to Patrol Squadron Six at Honolulu.

Literally hundreds of bluejackets will participate in the activity made necessary by the long-distance hop.

Vessels Participate

In addition to approximately 70 officers and enlisted men in the "airboats," crews of several aircraft tenders will contribute to success of the flight. These surface craft will be stationed at strategic points between California and Hawaii to act not only as "plane guards" but to obtain weather data which will help navigators of the planes plot out a satisfactory course.

It is believed the flight will be made in one group of 12 planes and that the takeoff will occur at Alameda, which is 200 miles closer to Hawaii than San Diego. Yesterday, the second six PBY bombers to be delivered to North Island by Consolidated Aircraft Corp. successfully completed a 24-hour non-stop endurance test under the command of Lieut. Ralph W. D. Woods.

Function Satisfactorily

Several weeks ago, Lieut. Comdr. William M. McDade, commanding officer of Squadron VP-6, led the first six "airboats" on a similar hop. All 12 planes functioned satisfactorily, and it is believed they are today ready for the ocean jump at a moment's notice.

Soon after dispatching the planes to Hawaii, Rear Adm. Ernest J. King, commander Aircraft Base Force, will leave for the Canal Zone Feb. 2 aboard his flagship, USS Wright, to conduct maneuvers of patrol squadrons in that region until late in March.

FLEET AIRCRAFT CHANGES HANDS

Control of Consolidated Aircraft Unit Gained by Canadian Capital

Special to The Buffalo Times

TORONTO, Dec. 29.—Control of Fleet Aircraft Ltd. lies today with Canadian capital, it was announced by Nesbitt-Thompson Co., investment brokerage house here, following sale yesterday of 50,000 additional common shares to the public. Control formerly was voted in Consolidated Aircraft Co.

The no par value common shares were sold at $11.50, the brokers declared. Capitalization of the aircraft firm stands, it was said, as follows: 100,000 authorized shares of which 90,000 are outstanding; 30,000 or these shares held by Consolidated Aircraft Corp., former Buffalo concern now located in San Diego, Cal., 10,000 shares held by the nine directors of the Fleet Aircraft Ltd., and 50,000 shares now in the hands of the Canadian public.

Nesbitt-Thompson Co. also announced a contractual agreement between Fleet Aircraft Ltd. and the Consolidated Aircraft Corp. in which the latter concern will receive royalties from accessories and other products of Fleet Aircraft which will be sold only in the British Empire.

The agreement stipulated Fleet Aircraft Ltd. has the right to sell the "Fleet Trainer" in all countries except the United States and China.

$100,000 of the new capital will be used for expansion of the Fort Erie plant and the balance will be used as working capital. Contract for a $50,000 expansion job has been awarded to Oscar C. Teal of Fort Erie.

Work on the annex, which started yesterday, will be completed in two months, according to officials. The addition will be 180 by 120 feet. It will add one and a half times to the space of the present factory.

When the addition is finished, officials declared, it will greatly increase plant production and permit the factory to build planes entirely within the plant without "farming out" certain construction tasks to outside manufacturers.

Employment here is expected to be increased considerably with the completion of the annex, officials said.

S. D. PLANE PLANT IS DESCRIBED FOR ESCONDIDO GROUP

S. DUNION 1-15-37

ESCONDIDO, Jan. 14 (Special)—With an enthusiastic crowd attending, the chamber of commerce's annual meeting was held Tuesday night at the Methodist church, the business session following a dinner served by church women.

The highlight was an address by Maj. Edgar Gott, assistant to the president, Consolidated Aircraft Corp. Gott was introduced by Maj. T. C. Macaulay, San Diego chamber of commerce executive secretary.

The speaker pointed out that whereas the aviation industry is no more complicated and has no more problems than agriculture, there probably is no faster growing business with such revolutionary changes from year to year than the manufacturing of planes. He referred to the first types in which wood was used in wing construction. The next step was all-steel and now duralumin is being used, he declared, "And it probably won't be long before we will be using stainless steel or some other material and it will be necessary for us to throw away our old equipment and moulds and get new ones."

Climate Won Firm

Climate is what caused the Consolidated Aircraft Co. to move to California and select San Diego as the site for its plant, Maj. Gott declared. In Buffalo, N. Y., where the plant formerly was situated, it was impossible many times to launch sea planes made for the navy, because of ice on lakes and streams. All work undertaken at the Consolidated plant is construction work for the navy, the speaker said.

J. Claude Wilson, toastmaster, opened the meeting. He presented Lynn F. Stoddard, who led in community singing; Basil Lewis, saxophone player; and Myron Buzzell, cornet soloist.

Reports Are Made

Toastmaster Wilson then introduced President Arthur Drury of the chamber of commerce, who gave a report on last year's activities of the local booster body. Mr. Drury will serve a second term as president of the chamber.

Edgar E. Turrentine gave a report on finances.

Those who will compose the 1937 board of directors of the chamber of commerce were announced by President Drury as follows: Crawford Bent, H. W. Brewer jr., Merwyn Christie, Pansy P. Claggett, Fred Cooper, Percy Evans, James Hollis, A. L. Hubbell, Elmer Jacob, Harry B. Lee, John Marken, Allan Mason, Edgar E. Turrentine, Anna Von Seggern and J. Claude Wilson.

Selections were sung by a trio composed of Marjorie Lou and Evelyn Kelly and Theabeth Rice.

Judge William P. Carey of San Diego, F. H. LaBaume, president of the Pacific Beach chamber of commerce, and heads of Escondido organizations were introduced.

S. D. BOMBERS RETURN TO BAY

New 'PBYs' Prepare For Hawaii Flight

S. D. SUN 1-16-37

Six Consolidated PBY patrol bombers returned to North Island at 12:30 p. m. today after cruising in the San Diego-San Pedro area since yesterday afternoon.

All six planes were to return to North Island at 2:30 p. m. today after cruising in the San Diego-San Pedro area since yesterday afternoon.

Under command of Lieut. Ralph W. D. Woods, the "airboats" were undergoing one of the final "shakedown" hops before taking off for their new station in Hawaii late this month. A similar 24-hour flight was made several weeks ago by the first six planes of Honolul's Patrol Squadron Six, led by Lieut.-Comdr. William M. McDade.

When reports on how the planes functioned are received by Rear Adm. Ernest J. King, commander Aircraft Base Force, he will begin active preparations for the trans-Pacific jump, it was indicated today.

ADM. KING COMING FOR HAWAII HOP; MARINES ON WAY

S. D. TRIBUNE 1-12-37

Rear Adm. Ernest King, commander of aircraft, base force, who will return here this week from Washington, will be busy for two months, supervising the Hawaii flights of 12 Consolidated flying boats and later routine operations of aircraft squadron based in the Canal Zone.

Adm. King

Adm. King will sail for Panama aboard the aircraft tender Wright Feb. 2. He will return to San Diego March 27. The tender Langley, undergoing repairs and overhaul at Mare Island, is due to return to San Diego Feb. 17. She will not join the Wright in Central American waters.

The battleship Wyoming, with several hundred marines from the First brigade at Quantico obard, will pass through the Panama canal Friday en route to San Diego. Also aboard the Wyoming is Rear Adm. William H. Standley, former chief of naval operations.

The mobile target ship Utah is due to arrive here from San Pedro Jan. 28.

Destroyers Goff, Bainbridge, Reuben James and Sturtevant will return here from Mare Island Jan. 31, followed by the destroyer tender Melville on Feb. 10.

12 PLANES POISED FOR HAWAII HOP

L. A. Examiner 1-27-37

Word of favorable weather conditions in mid-Pacific will soon send 12 huge navy seaplanes winging their way across the ocean toward Pearl Harbor, Hawaii, in a nonstop flight of 2553 miles. The ships, now poised in San Diego harbor, probably will depart within 60 hours, fleet aviation officers said.

For several weeks the flying boats have undergone grueling test flights up and down the coast in preparation for the hop which, although classed as "routine," will be the longest non-stop mass flight ever undertaken by that type of plane.

The ships will leave San Diego harbor en masse and will remain in constant radio communication with ship or shore during the flight. Scattered over the route will be navy auxiliary vessels stationed at 500-mile intervals to lend assistance in case of mishap.

Lieutenant Commander W. M. McDade will be in charge of the flight and each ship will be manned by a crew of five men. The planes on arrival in Hawaii will take up regular duties as patrol ships out of Pearl Harbor.

AIRBOATS TESTED FOR PACIFIC HOP

S. D. SUN 1-26-37

Aviation mechanics today began their final inspection of 12 Consolidated PBY patrol bombers scheduled to take off from San Diego Thursday on a 2250-mile flight to Pearl Harbor, Honolulu.

Lieut. Comdr. William M. McDade will lead a personnel of 72 officers and men on the hop. An officer and five enlisted men will pilot each airboat. On arrival in Pearl Harbor, the airboats will go into patrol service as Squadron Six in the Pacific "triangle" from Hawaii to the Aleutian Islands to California.

Five newsreel companies were to photograph crew members and their planes at North Island this afternoon.

NAVY FLIGHT TO HONOLULU DUE THURSDAY

S. D. SUN — 1-24-37

Twelve Flying Boats To Take Off From San Diego For New Base

Twelve Navy flying boats will take off from San Diego Thursday, weather permitting, for a non-stop flight to Honolulu and their new home base at Pearl Harbor, Adm. Arthur J. Hepburn, commander-in-chief of the United States fleet, announced in San Pedro last night, the United Press reported.

The planes are part of the large complement being turned out for the Navy by the Consolidated Aircraft Corp. of San Diego. They have engaged in preliminary flights in the past few weeks as a test for the long overwater hop to Hawaii.

Three mine sweepers, the Avocet, the Swan and the Gannet, are now engaged in a meteorological patrol of the waters over which the squadron will fly.

The destroyer Worden and the mine sweeper Sandpiper will serve as "guard ships" on the eastern half of the trip. The destroyer Breese and the minesweeper Pelican, Gannet and Swan, will patrol the western segment.

The giant seaplanes have a cruising speed of 120 knots and are designed to land or take off in rough seas.

They are the forerunners of an aerial fleet of 216 Navy planes which eventually will be based at Panama, Hawaii, Puget Sound, Los Angeles, San Francisco, and San Diego.

McDade Commander

The squadron will be commanded by Lieut.-Comdr. W. S. McDade and will be under the executive command of Rear Adm. Ernest J. King, commander of Base Force Aircraft.

In announcing the projected 2285-nautical mile flight — the longest mass overwater hop ever attempted—Adm. Hepburn emphasized that it was in no sense a "stunt" but a "routine flight" to the planes' new base at Pearl Harbor.

Each plane will carry a crew of six, enough fuel to last 3000 miles, and radio equipment to permit regular contact with San Diego, Pearl Harbor and six ships to be stationed along the route.

Tested For 24 Hours

Adm. Hepburn's announcement made certain for the first time that the 12 planes would take off from San Diego, and all at once. For a time it was believed the boats might make the long hop in flights of six.

In preparation, two squadrons of six planes each remained in the air for 24-hour periods, keeping in touch with each other and the Naval Air Station by radio.

WARNINGS ISSUED ON PATROL PLANE TAKE-OFF AREAS

S.D. UNION — 1-27-37

By JERRY MacMULLEN

Danger of collision between harbor craft and heavily-loaded patrol planes having reached the point where control measures are required, naval and harbor department officials yesterday were busy with plans to prevent any accidents at the time of the departure of the 12-plane flight over Hawaii, which is expected to take place late this week.

The big patrol planes, heavy with gasoline, personnel and supplies, are said to be not the easiest things in the world to handle, and when a small boat suddenly starts across the path of one of them, either at the time of take-off or landing, the possibility of an accident involving heavy loss of life is presented. Naval vessels, fishing boats and water taxis are being advised of the new safety provisions, which will be of a more or less permanent nature when patrol planes are operating.

Set Off Six Areas

Six areas for plane operations, wind conditions determining which one will be used, have been set off, each "runway" being about a mile and a half in length. Locations of the areas are as follows: Area 1, parallel to the San Diego shore from the ferry lanes to the Standard Oil wharf; Area 2, from the ferry lanes to Beacon 7; Area 3, from Pier 1 to Beacon 5; Area 4, parallel to Shelter Island (yacht harbor) from Beacon 5 to Quarantine; Area 5, from National City toward Glorietta bay, and Area 6, from National City toward the destroyer base

When patrol plane operations are being carried on the International danger signal (letter "U" — white and red square above red and white square) will be displayed from a staff on Hangar 69 at the Naval Air station. If at night, two vertical red lights will be displayed there. Patrol boats will cover whichever area is to be used, the boats carrying a red flag by day and a red hand-light by night. Waving of either signal will indicate danger, and the person in command of a boat so signalled should withdraw to the edge of the channel until it is clear.

GREATEST NAVY MASS FLIGHT DUE

S.D. SUN — 1-27-37

Twelve Planes, 80 Men Ready To Take Off For Hawaii From S. D. Tomorrow

Weather permitting, the 12 U. S. Navy planes bound for Honolulu will take off from San Diego bay at 7 a. m. tomorrow, Rear Adm. Ernest J. King, commander Base Force Aircraft, announced this afternoon.

The greatest mass flight in U. S. naval aviation history will begin from San Diego bay tomorrow—if the skies do not frown.

Twelve Consolidated PBY patrol bombers—most powerful of their type in the world—with a crew of 80 will slide down the seaplane ramp at North Island, taxi to the foot of Market-st, then turn about for the long take-off in a northwesterly direction.

Flight Leader

Lieut. Comdr. William M. McDade, who will direct the flight of 12 Navy patrol planes from San Diego to Hawaii.

See Page 6 for the history of Navy mass flights, and Page 12 for pictures of planes and their commanders on tomorrow's flight.

Fully loaded, the planes will be difficult to maneuver and the takeoff will constitute one of the most crucial moments of the entire flight, Naval officials agree. The gasoline load of approximately 1600 gallons, alone will weigh about 10,000 pounds.

12 Planes on Line

All 12 planes rested near the seaplane ramp at North Island today, final tests completed. Fuel sufficient to keep the big craft in the air approximately 3000 miles has been poured into the tanks and the airboats are ready to take off whenever weather conditions are considered satisfactory.

Rear Adm. Ernest J. King and his chief of staff, Comdr. Charles A. Pownall, today studied weather reports received from the six vessels stationed along the route from the mainland to Hawaii. Definite time of the takeoff has not yet been set.

McDade In Command

The transpacific hop will be led by Lieut. Comdr. William M. McDade—taciturn commander of Patrol Squadron 6, who has worked literally day and night during the past month getting the big airboats ready for the long flight.

Two civilians—Chief Test Pilot W. B. Wheatley and Service Representative A. W. Koster, both of Consolidated Aircraft Corp., will accompany the 78 Navy officers and men.

Roaring down a harbor runway for hundreds of yards, the planes will take off directly in front of the Naval Air Station, soar to a 10,000-foot altitude where all 12 will rendezvous before pointing toward Parl Harbor—2270 nautical miles (2553.75 statute miles) away.

Six vessels will guard the planes on the transpacific airway—along the Great Circle route to Hawaii. They are the San Diego aircraft tenders Sandpiper and Gannett, the destroyer Worden, the Hawaiian aircraft tenders Pelican, Swan, and the destroyer Breeze.

With a cruising speed of 120 knots, the planes are expected to complete the flight in 16 to 24 hours, depending on wind and weather conditions.

Personnel of the 12 ships follow:

Patrol Plane 1—Lieut. Comdr. W. M. McDade, squadron commander and first pilot; Lieut. C. H. Ostrom, L. Serpa, H. Hurley, T. D. Dovell, E. J. McCormick, R. L. Fourcher.

Patrol Plane 2—Lieut. G. C. Briant, P. M. Screws, H. R. Green, C. H. Bishop, P. L. Smith, A. DiCerchio and W. E. Benham.

Patrol Plane 3—Lieut. D. B. Brokenshire, B. Sears, L. O. Polk, R. R. Metzger, K. K. Kimmons, C. H. Claytor, L. E. Leonard

Patrol Plane 4—Lieut. W. W. Harvey, W. B. Wheatley, test pilot of Consolidated, who is a lieutenant in the Naval Reserve; M. W. Woodruff, H. G. Byron, C. Henson, R. J. Holt, O. W. Miller.

Patrol plane 5—Lieut. J. B. Young, H. C. Smathers, H. E. Leedom, M. S. Harrell, W. Z. Paulk, R. M. Williams and A. W. Koster of Consolidated.

Patrol plane 6—Lieut. L. O. Mathews, A. E. White, H. E. Rutherford, N. Evaschuk, C. L. English, L. M. Hurtado.

Patrol plane 7—Lieut. R. D. Woods, W. P. Brett, W. H. Karr, C. D. Conway, E. A. Turner, D. E. Stanford, J. L. Lipsey.

Patrol plane 8—Lieut. G. L. Heap, J. E. Despardins, W. T. Whitham, L. A. Knight, H. J. Kolb, R. S. Munteer, W. A. Harris.

Patrol plane 9—Lieut. J. O. Biglow, K. L. Moser, R. B. Rueger, S. W. Wooten, H. A. Peters, A. W. Andrews.

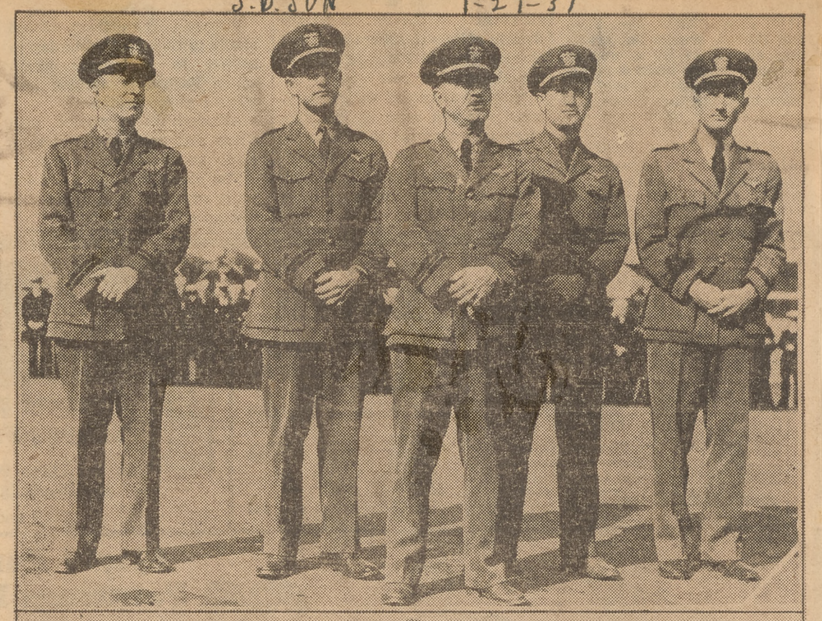
Patrol plane 10—Lieut. W. M. Drane, D. B. Mommsen, H. A. Wolfe, W. C. Curry, J. H. Ball, J. Alkov, J. F. Siebenthall.

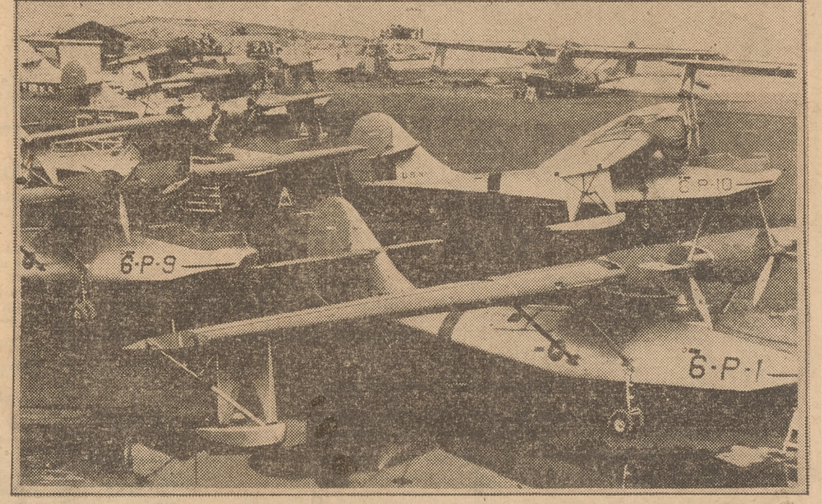
Patrol plane 11—Lieut. R. C. Bauer, T. J. Hughes, P. C. Hutchens, D. B. McKay, B. L. Frick, T. E. Muran.

Patrol plane 12—Lieut. J. A. Murphy, R. P. Minniear, D. E. Ferguson, H. Scoutt, A. B. Herb and M. H. Davis.

They're Ready To Challenge Pacific Skies

S.D. SUN — 1-27-37





Challenging the Pacific on the most spectacular transoceanic mass flight in history, the five officers pictured at top will lead a crew of 80 on a 2270-mile hop from San Diego to Honolulu in 12 Consolidated patrol bombers. Left to right, Lieut. R. D. Woods, executive officer; Lieut. W. W. Harvey, flight officer; Lieut. Comdr. William M. McDade, squadron commander; Lieut (jg) G. C. Briant, engineering officer; Lieut. (jg) J. B. H. Young, gunnery officer. The huge airboats, completely fueled and ready for the long flight, are shown below, with Lieut. Comdr. McDade's flagship "6-P-1" in the foreground.

SERVICE NOTES

S.D. SUN — 1-27-37

Just Routine, Says Navy Of 2270-Mile Ocean Hop

By HAROLD KEEN

Imagine making a 2270-mile non-stop flight and considering it a mere routine operation!

That's the impression the Navy wants to leave regarding the hop to Pearl Harbor tomorrow of 12 Consolidated PBY bombers. And as far as Lieut.-Comdr. William M. McDade, squadron commander, is concerned, the less said about the flight the better. He's a genius for avoiding the spotlight of publicity.

"Routine" Goes On and On

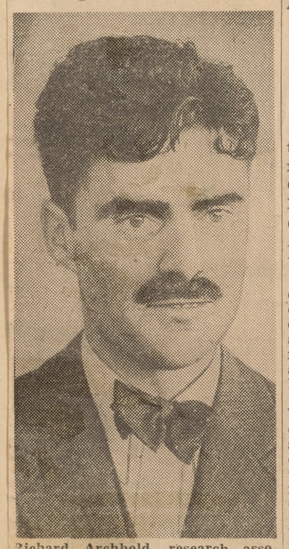
Meanwhile, the airboats are being tested, day and night, with little interruption of the North Island "routine" until the very hour of the takeoff. The 78-man crew of the bombers may be a bit tired, but, as Comdr. McDade puts it, "This is as good a way of keeping busy as any." No heroics about that gentleman.

Two civilians will accompany the Navy personnel in the trans-Pacific flight. They are W. B. Wheatley, chief test pilot of Consolidated Aircraft Corp., and a first lieutenant in the Army Reserve, and A. W. Koster, who will act as service representative of the plane concern.

Mr. Wheatley will return to San Diego within a month, but Mr. Koster expects to remain with the squadron for a half-year to act as advisor on servicing the big craft.

◇ ◇ ◇

Going to New Guinea



Richard Archbold, research associate, department of mammals, American Museum of Natural History, who yesterday announced purchase of a Consolidated PBY-type flying boat for use on an expedition to New Guinea late this year.

Researcher Buys Consolidated Ship For Isle Journey

S D UNION — 1-28-37

Purchase of a Consolidated PBY-type flying boat without armament for use on an expedition to New Guinea was announced yesterday by Richard Archbold, research associate,, department of mammals, American Museum of Natural History.

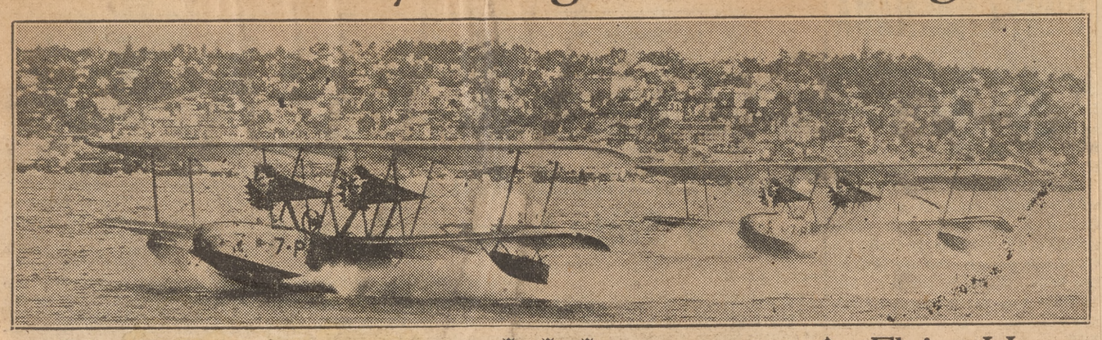
Archbold said the plane is equipped with two 1000-horsepower engines, two-way radio and has cruising speed of 140 miles an hour and cruising range of about 4000 miles. The plane is of the same type as the 12 to be flown to Honolulu by the navy.

Naval regulations prevent Archbold's taking the plane out of the country before November. With his scientific party aboard, he plans to direct the flight along the route of the Clippers to Wake island and from there south 2000 miles to New Guinea.

The expedition plans to study the life history of birds and animals in the New Guinea regions for more than a year.

Dr. Austin L. Rand will lead the scientific members of the expedition. Archbold said he will be here until Consolidated delivers the airship next June.

The Navy's Saga Of Courage



Glory His

COMDR. RODGERS

Feats Of Past Recalled As 12 Planes Prepared For Jump Across Ocean

S.D SUN 1-27-37

By HAROLD KEEN
The Sun's Navy Editor

TO the saga of courage written into the Navy's aviation log will be added a thrilling new chapter tomorrow when 12 giant patrol bombers soar away from San Diego on a 2285-mile flight to Pearl Harbor, Honolulu.

It will be the Navy's fourth attempt to span an ocean. Only one of the previous three was completed without mishap. But. Lieut.-Comdr. William M. McDade, flight commander, is quietly confident that the most powerful seaplanes in the world, with a cruising radius of more than 3000 miles, will master space and the elements easily.

What is the heritage Commander McDade, his fellow officers and enlisted men will carry with them on the long, gruelling trip across the Pacific?

In May, 1919, three Navy airships took off from Newfoundland for the Azores. Crew of the famed "NC" planes, commanded by Capt. John H. Towers, present Aircraft Battle Force chief of staff, were unaware of the perils they might have to face on this unprecedented flight.

Landing In Sea

Forced down in the murky, storm-tossed sea several hundred miles from their destination, only one of the planes, led by Comdr. Albert C. Read, was able to continue. Towers' craft was piloted, much as a sailboat, to the Azores in two and one-half days. The airship of "Pat" Bellinger, who today is commanding officer of the USS Ranger, capsized and its crew was saved by a passing tramp steamer.

The Atlantic had been partially conquered, and the Navy turned its eyes toward the Pacific.

Winds Their Hope

The entire west coast throbbed with excitement when the squadron of three planes under Lieut. Comdr. John Rodgers prepared to make the hazardous 2100-mile hop from San Francisco to Hawaii. Sept. 1, 1925. Built by the Naval Aircraft factory at Philadelphia, the airboats were capable of a maximum non-stop flight of only 2000 miles. Fortuitous tail winds were expected to push the planes the remainder of the distance.

It was a gamble between the staying power of the planes and the weather—and Rodgers was the loser. The airship commanded by Lieut. Allen P. Snody was forced down 300 miles off Golden Gate when its oil pressure lines snapped. The PB-1 of Lieut. Comdr. James H. Strong was unable to leave because of engine trouble. Thus Rodgers and his crew of four flew much of the distance alone.

Drifted 10 days

Two hundred miles from Hawaii, the craft ran out of gas. The plane drifted for 10 days before the submarine R-4 located it near Kauai Island. Their emergency rations having been consumed during the first four days, the crew was nearly dead from starvation and exposure.

The Navy profited by its mistakes in that flight. Three years ago, Lieut. Comdr. Knefler McGinnis commanded a squadron of six P2-Y1 planes, predecessors to the modern Consolidated bombers, from San Francisco to Hawaii in 24 hours and 56 minutes. There were no untoward incidents on this hop.

Commander Confident

"Shakedown" tests have been performed on the present PBY planes with business-like efficiency. Nobody became excited over their recent 24-hour endurance flights.

Unlike Comdr. Rogers, who 11 years ago knew he had only one chance in two of avoiding death by challenging the Pacific, Comdr. McDade today considers the long trip merely a routine operation necessary to deliver a dozen planes to their Pearl Harbor base.

He has confidence made possible by the knowledge gained from the sufferings of yesterday's intrepid fliers.

Flying Hero

CAPT. READ

S. D.-HAWAII FLIGHT SET THURSDAY

12 Navy Seaplanes Will Make Air History With 2285-Mile Non-Stop Delivery Hop Across Pacific.

1-24-37 S.D. UNION

SAN PEDRO, Jan. 23 (A.P.) —Adm. Arthur J. Hepburn, commander-in-chief of the U. S. fleet, said today the mass-flight of 12 seaplanes from San Diego to Honolulu would begin next Thursday or as soon thereafter as weather conditions permit.

It will be the longest non-stop trans-oceanic mass aircraft operation ever attempted.

Adm. Hepburn said he was "very anxious" that the flight be not regarded as "a stunt." He said it was to be routine delivery of the planes to Honolulu.

Each Carries 6 Men

Under command of Lt. Comdr. W. M. McDade, the big ships will each carry a crew of six, with fuel and food as for a routine flight. The squadron wil cover 2285 nautical miles, a voyage surpassed only by the 3200-mile flight from Panama to Alameda, made by the navy's XPBY-1 craft, forerunner of the present planes.

The 12 ships are the first of an armada of 176 ordered by the navy, Adm. Hepburn said. Their duty, in an emergency, would be to patrol the Alaska-Honolulu-Panama triangle. They have a cruising speed of 120 knots, an an overseas radius of 3000 miles.

In the projected flight, the planes will be in constant radio contact with ground stations at Pearl Harbor and San Diego, it was stated. Three mine sweepers, stationed along the route, now are gathering meteorological data. Six patrol vessels will cruise the route during the flight.

HAWAII FLIGHT TAKE-OFF SET FOR 7 A. M.

S.D. SUN 1-27-37

Twelve glistening silver airboats bearing 80 tense-faced men will roar down San Diego bay tomorrow at 7 a. m. in the take-off of the Navy's greatest mass flight, bound for Honolulu.

"Weather permitting, the ships will take off at 7 a. m. tomorrow," Rear Adm. Ernest J. King, commander Aircraft, Base Force, told newsmen at North Island in a brief statement today.

'Spotty' Weather Due

Facing the Navy's powerful twin-motored, single-winged bombers will be spotty weather which Aircraft Base Force officers termed "average." This, they explained, means that while sky and sea conditions are good in some places, they are not so good in others.

Gather Over Point Loma

The ships will race seaward from the take-off line off the Coronado ferry dock, in groups of threes. Once in the air, they will rendezvous over Point Loma at 10,000 feet when Lieut. Comdr. William M. McDade will signal the "start off" and the ships will point their streamlined noses toward distant Hawaii.

TAIL WINDS AID SEA FLIGHT

Feb. 3, 1937 THE SAN DIEGO CLUB

A MESSAGE TO CONSOLIDATED—

In the January issue of "Consolidated," a splendid publication issued by and in the interests of the Consolidated Aircraft Corporation, President R. H. Fleet sends a message to the 3,613 employees of that concern. It is a frank statement of facts and a bid for increased loyalty and efficiency from the president of a huge corporation to its employees.

The message is of interest to every San Diegan for it denies and disproves in no uncertain terms rumors that have been rife that Consolidated employees are underpaid. They are not. According to government statistics, average weekly earnings for the entire aircraft industry in the United States for August, 1936 were $26.07. California state labor statistics show the average in California for that same period as $25.82, while Consolidated weekly average for the same period is $28.00.

It is vital and interesting to know that San Diego's greatest industrial enterprise employs the highest paid skilled men in the entire industry. It is a monument to President Fleet and a matter of congratulation to those who have the best interests of San Diego at heart.

Congratulations, President Fleet. We are proud to have you as a member among us. This club enjoys the membership of a great many of your employees and, may we add, that aside from their financial earnings they are a very fine type of men and as such, an asset to the community. May their number increase.

H. E. RHOADS.

S. D. NAVY PLANE FORCED DOWN IN FOG; CREW SAFE

S.D. Union 2-13-37

Trapped in fog, one of the navy's great Consolidated-built PBY flying boats made a forced landing in the bay near Imperial Beach while on a test flight late last night. Cause of the landing was not announced by navy authorities.

The plane landed about 200 yards offshore and was in constant radio communication with the U. S. S. Sandpiper, plane-guard ship, during the flight and landing. The U. S. S. Thrush, a minesweeper, was dispatched to the plane's aid.

Members of the crew swam and waded ashore. Other members remained on the flying boat, which was one of a squadron of the navy's newest aircraft undergoing a test flight last night. The other planes continued on the test flight which was scheduled to end early today.

The flight was made in fog that hid the coast from south of San Diego to Laguna Beach.

U. S. Navy is Buying 593 New Aircraft This Year

S.D CLUB—LIFE 2-3-37

Your Uncle Sam's Navy is purchasing $30,000,000 worth of aircraft this year, including 170 bombers and patrol boats from Consolidated Aircraft Corp. here in San Diego. That, incidently, is the largest order given to one plant. The orders will include 54 Northrup bombers, 29 Grumann amphibians, three Sikorsky amphibians, 83 Curtis bombers, 90 Vought Scout bombers, 40 Curtiss scouts and 114 Douglas torpedo bombers, for a total of 593 planes.

Also, the Navy will plank down a cool $9,000,000 for 975 new aircraft engines, most of them from the Pratt-Whitney Co.

And there is Consolidated Aircraft Corporation in San Diego which has so much to do in the way of flying boats, and patrol planes, that it has to farm out part of the work to other manufacturers. Consolidated has two years' work ahead of it. WESTERN FLYING Jan 1937

Consolidated Feb. 1937

Western Flying

Shift of the control of **Fleet Aircraft, Ltd.**, from **Consolidated Aircraft Corporation** was completed January 4, 1937, when **Nesbitt Thomson and Company, Ltd.**, and associates offered for sale to interested Canadian investors 50,000 shares of the 90,000 outstanding, and issued shares of the new company. The offering was considerably over-subscribed and many requests for allotments from interests in the United States were refused in order to retain the desired Canadian ownership.

The new company came into existence November 17 last, when the name was changed from **Fleet Aircraft of Canada, Ltd.**, and the authorized stock was increased from 10,000 shares to 100,000 shares, without par value.

The Canadian company has a manufacturing license to produce all of Consolidated's designs released by the United States government for export, and is planning the increase of factory floor space from 15,000 to 37,000 square feet to accommodate the increasing demand for their products.

The new officers of the firm are: **W. J. "Jack" Sanderson,** president and general manager; **E. G. McMillan, K. C.,** vice-president; and **H. E. Langford,** secretary and treasurer, according to Consolidated employees' magazine, the Consolidator, which gives a complete history of the Canadian company in its January issue.

'GOING FINE,' NAVY WORD ON 12

S.D. TRIBUNE 1-28-37

Their speed increasing as the day advanced and the gasoline load decreased, 12 navy planes of patrol squadron six, which left San Diego at 8:32 a.m. today for Honolulu, made good time this afternoon.

Near Second Station

Light headwinds reported during the morning hours gave way to tail winds, which the weather bureau says probably will continue for the remainder of the flight. With more favorable wind conditions and the lightening of their load, the 80 officers and men hope to reach Honolulu within from 18 to 20 hours from their departure here.

"Everything is going along fine with the fliers," was the report at base force aircraft headquarters here at 2:30 p.m.

Explaining that news would be given out each time the planes passed a station ship on the route, a base force aircraft official said the planes passed the first station ship, the U.S.S. Sandpiper, at 12:30 p.m. They neared the second station ship the middle of the afternoon.

12 HUGE PLANES POISED FOR FLIGHT FROM HERE TO HAWAII

S.D SUN 1-27-37

TAKE-OFF LIKELY IN 72 HOURS AS WEATHER STUDIED

Final plans for the navy's epochal and history-making flight of 12 Consolidated airboats from San Diego to Hawaii were outlined to newsreel cameramen, press photographers and representatives of the National Broadcasting Co. at a conference at the Naval Air station yesterday afternoon.

Comdr. Charles Pownall, chief of staff, and Lt. Comdr. A. I. Price, operations officer on the staff of Rear Adm. Ernest J. King, and Lt. Comdr. William McDade, commander of patrol squadron 6, explained to the group the completed arrangements for the flight.

Will Fly Non-Stop

The flight will start from San Diego bay probably within the next 72 hours, depending on weather conditions in mid-Pacific. The huge airboats will fly non stop to Pearl Harbor, a distance of 2270 nautical miles or 2553 land miles, the longest sustained flight by a squadron of seaplanes in aviation history. It also will mark the first time that commercial or naval aircraft ever have taken off from San Diego for a flight to the crossroads of the Pacific.

In January, 1934, a squadron of six naval seaplanes commanded by the then Lt. Comdr. Knefler McGinnis flew from San Francisco bay to Pearl Harbor, 2400 miles, in 24 hours and 45 minutes.

Naval authorities also considered this journey the greatest overseas mass flight in aviation history, a "routine transfer" of equipment.

Depending on wind conditions, the 12 planes will take off from the channel extending northwestward from the foot of Market st. The ships will rendezvous at 10,000 feet and when all are in position Comdr. McDade will give the signal to start across the Pacific. It is estimated the squadron will arrive at Honolulu within 20 hours after leaving Pt. Loma astern.

Flight Routine Delivery

Fleet aviation authorities stress that the flight is merely a routine delivery of new aircraft built for the navy by the Consolidated plant at Lindbergh field. Six surface craft will act as patrol guards. These vessels will be spaced at intervals between Pt. Loma and Diamond Head.

The airboats have a wing spread of 105 feet. The hulls are 63½ feet long and 18½ feet high. They are powered with two Pratt-Whitney engines.

The National Broadcasting company will feature a coast-to-coast description of the take-off of the planes from San Diego.

Personnel Listed

Personnel of the 12-plane squadron follows:

Patrol plane 1—Lt. Comdr. W. M. McDade, squadron commander and first pilot; Lt. C. H. Ostrom, L. Serpa, H. Hurley, T. D. Dovell, E. J. McCormick, R. L. Fourcher.

Patrol plane 2—Lt. G. C. Briant, F. M. Screws, H. R. Green, C. H. Bishop, P. L. Smith, A. DiCerchio and W. E. Benham.

Patrol plane 3—Lt. D. B. Brokenshire, B. Sears, L. O. Polk, R. R. Metzger, K. K. Kimmons, C. H. Claytor, L. E. Leonard.

Patrol plane 4—Lt. W. W. Harvey, W. B. Wheatley, test pilot of Consolidated, who is a lieutenant in the naval reserve; M. W. Woodruff, H. G. Byron, C. Henson, R. J. Holt, O. W. Miller.

Patrol plane 5—Lt. J. B. Young, H. C. Smathers, H. E. Leedom, M. S. Harrell, W. Z. Paulk, R. M. Williams and A. W. Koster of Consolidated.

Patrol plane 6—Lt. L. O. Mathews, A. E. White, H. E. Rutherford, N. Evaschuk, C. L. English, L. M. Hurtado.

Patrol plane 7—Lt. R. D. Woods, W. P. Brett, W. H. Karr, C. D. Conway, E. A. Turner, D. E. Stanford, J. L. Lipsey.

Patrol plane 8—Lt. G. L. Heap, J. E. Desjardins, W. T. Whitham, L. A. Knight, H. J. Kolb, R. S. Minteer, W. A. Harris.

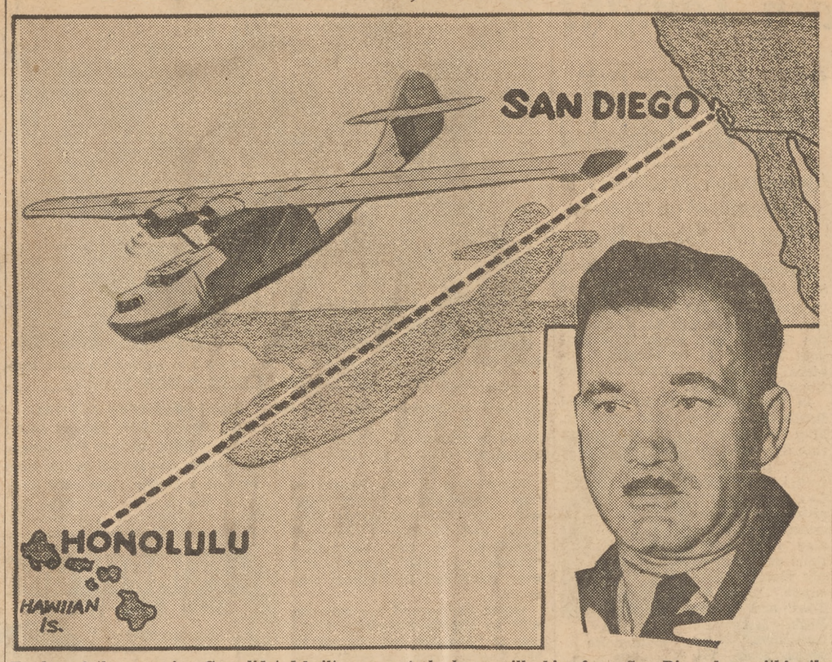
Patrol plane 9—Lt. J. O. Biglow, K. L. Moser, R. B. Rueger, S. W. Wooten, H. A. Peters, A. W. Andrews.

Patrol plane 10—Lt. W. M. Drane, D. B. Mommsen, H. A. Wolfe, W. C. Curry, J. H. Ball, J. Alkov, J. F. Siebenthall.

Patrol plane 11—Lt. R. C. Bauer, T. J. Hughes, P. C. Hutchen, D. B. McKay, B. L. Frick, T. E. Muran.

Patrol plane 12 —— Lt. J. A. Murphy, R. P. Minniear, D. E. Ferguson, H. Schutt, A. B. Herb and M. H. Davis.

READY FOR 2553-MILE, 20-HOUR PACIFIC HOP



Twelve of these roaring Consolidated-built navy patrol planes will skim from San Diego bay within the next 72 hours, drone to a rendezvous at 10,000 feet and start on their way to Honolulu—20 hours and 2553 miles away. Lt. Comdr. William McDade (inset) will be in command.

PLANES AT MERCY OF 'WALL OF WIND' NEAR ISLANDS

S.D. TRIBUNE 1-29-37

A "wall of wind," which tossed the planes about as though they were toy balloons, was one of the weather hazards encountered by the 80 navy fliers in their 2553-mile San Diego-Honolulu flight yesterday and last night. A graphic account of the flight of the 12 San Diego-built planes through a storm they encountered when 300 miles out of Honolulu was given by The Associated Press today after the fliers had landed safely at Honolulu.

"It was cold during the storm," said Lt. Comdr. William H. McDade, flight commander, who did not appear tired after the flight was over. "For an hour and a half we battled the storm which extended for 150 miles along our course, and we could not get through it or around it. Finally we had to turn back and climb to 14,000 feet to get over it. The weather was as thick as pea soup, and trapped us completely."

Throughout the flight the planes flew in squadron formation. McDade expressed satisfaction with the performance of the flying boats.

As weather conditions varied, the speed ranged between 87 and 162 miles an hour.

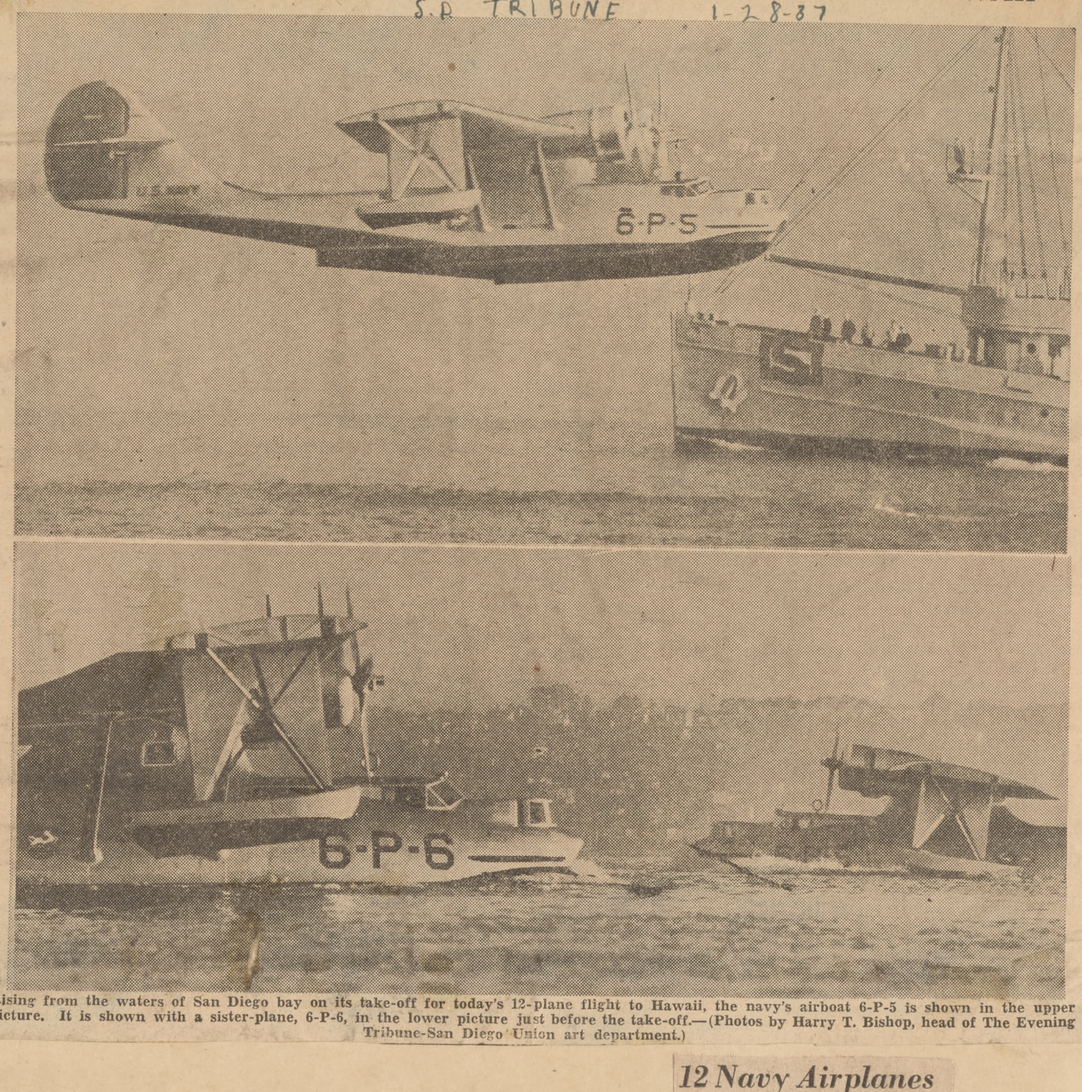
The thick weather shut off visibility so badly that McDade said he was uncertain of his navigation at times. When he did not sight the U.S.S. Pelican, station ship, he flew into Pearl Harbor on bearings.

Louis Serpa, second pilot of McDade's plane, describing the battle against the storm, said: "We kept digging at the thick weather, trying to get through or around it. But we were unsuccessful, so McDade gave the order to split into four 3-plane groups. We set a compass course and ploughed through the middle of the storm. As we plunged into it, we hit winds from every side, making rough riding like going over Niagara falls. Then we hit a clear spot and soared high to fly over the storm.

"Another time, we were flying at 10,000 feet when we reached a cloud bank extending down to water. We hit a wall of wind which threw us up like toy balloons."

PLANES PASS FIRST STATION SHIP ON FLIGHT TO HAWAII

S.D. TRIBUNE 1-28-37



Rising from the waters of San Diego bay on its take-off for today's 12-plane flight to Hawaii, the navy's airboat 6-P-5 is shown in the upper picture. It is shown with a sister-plane, 6-P-6, in the lower picture just before the take-off.—(Photos by Harry T. Bishop, head of The Evening Tribune-San Diego Union art department.)

AIR FLEET REACHES HAWAII AFTER BATTLING VICIOUS GALE

L.A. TIMES 1-30-37

HONOLULU, Jan. 29. (AP)—Twelve large sky cruisers, boring through a terrific storm that momentarily stopped them "cold," sailed into Honolulu today to complete with military precision the greatest nonstop ocean mass flight ever attempted.

Carrying eighty men, the planes made a "routine transfer" from San Diego to Honolulu, 2553 miles, in twenty-one hours, forty-three minutes, official elapsed time. They alighted on Pearl Harbor in the glare of powerful floodlights at 3:50 a.m.

About 300 miles out of Honolulu the air squadron ran into treacherous winds that tossed the giant planes like they were corks.

"For an hour and a half," said Lieutenant - Commander William H. McDade, the flight chief, "we battled the storm but could not get through. Thick as pea soup, it had trapped us completely. At one point it momentarily stopped us cold."

The squadron eventually soared into a clear spot which enabled it to climb over the remainder of the storm.

McDade said the weather was so thick that he was uncertain of his navigation at times. He did not sight the U.S.S. Pelican, last of seven surface ships stationed along the route.

12 Navy Airplanes Away to Honolulu In Greatest Flight

WASH-POST 1-30-37

By The Associated Press.

San Diego, Calif., Jan. 28.—The Navy's 12 newest sky cruisers winged westward tonight bent on a new record—the greatest non-stop over-water massed air flight in American aviation history—San Diego to Honolulu.

Two miles high, in trim squadron formation, they started for the Hawaiian Islands at 8:35 a. m. (Pacific time), 11:35 a. m. Eastern standard time). There were 80 men aboard, 7 in some ships and 6 in others.

With 1,125 nautical miles of open sea traversed, Lieut. Cmdr. William M. McDade radioed at 8:30 p. m. (11:30 p. m. Eastern standard time) "We've psssed the half-way mark with no trouble."

It took an hour and 33 minutes for Lieut. Comdr. McDade to get his ships into formation from the time the first took off the harbor waters.

In widening circles they flew to the rendezvous, 10,000 feet above Point Loma. Their goal was the still waters of Pearl Harbor, the naval station near Honolulu, 2,553 miles from here.

This is the first airplane flight from San Diego to the Hawaiian Islands.

Rear Admiral Ernest J. King, commander of the aircraft squadrons of the United States fleet base force, emphasized that the flight was not a stunt, but a normal transfer of new sky patrols of the fleet to the mid-Pacific outpost.

"We expect to have breakfast in the islands," said Lieut. Comdr. McDade.

He figured the flight would take some 20 hours. Three years ago a squadron of Navy patrols of the skies, six seaplanes, flew from San Francisco Bay to Pearl Harbor, 2,400 miles, in 24 hours and 25 minutes.

The sky cruisers that moved out today are larger and faster.

12 NAVY PLANES POISED TODAY

S.D. UNION

12 PLANES POISED FOR HAWAII HOP FROM S. D. TODAY

Squadron Ready to Take Off At 7 A. M. for 18-Hour Dash; Launchings at 6.

S.D. UNION 1-29-37

Weather conditions permitting, 12 Consolidated airboats comprising Squadron 6 of the fleet patrol wing, will take off from San Diego harbor at 7 o'clock this morning for a sustained flight of 2553 miles to Hawaii.

Rear Adm. Ernest J. King, commander of aircraft, base force, announced that the 12 planes were serviced and made ready for the world record-breaking flight late yesterday. The huge seaplanes, each weighing several tons, will be launched from the ramp on the north beach beginning at 6.

Acting on the request of newsreel and press cameramen and to accommodate relatives of officers and men making today's Hawaiian flight, George Shaver of the Coronado Ferry Co. announced last night that a special ferry will leave San Diego at 5:40 a. m. today.

Shaver said that the usual daily ferry service will be maintained following the departure of the special ferry.

Will Fly In Formation

If the wind is from the northwest, the heavily laden planes will use a two-mile runway extending along the main channel from the ferry fairway to a point abeam the Naval Training station. When clear of the water, the pilot of each plane will circle to a 10,000-foot rendezvous over Pt. Loma and then, when all ships are in formation, the squadron will swing westward across the Pacific.

Comdr. William McDade has the distinction of commanding on the spectacular and history-making flight the most powerful squadron of planes yet constructed for the world's navies. These Consolidated ships, part of an armada of 76 being built for the navy, are capable of 3000 miles of sustained flight without refueling. They are to be stationed at Pearl Harbor as replacements for obsolete seaplanes. In May they will participate with planes from the carrier divisions and surface craft in fleet Problem 18 in an area extending from Hawaii to Alaska and southward to the southern California coast.

Early Flights Recalled

A recapitulation of history-making flights graphically indicates the marvelous progress made in aircraft construction since the Wrights flew a couple of hundred feet at Kitty Hawk Dec. 17, 1903. The first "endurance" flight in Europe was made by Santos Dumont, Sept. 13, 1906, when he flew 700 feet in 21 seconds.

Gradually the distance for seaplanes was extended until the late Comdr. John Rodgers flew 1992 miles in an attempted flight from San Pablo bay to Hawaii, Aug. 31, 1925. Rodgers was forced down and drifted nine days before sailing his plane under a jury rig to shore. The navy officer grew a beard a foot long in this combined air and sea voyage.

Last January, Comdr. Knefler McGinnis, also taking off from San Pablo bay, piloted a squadron of six navy planes to Hawaii without mishap. He was 22 hours making the 2053-mile flight.

New Record Seen

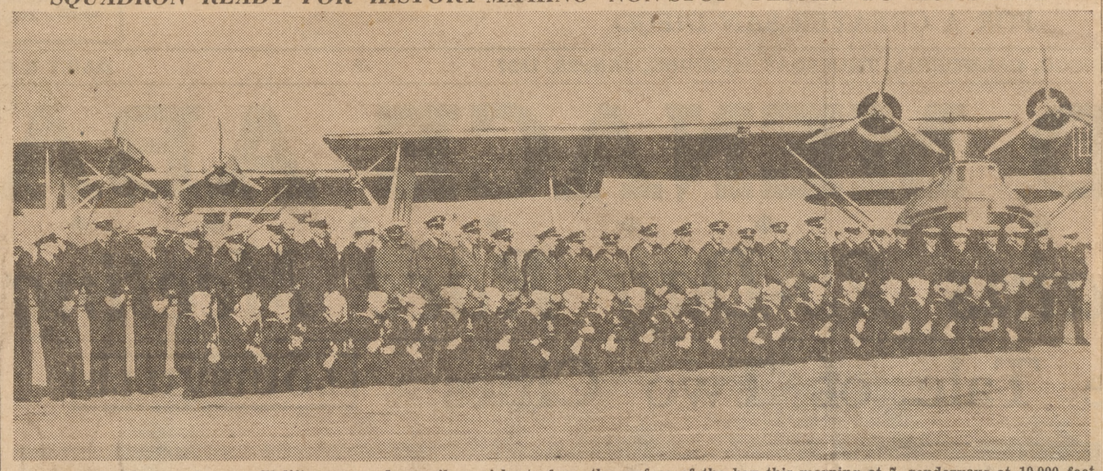
Should Comdr. McDade get his squadron of 12 ships away from the Pt. Loma rendezvous at 8 o'clock this morning, he will sight Diamond Head within 18 hours if no serious head winds are encountered. This is about four days ahead of the fastest time made by steamer, clips four hours off Comdr. McGinnis' record and eclipses by three hours and 50 minutes the San Francisco-Hawaii flight time of Lts. Maitland and Hegenberger who flew an army land plane. It exceeds by several hundred miles the non-stop flight record over water of the Italian squadron commanded by Gen. Balbo in its trip from Italy to Chicago four years ago.

Barring mishaps, Comdr. McDade and his 80 officers and men will breakfast this morning at San Diego and tomorrow they will have a similar repast in Hawaii. The flight will be history making in many respects in that it definitely will place San Diego on the airway connecting California with Asia and Australia.

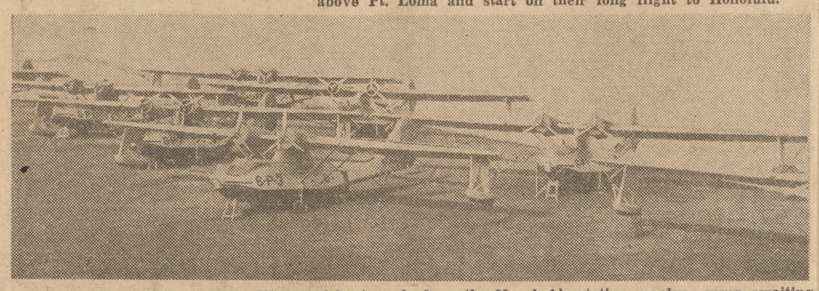
PACIFIC DASH SCHEDULED TO TAKE 18 HOURS

(Continued from Page 1)

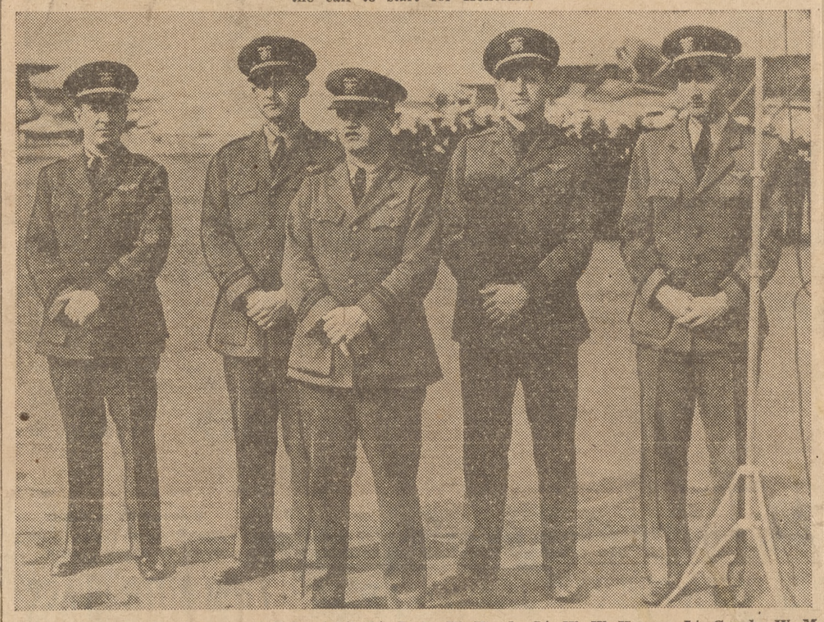
SQUADRON READY FOR HISTORY-MAKING NON-STOP FLIGHT TO HONOLULU



These naval officers and men will lift an even dozen silver airboats from the surface of the bay this morning at 7, rendezvous at 10,000 feet above Pt. Loma and start on their long flight to Honolulu.



A study of a few of the 12 Consolidated airboats, poised on the Naval Air station seaplane ramp awaiting the call to start for Honolulu.



Flight officers for the trip are (left to right) Lt. R. D. W. Woods, Lt. W. W. Harvey, Lt. Comdr. W. M. McDade, squadron commander; Lt. (jg) G. C. Briant, Lt. (jg) J. B. H. Young.

12 Navy Planes Fought Storm On Pacific Hop

WASH POST 1-30-37

Comdr. McDade Tells of Winds That Delayed Nonstop Flight.

By the Associated Press.

Honolulu, Jan. 29.—Twelve big navy sky cruisers bored through a terrific storm that momentarily stopped them "cold" and sailed into Honolulu today to complete with military precision the greatest nonstop ocean mass flight in American aviation history.

Carrying 80 men, the planes made a "routine transfer" from San Diego to Honolulu, 2,553 miles, in 21 hours 43 minutes official elapsed time. They alighted on Pearl Harbor in the glare of powerful floodlights at 3:50 a. m. (9:20 a. m. Eastern standard time).

About 300 miles out of Honolulu the air squadron ran into treacherous winds that tossed the giant planes as though they were corks.

"For an hour and a half," said Lieut. Comdr. William H. McDade, the flight chief, "we battled the storm, but could not get through. Thick as pea soup, it had trapped us completely. At one point it momentarily stopped us cold."

Louis Serpa, second pilot in McDade's plane, said the flight chief finally ordered the squadron to split up into three-plane groups.

"The planes in each group had to fly within 25 feet of their leaders in order to see each other," said Serpa. "We hit winds on every side, making rough riding, like going over Niagara Falls. At 9,000 feet we hit a wall of wind that threw us up like a toy balloon."

The squadron eventually soared into a clear spot and climbed over the remainder of the storm.

Aerial Fleet Speeds West

L.A. TIMES 1-29-37

Twelve Giant Flying Boats Making Mass Hop From San Diego

SAN DIEGO, Jan. 28. (AP)—With 1125 nautical miles of open sea already traversed, Lieutenant-Commander William M. McDade, commanding the Navy's twelve-plane squadron en route from San Diego to Honolulu, radioed "we've passed the halfway mark with no trouble," at 8:30 p.m. tonight.

At 6:57 o'clock this morning the first of the huge patrol planes, commanded by Lieutenant-Commander W. W. McDade, roared off the bay waters near the naval air station ramp and disappeared into the gray haze off Point Loma.

SPEED PAST POINT LOMA

Just one hour later, the last plane left the water and the twelve planes maneuvered to a rendezvous at 10,000 feet and sped past Point Loma at 8:32 o'clock.

Described by naval officials as a routine flight, the planes are scheduled to reach Hawaii within eighteen or twenty hours, completing the 2553-mile flight entirely over water.

Some of the planes carry six men and others seven for a total crew in the armada of eighty men. Each plane carries 10,000 pounds of gasoline.

NEW PATROL BOATS

The planes engaged in the flight are new PBY type patrol boats, recently constructed by Consolidated Aircraft Corporation here, and destined for duty in Honolulu waters.

12 NAVAL PLANES LAND IN HONOLULU

WASH. STAR 1-29-37

21 Hours and 48 Minutes Time for 2,553-Mile Flight From San Diego.

By the Associated Press.

HONOLULU, January 29.—Battling through thick weather in the last stages of their record-breaking flight, 12 huge United States naval seaplanes completed the longest over-water mass flight in history at 3:30 a.m. today (9:20 a.m. Eastern standard time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 feet to escape what Lieut. Comdr. William H. McDade described as "very bad weather."

Arrive in Formation.

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 a.m. (9:59 a.m. Eastern standard time).

The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Six in Previous Flight.

The only previous mass transpacific flight was three years ago when Lieut. Commander Kneffler McGinnis led a squadron of six naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

Today Comdr. McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectacular demonstration of the precision of naval flying.

McDade, who did not appear tired, related a bitter struggle with a storm which momentarily stopped the planes.

"It was cold," he said. "For an hour and a half we battled a severe storm when we were about 300 miles from Honolulu. The storm extended 150 miles along our course. We could not get through or around it.

Forced to Turn Back.

"Finally we had to turn back and climb to 14,000 feet to get over it. The weather was as thick as pea soup and trapped us completely."

Throughout the flight, even while battling the storm, the planes flew in squadron formation. The commander expressed satisfaction with the performance of the flying boats.

As weather conditions varied, the speed ranged between 87 and 162 miles an hour.

The thick weather shut off visibility so badly that McDade said he was uncertain of his navigation at times. The planes did not sight the U. S. S. Pelican, last of seven surface boats patrolling the course, and flew into Pearl Harbor on bearings.

12 HUGE PLANES POISED FOR FLIGHT FROM HERE TO HAWAII

S.D. SUN 1-27-37

TAKE-OFF LIKELY IN 72 HOURS AS WEATHER STUDIED

Final plans for the navy's epochal and history-making flight of 12 Consolidated airboats from San Diego to Hawaii were outlined to newsreel cameramen, press photographers and representatives of the National Broadcasting Co. at a conference at the Naval Air station yesterday afternoon.

Comdr. Charles Pownall, chief of staff, and Lt. Comdr. A. I. Price, operations officer on the staff of Rear Adm. Ernest J. King, and Lt. Comdr. William McDade, commander of patrol squadron 6, explained to the group the completed arrangements for the flight.

Will Fly Non-Stop

The flight will start from San Diego bay probably within the next 72 hours, depending on weather conditions in mid-Pacific. The huge airboats will fly non stop to Pearl Harbor, a distance of 2270 nautical miles or 2553 land miles, the longest sustained flight by a squadron of seaplanes in aviation history. It also will mark the first time that commercial or naval aircraft ever have taken off from San Diego for a flight to the crossroads of the Pacific.

In January, 1934, a squadron of six naval seaplanes commanded by the then Lt. Comdr. Knefler McGinnis flew from San Francisco bay to Pearl Harbor, 2400 miles, in 24 hours and 45 minutes.

Naval authorities also considered this journey the greatest overseas mass flight in aviation history, a "routine transfer" of equipment.

Depending on wind conditions, the 12 planes will take off from the channel extending northwestward from the foot of Market st. The ships will rendezvous at 10,000 feet and when all are in position Comdr. McDade will give the signal to start across the Pacific. It is estimated the squadron will arrive at Honolulu within 20 hours after leaving Pt. Loma astern.

Flight Routine Delivery

Fleet aviation authorities stress that the flight is merely a routine delivery of new aircraft built for the navy by the Consolidated plant at Lindbergh field. Six surface craft will act as patrol guards. These vessels will be spaced at intervals between Pt. Loma and Diamond Head.

The airboats have a wing spread of 105 feet. The hulls are 63½ feet long and 18½ feet high. They are powered with two Pratt-Whitney engines.

The National Broadcasting company will feature a coast-to-coast description of the take-off of the planes from San Diego.

Patrol plane 11—Lt. R. C. Bauer, T. J. Hughes, P. C. Hutchen, D. B. McKay, B. L. Frick, T. E. Muran.

Patrol plane 12 —— Lt. J. A. Murphy, R. P. Minniear, D. E. Ferguson, H. Schutt, A. B. Herb and M. H. Davis.

PLANES AT MERCY OF 'WALL OF WIND' NEAR ISLANDS

S.D. TRIBUNE 1-29-37

A "wall of wind," which tossed the planes about as though they were toy balloons, was one of the weather hazards encountered by the 80 navy fliers in their 2553-mile San Diego-Honolulu flight yesterday and last night. A graphic account of the flight of the 12 San Diego-built planes through a storm they encountered when 300 miles out of Honolulu was given by The Associated Press today after the fliers had landed safely at Honolulu.

"It was cold during the storm," said Lt. Comdr. William H. McDade, flight commander, who did not appear tired after the flight was over. "For an hour and a half we battled the storm which extended for 150 miles along our course, and we could not get through it or around it. Finally we had to turn back and climb to 14,000 feet to get over it. The weather was as thick as pea soup, and trapped us completely."

Throughout the flight the planes flew in squadron formation. McDade expressed satisfaction with the performance of the flying boats.

As weather conditions varied, the speed ranged between 87 and 162 miles an hour.

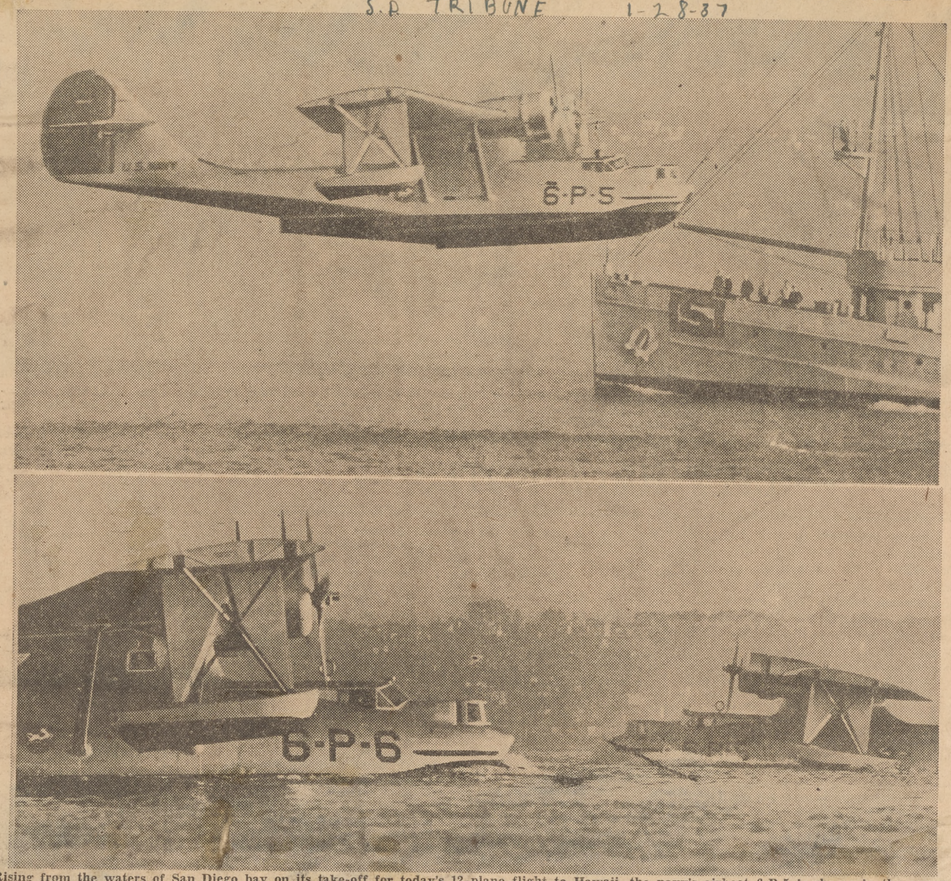
The thick weather shut off visibility so badly that McDade said he was uncertain of his navigation at times. When he did not sight the U.S.S. Pelican, station ship, he flew into Pearl Harbor on bearings.

Louis Serpa, second pilot of McDade's plane, describing the battle against the storm, said: "We kept digging at the thick weather, trying to get through or around it. But we were unsuccessful, so McDade gave the order to split into four 3-plane groups. We set a compass course and ploughed through the middle of the storm. As we plunged into it, we hit winds from every side, making rough riding like going over Niagara falls. Then we hit a clear spot and soared high to fly over the storm.

"Another time, we were flying at 10,000 feet when we reached a cloud bank extending down to water. We hit a wall of wind which threw us up like toy balloons."

PLANES PASS FIRST STATION SHIP ON FLIGHT TO HAWAII

S.D. TRIBUNE 1-28-37



Rising from the waters of San Diego bay on its take-off for today's 12-plane flight to Hawaii, the navy's airboat 6-P-5 is shown in the upper picture. It is shown with a sister-plane, 6-P-6, in the lower picture just before the take-off.—(Photos by Harry T. Bishop, head of The Evening Tribune-San Diego Union art department.)

AIR FLEET REACHES HAWAII AFTER BATTLING VICIOUS GALE

L.A. TIMES 1-30-37

HONOLULU, Jan. 29. (AP)—Twelve large sky cruisers, boring through a terrific storm that momentarily stopped them "cold," sailed into Honolulu today to complete with military precision the greatest nonstop ocean mass flight ever attempted.

Carrying eighty men, the planes made a "routine transfer" from San Diego to Honolulu, 2553 miles, in twenty-one hours, forty-three minutes, official elapsed time. They alighted on Pearl Harbor in the glare of powerful floodlights at 3:50 a.m.

About 300 miles out of Honolulu the air squadron ran into treacherous winds that tossed the giant planes like they were corks.

"For an hour and a half," said Lieutenant - Commander William H. McDade, the flight chief, "we battled the storm but could not get through. Thick as pea soup, it had trapped us completely. At one point it momentarily stopped us cold."

The squadron eventually soared into a clear spot which enabled it to climb over the remainder of the storm.

McDade said the weather was so thick that he was uncertain of his navigation at times. He did not sight the U.S.S. Pelican, last of seven surface ships stationed along the route.

12 Navy Airplanes Away to Honolulu In Greatest Flight

WASH - POST 1-29-37

By The Associated Press.

San Diego, Calif., Jan. 28.—The Navy's 12 newest sky cruisers winged westward tonight bent on a new record—the greatest non-stop over-water massed air flight in American aviation history—San Diego to Honolulu.

Two miles high, in trim squadron formation, they started for the Hawaiian Islands at 8:35 a. m. (Pacific time), 11:35 a. m. Eastern standard time). There were 80 men aboard, 7 in some ships and 6 in others.

With 1,125 nautical miles of open sea traversed, Lieut. Cmdr. William M. McDade radioed at 8:30 p. m. (11:30 p. m. Eastern standard time) "We've pssed the half-way mark with no trouble."

It took an hour and 33 minutes for Lieut. Comdr. McDade to get his ships into formation from the time the first took off the harbor waters.

In widening circles they flew to the rendezvous, 10,000 feet above Point Loma. Their goal was the still waters of Pearl Harbor, the naval station near Honolulu, 2,553 miles from here.

This is the first airplane flight from San Diego to the Hawaiian Islands.

Rear Admiral Ernest J. King, commander of the aircraft squadrons of the United States fleet base force, emphasized that the flight was not a stunt, but a normal transfer of new sky patrols of the fleet to the mid-Pacific outpost.

"We expect to have breakfast in the islands," said Lieut. Comdr. McDade.

He figured the flight would take some 20 hours. Three years ago a squadron of Navy patrols of the skies, six seaplanes, flew from San Francisco Bay to Pearl Harbor, 2,400 miles, in 24 hours and 25 minutes.

The sky cruisers that moved out today are larger and faster.

12 NAVY PLANES POISED FOR SAN DIEGO-HAWAII HOP TODAY

12 PLANES POISED FOR HAWAII HOP FROM S. D. TODAY

S.D. UNION 1-28-37

Squadron Ready to Take Off At 7 A. M. for 18-Hour Dash; Launchings at 6.

Weather conditions permitting, 12 Consolidated airboats comprising Squadron 6 of the fleet patrol wing, will take off from San Diego harbor at 7 o'clock this morning for a sustained flight of 2553 miles to Hawaii.

Rear Adm. Ernest J. King, commander of aircraft, base force, announced that the 12 planes were serviced and made ready for the world record-breaking flight late yesterday. The huge seaplanes, each weighing several tons, will be launched from the ramp on the north beach beginning at 6.

Acting on the request of newsreel and press cameramen and to accommodate relatives of officers and men making today's Hawaiian flight, George Shaver of the Coronado Ferry Co. announced last night that a special ferry will leave San Diego at 5:40 a. m. today.

Shaver said that the usual daily ferry service will be maintained following the departure of the special ferry.

Will Fly In Formation

If the wind is from the northwest, the heavily laden planes will use a two-mile runway extending along the main channel from the ferry fairway to a point abeam the Naval Training station. When clear of the water, the pilot of each plane will circle to a 10,000-foot rendezvous over Pt. Loma and then, when all ships are in formation, the squadron will swing westward across the Pacific.

Comdr. William McDade has the distinction of commanding on the spectacular and history-making flight the most powerful squadron of planes yet constructed for the world's navies. These Consolidated ships, part of an armada of 76 being built for the navy, are capable of 3000 miles of sustained flight without refueling. They are to be stationed at Pearl Harbor as replacements for obsolete seaplanes. In May they will participate with planes from the carrier divisions and surface craft in fleet Problem 18 in an area extending from Hawaii to Alaska and southward to the southern California coast.

Early Flights Recalled

A recapitulation of history-making flights graphically indicates the marvelous progress made in aircraft construction since the Wrights flew a couple of hundred feet at Kitty Hawk Dec. 17, 1903. The first "endurance" flight in Europe was made by Santos Dumont, Sept. 13, 1906, when he flew 700 feet in 21 seconds.

Gradually the distance for seaplanes was extended until the late Comdr. John Rodgers flew 1992 miles in an attempted flight from San Pablo bay to Hawaii, Aug. 31, 1925. Rodgers was forced down and drifted nine days before sailing his plane under a jury rig to shore. The navy officer grew a beard a foot long in this combined air and sea voyage.

Last January, Comdr. Knefler McGinnis, also taking off from San Pablo bay, piloted a squadron of six navy planes to Hawaii without mishap. He was 22 hours making the 2053-mile flight.

New Record Seen

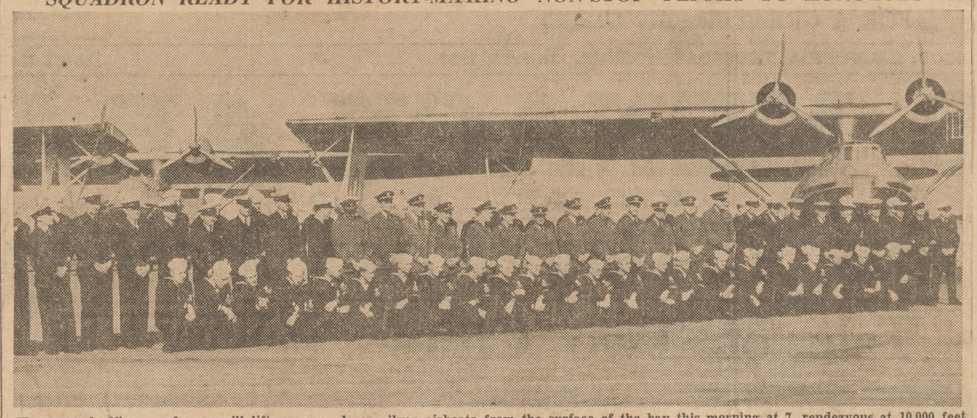
Should Comdr. McDade get his squadron of 12 ships away from the Pt. Loma rendezvous at 8 o'clock this morning, he will sight Diamond Head within 18 hours if no serious head winds are encountered. This is about four days ahead of the fastest time made by steamer, clips four hours off Comdr. McGinnis' record and eclipses by three hours and 50 minutes the San Francisco-Hawaii flight time of Lts. Maitland and Hegenberger who flew an army land plane. It exceeds by several hundred miles the non-stop flight record over water of the Italian squadron commanded by Gen. Balbo in its trip from Italy to Chicago four years ago.

Barring mishaps, Comdr. McDade and his 80 officers and men will breakfast this morning at San Diego and tomorrow they will have a similar repast in Hawaii. The flight will be history making in many respects in that it definitely will place San Diego on the airway connecting California with Asia and Australia.

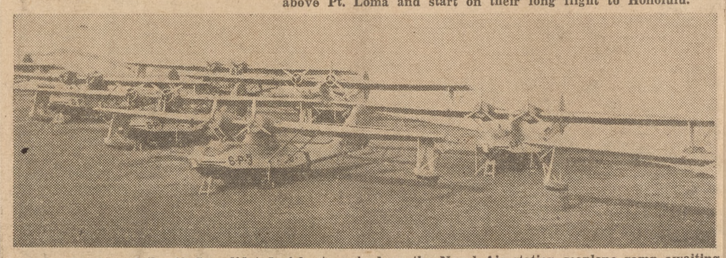
PACIFIC DASH SCHEDULED TO TAKE 18 HOURS

(Continued from Page 1)

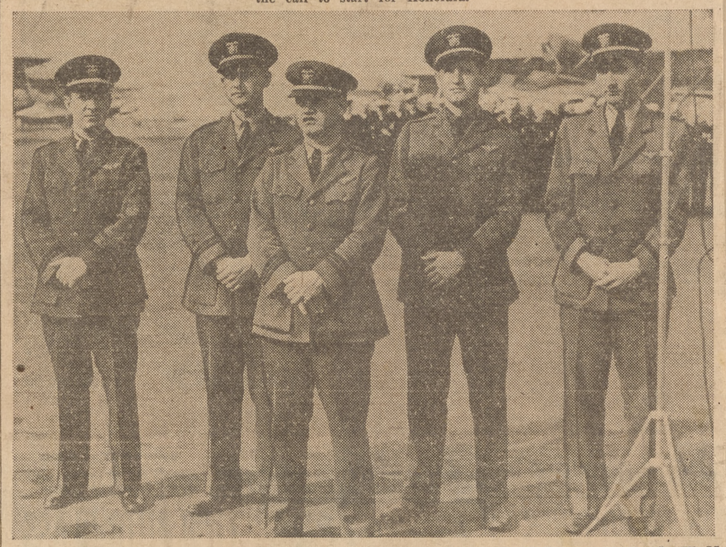
SQUADRON READY FOR HISTORY-MAKING NON-STOP FLIGHT TO HONOLULU



These naval officers and men will lift an even dozen silver airboats from the surface of the bay this morning at 7, rendezvous at 10,000 feet above Pt. Loma and start on their long flight to Honolulu.



A study of a few of the 12 Consolidated airboats, poised on the Naval Air station seaplane ramp awaiting the call to start for Honolulu.



Flight officers for the trip are (left to right) Lt. R. D. W. Woods, Lt. W. W. Harvey, Lt. Comdr. W. M. McDade, squadron commander; Lt. (jg) G. C. Briant, Lt. (jg) J. B. H. Young.

12 Navy Planes Fought Storm On Pacific Hop

WASH POST 1-30-37

Comdr. McDade Tells of Winds That Delayed Nonstop Flight.

By the Associated Press.

Honolulu, Jan. 29.—Twelve big navy sky cruisers bored through a terrific storm that momentarily stopped them "cold" and sailed into Honolulu today to complete with military precision the greatest nonstop ocean mass flight in American aviation history.

Carrying 80 men, the planes made a "routine transfer" from San Diego to Honolulu, 2,553 miles, in 21 hours 43 minutes official elapsed time. They alighted on Pearl Harbor in the glare of powerful floodlights at 3:50 a. m. (9:20 a. m. Eastern standard time).

About 300 miles out of Honolulu the air squadron ran into treacherous winds that tossed the giant planes as though they were corks.

"For an hour and a half," said Lieut. Comdr. William H. McDade, the flight chief, "we battled the storm, but could not get through. Thick as pea soup, it had trapped us completely. At one point it momentarily stopped us cold."

Louis Serpa, second pilot in McDade's plane, said the flight chief finally ordered the squadron to split up into three-plane groups.

"The planes in each group had to fly within 25 feet of their leaders in order to see each other," said Serpa. "We hit winds on every side, making rough riding, like going over Niagara Falls. At 9,000 feet we hit a wall of wind that threw us up like a toy balloon."

The squadron eventually soared into a clear spot and climbed over the remainder of the storm.

Aerial Fleet Speeds West

L.A. TIMES 1-29-37

Twelve Giant Flying Boats Making Mass Hop From San Diego

SAN DIEGO, Jan. 28. (AP)—With 1125 nautical miles of open sea already traversed, Lieutenant-Commander William M. McDade, commanding the Navy's twelve-plane squadron en route from San Diego to Honolulu, radioed "we've passed the halfway mark with no trouble," at 8:30 p.m. tonight.

At 6:57 o'clock this morning the first of the huge patrol planes, commanded by Lieutenant-Commander W. W. McDade, roared off the bay waters near the naval air station ramp and disappeared into the gray haze off Point Loma.

SPEED PAST POINT LOMA

Just one hour later, the last plane left the water and the twelve planes maneuvered to a rendezvous at 10,000 feet and sped past Point Loma at 8:32 o'clock.

Described by naval officials as a routine flight, the planes are scheduled to reach Hawaii within eighteen or twenty hours, completing the 2553-mile flight entirely over water.

Some of the planes carry six men and others seven for a total crew in the armada of eighty men. Each plane carries 10,000 pounds of gasoline.

NEW PATROL BOATS

The planes engaged in the flight are new PBY type patrol boats, recently constructed by Consolidated Aircraft Corporation here, and destined for duty in Honolulu waters.

LAND IN HONOLULU

WASH STAR 1-29-37

21 Hours and 48 Minutes Time for 2,553-Mile Flight From San Diego.

By the Associated Press.

HONOLULU, January 29.—Battling through thick weather in the last stages of their record-breaking flight, 12 huge United States naval seaplanes completed the longest over-water mass flight in history at 3:30 a.m. today (9:20 a.m. Eastern standard time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 feet to escape what Lieut. Comdr. William H. McDade described as "very bad weather."

Arrive in Formation.

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 a.m. (9:59 a.m. Eastern standard time).

The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Six in Previous Flight.

The only previous mass transpacific flight was three years ago when Lieut. Commander Kneffler McGinnis led a squadron of six naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

Today Comdr. McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectacular demonstration of the precision of naval flying.

McDade, who did not appear tired, related a bitter struggle with a storm which momentarily stopped the planes.

"It was cold," he said. "For an hour and a half we battled a severe storm when we were about 300 miles from Honolulu. The storm extended 150 miles along our course. We could not get through or around it.

Forced to Turn Back.

"Finally we had to turn back and climb to 14,000 feet to get over it. The weather was as thick as pea soup and trapped us completely."

Throughout the flight, even while battling the storm, the planes flew in squadron formation. The commander expressed satisfaction with the performance of the flying boats.

As weather conditions varied, the speed ranged between 87 and 162 miles an hour.

The thick weather shut off visibility so badly that McDade said he was uncertain of his navigation at times. The planes did not sight the U. S. S. Pelican, last of seven surface boats patrolling the course, and flew into Pearl Harbor on bearings.

S. D. Naval Air Squadron Nearing Hawaii

S.D. UNION 1-29-37

TAIL WIND SPEEDS 12 BIG PLANES

Record Mass Flight Said 'Without Incident' Over Major Part of Trip; Radio Communication Constant.

BULLETIN

Sixteen hours out of San Diego the 12 giant navy airboats that took off from here at 8:30 a. m. yesterday were 610 miles from Honolulu at 12:30 a. m. today, according to a radio message received by the navy here. The squadron, The Associated Press reported from Honolulu, was expected to land at 5:30 a. m. (San Diego time). At the 12:30 a. m. report, the planes had covered 1943 miles.

Flying in tight V formation high over calm Pacific waters, the navy's 12-plane squadron en route to Honolulu on the largest transpacific flight ever attempted, was nearing Honolulu this morning.

The flight of the 12 huge dual-motored planes was "without incident so far," high-ranking officials at North island air station said. Radio communication between ships and stations and between the planes and the shore was being kept at a minimum, officers said, so that "the air will be quiet if anything occurs."

In Constant Touch

Throughout the day and early evening direct communication between the ships and the U. S. S. Wright, at anchor at the air station, was maintained without interruption. Every two hours, Comdr. William McDade, flight commander, reported his position and the weather conditions as the planes skirted a low-pressure area in their path.

Progress of the ships was retarded during early hours of the flight as two periods of headwinds were encountered. Late in the evening, however, Comdr. McDade reported a brisk tail wind was speeding the ships on their way. Naval officials refused to predict a time of arrival for the planes.

The pilots of VP-6 squadron of the fleet patrol wing lifted their 14-ton long-range patrol airboats into the skies soon after dawn yesterday.

Early Take-Off

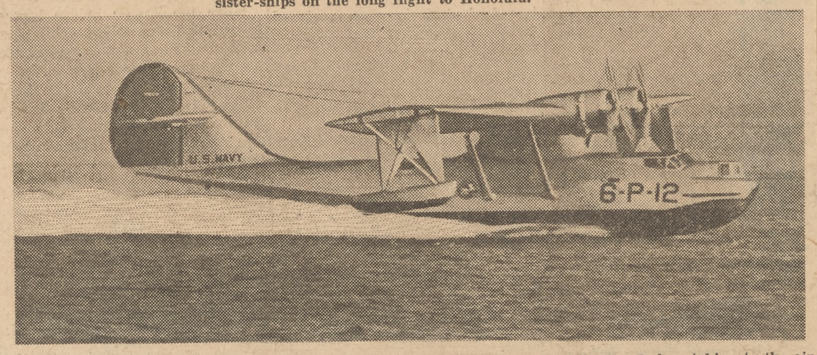
A full moon was just setting in the cloud banks on the western horizon when the first of the 12 airboats began thundering down the two-mile take-off course. The spindrift barely had cascaded from the wings when plane No. 2's motors, spinning the propellers at full blast, added to the noise which could be heard plainly several miles.

An airboat following in the wake of Comdr. McDade's flagplane ran into trouble when it tried to buck the waves kicked up in the bay by the slipstream of plane No. 1. Heading about, Lt. D. B. Brokenshire tried again and this time he was successful. Three other ships also had to taxi a second time before they lifted clear of the water.

The usual handicaps confronting heavily laden seaplanes taking off at dawn occurred again. The wind shifted. So did the pilots. Quickly abandoning the two-mile northwesterly take-off area, the remainder of the planes swung southward from the ferry lane and roared in safety over the Silver strand to the Pacific.

Taking Off on Epochal Flight

Rolling down the Naval Air station seaplane ramp, the huge patrol airboat 6-P-6 enters the bay to join her sister-ships on the long flight to Honolulu.



Throwing spray from either side of her sharp prow, the 6-P-12 skims along the bay before taking to the air, Hawaii-bound.

Flagplane Goes First

It was 6:50 a. m. when the flagplane went aloft. At 8:35 the last of the 12 planes had reached the rendezvous two miles over Pt. Loma and with the beat of their wings sounding in unison, they headed out over the sea for the 2553-mile voyage to the crossroads of the Pacific.

Veteran naval aviators recalled that the successful take-off of the powerful airboats was strikingly different than when an attempt was made to launch an F-5-L, laden with three tons of sand, into the air 10 years ago. Then the ship literally had to be blown into the air by the slipstream of a plane taxiing just ahead.

Two hours out from San Diego Comdr. McDade reported by radio that the squadron was bucking head winds. This was expected to continue until the squadron had passed the third patrol ship, 900 miles offshore.

Six surface craft, the mine layers Chandler and Breese, mine sweepers Sandpiper, Swan, Gannett and Pelican, acted as patrols along the route. They were spaced about 300 miles apart. Reports from them indicated the planes would have fairly good weather all the way from Pt. Loma to Diamond Head. In mid-Pacific, with the gasoline supply lessened and a corresponding load lifted from the motors, the planes were expected to pick up speed until they were exceeding the cruise rate of 120 miles an hour.

Scenes reminiscent of Capt. Henry Mustin's flight from San Diego to the Canal Zone more than a decade ago and of the subsequent Hawaiian flights of Comdr. Rodgers and Comdr. McGinnis, occurred at the naval air station prior to yesterday's take-off. Families of the sky sailormen bade them an affectionate farewell because they will have to wait for the maritime strike to end before they can hope for return transportation to Hawaii.

The flight of the 12-plane squadron from San Diego to Honolulu constitutes a spectacular illustration of the modern tendency to cover vast distances in hours instead of days. Superb as are the ships commanded by Comdr. McDade, they will be far eclipsed by new craft whose plans and specifications are a closely guarded secret at the Consolidated plant at Lindbergh field.

Preparations made by the navy for clearing the take-off areas of the 12 big planes proved successful, it was reported at headquarters of the 11th naval district.

Rear Adm. Ernest J. King, commanding the base force aircraft units, yesterday afternoon sent a message to Rear Adm. Sinclair Gannon, district commandant, expressing appreciation at the way in which the harbor traffic situation was handled by district craft and by commercial vessels. Copies of the message, which stated that the cooperation of the naval and maritime interests contributed to the safety of the take-off, were sent to various maritime organizations here. Plane take-off areas previously had been marked off, and a system of warning signals had been published by the navy.

The beat of American naval aircraft wings over the Pacific is said to be only the forerunner of a great fleet of commercial aircraft that will connect San Diego with the intricate network of airways linking the capitals of China, Japan, Hawaii, the Philippines and Australia with India, French Indo-China, the Netherlands Indies and through the British Imperial airways with the leading cities of England and continental Europe.

Navy Fliers Set Record In Honolulu Hop

J.D. TRIBUNE 1-29-37

Battling through thick weather in the last stages of their record-breaking flight, 12 San Diego-built United States naval seaplanes completed the longest overwater mass flight in history at 6:20 a.m. (Pacific coast time) today.

Landing at Honolulu at 3:50 a.m. (Honolulu time) after a flight from here which started yesterday morning, they officially covered the 2553 miles in 21 hours and 48 minutes elapsed time, The Associated Press reports.

Secretary of the Navy Swanson expressed the navy's elation today over the successful completion of the mass flight. "While the flight was a routine one for delivery of new planes to replace obsolete ones now at Honolulu," he was quoted by The Associated Press, "it nevertheless was a grueling test of the new patrol planes and of the skill of the operating personnel. To fly 12 large planes in formation through all kinds of weather for a distance of 2600 miles and maintain a schedule of departure and arrival fixed several weeks ago is a gratifying example of the efficiency of our naval aviation."

During the last 300 miles, the squadron maneuvered between altitudes of 2000 and 15,000 feet to escape what Lt. Comdr. William H. McDade, flight commander, described as "very bad weather."

They came out into bright moonlight as they flew over the Pearl Harbor naval base in perfect formation, their flying lights twinkling. The first plane came down on the harbor at 4:29 a.m. (6:59 a.m. Pacific coast time). The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Patrol Boat Missed

The only previous mass transpacific flight was made three years ago when Lt. Comdr. Kneffler McGinnis led a squadron of six naval planes on another "routine flight" of 2400 miles from San Francisco bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

In the flight ending today, McDade led his squadron in circling Honolulu harbor for 39 minutes before the first plane swooped down to a perfect landing. Only 150 spectators, mostly families of the 80 fliers, were on hand to welcome the planes. Honolulans, accustomed to weekly transpacific flights of the big clipper planes, showed only slight interest in the navel maneuver.

The planes officially left San Diego yesterday at 8:32 a.m. (Pacific coast time). The first plane took to the air at 6:57 a.m., the last at 7:56 a.m., the fliers soaring over San Diego for half an hour to gain the 10,000-foot altitude sought for the start of the flight.

Weather conditions generally throughout the flight were reported good, although bad weather was encountered on the last 300 miles. Radio Corporation of America reported that McDade radioed that the armada dropped to within 2000 feet of the water to escape bad weather, and that the formation missed the last patrol boat between the mainland and the islands, the U.S.S. Pelican. After dropping to 2000 feet the planes then soared to an altitude of 15,000 feet. Previously, during the long, uneventful hours of their trip, they had held to 12,000 feet.

Rear Adm. Earnest J. King, commander, aircraft base force, said today he did not wish to make any statement concerning the flight. He previously has stressed that the flight was a "routine transfer of navy planes."

Consolidated Aircraft Corp. officials, builders of the planes, said: "While we naturally are very proud of the performance of the ships, credit for the successful flight must go to the navy and its pilots who performed the remarkable feat of so successfully taking the 12 planes on such a long overwater flight."

The navy spread its wings over the Pacific today in the greatest over-water flight it has attempted, when 12 giant flying boats left San Diego at 8:32 a.m. on a 2553-mile, nonstop flight to Honolulu.

Pass Station Ship

All 12 flying boats passed over the first station ship, U.S.S. Sandpiper, 340 miles out, at 12:30 p.m., according to word here.

So heavily loaded they required a run of more than two miles over the surface of the bay before they could rise, the planes, which were built by the Consolidated Aircraft Corp. here took to the air at intervals extending over the period of an hour. The first plane, flown by Lt. Comdr. William M. McDade, was lifted into the air at 6:57 a.m. The last plane to get off left the water at 7:56 a.m.

Two of the planes experienced some difficulty in taking off, observers reported. They were Nos. 6-P-6 and 6-P-8, the latter piloted by Lt. Comdr. J. L. Heap, who raced his craft three miles across the bay from the foot of Market st. to near La Playa and then was unable to get off the water. Both planes on their second attempt rose easily.

Once aloft the 12 remained over San Diego until 8:32 a.m., swinging back and forth over the bay and city to gain altitude before streaking out over Pt. Loma. They sought a 10,000-foot altitude here.

Tail Wind Indicated

Weather conditions at San Diego were good for the take-off, and the weather bureau reports that conditions over the route are good. There are no storms between San Diego and Honolulu charted on today's weather map, and wind directions and velocities indicate that the fliers will have moderate tail winds through out the flight.

The public's interest in the record flight was demonstrated by the crowds which assembled along the waterfront and on Pt. Loma to watch the planes depart. Cliff Rock, custodian of the Old Spanish Lighthouse, Cabrillo national monument, Pt. Loma, reports that there were several out-of-state cars out on the end of Pt. Loma early today to watch the planes. An extra early ferry was operated to accommodate friends and relatives of the fliers who wished to be at North Island for the take-off.

Wind conditions changed during the take-offs. The first planes roared down the bay from the foot of Market st., but a change in wind necessitated the last six planes coming up the bay from La Playa.

80 Men on Trip

The 80 navy officers and men making the flight hope to be in Honolulu within from 18 to 20 hours after leaving here. The planes are the most powerful yet constructed for any navy of the world, and are part of an armada of 76 being constructed for the navy. They are reported to be capable of 3000 miles of sustained flight without refueling.

Today's flight marks the first attempted from San Diego to Honolulu. It is not the first group flight of navy planes to Honolulu, six having been flown there from Alameda three years ago this month, a distance of 2053 miles.

Rear Adm. Ernest J. King, commander aircraft base force, describes the flight as a "ferry flight of patrol squadron six to Hawaii." The planes, replacing older craft at Honolulu, will participate in United States fleet problem 18 in May, when the fleet's annual spring exercises will be carried on in the north Pacific from Hawaii to Alaska and California.

S. D. GAINING IMPORTANCE AS PLANE-BUILDING CENTER

S. D. UNION 1-17-37

Consolidated Aircraft Plant, Source of Latest-Type Navy Craft, Employs 3613 Men; Construction Is Carried On in Secret; Wages Above Average, President Says.

1/17/37

By EDWARD T. AUSTIN

When the fleet of big navy planes left here last week for a practice flight, the products of one of San Diego's greatest industries was receiving a practical test. Not that they haven't been tested thoroughly before, nor that these are the first to be turned out, but they are impressive evidence that San Diego rapidly is becoming an important manufacturing center for the nation's defense.

In a little more than a year the Consolidated Aircraft plant, which manufactures the navy planes, has expanded until it employs 3613 men, 2985 of which are in actual production work. The remainder are in the plant as non-productive employes, such as time keepers, maintenance men, shipping and receiving clerks.

Some idea of the size of this industry which has sprung up in San Diego almost overnight and which has reached a proportion far beyond that imagined by a great many people who live here, can be gained by a realization that the payroll averages more than $100,000 a week and steadily is growing.

Unfortunately, perhaps, it isn't possible for San Diegans or anyone else to go through the plant. The development and manufacture of national defense mechanism is an industry that, while not 100 percent secret, is carried on in a way that one doesn't go barging in to have a look around without a pretty good reason. Only American citizens are employed there and only American citizens, and very few of them, are allowed to see the plant in operation.

Rumors Spread Fast

While the average citizen would not know a military secret if he saw it lying around, the navy department, which maintains close supervision over the Consolidated plant, takes no chances.

It is possible for San Diegans to know something of this huge business and industry that has sprung up in their midst. In any industry where there is so much necessary secrecy as in the manufacture of military equipment, the most casual observation soon develops into a rumor and from rumor it isn't far to wild reports of all sorts—most of them harmless, some of them vicious, but all of no value either to the industry or the community.

In the current issue of the Consolidator, monthly organ issued by the company, R. H. Fleet, president, talks to the employes through his regular column and reveals to them a number of facts which are not generally known. Particularly does he explode the frequently heard report that the company is getting rich on government contracts. There are no "cost-plus" contracts in the plant.

Under the Vinson act, Mr. Fleet explains, Consolidated is barred from profiting more than 10 percent on government contracts. As all the work being carried on is for the navy, the entire plant operations would come under that law. But, he goes on, that doesn't mean that the government guarantees the company 10 percent profit. The contracts are awarded on the basis of the lowest bids by responsible manufacturers and the fact that Consolidated obtained them indicates that its bid was the lowest. If it figures too low and loses money, that's too bad, but there's nothing to be done about it. If it bids high and makes more than 10 percent, the surplus must be turned back to the government.

The government doesn't take Consolidated's word for its operating and manufacturing costs. It has its own auditors on hand to check every item, just as 15 naval department inspectors check every piece of material that goes into the planes. Then too, he explained, there are a number of items of expense which the government does not allow and which must come out of the profit, if any, such as certain federal taxes, interest on borrowed money, advertising, publicity and other costs.

Pay Said Good

Denying another rumor that has gained some circulation, Mr. Fleet points out that no employe in Consolidated draws less than 40 cents an hour. In the last six months, 1700 men have been given pay increases as they developed in ability. The plant now is operating in two shifts, the day crews working on a base of 40 hours a week and all being given an extra five hours, for which time and a third is paid. The night crews also are on a 40 hour base but receive 10 extra hours a week at time and a third. Only the 14 executives in the plant fail to participate in the overtime.

Comparing Consolidated wages with those paid elsewhere, Mr. Fleet points out that department of labor statistics for August, the latest period compiled, showed that average weekly earnings for the aircraft industry in the United States were $26.07. In California, the industry as a whole paid $25.82. The average paid by Consolidated for that month was $28, or $1.93 better than the national average and $2.18 better than the state average for the industry. Since August, he said, numerous raises have been given so that the average here now is even higher.

"At this point," Mr. Fleet went on, "it might be of interest to you to know that the stockholders of Consolidated haven't received a dividend in more than eight years, with the exception of the preferred dividend, 6 percent a year, paid to holders of our recently issued preferred stock, which is in the same class as money borrowed and which was issued for the purpose of financing our recent plant expansion."

Efficiency Sought

Mr. Fleet explained that the reason he was going into all these phases of the industry was that a great many people have obtained an erroneous impression. He put it this way:

"There is just so much money in each contract and Consolidated can, at best, only benefit by a small percentage of it. So it is that when one man is able to produce some article in a more economical manner, thereby saving that much for the pot, he in turn receives just reward in the form of increased compensation. On the other hand, those on our payroll who increase the cost of our products by inefficiency are removing the possibility of increased wages to others. In the long run, these men are eliminated."

A trip through the plant would reveal a huge, light, airy and well-ventilated building, adequately heated during the cold weather by a central plant which blows clean, fresh air into each section. Every piece of equipment is as modern as next week and every convenience for the comfort of the employes has been provided. It would be difficult to find a better-looking industrial plant anywhere in the country and, on the whole, a better-cared-for group of workmen. In is an industry of which San Diego can feel proud.

FLEET FORECASTS PROSPEROUS FUTURE FOR CONSOLIDATED AIR; WARNS AGAINST 'IDLE RUMORS'

S. D. SUN 1-20-37

Aircraft Corporation Head Declares San Diego Plant Maintains "Above Average" Wage Scale; Lists Recent Promotions Among Workers

Major Reuben H. Fleet, president of Consolidated Aircraft Corp. today issued a smiling forecast that the 3613 employes of Consolidated would have steady work for at least a year and a half, and probably for as long as they wanted to stay in San Diego.

The forecast was part of the major's first-of-the-year statement, published in the January issue of the firm's publication, "Consolidator."

At the same time he predicted a long, prosperous era at the plant, Major Fleet also issued a warning to employes to be wary of subversive talk concerning wages and hours of employes.

"Persistent rumors have been circulated in San Diego that Consolidated employes are underpaid. Reference to authentic sources of information will show that this is not the case," he wrote.

Above Normal Wage

"The United States Department of Labor publishes statistical information for the entire country in its monthly labor review. On page 1285 of the last issue of this publication appears the information that the average weekly earnings for the entire aircraft industry in the United States were $26.07 in August, 1936. The State of California Labor Statistics report shows the avergae in California to have been $25.82 for the same month.

"Consolidated's weekly average during last August was $28, $1.93 better than the average for the nation and $2.18 better than the average for California."

Major Fleet's statement, as published in the Consolidator, follows in part:

"On the date of writing we have a total of 3613 employes on the payroll. Of this number 2985 are actual producing factory men: there are 412 more in the factory that may be classed as non-productive, such as maintenance men, inspectors, timekeepers, watchmen and janitors, shipping and receiving and other clerks, etc. The engineering department accounts for 152 and the general office has 64 employes, 44 of which are employed in the accounting department, the remaining 20 being officers and executives, their secretaries, etc.

Steady Work Ahead

"Every one of those 3613 employes has steady work. By that I mean that we have no employes on a 3-day week basis, no employes working only four or five hours a day and no employes on piece work. We have sufficient work ahead of us for a year and a half and expect to get more during that time. A majority of our employes should have steady work for years to come.

"As employes have become more skilled, voluntary increases have been made from time to time. I have checked back three months and find that since October 1, 1936, to the end of the year, over 1600 of our hourly employes have received increases. This comprises over 62 per cent of the total on the payroll at the beginning of that three-months period. In that same time, 94 of our salaried employes have received increases which comprises 28 per cent of our salaried staff.

These raises will cost Consolidated at the rate of $164,845.44 during the coming year ($147,052.80 to hourly employes, $17,792.64 to salaried employes).

No Dividends Paid

"At this point it might be of interest to you to know that the stockholders of Consolidated have not received a dividend in more than eight years, with the exception of the preferred dividend (6 per cent per annum) paid to holders of our recently issued preferred stock, which is in the same class as money borrowed and which was issued for the purpose of financing our recent plant expansion.

"Every man in the organization is under constant observation for promotion and for that reason, 1700 men have received increases during three months.

"We are working on a base of 40 hours per week and are temporarily offering five hours of overtime to everyone (except as to 14 of us on the executive payroll who work the overtime without the extra pay therefor) at time-and-a-third for the day shift, and ten hours overtime to everyone on the night shift at the same rate. This overtime costs us an extra bonus amounting to more than $200,000 per year. Everybody (except the 14) gets his share of this bonus.

"If we paid time-and-a-half, this bonus would cost over $300,000 per year—or about $1000 per working day. At such a penalty we could not afford very much overtime—only such as was absolutely necessary to maintain production. The Assistant Secretary of Labor told me the time-and-a-half provision in the Walsh-Healy Act was put there to force employers (because of the high penalty for overtime) to absorb as many as possible of the 11,000,000 odd men with no jobs. None of our current contracts comes under the Walsh-Healy Act.

"It seems to me that under our present system everybody gets the same treatment—whereas under a system offering spasmodic overtime, only a fortunate few would benefit thereby.

'Challenge Propaganda!'

"Since last May no employe has drawn less than 40 cents per hour.

"We have spent all we had, and our preferred stockholders have recently put up more, to provide us with ideal working conditions—a fine factory, well lighted, well heated, airy, sanitary, healthful and clean. Our business is not as dangerous to workers as many. It has a firm future and is an honorable way of making a living without resort to slave-killing methods.

Challenge propaganda unless you know it to be fact! Our products—our business—are founded upon truth!—R. H. FLEET."

Explorer To Fly Ocean In Big S. D. Plane

S. D. TRIBUNE 1-28-37

New Guinea Goal Of Air Cruiser Like Navy's

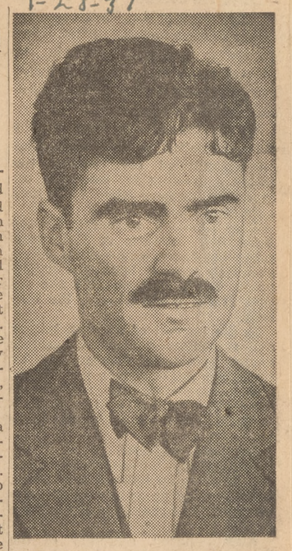
A San Diego-built plane now under construction by Consolidated Aircraft Corp., which will drop food instead of bombs and shoot with cameras instead of guns—although otherwise similar in construction and design to the 12 navy patrol planes which left here today for Honolulu, will be flown from the United States to New Guinea next winter in the interest of science. The plane, a Consolidated PBY-type flying boat, has been purchased by Richard Archbold, research associate of the department of mammals, American museum of natural history.

The route covered by the China clipper in its Pan-American Airways service across the Pacific probably will be followed by Archbold. He said he tentatively plans to cross by way of Hawaii, Midway island, Wake island and Guam, proceeding from the latter point straight south to New Guinea. The object of the expedition, which will be led by Dr. Austin L. Rand, who has accompanied Archbold on three previous expeditions to New Guinea, is to collect mammals, birds and plants, as well as to study the life history of birds and animals in the regions to be explored.

Plane To Drop Supplies

Archbold said the party of scientists probably will proceed to Hawaii by steamer, and that he then will pick them up there after flying the plane from the United States. He plans to be gone a year. During the expedition the plane will be used for "advanced base operations," flying over virtually inaccessible land and dropping foodstuffs and supplies by parachutes for use later by members of the expedition.

Archbold, 29, has a quiet manner and slow, almost drawling speech, which belies his exciting vocation. He has traveled in many strange places, and received his education, as he puts it, "any and everywhere." In 1928, when he was 21, and deeply engrossed in photography, his father got him a place as a photographer in an expedition to Madacasgar, sponsored by the American, British and French museums of natural history. He later went to New Guinea, and said that the worst part of the whole trip was the difficulty of transportation. Hence, he purchased a plane, which later turned over and was lost. With his new plane, he said, he will be able to carry larger loads than ever before and increase his range of exploration. He took 1500 pictures on his last expedition to New Guinea, and expects to take even more this next one. He plans to fly the big plane himself.

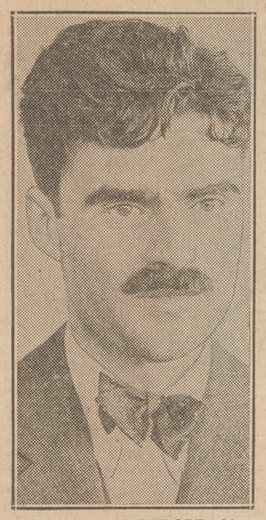


Richard Archbold, research associate of the department of mammals, American museum of natural history, who will fly a San Diego-built Consolidated BBY-type plane to New Guinea next winter.

He Can Do Just About Anything—In A Jungle

Richard Archbold, 29, Waits Delivery Of PBY Plane

S. D SUN 1-31-37



RICHARD ARCHBOLD, 29
Seeks new jungles to conquer.

At 29, Richard Archbold, a New Yorker with a British accent, has been chief pilot, chief photographer, and leader of tropical expeditions; he can rattle off the scientific names and complete descriptions of mammals from the Australian "teddy bear" (koala to him) to the giant panda of Manchukuo; and he can nonchalantly maneuver a giant amphibian plane against a cross wind into a seven-knot current of a narrow stream which offers only 50-foot clearance from the wing tips.

Mr. Archbold, apparently, has feared getting a one-track mind. In his extreme youth, he had ambitions to explore. Combine the two and you have quite a versatile person.

Strenuous Life Devotee

A devotee of the strenuous life, but not to the point of flaunting it in the face of every city-dweller he meets, Mr. Archbold is taking it relatively easy right now. Consolidated Aircraft Corp. has provided him with an office, and during the next few months he is going to watch them turn out one of their famous PBY patrol bombers for him.

First Private Sale

Mr. Archbold is purchaser of the first PBY to be sold a private individual. Of course, it won't carry any bombs or other armament. This daring young man will use the huge airboat on another expedition into New Guinea next November for the American Museum of Natural History. He happens to be Research Associate of the Department of Mammals in this venerable institution.

The plane will be used to penetrate inaccessible jungle country traversed by rivers. When advance parties travel miles away from their base camp, use of the PBY will enable Mr. Archbold to drop food to the scientists.

Extremely Shy

The aviator-explorer-photographer gives an impression of extreme shyness. He'd look younger were it not for his unruly shock of black hair and thick mustache. He doesn't remember where he picked up the accent. Yes, he's lived in Australia, but not long enough to speak like a dyed-in-the wool Britisher.

He got his first job at the age of 21 as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. He wound up this trip as an animal collector, and found the work so fascinating he decided to make a career out of exploration, even if it meant living in fever-infested jugles much of his life.

Authority On Fever

Fever. That's another subject about which Mr. Archbold can talk authoritatively. He has provided lodging for malarial spirochetes since 1933. In the jungles you dose yourself continually with quinine to build up resistance against the dread tropical mosquito which squirts the malarial germ into your blood stream.

"I became careless in the 1933 expedition which I led into Papua, New Guinea," he recalled. "I neglected to take the quinine, and the inevitable fever hit me.

Medicine Can't Help

"When malaria strikes, there's nothing you can do. You just lie in agony waiting for the sickness to turn one way or the other. You either live or die. No medicine can help you."

The fever stayed in his blood stream after the attack passed.

Since then, he has never known when the next attack will occur. "That's the way with malaria," he said. "If it's in you, it's liable to pop up actively at any moment. Then your temperature can bounce up to 105 degrees in 15 minutes."

15 Grains Quinine Daily

Since his second attack last January, Mr. Archbold has been sentenced to a medicine diet of 15 grains of quinine daily. And you may know how quinine tastes.

Permission for the sale of the plane had to be granted by the State Department. Since delivery of a U. S. military craft is forbidden for one year after the first plane is received by the government, Mr. Archbold must wait until next November before taking the PBY out of the country.

He will probably follow the course taken by the 12 Navy bombers to Hawaii, continuing to Midway Island, Wake Island, Guam and thence to New Guinea. The scientists will join him in Hawaii.

NAVY AIRBOATS BEAT STORM TO HAWAII BASE

S.D SUN 1-24-37

Record Mass Flight Ends After S. D. Bombers Outrace Winds

Successfully fighting their way through a 'wall' of stormy weather 185 miles from Pearl Harbor, 12 Navy patrol bombers reached Honolulu at 6:20 a. m. (Pacific time) today to complete the most daring mass flight in U. S. aviation history, the United Press reported.

The first plane of the armada which flew the 2553-mile (2270 nautical miles) distance from San Diego to Hawaii landed at 6:29 a. m. and the other planes followed it to the water in rapid succession.

The exact total elapsed time of the flight, 21 hours and 48 minutes, was almost three hours less than that of the previous Navy trans-Pacific hop of six seaplanes led by Lieut.-Comd. Knefler McGinnis in January, 1934. Flying a distance about 200 miles shorter, from San Francisco to Hawaii, McGinnis' squadron crossed the Pacific in 24 hours, 45 minutes.

Two patches of unsettled weather delayed the planes on the long hop after they left San Diego at 8:30 a. m. yesterday. The first was encountered yesterday morning, soon after the takeoff. The second was early today when the fleet was within 185 miles of Pearl Harbor.

Driving rain and thunder showers forced the planes to shift from their course to escape the storm which earlier swept Oahu. Visibility became better closer to Honolulu and a brilliant moon flooded the ocean as the airmen winged their last few miles.

Through Bad Wall

Lieut. Arnold E. True, Pearl harbor aerologist, said that the "wall" of bad weather through which the fliers came was the worst reported in the area in years.

Wives and sweethearts of the aviators—left behind when the men left for San Diego last August—rushed to greet the men when then came ashore after crews, wearing bathing suits, swam out to attach mooring gears to the planes.

In Perfect Formation

The big airboats first were sighted rounding Makapuu Point, on the northeast corner of Oahu, at 5:49 a. m. At 6:20 a. m. they circled over Honolulu in perfect formation.

Six Navy surface craft were stationed across the ocean at 300-mile intervals to aid the fliers. The aircraft tender Pelican, 300 miles from Honolulu, was left behind before 3 a. m. and the fifth ship, the mine destroyer Breese, 610 miles out, was sighted at 12:30 a. m. today.

The new bombers, carrying 78 officers and enlisted men and two civilians, both employes of the builders, Consolidated Aircraft Corporation, will be used to replace obsolete planes in service in the Hawaiian islands area. They are forerunners of a giant fleet of 216 planes to be spotted at strategic points along the Pacific coast from Hawaii on the west to Puget Sound on the north and Panama on the south.

In Contact With S. D.

Regular contact was maintained with the San Diego Naval station, Pearl Harbor and the six surface craft stationed along the route, by means of powerful radio equipment.

The first surface ship, the aircraft tender Sandpiper, was passed at 12:30 p. m. about 340 miles at sea from San Diego. Headwinds were encountered which slowed down the giant seabirds.

Hold Speed Of 130

The destroyer Chandler, about 700 miles from San Diego, was sighted after the planes had skirted a low pressure area at 3:30 p. m. At 7:15 p. m. the planes passed the third patrol vessel, Gannet, about halfway on the 2553 mile journey (2270 nautical miles).

Two hours later, the fourth patrol ship, the aircraft tender Swan, was passed by the air fleet. By this time the weather had cleared and the squadron experienced no difficulty in holding and sometimes exceeding its cruising speed of 130 miles per hour.

The squadron of 12 planes is commanded by Lieut. Comdr. W. M. McDade of Pearl Harbor. Each ship carries a crew of six or seven and enough fuel for a 3000-mile flight.

Cooperation of the Harbor Department and other local maritime authorities was lauded today by Rear Adm. Ernest J. King, who declared that the difficult takeoffs of the 12 patrol bombers yesterday were considerably aided when civilian boats kept clear of the harbor runways.

In a dispatch to 11th Naval District headquarters, Adm. King recorded his appreciation, indicating that courtesy of commercial vessels had contributed to the safety of personnel in the big airboats.

The takeoff runways extended practically the entire length of the bay, from the ferry lanes to Point Loma, and even that distance of two to three miles was almost insufficient for the planes which did succeed in rising from the water in a westerly direction.

Finally, it became necessary for the pilots to take a course beginning at La Playa. With a little head wind helping to lift them from the water, they were able to shorten the runway at least a mile. S.D SUN 1-24-37

HONOLULU 'ALOHA' CAKE FINDS S. D. FLIERS RECEPTIVE

S.D TRIBUNE 2-9-37

Even a battle against the elements could not prevent the crew of the flagship in the navy's airplane San Diego-Honolulu flight from lining up for a share of "Aloha" cake at Honolulu at the end of the greatest mass flight, as shown here in an Associated Press photo. Left to right: E. J. McCormick, Louis Serpa, Lt. C. H. Ostrom, Lt. Comdr. W. M. McDade, flight commander; Henry Hutley, Thomas Duval, Reginald Fourcher. The storm the San Diego navy fliers encountered 11 days ago moved on across the Pacific and struck San Diego Saturday producing torrential rains here.

GANNET LEAVES ON MID-PACIFIC PATROL DUTY

S.D SUN 1-21-37

The San Diego aircraft tender Gannet left the harbor this morning for an unannounced destination in the Pacific, believed to be a point midway between here and Hawaii, where the vessel will undertake "plane guard" duty on the flight to Pearl Harbor next week of 12 Consolidated PBY patrol bombers.

Swan, Avocet Depart

Meanwhile, the aircraft tenders Swan and Avocet, attached to the Fleet Air Base at Pearl Harbor, left Hawaii yesterday, 11th Naval District headquarters were notified today. These ships will probably be stationed at 300-mile intervals and will constitute the last two plane guards on the long flight.

Following the Gannet, which will be posted approximately 1000 miles south of here, will be the aircraft tender Sandpiper, and the Wright, flagship of Rear Adm. Ernest J. King.

Airboats To Hop

The 12 airboats to make the flight are commanded by Lieut.-Comdr. William M. McDade of Pearl Harbor's Patrol Squadron Six. All have undergone 24-hour non-stop endurance tests and are beblieved in fit condition for the transpacific flight, which will probably start from Alameda.

'Plane Guards' To Leave

To engage in "plane guard" duty on the trans-Pacific flight next week of 12 Consolidated PBY patrol bombers, the flagship of Rear Adm. Ernest J. King, USS Wright, the aircraft tender Sandpiper and two destroyers will probably leave the harbor over the weekend. The Gannet preceded these craft to her station 1000 miles south of here yesterday.

Weather data will be flashed to the plane squadron in order that Lieut.-Comdr. William M. McDade, commanding officer, may decide the most satisfactory time of departure for the islands.

S.D. SUN ◇ ◇ ◇ 1-21-37

S.D SUN 1-19-37

There was a lot of scurrying about at Rockwell Field yesterday getting things in readiness for one of the rare surprise visits to San Diego by high-ranking Army officers.

With only a few hours advance notice, Brig. Gen. A. W. Robbins, assistant chief of the Army Air Corps in charge of the Materiel Division, dropped in on the depot for a semi-official tour of inspection.

Five Officers Accompany

Gen. Robbins was accompanied by five fellow officers in a Lockheed Electra Army transport. They were Lieut.-Col. Oliver P. Echols, chief of the engineering section of the Materiel Division; Lieut.-Col. William F. Voiandt, Maj. Bennett E. Meyers, who represented the Chief of the Air Corp's Field Service Section, under whose jurisdiction the Rockwell Field Air Depot operates, and pilots of the plane, Capts. Frank G. Irvin and Turner A. Sims Jr.

Probability that Consolidated Aircraft Corp. may soon bid on an Army plane contract was seen in the inspection of the local plant yesterday by Gen. Robbins, who is responsible for procurement of Army aviation equipment.

Paving of Ramp Approach To Start Today S.D.SUN 1-21-37

Paving of the runway extending to the municipal ramp was to begin today, weather permitting, Port Director Joe Brennan reported.

The paved strip will enable Consolidated Aircraft Corp. to move newly-built PBY planes to the ramp with little difficulty, according to Brennan. Launching of the airboats from an improvized ramp reached after "rough going" across a beach is a troublesome affair at present.

12 NAVAL PLANES LAND IN HONOLULU

WASH STAR 1-29-37

21 Hours and 48 Minutes Time for 2,553-Mile Flight From San Diego.

By the Associated Press.

HONOLULU, January 29.—Battling through thick weather in the last stages of their record-breaking flight, 12 huge United States naval seaplanes completed the longest over-water mass flight in history at 3:30 a.m. today (9:20 a.m. Eastern standard time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 feet to escape what Lieut. Comdr. William H. McDade described as "very bad weather."

Arrive in Formation.

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 a.m. (9:59 a.m. Eastern standard time).

The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Six in Previous Flight.

The only previous mass transpacific flight was three years ago when Lieut. Commander Kneffler McGinnis led a squadron of six naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

Today Comdr. McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectacular demonstration of the precision of naval flying.

McDade, who did not appear tired, related a bitter struggle with a storm

Navy Planes HITS HAWAII AS PLANES WING IN

Low Pressure Area Sweeps Eastward In Night With Thunder, Lightning

A low pressure area which swept eastward across Hawaii, unloosing a vicious storm at it went, provided a brief but intensive disturbance here late Thursday and a furious onslaught in the path of the 12 navy planes flying from San Diego to Pearl Harbor.

Menacing dark clouds were the forerunner of the storm in Honolulu. Against a sea ranging in tones from pea green to deepest blue a slate gray curtain stretched from horizon to miles high in the sky. Curling lines of surf appeared snow white before the unusually dark background.

Shortly before 6:30 p. m. rain broke in waves over Honolulu, accompanied by lightning and pealing thunder.

According to Walter Feldwisch, weatherman, the low pressure area continued today but appeared to be disintegrating, although a repetition of the disturbance was possible.

Presence of the disturbance to the west was shown in weather reports Thursday but the weatherman said he did not anticipate that it would move as rapidly as it did in this direction.

Weather today, he said, was likely to continue unsettled with variable winds.

A thunderstorm Thursday was reported from Lanai City where rains were heavy. Rainfall in downtown Honolulu in a 24 hour period ending at 8 a. m. today was a fraction below an inch although precipitation in valleys and uplands was considerably heavier. Lihue, Kauai, reported heavy rains Thursday. The rainfall report from Hilo, Ha-

(Continued on Page 9, Col. 8)

19 OF AIRBOATS ... Lindbergh Field ... Defeat Storm Gods ... Couldn't Get Past, But Did

How the 12 big planes of squadron VP-6 fought through a storm after striking a veritable wall of wind some 300 miles distant from Pearl Harbor at midnight last night was related by squadron personnel following their arrival here at 3:50 this morning from San Diego.

"We flew as low as 1,000 feet, and ascended to 14,000 feet to get over it, but it extended on up higher," Lt. Cmdr. William M. (Shorty) McDade said after he stepped out of his plane on the fleet air base ramp.

"It was just one of those things you can't get through," he said.

Trapped by Storm

But the planes did get through, unable to fly above a storm which, to use the words flashed in a radio message from his plane to the air base, extended upward "solid from the surface" to an undetermined height.

"We were trapped in it," Cmdr. McDade said.

The elevations of 1,000 and 14,000 feet were the lowest and highest which the squadron reached on its 2,631 mile voyage from San Diego.

"We were delayed an hour and a half—between here and the Pelican."

The Pelican is an aircraft tender at Pearl Harbor. She was stationed out approximately 300 miles from Pearl Harbor to furnish weather reports.

"Didn't Slow—We Stopped"

Asked how much the storm had slowed the planes down, Cmdr. McDade said, "We weren't slowed down. We were stopped cold."

At one time, he said, the squadron flew back for some distance away from Pearl Harbor before turning again to cope anew with the storm.

"We tried everything," he said. "All I wanted to do was get out of it."

Judged by time spent in battling the weather, the storm was estimated to be about 200 miles deep.

"We could see lightning but we kept well out of it," Cmdr. McDade added.

Headwinds At Beginning

Cmdr. McDade said the squadron encountered more headwinds than it expected. Headwinds set in shortly after the takeoff, but had been cleared by noon.

The squadron commander expressed himself as pleased with the performance of the planes. He spoke warmly of the officers and

(Continued on Page 9, Col. 8)

VICIOUS STORM HITS ISLANDS

(Continued from Page 1)

waii, for Thursday was 1.06 inches.

A cloudburst between Haiula and Waimea made the Kamehameha highway impassable between those points from 3 p. m. to 5:15 p. m. Thursday but caused no known damage, Kaneohe police reported today.

Submerged in places, the highway was strewn at other points with debris. City-county road gangs cleared away the tree stumps and branches.

No damage in Honolulu due to heavy rainfall was reported to the police or fire departments.

NAVY FLIERS VANQUISH STORM GODS OVER SEA

(Continued from Page 1)

men who formed the plane crews.

Speeds varied from 75 to 140 knots.

Louis Serpa, aviation chief machinist mate and second pilot in Cmdr. McDade's plane, looked fresh but confessed he would "like to stretch out on top of a bunk and just sleep. I've been going since 3 o'clock yesterday morning. That's when I got up before our takeoff.

"Just before midnight we hit a wall of wind. Air currents were coming every way. They tossed the planes up like balloons."

"Just a Business Trip"

The squadron finally set a straight course into the storm and battled through it, crew members said.

Cmdr. McDade, grinning, was overheard telling a friend after his arrival here that the flight was "just a business trip."

Thomas Duval, a husky machinist mate first class in Cmdr. McDade's plane, said, "The flight was okay. It got a little cold, though."

Officers and enlisted men were gayly welcomed by wives and friends. In the VP-6 hangar they drank coffee and ate sandwiches. On a table was a four foot cake across the white surface of which appeared in pink icing the legend, "Aloha—Honolulu, January 28, 1937—VP-6."

In opposite corners appeared, in brown chocolate, maps showing the place of takeoff at San Diego and the fleet air base at Pearl Harbor.

Cmdr. McDade cut the cake after the crew of the last plane to arrive had stepped ashore.

FASTEST AIR TRANSPORT DUE

S D SUN 2-10-37

Production of a transport monoplane 30 miles an hour faster than any commercial airplane in the United States is under way at Burbank, officials of Lockheed Aircraft Corp., said today.

The new seven and one-half ton airliner will be an all-metal, twin-engined plane carrying 11 passengers, two pilots and a stewardess. It will be capable of a top speed of 265 miles per hour, a cruising speed of 240 miles, and a non-stop flying range of 1950 miles, company officers said.

Powered by two Wright Cyclone 840 horsepower engines, the plane, designed as the Lockheed "14", will take off in 11 seconds in the comparatively short run of 610 feet. With full gross weight of 15,000 pounds, it will climb to an absolute ceiling of more than five miles and will operate, with one motor shut off, at an altitude of 14,000 feet, the plane's designers claimed.

NAVY ASSIGNS NEW SQUADRON TO SAN DIEGO

S.D.SUN— 2-1-37

Seattle Unit Transferred To Base At North Island

San Diego's Navy aviation establishment soon will be expanded to include another patrol squadron, the Aircraft Base Force operations office revealed today.

Officers and men of Squadron VP-12, now stationed at Seattle, will be transferred to North Island and go into service with the aviation units to be attached to the USS Langley.

Langley Due Back

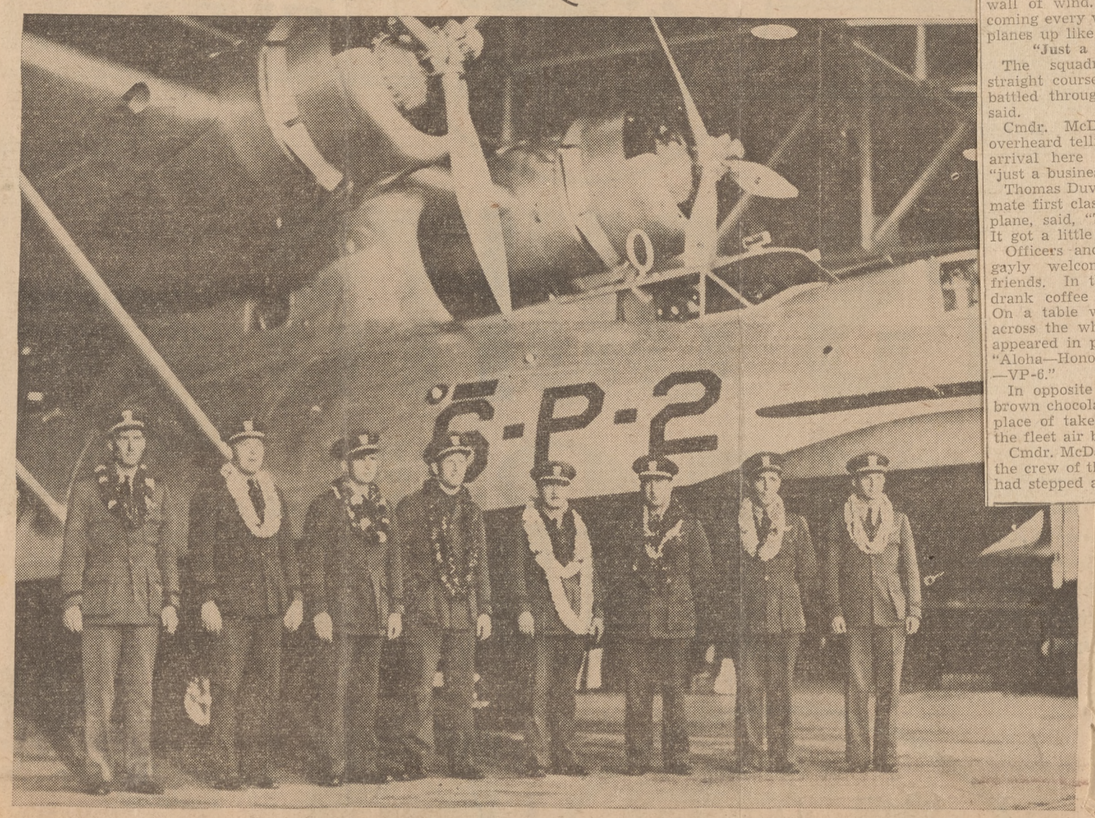
The Langley is scheduled to return here from Mare Island Navy Yard next Wednesday on completion of extensive repairs which have converted her from an aircraft carrier into a tender.

Two planes of Squadron VP-12 were flown here from Seattle this week to undergo overhaul before being transferred to VP-17, commissioned on North Island Jan. 2 and due to begin operations in the Washington city next month. The remaining four craft of VP-12 are being delivered to another of Seattle's new squadrons, VP-16.

Bombers Added

Twelve Consolidated PBY patrol bombers will be assigned to VP-12 during the next few weeks, the Base Force operations office announced. The squadron is commanded by Lieut.-Comdr. James E. Dyer.

NAVY PILOTS WHO VANQUISHED STORM A



Above are eight of 13 officers who flew from San Diego to Pearl Harbor, arriving this morning in new patrol bombing planes. They are shown alongside number 2 plane of squadron, inside hangar at fleet air base following arrival here. Photograph furnishes some indication of size of planes, whose wingspread measures 104 feet. Left to right, Lt. (jg) J. B. H. Young; Lt. (jg) J. L. Heap; Lt. W. W. Harvey; Lt. (jg) G. C. Briant; Lt. Cmdr. W. M. McDade, commanding oficer; Lt. R. W. D. Woods, executive officer; Lt. (jg) L. O. Matthews, and Lt. (jg) W. M. Drane.—Star-Bulletin photos.

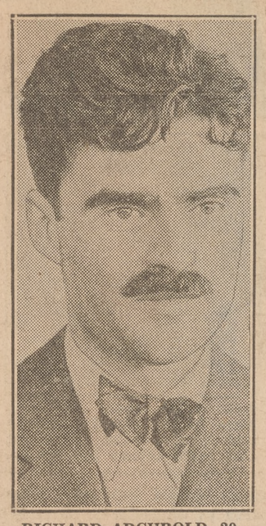
He Can Do Just About Anything—In A Jungle

Richard Archbold, 29, Waits Delivery Of PBY Plane

S. D SUN 1-31-37



RICHARD ARCHBOLD, 29
Seeks new jungles to conquer.

At 29, Richard Archbold, a New Yorker with a British accent, has been chief pilot, chief photographer, and leader of tropical expeditions; he can rattle off the scientific names and complete descriptions of mammals from the Australian "teddy bear" (koala to him) to the giant panda of Manchukuo; and he can nonchalantly maneuver a giant amphibian plane against a cross wind into a seven-knot current of a narrow stream which offers only 50-foot clearance from the wing tips.

Mr. Archbold, apparently, has feared getting a one-track mind. In his extreme youth, he had ambitions to explore. Combine the two and you have quite a versatile person.

Strenuous Life Devotee

A devotee of the strenuous life, but not to the point of flaunting it in the face of every city-dweller he meets, Mr. Archbold is taking it relatively easy right now. Consolidated Aircraft Corp. has provided him with an office, and during the next few months he is going to watch them turn out one of their famous PBY patrol bombers for him.

First Private Sale

Mr. Archbold is purchaser of the first PBY to be sold a private individual. Of course, it won't carry any bombs or other armament. This daring young man will use the huge airboat on another expedition into New Guinea next November for the American Museum of Natural History. He happens to be Research Associate of the Department of Mammals in this venerable institution.

The plane will be used to penetrate inaccessible jungle country traversed by rivers. When advance parties travel miles away from their base camp, use of the PBY will enable Mr. Archbold to drop food to the scientists.

Extremely Shy

The aviator-explorer-photographer gives an impression of extreme shyness. He'd look younger were it not for his unruly shock of black hair and thick mustache. He doesn't remember where he picked up the accent. Yes, he's lived in Australia, but not long enough to speak like a dyed-in-the wool Britisher.

He got his first job at the age of 21 as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. He wound up this trip as an animal collector, and found the work so fascinating he decided to make a career out of exploration, even if it meant living in fever-infested jugles much of his life.

Authority On Fever

Fever. That's another subject about which Mr. Archbold can talk authoritatively. He has provided lodging for malarial spirochetes since 1933. In the jungles you dose yourself continually with quinine to build up resistance against the dread tropical mosquito which squirts the malarial germ into your blood stream.

"I became careless in the 1933 expedition which I led into Papua, New Guinea," he recalled. "I neglected to take the quinine, and the inevitable fever hit me.

Medicine Can't Help

"When malaria strikes, there's nothing you can do. You just lie in agony waiting for the sickness to turn one way or the other. You either live or die. No medicine can help you."

The fever stayed in his blood stream after the attack passed.

Since then, he has never known when the next attack will occur. "That's the way with malaria," he said. "If it's in you, it's liable to pop up actively at any moment. Then your temperature can bounce up to 105 degrees in 15 minutes."

15 Grains Quinine Daily

Since his second attack last January, Mr. Archbold has been sentenced to a medicine diet of 15 grains of quinine daily. And you may know how quinine tastes.

Permission for the sale of the plane had to be granted by the State Department. Since delivery of a U. S. military craft is forbidden for one year after the first plane is received by the government, Mr. Archbold must wait until next November before taking the PBY out of the country.

He will probably follow the course taken by the 12 Navy bombers to Hawaii, continuing to Midway Island, Wake Island, Guam and thence to New Guinea. The scientists will join him in Hawaii.

NAVY AIRBOATS BEAT STORM TO HAWAII BASE

S.D SUN 1-24-37

Record Mass Flight Ends After S. D. Bombers Outrace Winds

Successfully fighting their way through a 'wall' of stormy weather 185 miles from Pearl Harbor, 12 Navy patrol bombers reached Honolulu at 6:20 a. m. (Pacific time) today to complete the most daring mass flight in U. S. aviation history, the United Press reported.

The first plane of the armada which flew the 2553-mile (2270 nautical miles) distance from San Diego to Hawaii landed at 6:29 a. m. and the other planes followed it to the water in rapid succession.

The exact total elapsed time of the flight, 21 hours and 48 minutes, was almost three hours less than that of the previous Navy trans-Pacific hop of six seaplanes led by Lieut.-Comd. Knefler McGinnis in January, 1934. Flying a distance about 200 miles shorter, from San Francisco to Hawaii, McGinnis' squadron crossed the Pacific in 24 hours, 45 minutes.

Two patches of unsettled weather delayed the planes on the long hop after they left San Diego at 8:30 a. m. yesterday. The first was encountered yesterday morning, soon after the takeoff. The second was early today when the fleet was within 185 miles of Pearl Harbor.

Driving rain and thunder showers forced the planes to shift from their course to escape the storm which earlier swept Oahu. Visibility became better closer to Honolulu and a brilliant moon flooded the ocean as the airmen winged their last few miles.

Through Bad Wall

Lieut. Arnold E. True, Pearl harbor aerologist, said that the "wall" of bad weather through which the fliers came was the worst reported in the area in years.

Wives and sweethearts of the aviators—left behind when the men left for San Diego last August—rushed to greet the men when then came ashore after crews, wearing bathing suits, swam out to attach mooring gears to the planes.

In Perfect Formation

The big airboats first were sighted rounding Makapuu Point, on the northeast corner of Oahu, at 5:49 a. m. At 6:20 a. m. they circled over Honolulu in perfect formation.

Six Navy surface craft were stationed across the ocean at 300-mile intervals to aid the fliers. The aircraft tender Pelican, 300 miles from Honolulu, was left behind before 3 a. m. and the fifth ship, the mine destroyer Breese, 610 miles out, was sighted at 12:30 a. m. today.

The new bombers, carrying 78 officers and enlisted men and two civilians, both employes of the builders, Consolidated Aircraft Corporation, will be used to replace obsolete planes in service in the Hawaiian islands area. They are forerunners of a giant fleet of 216 planes to be spotted at strategic points along the Pacific coast from Hawaii on the west to Puget Sound on the north and Panama on the south.

In Contact With S. D.

Regular contact was maintained with the San Diego Naval station, Pearl Harbor and the six surface craft stationed along the route, by means of powerful radio equipment.

The first surface ship, the aircraft tender Sandpiper, was passed at 12:30 p. m. about 340 miles at sea from San Diego. Headwinds were encountered which slowed down the giant seabirds.

Hold Speed Of 130

The destroyer Chandler, about 700 miles from San Diego, was sighted after the planes had skirted a low pressure area at 3:30 p. m. At 7:15 p. m. the planes passed the third patrol vessel, Gannet, about halfway on the 2553 mile journey (2270 nautical miles).

Two hours later, the fourth patrol ship, the aircraft tender Swan, was passed by the air fleet. By this time the weather had cleared and the squadron experienced no difficulty in holding and sometimes exceeding its cruising speed of 130 miles per hour.

The squadron of 12 planes is commanded by Lieut. Comdr. W. M. McDade of Pearl Harbor. Each ship carries a crew of six or seven and enough fuel for a 3000-mile flight.

Cooperation of the Harbor Department and other local maritime authorities was lauded today by Rear Adm. Ernest J. King, who declared that the difficult takeoffs of the 12 patrol bombers yesterday were considerably aided when civilian boats kept clear of the harbor runways.

In a dispatch to 11th Naval District headquarters, Adm. King recorded his appreciation, indicating that courtesy of commercial vessels had contributed to the safety of personnel in the big airboats.

The takeoff runways extended practically the entire length of the bay, from the ferry lanes to Point Loma, and even that distance of two to three miles was almost insufficient for the planes which did succeed in rising from the water in a westerly direction.

Finally, it became necessary for the pilots to take a course beginning at La Playa. With a little head wind helping to lift them from the water, they were able to shorten the runway at least a mile. S.D SUN 1-24-37

HONOLULU 'ALOHA' CAKE FINDS S. D. FLIERS RECEPTIVE

S.D TRIBUNE 2-9-37

Even a battle against the elements could not prevent the crew of the flagship in the navy's airplane San Diego-Honolulu flight from lining up for a share of "Aloha" cake at Honolulu at the end of the greatest mass flight, as shown here in an Associated Press photo. Left to right: E. J. McCormick, Louis Serpa, Lt. C. H. Ostrom, Lt. Comdr. W. M. McDade, flight commander; Henry Hutley, Thomas Duval, Reginald Fourcher. The storm the San Diego navy fliers encountered 11 days ago moved on across the Pacific and struck San Diego Saturday producing torrential rains here.

GANNET LEAVES ON MID-PACIFIC PATROL DUTY

S.D SUN 1-21-37

The San Diego aircraft tender Gannet left the harbor this morning for an unannounced destination in the Pacific, believed to be a point midway between here and Hawaii, where the vessel will undertake "plane guard" duty on the flight to Pearl Harbor next week of 12 Consolidated PBY patrol bombers.

Swan, Avocet Depart

Meanwhile, the aircraft tenders Swan and Avocet, attached to the Fleet Air Base at Pearl Harbor, left Hawaii yesterday, 11th Naval District headquarters were notified today. These ships will probably be stationed at 300-mile intervals and will constitute the last two plane guards on the long flight.

Following the Gannet, which will be posted approximately 1000 miles south of here, will be the aircraft tender Sandpiper, and the Wright, flagship of Rear Adm. Ernest J. King.

Airboats To Hop

The 12 airboats to make the flight are commanded by Lieut.-Comdr. William M. McDade of Pearl Harbor's Patrol Squadron Six. All have undergone 24-hour non-stop endurance tests and are beblieved in fit condition for the transpacific flight, which will probably start from Alameda.

'Plane Guards' To Leave

To engage in "plane guard" duty on the trans-Pacific flight next week of 12 Consolidated PBY patrol bombers, the flagship of Rear Adm. Ernest J. King, USS Wright, the aircraft tender Sandpiper and two destroyers will probably leave the harbor over the weekend. The Gannet preceded these craft to her station 1000 miles south of here yesterday.

Weather data will be flashed to the plane squadron in order that Lieut.-Comdr. William M. McDade, commanding officer, may decide the most satisfactory time of departure for the islands.

S.D. SUN ◇ ◇ ◇ 1-22-37

S.D. SUN 1-19-37

There was a lot of scurrying about at Rockwell Field yesterday getting things in readiness for one of the rare surprise visits to San Diego by high-ranking Army officers.

With only a few hours advance notice, Brig. Gen. A. W. Robbins, assistant chief of the Army Air Corps in charge of the Materiel Division, dropped in on the depot for a semi-official tour of inspection.

Five Officers Accompany

Gen. Robbins was accompanied by five fellow officers in a Lockheed Electra Army transport. They were Lieut.-Col. Oliver P. Echols, chief of the engineering section of the Materiel Division; Lieut.-Col. William F. Voiandt, Maj. Bennett E. Meyers, who represented the Chief of the Air Corp's Field Service Section, under whose jurisdiction the Rockwell Field Air Depot operates, and pilots of the plane, Capts. Frank G. Irvin and Turner A. Sims Jr.

Probability that Consolidated Aircraft Corp. may soon bid on an Army plane contract was seen in the inspection of the local plant yesterday by Gen. Robbins, who is responsible for procurement of Army aviation equipment.

Paving of Ramp Approach To Start Today S.D.SUN 1-21-37

Paving of the runway extending to the municipal ramp was to begin today, weather permitting, Port Director Joe Brennan reported.

The paved strip will enable Consolidated Aircraft Corp. to move newly-built PBY planes to the ramp with little difficulty, according to Brennan. Launching of the airboats from an improvized ramp reached after "rough going" across a beach is a troublesome affair at present.

12 NAVAL PLANES LAND IN HONOLULU

WASH STAR 1-29-37

21 Hours and 48 Minutes Time for 2,553-Mile Flight From San Diego.

By the Associated Press.

HONOLULU, January 29.—Battling through thick weather in the last stages of their record-breaking flight, 12 huge United States naval seaplanes completed the longest over-water mass flight in history at 3:30 a.m. today (9:20 a.m. Eastern standard time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 feet to escape what Lieut. Comdr. William H. McDade described as "very bad weather."

Arrive in Formation.

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 a.m. (9:59 a.m. Eastern standard time).

The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Six in Previous Flight.

The only previous mass transpacific flight was three years ago when Lieut. Commander Kneffler McGinnis led a squadron of six naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

Today Comdr. McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectacular demonstration of the precision of naval flying.

McDade, who did not appear tired, related a bitter struggle with a storm

12 Navy Planes Fought Storm On Pacific Hop

WASH POST 1-30-37

Comdr. McDade Tells of Winds That Delayed Nonstop Flight.

By the Associated Press.

Honolulu, Jan. 29.—Twelve big navy sky cruisers bored through a terrific storm that momentarily stopped them "cold" and sailed into Honolulu today to complete with military precision the greatest nonstop ocean mass flight in American aviation history.

Carrying 80 men, the planes made a "routine transfer" from San Diego to Honolulu, 2,553 miles, in 21 hours 43 minutes official elapsed time. They alighted on Pearl Harbor in the glare of powerful floodlights at 3:50 a. m. (9:20 a. m. Eastern standard time).
